When the free Western Powers failed to take any practical action in support of the Hungarian freedom fighters, the conscience of the American people demanded that immediate asylum should be given to some of the latest victims of Russian tyranny and reprisal. The result was that President Eisenhower directed the admission of 21,500 Hungarian refugees in Austria on a parole status, with the understanding that this arrangement would continue until Congress took action one way or another on his decision. The President's authority to direct such action under existing law has been subject to question. As of May 20, 1957, the number of Hungarian refugees admitted to the United States was 32,295, of which 6,284 came under immigrant visas issued pursuant to the Refugee Relief Act of 1953, as amended, and 26,011, came under the parole operation. Nevertheless, the fact remains that unless the President took the action he did, it would not have been possible for the United States, the historic haven for the oppressed and unwanted, to do much of anything to help the Hungarian refugees in Austria. This helplessness would have been demonstrated at a time when most of the small but free nations of the world were opening their doors wide to the Hungarian patriots.

I hesitate to think about the position we will be in should the East Germans or the Poles or the people of some other oppressed nation behind the Iron Curtain erupt into total revolution against the Russian Communists. Should this happen, we will undoubtedly be faced again with a tremendous refugee problem caused by the brutal methods used by the Russians in suppressing such freedom revolutions. I would like to think that future revolutions against communism would not result in a large influx of political refugees into the free world, but I am afraid the absence of a dynamic foreign policy toward the captive nations forbids my entertaining that happy thought.

You might be interested in an observation I made in a speech on the floor of the House on February 8 last year on the occasion when Congress received President Eisenhower's latest message on immigration policy. In commenting on the need for a more elastic policy than now exists, I said, and I quote: "The likelihood exists that so long as the conspiracy of communism exists in this world and continues its inhumanities and tyrannies against people, we will continue to have refugees who plead with us for religious and political asylum." The Hungarian revolution which followed in October of last year underscores the importance of our facing up to that cold reality because the very same situation applies today as applied on February 8, 1956 when I first made the statement. Moreover, the circumstances that compelled me to make that statement have not changed in the least.

To sum up, I consider that our present immigration policy as reflected by the controlling laws is outdated, inadequate, and certain to cause us not only embarrassment, but the loss of respect and friendship of millions of people who look to us as the defenders of human freedom and the hope of a better world of tomorrow. The national origins formula applies to conditions prevalent in 1921 and 1922. It has no practical relationship to the political demands of the modern day. Events of the past 12 years leave no doubt that we must effect major changes in our basic immigration laws so that we may have an immigration policy to support our best national interests.

There is so much emotion and lack of knowledge surrounding our immigration laws that any effort to bring about sudden and drastic change in them will be met by a number of very serious obstacles. It seems to me therefore, if any real change is to be effected in these laws it must come gradually. Accordingly, I have worked out a proposal which does not abruptly discard the national origins formula, but does open the

way for the demonstration of what may be a better system of allocating quota numbers than the national origins formula.

It is estimated that each year there are some 65,000 authorized but unused quota numbers. I propose that the unused quota numbers for the past 3 years be reauthorized for use for a period of 3 years. These unused quota numbers would then be allocated semiannually with the following criteria to serve as guideposts in making specific allocations:

1. The desirability of bringing into the United States annually a number of persons possessing technical and professional skills and specialized experience found to be in short supply in the American labor market. A determination would need to be made that such services will be substantially beneficial to the national economy.

2. Our traditional position of providing a haven for victims of totalitarian aggression who have found it necessary to flee their homelands because of persecution or fear of persecution based upon their religious or political views. In the present world circumstances, special account should be taken of those escapees from communism who fled from their homelands because of acts they had taken against the regimes in control.

3. The desirability of reuniting families and relatives. There are in the United States a considerable number of families who have found asylum here while members of their immediate families are still living in distant lands. There are also native born Americans who are anxious to have relatives abroad admitted into the United States for permanent residence. To reunite these broken families is to act in concert with our political philosophy which holds that the family is the basic unit of society.

To make the allocations of these unused quota numbers and all determinations connected therewith, a board or commisison will be necessary. Such board or commission would initiate studies and investigations and would be in touch with departments and agencies of the Government in any way concerned with immigration policy. It would be made up of five members, appointed by the President, with the advice and consent of the Senate.

Congress would be notified semiannually of all allocations made of quota numbers and such allocations would become effective unless Congress took action disapproving them.

The makeup of this proposed commission or board is critical to the success of the proposal. Obviously, individuals appointed to the commission must possess the highest qualifications backed by a long record of devotion to the public interest. The commission must be completely devoid of partisan politics just as it must be composed of individuals experienced in withstanding undue pressure or promises. The terms of office should be, if the plan proves to be feasible, for 10 years and with salaries provided to make possible the availability and time of the best talents in the country.

After this proposed pilot project has been in effect several years, I believe that with wise administration the feasibility of eliminating the national origins formula without doing violence to our national interest, will in my opinion, have been demonstrated. If the plan proves otherwise, Congress would simply not renew the 3-year authority and the project would be automatically terminated. In either case, the debate about our national origins system could be resolved once and for all on the basis of facts and not emotion and prejudice.

Fourteen years of service on the Committee on the Judiciary, together with a careful study of the many new political responsibilities which have been thrust upon us as a Nation in recent years, led me to offer this proposal. It is one way of creating an elastic and realistic policy which will permit us to adjust our immigration system to the most urgent demands put upon our leadership as a nation. I believe that our present immigration policy has failed to meet the test of time or the tide of human events.

It is time for a change, and I sincerely hope that the changes we must make will be based upon an honest recognition of the heavy responsibilities which are ours in a world which must avoid world war III, and find the way to a just and lasting peace.

Council Designates Village as "Constitution Town"

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. BOW. Mr. Speaker, Constitution Town is the new designation of the village of Louisville, Stark County, Ohio, by action of the village council at a recent meeting.

One of my legislative efforts over the years has been my resolution to establish September 17 as Constitution Day, a national holiday dedicated to the better understanding and appreciation of the great document which is the foundation of our freedoms.

I welcome the support which is now given this effort by the council and citizens of Louisville, and I ask leave to include the Louisville Herald account of this action. I wish also to commend Mrs. Olga T. Weber of Louisville who has been an earnest advocate of Constitution Day.

COUNCIL DESIGNATES VILLAGE AS "CONSTITUTION TOWN"

By unanimous vote, the Louisville Village Council at its regular meeting on April 15, 1957, officially designated Louisville as Constitution Town.

The resolution was presented to council by Mrs. Olga T. Weber, long time proponent of Constitution Day Observance and prime mover of the now snowballing statewide and nationwide observance of Constitution Day.

As pointed out in the resolution, Constitution Day was initated in Louisville more than 5 years ago, where it has been observed annually since then on September 17, with due pomp and ceremony. The present Gov- of Ohio, C. William O'Neill, has twice been principal speaker at a Louisville Constitution Day parade.

Legislation is in the hopper to make September 17 a legal holiday and a day of nationwide celebration of Constitution Day.

The council in its resolution urges all Louisville citizens and organizations to adopt this slogan, "Constitution Town," and use it on their letterheads and wherever possible to promote the greatness of the Constitution and honor of the village which has brought this recognition to the American Constitution.

Mrs. Weber expressed her appreciation for the legal action taken at this meeting.

Resolution 1043

Whereas the Constitution of our country is the basis of all laws throughout the length and breadth of our United States of America; and

Whereas the Constitution has been written that there shall be justice and equality for all people of our Nation regardless of race, color, or creed; and

Whereas it is evident that to retain these rights and privileges we shall in no way permit our Constitution to be misinterpreted to cause the abridgment of these rights reserved for our people; and

Whereas in order to retain these rights and to promote full knowledge of the meaning of our Constitution, and in order that the people of our United States of America may grow more alert to the principles declared by this document; and

Whereas the residents of the village of Louisville have taken it upon themselves to remind all the people of our Nation within their reach of their faith in the Constitution, by various and sundry ways, by initiating legislation adopted by the Ohio Legislature that September 17 (as requested by Louisville) be set aside annually for the observance of Constitution Day, so that the school, civic, and fraternal organizations, and all citizens remember, study, and discuss this wonderful document to bring about a better understanding by all, and because Louisville has taken the lead in celebrating this day annually since 1952, accompanied by gatherings, parades, and demonstrations complete with fully appropriate speeches on this great American heritage: Now, therefore, be it

Resolved by the council of the village of Louisville, State of Ohio: section I, That in our pride, we, the village council of Louisville, Ohio, declare that Louisville adopt for its slogan the name, Constitution Town, and request that the press, industry, business, merchants, schools, churches, and all citizens use the slogan, "Constitution Town," on their letterheads and where otherwise adaptable that the knowledge of the efforts of Louisville, Ohio, relative to the celebration of Constitution Day, in commemoration of the signing of this great freedom document, shall become known across our land.

Passed April 15, 1957.

H. JOSEPH ZWICK,
Mayor.

Attest: CAROLYN E. SCHWALLIE,
Clerk.

A Scholarly, Incisive Analysis of the Civil Rights Bill

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. ABBITT. Mr. Speaker, soon the House of Representatives will have before it for consideration the so-called civil-rights legislation. It is shocking to see in the press this legislation referred to as a bill intended to protect the voting rights of certain minority groups in the South. Certain segments of the press, news and radio commentators, and editorial writers have constantly and consistently glossed over the real part of this anti-civil-rights legislation and have made it appear that the innocent little bill will simply guarantee the voting rights for certain of our people. They have actually deceived many people in various sections of this country into believing such is the case. This is far from the truth. This proposed legislation is the most vicious, wicked, dangerous leg-

islation that I have ever had the opportunity of studying.

There appeared in the May 19 issue of the Richmond Times-Dispatch an editorial pointing out a few of the reasons why the bill is so dangerous, so liberty destroying, and so destructive of the rights of our people. The editorial, entitled "A Scholarly, Incisive Analysis of the Civil Rights Bill," is as follows:

A SCHOLARLY, INCISIVE ANALYSIS OF THE CIVIL-RIGHTS BILL

Asked by Frank Van der Linden, Times-Dispatch Washington correspondent, whether he feels that the Federal civil-rights bill will damage his chances of building a strong Republican Party in the South, President Eisenhower said at his Wednesday press conference:

"The civil-rights bill is a very moderate thing, done in all decency and in a simple attempt to study the matter, see where the Federal responsibilities lie, and to move in strict accordance with the Supreme Court's decision, and no faster and no further."

Mr. Van der Linden then asked how the President felt about the bill's denial of jury trials, and Mr. Eisenhower said he was "not going to talk about that matter." His questioner would have to ask Attorney General Brownell who "knows more about it than I do."

Herein lies the tragedy of this whole Presidential effort to ram the civil-rights bill through Congress. Mr. Eisenhower is no lawyer, and he has been told by Mr. Brownell that the civil-rights bill is a mild piece of legislation. He won't believe what nearly everybody in the South, and a good many people outside it, declare to the contrary.

If anybody could get Mr. Eisenhower to read the minority report of the Senate Subcommittee on Civil Rights, signed by Senators ERVIN, of North Carolina, and JOHNSTON, of South Carolina, he might see what vast and far-reaching evils lie in this legislation. Senator ERVIN is a former judge of the North Carolina Supreme Court, and he speaks with authority concerning these matters. The 31-page analysis of the bill which he and Senator JOHNSTON have signed is an exhaustive and devastating document.

Anything like a complete summary of this report within a limited space is impossible, but a few extracts follow:

"Senate bill 83 is calculated and intended to confer upon a single Federal executive officer, to wit, the Attorney General, the autocratic and despotic power to nullify at his absolute and uncontrolled election, in particular civil-rights cases selected by him, State statutes prescribing administrative remedies which were enacted by State legislatures in the undoubted exercise of the legislative power reserved to the States by the 10th Amendment."

On the subject of jury trials, the report points out that three of the great liberals, Senators Borah of Idaho, Norris of Nebraska, and Walsh of Montana, favored extending the right of trial by jury to all persons charged with indirect contempts arising out of alleged violations of injunctions. Congress passed the Norris-LaGuardia act in 1932 to cover this situation in labor disputes.

The report also contains the following:

"The arguments that criminal prosecutions are cumbersome and slow, and that jurors are reluctant to indict and convict are identical with those given for the establishment of the Court of Star Chamber, the enactment of the acts of Parliament depriving American colonists of the right of trial by jury, and the congressional opposition of former days to the jury trial provision of the Clayton and Norris-LaGuardia acts."

Senators ERVIN and JOHNSTON declare categorically that if the Americans of the late 18th century had dreamed that their descendants could be constitutionally robbed of their right of trial by jury (guaranteed in article 111, section 2 of the Constitution) * * * the people of the United States would have rejected the Constitution out of hand.

Their report goes on to announce the following staggering conclusion:

"Senate bill 83, if enacted by Congress, would empower any attorney general to litigate at public expense virtually all claims of virtually all aliens, citizens, and private corporations within the jurisdiction of the State in question that they have suffered intentional discrimination by the action of State or local officials taken under State statutes or municipal ordinances, or orders or regulations made under them, pertaining to elections; public education; business and trade; labor; charges, prices, and interest; railroads, motor carriers, telegraph companies, public warehouses, and other public utilities; ad valorem, income, inheritance, license, and sales taxes; local public improvements; highways and streets, buildings; fish and game; the keeping of animals; civil remedies and procedure; crimes and criminal procedure and all other matters committed by our system of government to State control."

The foregoing are merely a few of the high spots in an exhaustive and scholarly analysis of the legislation in question. The liberals who are backing this monstrosity had better read it carefully. In particular they should review the declarations of such men as Norris, Borah, and Walsh—men who would be much too wise and farseeing today to support any bill as potentially disastrous to our political institutions as this one.

American Serviceman Abandoned by His Government

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1957

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith an editorial from the Charleston, S. C., New and Courier of May 16, 1957, on the conviction, under the Status of Forces Agreement with Japan, of an American serviceman. I also include a clipping from the same newspaper written the editor by Hugo Hoogenboom of Beaufort, S. C.

Mr. Speaker, it is ironic and tragic how American boys are being ruthlessly turned over to foreign courts in the world, and it is indefensible how large the sentences are imposed on American servicemen by these foreign courts. Were these cases held in America under the American system of jurisprudence, no national of any other government in the world would be dealt with half as harshly as are our American servicemen who are sent to the uttermost parts of the earth to defend these foreign, ungrateful countries.

American might subjugated and brought Japan's mighty war lords to their knees. Under the Status of Forces Agreement with this Nation, the American military was "invited" to remain in Japan for the security of that nation. Now, American youth—drafted and sent there against their will—are tricked and decoyed into baseless controversy with Japanese and abandoned by their Government. I predict that the Congress will not long tolerate this sort of treatment to the sons of the greatest and most charitable Nation civilization has ever known.

The articles follow:

IN A JAP PRISON

According to the Associated Press, Airman first class Paul E. Bell, 22, of Beaufort, was sentenced Monday by a Japanese court to 5 years at hard labor on a charge of robbery resulting in injury.

Bell, stationed with the 39th Air Division, was defended by a Japanese lawyer. The Army said it will appeal the conviction and will hire a different attorney.

We do not know the merits of this particular case. But it should serve to remind South Carolinians that their sons, husbands or relatives serving overseas are at the mercy of foreign courts. The status of forces agreement the United States has with foreign countries means that American servicemen can be sentenced to long terms in foreign prisons if charged and found guilty.

We can well imagine what a Japanese prison is like. And we don't believe that Americans who get in trouble abroad should be abandoned by the United States. If an American serviceman commits a crime, he should be punished. The punishment, however, should be imposed by an American military court and sentences should be served in military prisons.

Whatever Airman Bell has or has not done, he is an American. His rights as an American continue even though he serves on foreign soil.

IN FOREIGN JAILS

To the NEWS AND COURIER:

Your editorial comments on the Paul Bell case were good, but they did not cover the situation entirely. Having served in the Far East and having spent some time in Japan, I believe I may be able to clarify a few points concerning the trial of American servicemen in Japanese courts.

The charge under which Paul Bell was sentenced is very common and is not nearly so serious as the legal term, "robbery resulting in injury," or the 5-year sentence, would indicate. Generally, these charges grow out of quarrels between American servicemen and Japanese taxi drivers who are trying to cheat in charging exorbitant fees. If the G. I. strikes the cab driver and doesn't pay him, he is committing, according to Japanese law, "robbery and assault." In Japan this results in an excessive prison term for the G. I. In the United States, it would probably result in the suspension of the taxi driver.

In this light the case takes on a new aspect. It proves that the American serviceman has been abandoned by his Government to all the twistings and turnings of oriental law, to be dealt with as the Japanese see fit. He has none of the constitutional rights he thought were guaranteed him, such as protection from excessive punishment or trial by jury. The obvious bias against him of Japanese witnesses and jurists (especially Communists and disgruntled nationalists) precludes any fair trial.

The fact is that Paul Bell and many others like him have been sacrificed to "international good will." Perhaps after enough men have been sacrificed to sop the pride of a defeated people, Americans may do something about it. Until then, God alone can help those forgotten men who are rotting their lives away in filthy Japanese jails.

HUGO HOOGENBOOM.

BEAUFORT.

The Challenge of the Learned Professions—The Law

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Mr. Joseph N. Welch, one of the outstanding attorneys in Massachusetts, which appeared in the February–April 1957 issue of the Journal of the American Judicature Society.

THE CHALLENGE OF THE LEARNED PROFESSIONS—THE LAW

(By Joseph N. Welch)

Mr. Chairman, members of the faculty, ladies and gentlemen, the subject assigned to me tonight is, as I understand it, a segment of the general field called the challenge of the learned professions, and I understand that I am to speak as a lawyer.

I have known for many weeks that I was to speak, and as is always the case, knowing that, I was filled with anxiety.

Such reputation as I have as a speaker rests, I regret to say, on a somewhat unsound basis. Such attention as I have attracted, outside my own community, is based on the fact that in some hearings held, now long ago and far away, there was the magic of electronics, so that some in this room listened to me and others viewed my ancient and sagging features.

Curiously enough, in that room I gained stature as a public speaker by the simple device of keeping still. In a room where there was often accusation, charge, countercharge, immense irrelevancy, and often bedlam, I was sometimes seen to sit in what was really a stunned silence, but which was interpreted by the audience as wise restraint. By the simple expedient of doing little, and often nothing for long periods of time, I was contrasted with more voluble and more violent voices, and at least in the eyes of a few people, came to be held in wholly undeserved esteem.

In those circumstances, it is not easy for me to make a set speech, and what is more, it is apt to be difficult for you, because you are trapped in this room as I was trapped in that room in Washington, and neither you nor I can escape with honor. However, I have a word of comfort for you—as in Washington, I shall resort to the device of using only the minimum number of words appropriate to the occasion; and I shall use another device—I have long since learned that if a sepaker will only strike the right note of despair and boredom at the outset, his audience may file out at the end, somewhat weary, it is true, but murmuring to each other as they leave, "Well, at least the speaker got a little better as he went along."

During the period when I was anxious about what I was to say tonight I was at the seashore. There is something about the shore, with the waves rolling in, which gives me a curious feeling of support, something approaching exhilaration. As a client of mine once said, "I draw strength from the sea."

Walking along the beach and thinking of tonight, it occurred to me that members of certain of the "learned professions" are described by more than a single word.

Take first the field of religion—a representative of that learned profession may be called a priest; he may be called a minister; he may be called a preacher; he may be called a rabbi.

Take next the field of medicine—a representative of that learned profession may be called a doctor, a physician, a surgeon; or colloquially an M. D.

In the field of law, he may be called a lawyer, an attorney, a counselor, or an advocate. In England you may add the other two well-known words—barrister and solicitor.

Why this variety of words descriptive of these three professions?

A single word will do for a barber. A single word will do for an electrician, or a mechanic, or a plumber. A single word will do for a blacksmith.

I think there is something significant about the variety of words used in our language to describe members of the learned professions representing medicine, the church, and the law.

These professions, I suggest, embrace matters of such richness and importance that no single word satisfies the mind as a fully descriptive word. There is in this nomenclature, I believe, a subtle compliment.

There must have been solid satisfactions, for example, in being a blacksmith, so solid that his place in our culture became embodied in our songs, our stories, and our poems, but however secure his position, it was not quite rich enough in content, so that several names would attach to it, as several names have attached in the other fields I have mentioned.

Those words may be used interchangeably to designate members of the legal profession—an attorney, a counselor, an advocate, and a lawyer.

It is this collection of nouns that are used quite at random to denote a member of the legal profession which gives me the key to what hereafter I shall say, at least in part, about the position of a lawyer in society.

THE ATTORNEY

Let me take first the word "attorney." It is perhaps not the richest in meaning, but to me it denotes representation. Indeed, there is in the law a power of attorney, something which specifically authorizes the holder to perform a series of designated acts. The holder of a power of attorney may convey property; he may sign checks; he may collect debts or incur obligations. It is common to say "I can't be at this meeting but my attorney will be there." I consider this a significant conception. It implies confidence so great that the representative equals the principal.

No doctor, no priest, no other person carries this responsibility for another to the degree that an attorney carries it.

THE COUNSELOR

The second word I have mentioned is "counselor." To me this implies the wise, the trusted, the respected adviser to a single client, a family, or a business. To this wise counselor come the clients with their problems, seeking his wisdom for their solution.

Those problems may involve money or property or family relations or estates, or even problems affecting a marriage or a home and its durability. These are areas where both the doctor and the priest may be consulted, but the wisdom of the counselor is the wisdom most often sought and heeded. Here are great satisfactions for the lawyer and for the client.

Over and over clients may face what may seem to them puzzling or even frightening situations, but the wise counselor has seen and dealt with many such problems, and he solves them with a sure touch and thus there is created on the part of the client a sense of gratitude which is a delight to the counselor.

This wise counselor may be found in any community—however small, however large. It was only yesterday, in this city, and quite by accident, that I sat beside such a counselor. I think he is here tonight. He is a man who, to my certain knowledge, through a whole generation, has advised a family and an immense business, at every point where questions arose. I think no single move of any importance was ever made in that long period, without consultation with this wise, kindly counselor and lawyer. I think there is no finer thing that can happen to a lawyer than to have such a relationship lasting through a generation.

THE ADVOCATE

The third word that is used by the public is the word "advocate." If my voice betrays a sentimental interest in that word, it is because I like to think that I am primarily an advocate.

In the areas of service which I have discussed, a client has the choice of approaching a member of the legal profession or not. Not so when an advocate is needed.

This need arises when a client, willingly or unwillingly, has become a party to legal proceedings. There is now no choice. An advocate must be procured.

Among you who are now listening to me, there must be some who will one day be unable to do without the services of an advocate.

For the most part, these situations arise from collisions inevitable in our society. There may be, for example, a collision with the law itself, the accusation of a crime, if only a collision with those laws cast in a criminal framework having to do with the operation of the cars in which we ride.

There may be a collision with another individual over a contract, over a boundary dispute, or some property right; or an owner of a small business may collide with a big business of monopolistic tendencies, which threatens his very livelihood; a newspaper or magazine may publish a false derogatory statement about him injuring his reputation in his community; a dispute may arise over a will, involving either its validity or its construction; the tax collector, either State or Federal, may assess a wholly improper and large tax against him. Because of the frictions and conflicts of a complicated society, the need for an advocate before a judge or a jury or an administrative body may arise.

Here at this critical point of collision, the citizen must have someone to speak for him. He has no choice.

Here at this tender and often tragic moment in the client's life appears the advocate. He searches for, he studies, and he marshals the facts; he elicits the interest and the help of witnesses and associates of the client. He finds in the books and in his experience the arguments which may move his listeners in his client's direction. He hopes for and often finds that compelling argument, that obscure precedent, or that eloquent phrase by which he may move men and affect events. He identifies himself with his client's cause, and with a skill unexcelled and perhaps unequaled in our society, he delivers to his client the last ounce of wit and wisdom, the last reserve of eloquence and persuasion, and that complete devotion which is good to give, and must be wonderful to receive.

In other words, it is good to be an advocate.

THE LAWYER'S PUBLIC SERVICE

Perhaps the richest word, or the most all-embracing word, and certainly the oldest and simplest, is "lawyer." That word encompasses all the others, and designates the wise counselor, the dependable attorney, the devoted advocate; in it are embraced all the concepts of fidelity and service which make any profession great, and that of the lawyer among the greatest.

One last word on this point—no speaker who stands where I stand could hope to do justice to this subject without mentioning the field of public service.

From colonial days, through all the vicissitudes of our national life, up to today, and I hope and believe forever, in every crisis and in every period of serenity, the lawyer has been found, is found, and I trust will always be found, ready with, a mighty contribution to the solution of problems of whatever time or place or magnitude.

At such times, his power of analysis, his power to marshal facts, his ability to persuade, are of inestimable service to his country, but most of all—and of this I am proudest—he will always be a magnificent figure because of his training to advance causes and ideas which may not be to his personal advantage, but always in the public service, because of his ability to discover what is right, and then to persuade others to see what is right and to adhere to it.

LAWYERS AND LIBERTY

At this point, I have decided that I will stop describing what a lawyer does and, at least to some extent, act like a lawyer.

The word "challenge" appears in the title of my address—not selected by me—and there has been, I think, in the last 2 or 3 years, a challenge to the legal profession which requires a response.

For this reason I wish to speak to this kind of audience about our Constitution, or rather, a part of it, and of what I think has been a great threat to the liberties it guarantees to us, which guarantee, I prefer to believe, is the right to fight for and preserve liberties always due to be threatened by direct attack or in danger of dying from the simple and painful sin of complacency.

As you know from what I have said, and from Dr. Arnold's graceful introduction, I am a lawyer, and a lawyer is passionately dedicated to the idea of an orderly and predictable society.

I must be able to tell my clients that no untoward event will befall them except by due process of law.

I look with horror on the political system described behind the various curtains—iron, bamboo, and others—which permits a loud knock on the door at midnight, the rough and brutal hustling into the cattle car, and the swift and terrifying journey into fear, torture, slave-labor camps, and death.

In what country behind the various curtains could I stand, as I do tonight, and criticize the head of this Government, if I chose, and know that no hand could or would touch me?

What is it that gives us this ancient, beautiful freedom of thought, of ideas and of speech that is denied to the teeming millions who live without it?

It is the aspirations and the hopes and the dreams of our forefathers distilled into words and made a part of our Constitution.

THE FIFTH AMENDMENT

I wish to raise with you the question as to whether or not one fundamental part of our Constitution, the fifth amendment, has not, in some way, had disrepute attached to it, and in some way become somewhat tarnished in the public mind, so that it shines less brightly than once it did.

First, may I point out to you the safeguards to liberty that are embodied in the fifth amendment?

It is by no means limited to the guaranty against self-incrimination, of which I wish to speak principally.

The fifth amendment also provides that criminal charges may not be made against you or me except upon the finding of a grand jury. That means that no person may be accused of a crime at the mere whim or caprice of the head of the state or the head of some police department.

The second freedom guaranteed by the fifth amendment is that no person shall ever be placed in double jeopardy. That is the lawyer's way of saying that if you or I are accused of a crime and tried and acquitted, never again may we brought to trial for that same offense.

The third freedom guaranteed in the fifth amendment is a provision against the taking of property except by due process of law.

The fourth freedom guaranteed in the fifth amendment is a provision against the taking of private property for public use—which may be done—but only upon the payment of just compensation.

Fifth and only lastly do we come to this provision about self incrimination, and I now use the words themselves. They are:

"No person shall be compelled, in any criminal case, to be a witness against himself."

Note those words "witness against himself." I may not be, you may not be, compelled to be a witness against yourself.

What rights, what dangers, were the framers of the Constitution thinking of, and what safeguards were they erecting, when they used those words in the fifth amendment?

They were thinking primarily of some dark pages in history, which thinking is revealed by their use of the word "compelled." They were thinking of confessions and they were thinking of confessions procured by the application of torture.

TRIAL BY TORTURE

I have looked into some of those dark pages in history, and in a moment I shall read to you some quaint old English embodied first in some directions to the keeper of the Tower in London, where a person was being held; and communications from the keeper to the State Council, reporting on activities in that grim fortress.

The year is approximately 1600 and Elizabeth is Queen.

I like to think of those papers, which still exist and may be viewed and which may be read in print, as, in substance, orders issued, legal in nature; and then a return of service, so to speak, which would be familiar to lawyers, or a return to the issuing authority on what was done as a consequence of the receipt of those orders.

The first is a communication from the keeper of the tower to the Council of State, and I now read, with some elisions, to shorten it:

"We have had twoo severall examinations of Thomas Meaghe, wherein we finde nothing but an improbable tale full of suspicion, not mutche encreased by reporte of further matter than heretofore he hathe declared to Your Honoure, as by the examinations whiche we sende herewith maie appeare. We have forborne to putt him in Skevington's Yrons, for that we re-received chardge from yow to examine hym with secrecie, whiche in that sorte we could not do, that maner of dealinge requiringe the presence and ayde of one of the jaylors all the tyme that he shall be in those yrons, and in this examination; and besides, we finde the man so resolute, as in our opinions litle will be wroonge out of hym but by some sharper torture."

That communication was duly thought over by the Council of State, and as a consequence, a communication went from the council to the keeper of the tower, and that I now read:

"Whereas Their Lordships have appointed Geoffry Fenton to repaire upon them for the examininge of Thomas Meaghe, heretofore committed to his charge, and to charge him with suche matters as he heretofore hath denied and now are certified from thence to be verified by depositions of witnesses. They are required uppon receipt hereof to call the said Meaghe before them; and in case, being confronted and charged with such matter as the said Fenton shall bringe with him, he shall wilfullie refuse to acknowledge the same, then it is thought meete that they deald with him with the racke in such sorte as they shall see cause."

Then comes what I call the final return of service, or the report from the Tower as to what took place there:

"We have agayne made twoo severall examinations of Thomas Meaghe, and notwithstandinge that we have made triall of hym by the torture of Skevington's Yrons, and with so muche sharpenes as was in our judgement for the man and his cause convenient, yet can we gett from hym no matter than we have sent herewith in writing."

The solemn and then legal procedure at the beginning of torture was indeed impressive. First, there was an oath to the witness to tell the truth. A court stenographer with book and quill poised sat ready to write down the questions as in any courtroom, and then the court stenographer solemnly recorded the answers made by the witness under torture.

I hope you observed in what I have called the final return of service the words "We have made triall of hym by the torture of Skevington's yrons." Torture was not being applied as a punishment. It was part of the trial of the case to determine guilt by confession. Punishment for the crime was death, but that followed conviction. If the accused actually admitted guilt, what more was needed?

Torture, as they thought, was to make the accused talkative, who had once been reticent.

There are countries where torture is still applied to secure confessions. We look on the practice with abhorrence, even if the torture is not quite so sickening to contemplate as the rack and the iron maiden.

In our civilization, our Constitution has rejected the idea of compelling a witness to give evidence against himself. Surely it is better so. Let us not condemn any man for merely asserting a right believed to be so fundamental that it is embodied in our Constitution itself.

While doubtless many guilty men have, in the past and will in the future, invoke its protection, never forget that it was adopted to protect the innocent, and never forget that it has its roots in the dark pages of history and in the barbarous torture chamber in which, I am convinced, many a man confessed to crimes of which he was as innocent as you or I.

Tonight, in police stations all over the country, men will be taken into custody and will be accused of crime and questioned. They will not, however, be tortured as Thomas Meaghe was tortured, and the solid guaranty against it is the fifth amendment.

I will now go back to the first part of my address, if I may, and add a word or two, if you will forgive me, of a personal nature.

I assume that there are in this room young men who aspire to be lawyers and who will become lawyers. There must be men in this room who will become advocates, of which part of the profession I have spoken, I hope, with obvious conviction. It was a long time ago and in a far-away place that I made that decision, but it is a decision I have never regretted; and to those of you who are young, and who wish to be lawyers, may I say this: If you grow to be old, and if you are very lucky, you may, on some occasion, stand where I happily stand tonight and have the great compliment paid to you of an attentive audience, and I allow myself to think, to some degree, an affectionate audience, such as I have had tonight.

How Kerrville, Tex., Solves Own Problems Without So Much Federal Aid

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. FISHER. Mr. Speaker, in this day and time when so many people look to Washington for money to aid in projects that are purely local, it is refreshing to learn of instances where communities still feel they should find ways locally to finance local programs.

The community I refer to is Kerrville, Tex., and the county of Kerr in the hill country of Texas where that little city is located. That community has, as the newspaper story which I am including indicates, been blessed with many public-spirited citizens who have contributed liberally to community projects when the occasion arose. No worthy cause in that community has lacked a champion.

Only a year or two ago when it became desirable for small dams to be built on the beautiful Guadalupe, which runs through the city, four of them were built and paid for locally.

A lot of credit is due Kerrville and Kerr County, including such public-spirited philanthropists as the Schreiner and Peterson families, for their willingness to help finance worthy local projects. Kerrville and its people can serve as a good example for the entire Nation to emulate.

The article from the Kerrville Times, dated May 12, 1957, follows:

Kerr County's bonded indebtedness is not as burdensome as is found in many Texas counties due to the fact that many hundreds of thousands of dollars have been donated by its philanthropists over a period of three-quarters of a century. These gifts have provided some of the most worthy and necessary institutions in the county which ordinarily cost each taxpayer many hard-earned tax dollars.

These were gifts of love by men who revered a people and an area, one of the most beautiful in our Nation.

When Kerrville needed a park the citizens built one in a day, with the donation of land by a public-spirited resident. The town needed a swimming pool years ago and a local banker built one—no bonds issued, no taxes paid. When a school was necessary for west Texas young men, the "father" of the community provided a fine, private military academy which was for many years, and continues, turning out good citizens who live all over Texas and still love this hill country.

When an old, inadequate hospital, which was largely the result of the same pioneer effort, was outgrown and outmoded, a new, local foundation stepped in and built a modern 6-story one—no bond issues and no taxes again.

Long before flying became so common and necessary the same local banker donated a flying field for the use of the country. As the public schools expanded and needed more room a local family donated a tract in a good location for a new elementary school. When a stadium was needed by the schools, a local man donated the land, and the community financed the stadium and lights with little cost and taxes to the school system.

When an opportunity came to locate a veterans' hospital here years ago, a father and his sons stepped in and donated a large farm on the edge of town which cost over $40,000 in those early days and that resulted in the present Veterans' Administration hospital.

Of course some bond issues for schools, water, sewer, streets, and roads, dams, etc., were necessary and supported by business leaders, but the tax burden has been much less and the community profits from much less debt than would otherwise have been necessary.

Kerrville and the surrounding territory has been fortunate over the years in having public-spirited citizens, such as the Schreiners, the Petersons, Dr. Sam Thompson, Captain Tivy, and others who have donated so much to this territory and have offered foresighted leadership. That combined with the work and cooperative spirit of businessman and others literally has built a thriving town where natural resources were conspicuous by their absence. No oil or gas or sulfur money to help, no waterways for shipping, no rich farms, no manufacturing. But the boys and girls camps were started and grew, and now the towns is a favored resort and place to retire and live. Many of these things were done when the dollar was worth much more than it is now and bought and built a great deal more; most were done before there was any Federal tax incentive to do such things and without asking much of any State or Federal aid.

For instance, Captain Schreiner, as far back as the 1880's, saw the need to bring a railroad into this undeveloped territory, and worked toward that end by contributing $25,000 (which would be the equivalent of 5 or 6 times that now) to get it here. During the early years of this century he contributed much to bringing good roads, such as $100,000 for a road to Edwards County, paving a road south from Kerrville, and numerous other road projects, total contributions being in excess of $300,000 in those early days. The income from some of the principal still goes to help local roads.

Kerrville's first hospital was the result of Dr. Secor's pioneer efforts, and Captain Schreiner's contributions, added to in 1936 by $35,000. But because it grew inadequate the Hal and Charlie Peterson Foundation was established and built the Sid Peterson Memorial Hospital at a cost of about $1,200,000. The total of the various Schreiner contributions to date has been about $1¼ million, all things considered. Churches and encampments, such as the Presbyterian Church and manse, and Westminster Encampment, resulted from gifts of the late A. C. Schreiner, and with the help of Gus F. Schreiner, the encampment was able to grow into what is now the Presbyterian Mo-Ranch Encampment. L. A. Schreiner had added the land for Antler Stadium, the land for the Louis Schreiner Airport, swimming pool which the city operates, and the low-water bridge across Guadalupe at foot of G Street.

Hal Peterson also made a $10,000 contribution toward the airport.

The Kerrville Golf Course was built by public subscription and a gift from A. C. Schreiner and L. A. Schreiner of $30,000.

Petersons' interests to date have contributed $1,008,366 to Hal and Charlie Peterson Foundation which built and equipped the hospital.

The various Schreiner contributions have been:

Donations Captain Schreiner and family

Captain Schreiner:	
1886 bonus to S. A. & A. P. Ry. Co. to Kerrville	$25,000
Kerr County supplemental to bond issue, building roads Kerr County	100,000
Paved road to Silver Creek	35,000
1918 original gift to Schreiner Institute, cash	250,000
1918 original gift to Schreiner Institute, land	56,000
1922 accumulated interest on gift Schreiner Institute	78,000
1927 gift to Schreiner Institute, will	150,000
1927 gift to Schreiner Institute, gym	2,500
1927 Schreiner Institute president's home	2,000
1920 permanent road fund	175,000
1936 gift for Secor Hospital	35,000
Captain Schreiner and sons: Gift, purchase of 700 acres land for veterans' hospital (about 1919—Legion, 1920)	40,000
Gus F. Schreiner:	
1950 for agricultural department to Schreiner Institute	15,000
1948 Westminster encampment for Schreiner Institute	25,000
Cash	10,000
Gus F. Schreiner and L. A. Schreiner: 1925 Episcopal Church building	10,000
A. C. Schreiner:	
1923 Presbyterian church, manse, etc.	75,000
1923 Westminster encampment	15,000
A. C. Schreiner and L. A. Schreiner:	
1927 gym building, Schreiner Institute	5,000
1922 Kerrville Country Club, $15,000 each	30,000
L. A. Schreiner:	
1923 airport	35,710
1936 26 acres Antler Stadium	7,000
Cement bridge lower end of Kerrville across Guadalupe River	3,500

In addition, subscriptions to every project for betterment of Kerrville Fish Hatchery land, Junction School library, Rocksprings School library, Schreiner Park, Junction, Schreiner student loan fund, Rotary student loan fund, started and principally from L. A. Schreiner.

New Hampshire Legislature Passes Resolution Asking Federal Government To Refrain From Enacting New Grant-Aid Programs

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein a concurrent resolution adopted by the General Court of New Hampshire:

Whereas through Federal grant-in-aid programs the Federal Government by extravagant and unnecessary spending is forcing New Hampshire also to spend extravagantly to match and thus obtain back part of its own money; and

Whereas New Hampshire citizens pay income taxes which go to Washington and are returned in part to New Hampshire under Federal grant-in-aid programs in amounts reduced by bureaucratic overhead, creating the false impression that the State is getting something for nothing; and

Whereas in returning funds to New Hampshire the Federal Government ties strings to the use of these funds which interfere with local government, complicates the enactment of State legislation, and forces the State to spend in fields it believes unwarranted; and

Whereas it is common knowledge that local projects financed in part by Federal funds usually cost excessively because of unnecessary Federal requirements; and

Whereas the New Hampshire Legislature feels that its citizens know better than the Federal Government how to spend the citizens' money and that local governments are more capable and efficient than the Federal Government in managing local programs: Now, therefore, be it

Resolved by the members of the New Hampshire Legislature in the 1957 session assembled:

1. That the Federal Government refrain from enacting new grant-aid programs and reexamine all such existing programs and end or reduce their costs wherever possible.

2. That copies of this resolution be transmitted to the President of the United States, Vice President of the United States as President of the Senate of the United States, to the Speaker of the House of Representatives of the United States, and to each Member from New Hampshire in the Senate of the United States and in the House of Representatives of the United States.

3. That copies of this resolution be transmitted to the presiding officers of the legislature of the other 47 States for their information and consideration by the clerks of the Senate and House of Representatives of the State of New Hampshire.

Senator PAUL G. KARKAVELAS,
Sponsor.

ERALSEY C. FERGUSON,
President of the Senate.

W. DOUGLAS SCAMMAN,
Speaker of the House of Representatives.

BENJAMIN F. GREER,
Clerk of the Senate.

GEORGE T. RAY, JR.,
Clerk of the House.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Address by Vice President of United States to American Iron and Steel Institute

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, May 27, 1957

Mr. SALTONSTALL. Mr. President, on Thursday, May 23, the Vice President delivered a significant address in New York City at the annual meeting of the American Iron and Steel Institute. I think that what he said will be helpful in clarifying in people's minds the issues in the present controversy over the Federal budget. I ask unanimous consent that the text of his address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE VICE PRESIDENT OF THE UNITED STATES BEFORE THE 65TH ANNUAL MEETING OF THE AMERICAN IRON AND STEEL INSTITUTE, HOTEL WALDORF-ASTORIA, NEW YORK CITY, MAY 23, 1957

Six years ago when I last had the privilege of appearing before this organization, I was asked to give a report from Washington on the most burning issue of the day. We were in a war at the time, and taxes and Government spending were at a higher rate than today. But there was little question that on that occasion there was another issue which was of even greater interest to the majority of the American people. I spoke on that subject, as you will recall—the controversy over President Truman's discharge of General MacArthur.

Tonight I would like to give you a similar report. Just as in the spring of 1951, there is no question today as to what issue is uppermost in the public mind. It is the administration's budget for 1958.

I will admit at the outset that I can think of a number of other subjects which would be more pleasant for me to discuss. I am sure many of you are probably tired of hearing about the budget. And some of you may have reached conclusions which will not be changed by anything that I say.

But because I believe the decisions we make on the budget, particularly as they relate to our national defense, are so important to the Nation, and because there has been so much misunderstanding as to the administration's position, I would like to take this opportunity to help set the record straight.

It is necessary to begin by examining the basic economic philosophy of this administration. We find ourselves in the incongruous position of being subjected to attacks from groups holding completely opposing points of view.

On the one hand, the advisory council of opposition party charged in Washington a few days ago that this was a probusiness administration under whose policies the rich are getting richer and the poor are getting poorer.

On the other hand, certain business groups have charged recently that this is a New Deal-Fair Deal administration which is bent on spending the Nation into bankruptcy.

Now, obviously both of these charges cannot be true. I submit that neither is true. Our attitude toward business is simply stated.

We believe that America enjoys unprecedented prosperity today because we have based our economic and political policies on the sound principle that the most productive source of national wealth is private rather than Government enterprise.

We reject the New Deal-Fair Deal attitude of baiting and penalizing business and using it as the scapegoat for all the economic sins of whatever administration happens to be in power.

Instead we believe that Government should encourage free competitive enterprise. It should promote private economy activity rather than penalize it. Regulations, controls, and Government activity should be reduced to the minimum demanded by the general welfare so that individuals can make their maximum contribution to the Nation's productivity.

We do not favor big business or little business. We are for good business and opportunity for all.

We have acted upon this philosophy.

We are getting the Federal Government out of many activities which properly belong to private enterprise.

We have left labor-management relations to the field of free collective bargaining. There have been no Government-imposed labor contracts under this administration.

We have faithfully administered laws which have been passed to prevent abuses by businesses such as those relating to securities, antitrust, pure food, and drugs. But in contrast to the New Deal and Fair Deal, we do not believe in penalizing the good with the bad. We try to adjust regulations to sound business practices in an industry and not merely impose them from above without consulting those affected by them.

Let us see how we have applied our basic economic philosophy to the problems of the Federal budget.

When we came into power we found that in the preceding 20 years there had been only 3 balanced budgets. Deficit financing had come to be accepted not as a necessary evil but as sound fiscal policy.

We rejected this philosophy completely. Our first budget with its inherited carryovers showed a $9 billion deficit. Our next three budgets, including the one for this year, were balanced budgets. In addition, the Federal Government has taken $25 billion less in taxes from the people during the past 3 years as a result of the tax cut we passed in 1954. We have reduced the national debt by $5 billion.

We believe that these fiscal policies have helped to create the confidence which has resulted in the greatest expansion of our economy in history during the past 4 years.

Let us now examine the 1958 budget. It is a balanced budget. It takes less from the economy than the budget of 4 years ago. But the fact remains that in dollars it is still the highest peacetime budget in our history.

I want to make one thing clear beyond question at this point. The budget as originally submitted by the President to the Congress represented the administration's best estimate as to how much we had to spend for our national security and to carry out the laws which the Congress had enacted.

But, consistent with the attitude we have adopted since we came into office in January 1953, we have pledged that we would continue to make every effort to keep actual expenditures below the estimated amounts.

That is why the President has instructed all agency heads not only to keep within their budget estimates but to effect any additional economies they can.

That is why he not only did not oppose but actually invited the cooperation of the Congress in finding any items in the budget which could be eliminated or reduced without damaging the national interest.

And that is why on his own initiative he has already indicated that on the basis of additional information he believes his budget estimates can be reduced by $1.8 billion.

May I for a moment digress to indicate my own as well as what I believe to be the administration's fundamental position with regard to Federal Government expenditures.

First, I believe that Government enterprise is by nature less efficient than private enterprise. Federal Government activity, therefore, should be limited to those areas in which private enterprise or local government cannot or will not render the services the people want and need.

Second, big government just like big business, and even more so, has a tendency to become inefficient and wasteful as it increases in size. We must constantly fight against waste, inefficiency, and duplication in Government operations.

I completely reject the phony fiscal philosophy of those who suggest that as the national income increases the expenditures of the Federal Government should increase in proportion. It is true that to the extent that a larger population requires larger expenditures the budget will necessarily increase. But it is sheer nonsense to suggest that Government should always take as much out of the national economy as the economy can stand. We should spend for Government only what we need to spend, even if this may be less than we are able to spend.

A sound American economy is as essential as a strong national defense if we are to defeat the forces of international communism. Our Government expenditures must never be allowed to reach or to remain too long at a level where they destroy the productivity of our economy. The present tax level, if continued indefinitely into the future, could seriously weaken the economy. Consequently, our objective must always be to reduce Government expenditures so that we can increase the amount individuals can invest in private enterprise which is the solid bedrock upon which real progress in America is built.

That is why I believe that the current discussion which is taking place throughout the Nation on the Federal budget will in the end prove to be a healthy development. In the past, the public generally has not been sufficiently aware of the fact that when the Federal Government does something the people pay the cost. As a result of the wave of tax consciousness which is sweeping the Nation the political demagogs who in the past have thrived on the slogan of "Let the Government do it," regardless of the cost in money or freedom, will find their audiences much less receptive than previously.

With these general principles in mind, I suggest we examine the reasons why the budget is as large as it is.

First, let me dispel two widely held misconceptions on this point. The increased size of this budget is not due to the initiation of new so-called New Deal spending programs. If all the new programs which had not previously been approved in the Congress were taken out of the budget, less than $300 million would be saved. And the size of the budget cannot be attributed to increases in foreign aid. The amount requested is actually $4.1 billion less in 1958 than in 1953.

The primary factors contributing to the size of the current budget are these: Eighty percent of the decrease is directly attributable to the higher prices the Government has to pay for both material and personnel. The other major factor is the increase in population of 12 million which has occurred since 1953 which results in increased demands on the Post Office and other service departments of the Government.

Turning now to the basic question, what cuts should and can be made in the 1958 Federal budget? As I have already indicated, the President has himself suggested a cut of $1.8 billion. To date, the Congress has approved cuts averaging approximately seven percent in the money bills which have been acted upon by both Houses. Up to this time, however, congressional action has been completed only on bills covering appropriations for other than so-called defense expenditures.

This, then, is the heart of the matter. Unless Congress decides to discontinue domestic programs it previously has approved, budget cuts as high as five to six billion dollars, which some have suggested, cannot be made unless the items for national defense are substantially reduced. Anyone who contends otherwise is just kidding himself and the public as well. Because approximately 75 percent of the entire Federal budget goes for the Defense Department, Atomic Energy Commission, interest on the debt, foreign aid, and other defense-related items.

How much can we safely cut from the amounts the President has asked for in these fields? The President has asked for $38 billion for the Army, Navy, and Air Force. No one would be so presumptuous as to claim that this or any other figure is exactly the right amount to spend for national defense. And no one would contend that in an establishment of this size there does not exist some inefficiency and duplication.

Under the circumstances, I believe these factors should control our decision. The major guaranty against war today is the strength of the United States and its free-world allies.

As I have indicated, reasonable men will disagree as to what the level of our military strength should be. But when men with the combined military, diplomatic, and business experience of Dwight Eisenhower, Arthur Radford, Charles Wilson, George Humphrey, and Foster Dulles, after months of study of information available to them from all parts of the world, agree that $38 billion is the minimum we should spend for our own security, I say that cutting the defense budget in any substantial amount below the level they have recommended would be a reckless and foolhardy action which on sober reflection the American people will not and should not support.

But now we come to the more difficult question. There are many people who say spending for defense at home is one thing, but the place to cut the budget is in the so-called foreign giveaway programs. It has been suggested that these programs could be cut anywhere from one to three billion dollars without risking any serious damage to the United States.

I believe the President gave an effective answer to these critics on Tuesday. I would like to underline what he said by stating simply that, in my opinion, the $4 billion we spend for our programs abroad is as essential a part of our national defense as the $38 billion we spend for our Army, Navy, and Air Force at home. And despite the waste and mistakes which are inevitable in such programs, we are getting more for our money in security for the United States in what we are spending abroad than we are in what we are spending at home.

Let us examine this amount item by item.

Approximately three of the four billion dollars goes to Korea, Indochina, Formosa, Thailand, Pakistan, Turkey, and other countries to assist them to maintain the armed forces needed for their own defense.

Most of these countries have common borders with Communist nations. If they were not able to defend themselves, the chance that they might be attacked would be increased. If they are attacked, we would inevitably become involved.

We had one experience of this type in Korea. That war cost us $18 billion and 157,000 American casualties. Putting it bluntly, it costs less to equip a few Korean divisions than to fight another Korean war.

In other words, if we do not help them to develop the strength which will enable them to defend themselves, our national security will require that we assume that burden ourselves. This would mean that we would have to spend billions more for defense than we presently are spending.

I submit then that cutting the defense portion of our foreign-aid programs can under no stretch of the imagination be held sound economy.

This leaves us with approximately $1 billion of the total foreign-aid program which is earmarked for economic assistance unrelated directly to military-aid programs.

Why should the American people be taxed to aid the economies of other countries who may not even be allied with us militarily? To find the answer to this question, let us examine the balance of power in the world today. There are approximately 1 billion people allied on the side of the free nations. There are approximately 900 million people under Communist rule, and there are another 700 million people in Asia, the Near East, and Africa who are classified as uncommitted or neutral.

It is to these uncommitted countries that the greater part of this billion dollars in economic assistance will go. I have visited most of these countries. I have seen our various programs in operation. I agree that some of them have been wasteful and badly executed. You can be sure that acting on the recommendations of the Fairless report and other studies, we shall devote every effort toward eliminating waste and increasing efficiency. But we don't scuttle the fleet because one ship proves to be unseaworthy.

I can state with complete conviction that I know of no expenditure being made by our Government which is more essential to our national security than this one.

The Soviet Union, Communist China, and the satellites are bending every effort to win these people. They are using offers of economic aid. They are spending millions for propaganda. For example, they consider Africa today as important a target as China was to them 25 years ago, and we know what happened there. They realize that if they can win a substantial number of the uncommitted nations to the Communist side they will gain the balance of power and people and resources in the world which will enable them to bring the free nations to their knees without the necessity of fighting a war.

The major danger which confronts the free world today is not defeat in a shooting war. We must never forget that the Communists gained over 600 million people since World War II through means other than overt aggression.

The people of the uncommitted nations are determined to have economic progress. They would prefer to gain that progress and keep their freedom and independence at the same time. I am convinced that if we do not help them, they will turn elsewhere for help. They will be forced to listen to the Moscow line which promises plenty at the cost of freedom.

This, then, is what is at stake—700 million people plus the greatest undeveloped natural resources in the world today. By helping these countries to help themselves through technical assistance, by making loans available to them for development as a supplement to the funds which will be invested by private enterprise, by standing ready to assist countries like Iran and Jordan when they are confronted with an economic emergency, we will effectively stop the Communists in their efforts to increase their sphere of domination, and we will, at the same time, help these nations to acquire and retain the economic and political independence with which international communism is completely incompatible.

We have been discussing our problems. Let us examine for a moment the problems of the Communists. There are definite signs of weakness in the Communist empire of today. The economic strain of armament and their foreign-aid progrems are beginning to tell on their economy. The education given to their executives is leading to demands for freedom.

History tells us that a dictatorship must have new victories in order to give its people reasons for their sacrifices in living standards. It must expand or its internal strains will ultimately tear it asunder. From 1945 to 1950, the Communists gained a vast empire and domination over 600 million people. In the past 7 years, they have been brought to a halt and the inevitable strain is beginning to tell.

I believe that we are now winning the battle for the world. Our military strength has been built to the point that the Communists are deterred from launching an attack. Our economic strength has aided in stopping their expansion by means other than war. If we can continue on our present course, we have a chance to win the victory we want without war.

This is no time to announce to the Communists and the world that we are tired of the struggle. This is no time to lose our vision and our courage. We Americans react magnificently when we are threatened with disaster. The Marshall plan, the aid to Greece and Turkey, the support of the Formosa resolution, our resistance in Korea, are all examples of this national characteristic. What we must do now is to demonstrate to ourselves and the world that we have the same will to win and willingness to sacrifice when we are inspired by the opportunity for victory without war as we have when we are frightened by the threat of defeat in war.

This, then, is the case as I see it for our defense and foreign-aid budgets. The President is the man primarily responsible for our national defense. He has indicated what he believes to be the minimum we should spend both at home and abroad if we are adequately to protect our security. The Congress has the power to appropriate less than he requests, but in doing so it must assume its share of responsibility in the event world developments prove those cuts to have been unwise. I am glad to report tonight that I believe support for the President's position is growing among both Democrats and Republicans in the Congress and that the prospects for approval of his program have substantially improved.

I indicated at the outset of my remarks that I could think of a number of subjects which would be more pleasant to discuss than the budget. I recognize that there has developed a great ground swell of opposition to Government spending all over the Nation and that this opposition is directed with particular vehemence against our foreign-aid programs. I realize that it would be far more popular either to ignore the subject or to go along with the tide of opposition.

But I believe it is the responsibility of the members of an administration to analyze the facts on such an issue, reach decisions which we consider to be in the national interest, and then to fight for enactment of our program by the Congress.

It is on that basis that I present the case for our defense in foreign-assistance programs tonight. I believe that they are necessary for our survival and that substantial cuts in the amounts we have requested will jeopardize not only our safety, but our chance for victory in the world struggle.

I have faith that as the American people know the facts they will not fail to meet the challenge which confronts them in this moment of destiny.

International Trade Promotes World Peace

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, May 27, 1957

Mr. KUCHEL. Mr. President, last Wednesday I made a speech in Los Angeles at the annual luncheon of World Trade Week before the Foreign Trade Association of Southern California on the subject International Trade Promotes World Peace. I ask unanimous consent that the text of my speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INTERNATIONAL TRADE PROMOTES WORLD PEACE

(Address by Senator THOMAS H. KUCHEL, Foreign Trade Association of Southern California, Los Angeles, May 23, 1957)

I am honored by your wish that I should speak at this annual luncheon of World Trade Week. This celebration originated in Los Angeles 30 years ago, and is now proclaimed each year by the President of the United States.

American trade and American industry have built the foundation upon which this Nation has assumed an undeniable position of economic and political leadership in the world, and our expanding commerce with sister nations has elevated steadily both their and our living standards, and—far more important—has contributed materially to the cause of freedom of their peoples and ours.

I salute the chamber of commerce whose leaders long ago recognized that California would continue to expand her interest in trade abroad. The planning and construction of Los Angeles and Long Beach harbors are splendid testimony to the vision of southern California pioneers. Harbor development there now encompasses a $101 million series of improvements, designed to double cargo handling capacity and increase berthing by 20 percent; $50 million of improvement at our International Airport will prepare this area for jet aircraft travel to every section of our planet. The Los Angeles Collector of Customs reports dutiable collections here are running well over a million dollars a week. The whole history of our State has been intertwined with foreign trade since the days when our forbears relied on sailing ships which beat their way around the Horn to come here from across the seas.

Ocean shipping and commerce overseas are more vital to the well-being of our 14 million people than ever before. Last year, California exported over $1 billion worth of goods and services. In the 1890's, a billion dollars represented the entire export value of the Nation. America's exports for last year are estimated at $23 billion, a vast increase over the $19.9 billion for 1955. Today, over half the employees of our State work in industries which figure significantly in foreign trade—such as aircraft, shipping, motion pictures, canned and processed foods and electrical machinery.

In the early days of our Nation, the struggling colonies had to trade to live. We fought the War of 1812 to confirm that right. But, by the period just prior to World War II, we had such a large domestic market and such ample domestic production, that our export trade was relatively less important. The roughly 10 percent of our production which we disposed of overseas was vital to a few industries but it was not a matter of economic life or death to most.

Now, we are compelled to make certain that we receive strategic raw materials from abroad, including not only such materials as rubber and tin but the new metals and metallic products essential in this nuclear age. And the margin between profit and loss is written for an increasing number of industries in their sales abroad. In this connection, I believe the Federal Government, through such agencies as the Export-Import Bank can be of real assistance to some California, and American, manufacturers, like our aircraft producers, in the stiff competition in which they are now engaged for foreign sales. Attractive credit arrangements are an important incentive for purchase here just as they are when a housewife considers buying furniture. The Export-Import Bank has been of great assistance in maintaining American sales abroad in the past and will, I feel sure, supply additional help in the expanding overseas trade of the days ahead, which, of course, will add to the stability of our employment here at home.

It is stimulating to think that American products and American know-how are raising standards of living abroad and find their way into hitherto remote parts of the globe. For no nation has more to offer the world, nor needs so many of the world's products, than our own United States.

Since California borders on Mexico, I think it is appropriate to note that world trade trends are changing. Whereas Europe was long the United States' best customer, it is interesting to note that Latin America is today, although by no very great margin. And one of the countries in that area which has developed fastest in recent years is, I am happy to say, our sister Republic just south of us.

When the Suez Canal crisis occurred last fall, the interdependence of nations on foreign trade stood out in bold relief. Complete economic strangulation to all the countries of free Europe became an immediate hazard. Fuel for travel, for heat, and for the industrial complex of each of these nations suddenly began to diminish. Gasoline rationing went into effect. Buildings and homes went unheated in a winter of severe temperature.

The interruption of foreign trade brought on by the ominous moves of Egyptian dictator Nasser brought on a grievous crisis in the Middle East and in Western Europe and, beyond that, poised for all the world the horrible possibility of a third world war. That it did not ensue, the peoples of the world may be grateful. The canal closing and the hostilities which followed brought home, once again, that diplomacy and international relations cannot be conducted in a vacuum, and that foreign trade is indispensable for nations to maintain their freedom.

Egypt's intransigence of last fall had the most far-reaching effects on foreign trade. The interruption of normal channels of commerce required wide diversion of oceangoing vessels from usual routes, and necessitated longer runs through the Panama Canal or around the Cape of Good Hope. More ships were called for to perform essential services. There was an impetus for planning of larger and longer range oil tankers. Consideration was given—and is being given—to alternate passages to the Suez. Great numbers of dry cargo ships came out of mothballs—all due to the sudden shipping shortage which followed the arbitrary closing of the waterway linking the Mediterranean and the Red Sea.

Congress, by a bipartisan vote, adopted President Eisenhower's Middle East resolution which in the intervening weeks, in my judgment, has contributed to the prevention of international hostilities and to restraining the growth of Soviet influences in the Middle East. The whole complex problem brought on by the Nasser move remains a most serious threat—for example, her immoral and illegal refusal to permit Israeli ships to utilize the canal, and now, paradoxically, the troubles she is encountering from her erstwhile friends, the Soviet, Czechoslovakia, and Poland, over canal payments—but I do not believe the canal question is insoluble. I mention it here to indicate its impact not alone on peaceful trade, but, beyond that, on peace.

A substantial number of the cargo craft hauled out of our laid-up fleet has been used most successfully in a foreign-trade program approved by Congress 3 years ago. Its first full year of actual operation ended last June 30, and Congress is presently considering continuing it.

Under this legislation, the Federal Government is disposing of food and fiber stored in Government warehouses in foreign trade. The act is designed to assist in solving a particular problem. It is not a permanent undertaking. It benefits American shipping and American labor. The so-called 50–50 provision requires one-half the exports—with a notable exception of direct significance to California—must be moved in American bottoms.

The law permits foreign-flag vessels to carry fruits and vegetables, warranted, I think, by the fact that refrigerated ships must be used, an important time element frequently is involved, and consignments often cannot be handled on regular routes and regular schedules.

World Trade Week is an appropriate occasion to look closely at what this program has achieved. Since its inception, we have made 87 agreements with 30 countries. Normal commercial procedures are followed, based largely on letters of credit. American financial houses participate, American workers benefit, American shipping is utilized, overseas market development is stimulated, and the clouds over American agriculture are breaking up.

Recent improvement in agricultural trade has been general in nature. Last year, intensified demands from abroad for American agricultural commodities carried shipments to an alltime peak. They comprised nearly one-fourth of the entire nonmilitary export total and jumped in value by $1 billion to $4,200,000,000.

Under the act, through last February, agreements had been negotiated to sell $1,769,000,000 worth of products. These included items produced in California, such as rice and cotton.

The aggregate cargoes in the fiscal year 1956 amounted to $427,000,000 in value. They represented 12 percent of all United States agricultural exports. This year, the proportion is expected to rise to 16 percent. Of the crops in which California has most interest, rice is going to 7 countries, cotton 17, and fruits and vegetables to 4. In the process, ocean transportation costs amounted to $221,000,000, a good share going to United States carriers under the 50–50 clause.

Secretary of Agriculture Benson just a few days ago said it is noteworthy that since the start of this program under Public Law 480 we have been able to hang up the "sold out" sign for a sizable list of commodities, including cottonseed oil, cottonseed meal, hay and pasture seeds, soybeans, linseed oil, and tung oil. He added that stocks of grain sorghums, rice, barley, butter, dry milk, and wool have been reduced to low levels.

In this accomplishment, incidentally, there is relief for the taxpayer. Only a couple of years ago, it cost our Government $1 million a day for storage charges on farm surpluses which it held. In addition, our country has swapped a billion dollars' worth of surpluses for strategic materials for our defense.

Under the original law, Congress laid down a condition that our Government could barter only with friendly nations independent of Communist Russia. Due to a feeling of hopefulness stemming from events last fall in Hungary and Poland, suggestions have been made that the anti-Communist restriction be discarded. For my part, I believe the restriction is justified. I voted to keep it. There is, in my view, abundant reason for this condition. I do not believe our Government should be a party to bartering with a government which is subservient to the U. S. S. R. While I was in the minority in the Senate on this issue, I note the House Agriculture Committee put the limitation back in the bill. House action is still to come.

In the era through which we now journey, foreign trade by Americans is not a simple business of going abroad, selling what one has to sell and buying what one has to buy. We, all of us, recognize the deadly menace which international communism poses to the very existence of every free Government and every free man throughout the world. Recognizing it, our Government, over the years, has taken steps to reduce and to resist the menace. That is why the United States has entered into agreements with free friends to stand together, to pool our defensive strength, and to treat a Communist attack against one of us as an attack against the rest of us. That is why, also, the Congress has adopted legislation regulating the manner in which foreign trade can be carried on with Communist Russia and her satellites, those unfortunate countries whose governments and whose independence have been enveloped and destroyed through Soviet infiltration and subjugation.

Under the Export Control Act, the United States maintains selective controls over exports to the U. S. S. R. and its European vassal states. Since 1949 we have participated with other governments in an international control system, on a selective basis, in the interests of our mutual security. They are designed to prevent the shipment to potential aggressors of materials which would contribute to their military potential. Goods thus embargoed include arms, ammunition, atomic-energy materials and, generally, such industrial commodities and equipment as would contribute significantly to war potential. Our laws do not prevent trade between our people and people in the Soviet bloc. They may export nonstrategic goods to those destinations as they may desire. Those are business transactions between peoples, as distinguished from governments, where I indicated earlier, our present policy requires our Government to barter farm surplus for strategic material only with countries free from Soviet domination or control. Congress has preserved the right of our Government to relieve famine and to alleviate distress among peoples as we did in the feeding of Hungarian refugees in Austria and in aiding the victims of floods in Iran and Afghanistan.

In all our Federal laws on this subject of foreign commerce, we must constantly consider the question of whether we strengthen the slave yoke of communism by trade with the Soviet and its satellites.

We on the west coast are keenly aware of the enslavement which communism has brought to the Chinese mainland. The Chinese people have been good friends with us throughout our history. Historically, we have enjoyed mutually profitable trade relations with them.

Our national ties run with the Republic of Free China. We sit with her representatives in the United Nations. We have a mutual security pact with her. Red China, on the other hand, has been branded by the United Nations as an aggressor in the Korean struggle. This slave state continues to hold in Communist prisons American military and civilian personnel in contravention of the most fundamental principles of moral law. She has been repeatedly refused membership in the United Nations. America does not recognize her diplomatically. Our two great political parties have repudiated her totalitarian regime.

I wish to recall the problem of the security of our country, as it pertains to the Far East in the words of General MacArthur. He referred to a chain of islands—including the Free Chinese area of Formosa and the Pescadores—as constituting a protective shield to the America. He said:

"The holding of this littoral defense line in the western Pacific is entirely dependent upon holding all segments thereof, for any major breach of that line by an unfriendly power would render vulnerable to determined attack every other segment * * *

"For that reason, I have strongly recommended in the past as a matter of military urgency that under no circumstances must Formosa fall under Communist control. Such an eventuality would at once threaten the freedom of the Philippines and the loss of Japan and might well force our western frontier back to the coasts of California, Oregon, and Washington."

Those same views are shared by your Government in Washington. They are some of the reasons which prompted me to vote against the Red Chinese regime. Our Government does not permit trade with Communist China, North Korea, or North Vietnam. America's overriding interest, in trade as in all else, is the maintenance of our own freedom. And the protective shield concept of MacArthur is sound. Meanwhile, rumblings of discontent come from Red China. Some ideological cleavages with Moscow are in the making. And we are not without good friends, aside from Free China, the Philippines, Japan, and Korea, among the peoples of Asia.

Listen to the sturdy words of the gallant President of the Republic of Vietnam as he spoke to Congress earlier this month:

"Our Republic was born among great suffering. She is courageously facing up to economic competition with the Communists, despite heavy and difficult conditions, which become daily more complex. Vietnam nevertheless has good reason for confidence and hope. Her people are intelligent, have imagination and courage. * * *

"Your and our fight is one and the same. * * * We too will continue to fight communism."

Thus, did the President of Vietnam express the same fundamental concern which is in the hearts of Americans and freedom-loving human beings wherever they may be. The fight against communism will continue. It has required of all of us great sacrifices—sacrifice of American men in the wars in which we have lately been engaged, sacrifice of money to maintain a competent deterrent in our defense department.

This country is now at peace, however, difficult and disturbing it may be. The Congress is now confronting the question of cost of our Government with particular emphasis on the needs of our own security. All of us want our Government to be strong so that all of us may be free. But I have no doubt that our people also want our Government to live within its means and to promote a healthy national economy by practicing economy in its own affairs. In this regard, I wish to recall that your Government balanced its budget in the year ending last June 30, 1956. This coming June 30, our budget for fiscal year 1957 will be balanced. Aside from the balanced budget of the 80th Congress, these are the only times in the last quarter of a century that our Government has lived within its means. The President has recommended a budget for the fiscal year ending June 30, 1958, which again will be in balance. In the consideration of that budget, I assure you, Congress will painstakingly endeavor to find any areas in which curtailment of expenditures can be achieved without damaging our national interest. So will I. Last week the Senate reduced two appropriation measures below the level approved in the House of Representatives after it had cut them. Of this, I give you my word: We will reduce expenditures wherever consonant with the national interest. We will again balance the national budget, and I venture to predict, if all goes well, the Congress next year will consider and approve tax reduction legislation.

By far the largest portion of Federal expenditures is in the field of defense and foreign policy. In the field of defense I believe President Eisenhower is uniquely qualified to determine the needs of the Nation. This does not mean that Congress or its membership should abdicate its constitutional responsibility carefully to sift each spending proposal. It does not mean that Congress should be a rubberstamp. Neither our people nor the President want that. It does not mean that Congress should refuse to consider recommendations from creditable sources in the interests of economy. For example, on one point, in the field of defense, I find myself in utter disagreement with the Bureau of the Budget of the administration. The head of a Defense Department committee, Mr. Ralph Cordiner, president of the General Electric Co., has stated that 87 percent of the technically skilled Armed Forces personnel leave the Armed Forces as fast as they can for greater incentives in civilian life, and that 4,000 Air Force pilots left the service in the fiscal year 1955, representing, according to his figures, a training loss of almost half a billion dollars. Modern weapons of defense require skills and training far greater than in years gone by. The committee recommendations are for a pay system in the Military Establishment based on skills rather than on seniority. Speaking for his committee, he says that approval of these recommendations would save $5 billion a year by the fiscal year 1962. Whether that is a correct figure or not, there is no question in my mind but what his proposal merits the most careful congressional consideration and I regret very much that the Budget Bureau turned it down. Incentive legislation to help skilled men in peacetime military service is both good defense and good economy. I mention this to indicate to you an example of current fiscal problems connected with defense upon which men disagree, and upon which I have, as one of your representatives

in the Senate, my own views as to what best serves your interests.

The problems of foreign policy and foreign aid become increasingly complex and far more subtle as the years go by. I cannot honestly indicate to you what will be the final outcome of this year's foreign policy and foreign aid proposals. I can tell you of my own feelings. I believe it can be clearly demonstrated that much of our foreign-aid program has been of direct benefit to the security of the American people. I believe the strength we have contributed to the North Atlantic Treaty Organization has been a major deterrent against Communist infiltration and destruction of Free Europe. Free Europe contains 200 million people whose salvation from the ugly fate which has befallen their satellite neighbors works in the interest of our own Nation. Foreign aid has underwritten a portion of the cost of maintaining defensive armies in Korea, in Formosa, and in Turkey. To feed, house, clothe, and pay an American GI requires an annual expenditure of $3,350. To do the same for a Korean soldier in Korea cost $234, for a Free Chinese soldier in Formosa $127, and for a Turkish soldier in Turkey $235. I believe that our military assistance to such nations as these has been both economical and in the interest of American freedom. In a real sense helping to maintain the defensive strength of those countries adds economically to our own defense.

In my view, foreign aid must continue. I believe, however, that it should be upon a more selective basis, and I shall vote accordingly. A special Senate committee has recommended that, consistent with national security, efforts should be made to reduce the rate of expenditures for military and supporting aid. I agree. It suggests that economic aid should be on a loan basis. I agree again. Indeed, I have voted in this fashion in past sessions. These are some of the considerations which will guide me in the Senate when the problem is before us in the weeks ahead.

Whether you are engaged in foreign trade or in business here at home, your interests and your country's interests rest upon a sound national economy which our Government should encourage, and upon a peace with justice in the world which our Government should strive to attain. These are the objectives which are set before us and which we intend to reach.

Preparedness or Destruction

EXTENSION OF REMARKS

OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, May 27, 1957

Mr. CASE of New Jersey. Mr. President, the Disabled American Veterans is headed this year by National Commander Joseph F. Burke, of New Jersey. Commander Burke spoke before a convention of the Maryland Department, DAV, on Saturday, May 25, 1957, about the need for adequate defense preparedness as the greatest deterrent to any potential aggressor.

We can all appreciate the deep feelings of men like Commander Burke on this subject. I commend to the attention of my colleagues his remarks opposing reduction of essential military expenditures, and ask unanimous consent that Commander Burke's speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PREPAREDNESS OR DESTRUCTION

(Address of Disabled American Veterans National Commander Joseph F. Burke before the DAV Maryland Department convention, Baltimore, Md., May 25, 1957)

We are all aware, of course, of the fact that eligibility for membership in the DAV is not an honor which can be conferred, but rather DAV membership is limited exclusively to those Americans who were either wounded, gassed, injured, or disabled by reason of active service in the United States forces during time of war. Many of us wounded and disabled veterans are much more aware of the fact, than is the average citizen, that an unnecessarily large number of us were called upon to sacrifice parts of our bodies or our health in the military service of our country during time of war because our country had not had an adequate national-defense program prior to our involvement in war.

Inadequate preparedness and inadequate appropriations for national defense purposes do not help to perpetuate and maintain peace throughout the world. Indeed, if the peace of the world should be shattered by the crazed ambition of some dictator or some aggressor nation, an inadequate national defense preparedness program on our part may result in our involvement in another terrible war of defense at a cost in human life and suffering and of material wealth beyond our imagination. Adequate preparation to prevent war is indeed costly. Inadequate preparation may mean our complete annihilation.

The best quarantee against war is adequate preparedness of war. The best method of warning any potential aggressor nation not to risk a future war is for our country to be prepared at all times for war.

As American citizens, we know full well that America has no ambitions to dominate any other nation or to acquire territory. As members of the DAV, bearing the brunt and scars of battle on our bodies, or in decreased health, we may appear unique in advocating such a program as would eventually do away with such an organization as the Disabled American Veterans. We want no more eligibles, we want no more war or a new crop of wounded and disabled veterans which is the inevitable cost of war.

You may wonder why I, as national commander of the DAV, am speaking out in this fashion on a subject that would perhaps be better left to the experts. In all modesty, I insist that as national commander of the DAV, I represent a group of experts who know all too well that war means and who hate war because we have served our country in time of war.

Am I to be censured because I am fearful that if our Nation should fail to do its utmost to prepare for and prevent an unwanted war because of the desires of some Americans to have their taxes reduced by calling for cuts in the budegt for national defense purposes? Such a shortsighted policy can only prove to be pennywise and pound foolish. In other words, if a potential aggressor nation—and you all know that I am speaking about the world force of communism as centered in Russia—should decide that the United States has fallen short in some phases of its national defense program that would make it vulnerable to attack, then that nation might decide to risk world war III. On the other hand, if such a potential aggessor should observe that our technological and research programs are continuously advanced, and that the American people are united in their willingness to pay the cost so that we can continue to develop the best scientific methods of defending our country against any aggression, then any such nation would decide not to risk taking any steps which might lead to a devastating world war III.

It is safe to say, in looking backward, that if the United States had had an adequate military preparednes program in 1914, that fact would have been taken into account by those whose actions were responsible for World War I. They would, in advance, have realized the probability that America could be quickly mobilized and prove to be the balance of power in any war that might be started, and on the basis of that realization would not have taken the steps that lead to World War I.

From stories I have heard from former DAV representatives before the House Committee on Appropriations, which prior to World War II, declined to grant additional appropriations for national defense purposes, because of a false sense of security and the cost involved, I am quite sure that if such comparatively minor appropriations had been made, enabling our Armed Forces to conduct the necessary scientific research and developmental programs, that the then dictator in Germany would not have completely discounted the power of the United States as a potential power bearing upon the results of any war that he might start in Europe; would not have taken the steps that did lead to World War II. Because we were not ready to prevent World War II in Europe because of our pinchpenny methods we became involved in a world conflagration that cost us some $3 billion and about half a million lives—American men and women.

Of course the story in Korea is too close a memory for us ever to forget the mistaken impression we had that peace in our time was secure and that we could afford to withdraw our might from vulnerable parts of the world that still needed our protection. I hope that America will not repeat the mistake made prior to World Wars I and II and Korea, the mistake of cutting down on appropriations considered by our military experts to be of essential importance to our various scientific developmental programs aimed at a more effective military defense program. This does not mean to support any waste or extravagance of Government funds, military or otherwise. We, who must continue to pay the price of battle in our physical handicaps incurred by reason of our services, have the right—yes, the responsibility—to warn our fellow Americans and potential disabled veterans of future wars that it is of infinitely greater importance to make every financial sacrifice that might be needed for the development of the most effective military program that will prevent war than to again accept a pennywise policy that may lead us all to destruction.

The direness of a world war III is apparent. It could mean the ruination of our very civilization. No taxes that we might now have to pay to avoid such a catastrophe would be too great a sacrifice. Unfortuantely, Godless communism will not be deterred by any consideration of justice, but only, in my humble opinion, because of the fear that its own country would be devastated by a more powerful enemy. Force is the only law they understand. Force is the only god their leaders obey and respect. The mental disease of communism is an insidious cancer that must be removed if men are to remain free and peace rule the world.

I am convinced, as I think all Americans should be, that we cannot rely upon any agreements that might be made by the forces of communism not to start any military aggressions, except as fortified by our own military power.

I want you to understand that I am heartily in favor of the United Nations, I am heart-

ily in favor of our country assisting other democratic countries and peoples who desire the freedoms we have here in America, including the common people under the communistic dictatorship who likewise yearn for such freedoms. Our willingness to strive toward the ends of mutual understanding and respect by all nations, through the United Nations, extends the hope of the fulfillment of such a dream, but in the meantime, let us not become so economy minded as to diminish in any way the development of our national defense program. Let us keep in mind that adequate preparedness will enhance the time needed for us to struggle again for the minds of those infected by the mental disease of communism which, unless cured some day by peaceful means, will always be a deterrent to the cause of world peace; however, I believe the factors of religion, decency, and understanding are among the elements that some day will help us reach that understanding. The defeat of communism will be the greatest contribution of civilized man himself against man's inhumanity to man.

I feel deeply about the subject of peace. As a man who was born during World War I, severely disabled in World War II and expecting to die in a world war III, unless we, as a nation, are ever vigilant of the freedom of liberty and the right of human understanding as opposed to the known record of the inhumaness of mankind down through the ages, I cannot help but feel that we must continue to hope and pray and work for the day when the last Korean veteran will have died peacefully in his bed and the words disabled veteran which are synonymous with war will no longer have a useful purpose in the English language and that this Nation, under God, in the cognizance of human rights and decency will have a world with peace, a world with understanding, a world with dignity and purpose that our Creator ordained for us. May the day come when only the revered memory of our war dead and disabled veterans finds its rightful place in the keystone of the historical arch of our great Nation that has succeeded in bringing lasting peace to the world.

Budget Controversy

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Monday, May 27, 1957

Mr. SALTONSTALL. Mr. President, David Lawrence is a competent analyst of the Washington scene. He has made some interesting and pointed conclusions on the controversy over the budget and President Eisenhower's position. His article appeared in the Washington Evening Star on Thursday, May 23, and I ask that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CONFIDENCE OF FEELING RIGHT—PRESIDENT'S PATIENCE IN FACE OF CRITICISM ON BUDGET AND OFFICE EVOKES PRAISE

(By David Lawrence)

Unruffled by the storms of criticism that have been raging around him because of the size of the Federal budget in a growing nation, President Eisenhower exudes the confidence of a man who feels he will be proved right and that the country will support his views.

Anyone who observed the President at his press conference yesterday, noting the frankness of his answers to questions, his intimate knowledge of the many topics brought up by the newsmen and his conciliatory and distinctly tolerant attitude toward his critics and opponents, must have come away with a feeling that here is a personality with the patience and calmness of a Job.

There are those who would have the President enter the lists and swing out boldly against this or that opponent inside or outside his own party. There are those who advise him to use all the arts of the demagog in his battle with Congress. And there are those who have been saying that his television addresses wouldn't be convincing because of their restraint and forbearance.

But how is public opinion formed in America—is it changed overnight by a single speech? Or does it take time for ideas to talk to neighbors and come to conclusions—perhaps not in time for the editions going to press the day after a presidential address on the television, but in due course?

The President is a rare personality in American history. He is unlike any other man who has ever been in the White House. He can take all sorts of criticism and can objectively consider the good and disregard the abuse and the emotionally extreme. Some of his comments are reminiscent of Lincoln's phrase:

"With malice toward none."

The reporters, for instance, asked him why he didn't go after those in his party who disagreed. He replied: "I have no right and no desire to punish anybody. I am committed to the support of people who believe, as I do, that the Republican platform of 1956 must be our political doctrine."

Unfortunately, many of the critics haven't read the 1956 Republican platform lately. They would find, if they did, that it says plainly that "further reductions in Government spending" are to be obtained but "without weakening the support of a superior defense program or depreciating the quality of essential services of government to our people?"

The same platform pledged tax reductions, but only "insofar as consistent with a balanced budget" and the necessity for a "gradual reduction of the national debt."

Yet, less than 7 months after Eisenhower was elected by an overwhelming vote, there are people who say he has repudiated his platform. Criticism of this sort has attained a nationwide momentum, along with a whispering campaign that the President really isn't in good health or that he isn't up to the job or is relaxing and doesn't care to fulfull his responsibilities.

How little those who spread such unfounded gossip really know about the indefatigable labors of Dwight Eisenhower. At the press conference this week a reporter asked if the President had been "filled in" on the case of the American soldier who is accused of killing a Japanese woman.

"You have used a strange word—'filled in,'" remarked the President rather ruefully. "I have been talked to about it at very great length, and both the State Department and the Defense Department are working on it very hard so that we keep our international agreements, but that we make certain that no injustice is done to any American."

Back of that comment was the story of a long conference with the Secretary of the Army and then a long talk with the Secretary of State—neither of which conference was reported in the press. Not much is known by the outside world of the many hours hat the President works away from the office, in the living rooms of the White House.

The President is in good health, his mind is lively and alert, and his interest in the duties of his office is as sincere and faithful as the day he first donned the uniform of a soldier.

The persistently adverse propaganda about the President is hard to understand in view of the presence of hundreds of alert reporters in Washington who can dispel such misinformation as has been spread by unfriendly critics in the political world.

But the tide is turning. The initial response from the second television address has been overwhelmingly favorable. The President is relying on the simple theory that commonsense and facts will win the case in the court of public opinion.

To quote a Kipling poem, Dwight Eisenhower may find that "If you can keep your head when all about you are losing theirs and blaming it on you," and if you can "be lied about" yet "don't deal in lies," or "being hated, don't give way to hating," the goal—in this case the support of the country—will be attained.

Wheat Quotas in the Upper Midwest

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Monday, May 27, 1957

Mr. YOUNG. Mr. President, recently Mr. M. W. Thatcher, one of the great agricultural leaders of the upper Midwest, made a very effective argument in behalf of a favorable vote for wheat quotas in the forthcoming referendum to be held on June 20. He presents a very objective analysis.

He also presents a very objective analysis of present grain prices as they would affect most other farm commodities.

Mr. President, I ask unanimous consent that his radio talk of May 22, 1957, be printed in the Appendix of the RECORD.

There being no objection, the talk was ordered to be printed in the RECORD, as follows:

Can you wheat farmers operate on $1 wheat? As a matter of fact, can you corn and hog and beef and dairy farmers keep your heads above water if wheat prices go down to $1 a bushel in 1958? Those are questions you ought to think over carefully—very carefully—because the decision will be made on June 20 when wheat farmres of the Nation vote in referendum. Every wheat farmer now knows the issues at stake. The question on the ballot is, "Will you accept marketing quotas on your 1958 wheat crop?" If you vote "Yes," present acreage controls will continue, and the price support on 1958 wheat will be $1.78 a bushel.

Sure, that's inadequate. But even this Bensonized $1.78 a bushel is better than what will probably happen if you wheat farmers vote "no" on June 20. Marketing experts—after taking a close look at wheat supplies and production—predict that the wheat price will plunge to $1 a bushel on the free market if the vote is "No." Sure, you could plant all the wheat you want, but to what avail if it costs you more to grow it than you can sell it for.

But $1 wheat would do more than just break the wheat farmers. It would start the disaster-price ball rolling among other crops and farm products. Even the diversified farmer, with an egg in every basket, would get rolled over a barrel. If that seems a little farfetched to you, let's look at it this way. One dollar wheat is about 40 percent of parity. That's almighty cheap wheat—good feed for beef and dairy cattle and hogs and chickens. But if wheat's a dollar a bushel for feed, what are other feed grains

worth in the feedbox in terms of pounds put on the animals, and milk in the cooker, and meat on the counter?

Well, it figures out about like this. If wheat sells for $1 a bushel—and there's plenty of it around the country to fill up the feed channels—then corn is worth about 65 cents a bushel—oats about 35 cents—barley 55 cents. Cheap feed. And when you start pouring cheap feed into your animals, you eventually end up with cheap animals, too. That's the record, and the boys who doublecheck the statistics will tell you that it has always worked that way. So on the basis of dollar wheat, you can end up with hogs and beef worth about $8.50 a hundred—eggs 19 cents a dozen—and butterfat 30 cents a pound.

Yes, it could happen that way. But for four straight years wheat farmers have help stave off an all-out price blowup by voting "yes" to keep the wheat program under the farm-price structure. And June 20 is the day to do it for the fifth time in a row. Vote "yes" and build and organize GTA—the co-op way.

Wasteful Spending by the Department of Defense

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, May 27, 1957

Mr. JOHNSTON of South Carolina. Mr. President, I have before me 2 editorials from 2 outstanding newspapers in South Carolina, commenting upon a news release which I issued regarding the wasteful spending of money by the military on unnecessary luxuries. One editorial is from the Anderson Independent of May 23. The editor of that paper most appropriately comments:

The defense setup needs fewer limousine-riding chiefs and more decently paid Indians.

The second editorial is taken from the Aiken Standard and Review of May 21, and states that:

All one has to do is to look around, and there will be brought home the fact that today taxpayers are being oppressed, while around them unnecessary waste of the people's money is going on.

Mr. President, these editorials represent the thinking of the people of South Carolina on his subject. I ask unanimous consent that the editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Anderson (S. C.) Independent of May 23, 1957]

TOO MUCH MONEY IS BEING WASTED IN THE SACRED NAME OF DEFENSE

No Andersonian or any other American in his right mind objects to developing and maintaining an arsenal of weapons and manpower sufficient for Uncle Sam to be able to talk firmly and wave a big stick.

Force is the only language understood and heeded by the imperialists of Communistic Russia.

On two occasions is as many weeks President Eisenhower has appealed to the people to stay the budget-cutting hands of Congress. The President has voiced especial concern that cuts may weaken the national defense.

Fundamentally the President is right. Yet he and the Department of Defense are on a spot of their own making in that the people have not been kept fully informed upon the aims and the actual needs.

Rather, Defense Secretary Wilson and the military bureaucrats have obviously conspired to keep information from the people—information that by no stretch of the imagination could be of aid and comfort to a potential enemy.

The American people desire Armed Forces capable of defending the land and ready to retaliate in event of attack. They do not believe that it is necessary nor desirable to create a military Frankenstein in order to achieve such a measure of security.

An unhealthy attitude is demonstrated, for example, by the reply Senator OLIN D. JOHNSTON, of South Carolina, received recently in reply to pertinent questions asking the numbers, types, costs, and relative information concerning all "nonmilitary type" vehicles used by all branches of service around the world.

"I have been advised by the Pentagon," JOHNSTON disclosed, "that if the Defense Department were to answer my letter, it would cost an estimated $40,000 to assemble the information. This in itself shows how ridiculous military nonessential spending has become" and how loosely it is controlled.

He went on to charge that taxpayers' money is being squandered on fancy chauffeured limousines and station wagons. He declared, "the military has so many chauffeurs and limousines scattered over the world it advises me the task to count them or determine the cost of chauffeuring and maintaining them is nearly impossible."

The Senator declares that "the streets and highways leading in and out of Washington are swarming with limousines and station wagons chauffeured by military personnel in and out of uniform to convenience officers and men of every description and rank."

Realizing the necessity of spending on planes and tanks, Senator JOHNSTON said he wants to know how much they are spending on the luxury items.

The Senator, even though bucking the closed Pentagon corporation, is on the right track. Millions that could be saved by cutting out the frills and furbelows could be used to increase the pay and bolster the incentive of men and officers who will be called upon to do any necessary fighting.

The defense setup needs fewer limousine-riding chiefs and more decently paid Indians.

[From the Aiken (S. C.) Standard and Review of May 21, 1957]

NO ELABORATION NECESSARY

Every American taxpayer, laboring desperately to make ends meet in this era of excessive taxation upon every governmental level and period of inflation when the dollar is worth only about 48 cents, should be vitally interested in this news release from the office of Senator OLIN D. JOHNSTON of South Carolina pertaining to the Department of Defense and its "squandering taxpayers' funds."

All one has to do is to look around and it will be brought home the fact that the Senator does have a basis of complaint and that today the taxpayers are being oppressed while around him unnecessary waste of the peoples' money is going on.

Not only is it true in Washington, in the Nation, abroad, but is very true in your own community if you but notice.

The news release follows, and nothing today could fill these editorial columns more fittingly and enlighten the people more as to just what is going on under the guise of "necessary and mandatory defense."

Senator OLIN D. JOHNSTON (Democrat, South Carolina) last week accused the Defense Department of "squandering taxpayers' funds on fancy chauffered limousines and station wagons" and said, "The military has so many chauffeurs and limousines scattered over the world it advises me the task to count them or determine the cost of chauffering and maintaining them is nearly impossible."

JOHNSTON charged that "the streets and highways leading in and out of Washington are swarming with limousines and station wagons chauffered by military personnel in and out of uniform to convenience officers and men of every description and rank."

The South Carolina Senator released a letter he sent Defense Secretary Wilson on May 9 in which he asked for the quantity, types, costs, and related information concerning all "nonmilitary type" vehicles used by all branches of the service around the world.

JOHNSTON demanded to know upon what conditions did certain officers and men receive chauffeured limousine service, how these cars are purchased or leased, from whom, and how much the whole show costs down to the last detail.

JOHNSTON said it was appalling to learn from the Defense Department that it was practically impossible to tell how much they were paying for these commercial-type cars or how much it was costing to operate them or how many men were being used to chauffeur them.

"I have been advised by the Pentagon that if the Defense Department were to answer my letter, it would cost an estimated $40,000 to assemble the information. This in itself shows how ridiculous military nonessential spending has become and how loosely it must be controlled."

JOHNSTON said he had advised the Defense Department to answer his letter as best possible in the hope of getting some sort of idea of the situation.

"We've heard a lot from Eisenhower about how much planes and tanks cost, now I want to know how much they are spending on luxury items. I want to know, too, why these military people can't provide their own transportation to and from work." Senator JOHNSTON said he drives to work every day in his own car and at his own expense and that other Senators and Congressmen drive their own cars to work, so why can't these military people do likewise.

"The military is flaunting the tax-weary American public with their extravagant living and operations at Government expense. I know I probably will not be very popular around the Pentagon because of all this, but it is time somebody got behind this thing and straightened it out."

JOHNSTON said he had forwarded a copy of his letter to Senator RICHARD RUSSELL, chairman of the Senate Armed Services Committee.

An Easy Essay on Conservation

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, May 27, 1957

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a document entitled "An Easy Essay on Conservation."

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

AN EASY ESSAY ON CONSERVATION

State Senator I. N. Curtis came up with an essay which he said won a contest on soil conservation for an Indian:

"White man crazy. Cut down tree. Make big tepee. Plow hill. Water wash. Wind blow soil. Grass gone. Door gone. Windows gone. Whole place gone. Buck gone. Papoose gone. Squaw too. No pigs. No corn. No plow. No hay. No pony.

"Indian no plow corn. Keep grass. Buffalo eat grass. Indian eat buffalo. Hide make tepee. Make moccasin. Indian no make terrace. No build dam. All time eat. No hunt job. No hitchhike. No ask relief. No shoot pig. Great Spirit make grass. Indian no waste anything. Indian no work. White man loco."

The Budget

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Monday, May 27, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Usual Budget Outcry," from the Asbury Park Evening Press, Asbury Park, N. J., of May 15, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

USUAL BUDGET OUTCRY

In 1952, for the first time in 20 years, the Republican Party elected a President. Now, less than 5 years later, a small, noisy, diehard segment of the party is sniping at the man who brought them their first victory by attacking his foreign policy and his budget.

It is hard to believe that these complainers are the same persons who, during the New Deal, prayed daily for a Republican—any Republican—who could defeat that awful man in the White House. Such a man was found in General Eisenhower and everyone who looks at the picture realistically knows that General Eisenhower won the Presidency because he was liberal, yet sensible; idealistic, yet practical; and very much in tune with the demands of the 20th century rather than the 19th.

Consider the country's present foreign policy. Do these persons who criticize the President's foreign policy prefer the dismal mess he inherited when we were at war in Korea—politely called a police action—and young Americans were being killed for a cause which neither they nor their elders understood? Does the United States Chamber of Commerce, which can be usually counted upon to take the backward look and raise it hackles at the very mention of the word "budget," prefer a different sort of foreign policy involving a shooting war? One would think that on practical considerations alone the national chamber would favor foreign aid over war. It's much cheaper.

We listened to a relatively small number of diehards decry everything President Roosevelt ever did, including the many sound measures which marked his first term. Those measures were not, as the diehards would have us believe, jammed down the throats of the American people by a forceful President. They were enacted into law at the demand of the American people by a president who had sense enough to realize that the country was demanding action along liberal lines.

The same diehards are making a great outcry against the President's budget which provides for foreign aid as a means of maintaining the peace of the world. If we want peace, and if that peace is inextricably tied up with our foreign aid program as most of us believe it is, then we must reconcile ourselves to substantial budgetary sums. Nor should the critics of the President's fiscal policies forget the fact that much of the prosperity in which they are at the moment basking is based upon huge Federal expenditures at home and abroad.

This newspaper has urged economy at every opportunity. But economy is not to be found in the size of a budget but rather in the wisdom which has gone into its making. A budget several billion greater than the present one which results in continued peace would be an economical investment. A much smaller budget which substantially weakens our position in the world would be the rankest extravagance. Let's discuss budgets in realistic terms, not solely from the angle of those relatively few individuals who desire to keep all the material benefits and at the same time have lower taxes. The state of affairs these people seek just can't be achieved. No one yet has successfully kept his cake and eaten it, too.

Accounting Practices of Pan American World Airways

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Monday, May 27, 1957

Mr. YOUNG. Mr. President, on May 1 I made certain observations regarding Pan American Airways which at that time I thought to be constructive and objective.

I am now in receipt of a most forthright letter from Mr. J. S. Woodbridge, comptroller of Pan American. From Mr. Woodbridge's letter I gather there is considerable controversy, and has been for some time, between Pan American and the Civil Aeronautics Board with regard to the matters I mentioned.

I now learn Pan American has taken these matters to the court for adjudication. Pan American, as Mr. Woodbridge pointed out, feels it has a strong case, and that when the courts finally decide the case, the result will not be adverse to Pan American. I believe it is important that any pending case of a controversial character not be prejudged.

Mr. President, in fairness to Pan American Airways, I ask that the letter I received from Mr. Woodbridge be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PAN AMERICAN WORLD AIRWAYS SYSTEM,
New York, N. Y., May 22, 1957.

The Honorable MILTON R. YOUNG,
The Senate, Washington, D. C.

DEAR SENATOR YOUNG: There has just come to my attention a copy of the CONGRESSIONAL RECORD for May 1 containing certain remarks which you made regarding the accounting practices of Pan American World Airways. Since I am primarily responsible for such practices, I believe that certain facts which were apparently not available to you should be brought to your attention.

Your remarks had reference to a recently instituted investigation by the Civil Aeronautics Board, and you advocated that so long as that matter was pending and also because Pan American was a monopoly, this company should be disqualified from getting any new routes.

For years there has been a fundamental area of disagreement between the Civil Aeronautics Board staff and Pan American with regard to mail rates and the proper accounting principles upon which to base them.

For example, in fixing the mail rates for Pan American-Grace Airways (Panagra), which is owned 50 percent by Pan American and 50 percent by W. R. Grace & Co., the Board has accepted an investment base of several million dollars, most of which has been built up by plowing back a very large part of the earnings over the entire life of this pioneer company. While the Civil Aeronautics Board staff has apparently permitted one owner, Grace, to take its full share of the earnings based on this actual investment, it has allowed Pan American to retain less than 20 percent of its share of the earnings, and has disregarded the great bulk of Pan American's investment representing its share of the earnings plowed back over a period of 25 years. Pan American has no objection to Grace receiving its half of the earnings based upon the true investment fixed by the Board, but considers it grossly discriminatory and illegal not to grant Pan American the same treatment as to earnings from their joint company. The Civil Aeronautics Board has adopted this same philosophy in dealing with all of Pan American's other affiliates. It would treat Pan American's investment on exactly the same basis as it would if all of the earnings of these affiliates had paid out in dividends over the years instead of being retained in the business.

Pan American has taken this and other related questions to the courts for adjudication. Pan American certainly feels that it has a good case and we believe that nothing should be done to prejudice it before the courts have finally decided the matter.

You also referred to Pan American as a monopoly which should be reduced in size. Pan American has competition on all of its routes—competition by American-flag carriers, and competition of the most vigorous sort from government-sponsored foreign-flag carriers. While Pan American flies over more route miles than our domestic airlines, it is no larger in this regard than some of its foreign-flag competitors and judged by the usual standards of volume of passengers, cargo, and mail carried it is considerably smaller than several of our United States domestic airlines.

Pan American welcomes the CAB inquiry and we are confident that when the courts finally have decided the Mail Rate case the result will not be adverse to Pan American. Meanwhile, it would be inappropriate for me to comment on the specific matters referred to in the Board's order of investigation. These will be fully answered in that proceeding.

The further order of the Civil Aeronautics Board itself reveals that the Board's conclusions are tentative and that they may be subject to substantial qualification. It also points out that Pan American is yet to be heard in connection with all of these matters.

There is a very substantial area of controversy between Pan American and the CAB staff. Both sides should be fully heard, and the matter should be settled in accordance with our American tradition of fair play. Meanwhile, it would be unfair and improper

to prejudge the case or to consider it in any other proceeding which might involve Pan American.

I feel certain, in light of the foregoing, you will want to correct the record and bring Pan American's side of the controversy to the attention of your colleagues. If there is any additional information you may care to have, please do not hesitate to call upon me.

Sincerely,

JOHN S. WOODBRIDGE,
Comptroller.

Educational Gems

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, May 27, 1957

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Educational Gems," written by Dr. George S. Reuter, Jr., of the Arkansas Agricultural and Mechanical College.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EDUCATIONAL GEMS

(By Dr. George S. Reuter, Jr., Arkansas A. and M. College)

About this time last year the author served with Dr. and Mrs. Thomas J. Welch, Mrs. Helen H. Mitchell, and Mrs. G. S. Reuter as Messengers to the Southern Baptist Convention in Kansas City, Mo. Since then the world has been saddened by the passing of Mrs. William (Billy) Sunday, Mrs. Edward James, Mrs. Nellie E. Simpson, Rev. John S. Ironside, ex-Governor N. G. Kraschel, Ramon Magsaysay, Dr. P. W. Philpott, F. E. Robinson, and Dr. John Elward Brown. Also, Dr. John R. Rice suffered a skull fracture and Dr. Richard Elvee suffered a back injury. Mrs. Mitchell liked the name of the British News Agency and changed her name on August 18, 1956. Winona Lake, Ind., will not be the same without Mrs. Sunday. Moody Memorial Church will not forget the late Dr. H. A. Ironside's son and Dr. Philpott, the former pastor. Many additional remarks could be made about each person mentioned, but Arkansas suffered the greatest in the passing of Dr. Brown. Mr. Robinson of the Robinson Drug Store of Dayton, Tenn., was a sign of the times in his leadership against evolution, but Dr. Brown was a leader in so many areas.

Dr. Brown, who was born in Oskaloosa, Iowa, on April 2, 1879, died February 12, 1957, in Leucadia, Calif. The founder of John Brown University of Siloam Springs, Ark., has thus departed this earth, with this appropriate statement made about him at his funeral:

"Dr. John E. Brown was one of the greatest evangelists of our generation. Few men have ever obtained distinction in so many fields. As an educator, he was the head of five great schools. As an evangelist, he held front rank among the greatest evangelists of our generation. As an author, his pen was prolific, having written numerous books, and he was the editor of a number of papers and magazines. As a radio minister, he was one of the best known and best loved."

A number of educational gems became reality during this time too. At the Department of Higher Education of the Arkansas Education Association in Little Rock, Ark., on November 1, 1956, Dr. L. D. Haskew of the University of Texas, delivered some worthy thoughts in his topic "Teaching, Instruction, and Learning."

He defined teaching as "the constellation of actions designed to afford individualized guidance, motivation, and opportunities to students who are enrolled in schools and colleges." Dean Haskew said instruction "is usually one part—relatively minor—in the teaching process, a part in which an instructor explains, elaborates, or presents to students (en masse) some knowledge." Dr. Haskew said learning "is done by students; it is the end-object of teaching and of instruction, but cannot be guaranteed by either."

Then there was the American Association of Colleges for Teacher Education Convention at the Morrison Hotel in Chicago, Ill., during the week of February 14, 1957. The writer represented Arkansas A. and M. College at this meeting. The theme was An Educated People Moves Freedom Forward, and this developed the next gem. He was also able to attend sessions of the Association for Student Teaching, National Society of College Teachers of Education, the Comparative Education Society, and a special meeting of administrators to consider factors concerning the National Association of Intercollegiate Athletics.

Editor Norman Cousins, of the Saturday Review, gave a fine address on international affairs that validated all that Adlai E. Stevenson had said about bombs during the recent campaign, but Mr. Stevenson's name was not mentioned. AACTE sent a long wire to President Eisenhower as a result. Dr. Albert Schweitzer has recently affirmed the danger.

Dr. T. R. McConnell, of the University of California, noted that "the task of teacher education is not to maintain standards but to raise them." Also he said that "academic excellence is obviously a function of the intellectual demands that can reasonably be made of students."

President David D. Henry, of the University of Illinois, noted "the American people are at last set about thinking about plans for the future of higher education and educational service for post-high-school youth. With confidence in the process of democratic appraisal, it may be hoped that school and civic leadership together may build a responsiveness among the people which will be a source of strength and inspiration for the challenging questions of our time."

Dr. Karl W. Bigelow, of Teachers College, Columbia University, said "the teachers college as we knew it 20 years ago is on the way to oblivion. It is proving to have been a way station between the normal school and the State college, a multipurpose institution for which teacher education is one among several functions." Several educators took exception and were quoted in the Chicago papers, one in particular from an Illinois institution.

President Eugene B. Elliott, of Eastern Michigan College, spoke on the National Council for Accreditation of Teacher Education in 1957; and Executive Secretary William K. Selden, of the National Commission on Accrediting, had the topic Accreditation of Teacher Education as Viewed by the National Commission on Accrediting. It was encouraging that great improvement was indicated.

Sidney H. Fine of the United States Information Agency showed a film "America Presents America" that gave a sample of what we show the foreign nations. He also said "the popularity of our programs is, at times, a bit overwhelming."

Dean William A. Brownell of the University of California indicated that "a common criticism of many public school administrators is that they know little about what is happening in their classrooms and that they do not care to know more." He also said "if there ever was a time when collegiate institutions could afford to be complacent about their programs in teacher education, that time is not now."

Director Emeritus Louis A. Warren of The Lincoln National Life Foundation set the pace of the entire conference from the standpoint of philosophy by talking on "Lincoln's Emphasis on a New Birth of Freedom." He noted the three books that constituted Lincoln's great education. They were: the Bible, Scott's Lessons in Elocution, and Weems' Washington. He said of the Gettysburg Address that "it might be considered as an epilogue to the Declaration of Independence."

It was possible to again have sweet fellowship with Dr. Calvin E. Harbin of Fort Hays, Kansas State College, to visit Moody Memorial Church again and hear Dr. Redpath preach, and to visit with Dr. Harold O. Soderquist of Wayne State University, but the nice ending came in the admission of 37 new institutions.

Nixon's Warning on Budget

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, May 27, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "NIXON's Warning on Budget," written by David Lawrence, and published in the Washington Evening Star of May 24, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NIXON'S WARNING ON BUDGET—VICE PRESIDENT SEES PERIL IN INFILTRATION OF UNCOMMITTED COUNTRIES BY REDS

(By David Lawrence)

Vice President NIXON thinks the biggest danger that confronts the free world today is not a defeat in a shooting war—he believes America can win such a war—but the infiltration and penetration by the Communists in the uncommitted countries, with 700 million people.

NIXON, who spoke on the Federal budget in Chicago on April 30 and in Hartford, Conn., on May 14, has just delivered his third punch in behalf of President Eisenhower. Having recently come back from some of the underdeveloped areas of the world, the Vice President portrays vividly the situation there in relation to the security of the United States.

NIXON points out that critics of the Federal budget have overlooked a salient fact—that "80 percent of the increase is directly attributable to the higher prices the Government has to pay for both material and personnel." But his most significant statement, which is a challenge as well as a disclosure of what's going on in Washington, was couched in even more pointed phrases, as follows:

"Unless Congress decides to discontinue domestic programs it previously has approved, budget cuts as high as five to six billion dollars, which some have suggested, cannot be made unless the items for national defense are substantially reduced. Anyone who contends otherwise is just kidding himself and the public as well—because approximately 75 percent of the entire Federal budget goes for the Defense Department, Atomic Energy Commission, interest on the national debt, foreign aid and other defense-related items."

NIXON contends that any cut of the defense budget below $38 billion would be "a reckless and foolhardy action which on sober reflection the American people will not and should not support." He adds that the $4 billion to be spent in mutual security programs and economic assistance are "as essential a part of our national defenses as the $38 billion we spend for our Army, Navy, and Air Force at home." He argues that, despite waste and mistakes, "we are getting more for our money in security for the United States in what we are spending abroad than we are in what we are spending at home."

The Vice President predicts the Communists will obtain a strong hold on the "uncommitted" countries unless America gets there first and wins the people to our side. The expenditure of about $1 billion in that field, out of the $4 billion for foreign aid, is supported by him as a necessary risk to be taken in the "cold war" because the stakes are so important. He declares there is "no expenditure being made by our Government which is more essential to our national security than this one."

NIXON warns, moreover, that "this is no time to announce to the Communists and the world that we are tired of the struggle."

What the Vice President didn't refer to in this particular speech, but which the President has emphasized, is that the free countries have spent more than $107 billion for defense against communism since the close of World War II and that the United States has furnished them with about $17 billion in assistance. This answers the argument that America is doing it all and that the other nations are not as concerned with their own defense against the Communist menace as they should be.

As the debate on the budget goes on, it is apparent that those on the attacking side have generalized that the waste in governmental operations amounts to many billions of dollars and that a tax cut of that sum can be obtained. Actually, it now appears that even the Democratic leaders are unwilling to try to pass a tax reduction bill at this session of Congress and will not be pinned down as to whether or when they will propose one after next January.

While a tax reduction—if the budget were cut by as much as $6 billion—would mean a saving to every taxpayer of about $78, it could be at a cost later of such a weakened defense in a possible war as to wipe out overnight any such saving. For, if a global or limited war ensued, it would draw many times that amount in taxes from the pocketbooks of the taxpayers, even as human lives might be lost. It is to prevent war that the United States wishes to see military and economic strength maintained throughout the free world.

Relations With Russia

EXTENSION OF REMARKS

OF

HON. SPESSARD L. HOLLAND

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, May 27, 1957

Mr. HOLLAND. Mr. President, there are, of course, many and varied points of view concerning the strained relations which exist between the United States and Russia, and the solution to problems created thereby. One point of view is clearly and provocatively expressed in an article entitled "How To Handle Russia," written by Mr. Robert K. Pepper, news editor of the Fort Myers News-Press Fort Myers, Fla. Since all points of view are entitled to expression and consideration, I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW TO HANDLE RUSSIA

(By Robert K. Pepper)

With the horror of hydrogen warfare hanging over us, it would seem wise to review our international policies, to make one last desperate attempt to gain an agreement with Russia leading to lasting peace.

Herein also lies the brightest hope for a substantial reduction in the ever-increasing national budget. Military costs now account for a major part of our spending, and Congress appears unwilling to reject any sum asked in the name of defense as long as the Communist threat remains.

From time to time, the Soviet leaders come out with various peace gambits. If they are sincere, we should make every effort to take advantage of it. If they are bluffing, we should call the bluff in no uncertain terms.

So let us go to the Kremlin with a really sensational proposal. Let us frankly say, we are tired of the cold war; we will make immense concessions in the cause of peace. We are prepared to call for the dissolution of the North Atlantic Treaty Alliance, abandon all bases in Europe, Africa, and Asia, and bring all our troops home. We will also drop all anti-Soviet military-aid programs.

We agree to cease production of nuclear weapons, if the Russians do likewise. As for inspection, we should not insist on our open-skies plan which may or may not be the best solution. Rather we should strive to work in harmony for a swift but orderly program of mutual disarmament and demobilization.

In addition to military concessions, we should present a specific program calling for expansion in trade between the United States and the Communist world.

In return for all this, we should spell out exactly what we desire in the way of disarming, release of the Soviet satellite countries in Europe, and the end to antiwestern propaganda and intrigue. If the answer is satisfactory, then the most important issue facing the world today is solved. But if they hedge and quibble, we will at least have gained face with the peace-loving peoples of the earth. And, of course, we make no retreat until we are convinced of Russia's sincerity.

Many will say, you cannot deal with the Russians; they can't be trusted. But have we ever actually tried? Don't we insist that things be done "our way," giving little consideration to their arguments? Have we ever offered them a program which, in the minds of their leaders, would be advantageous to accept?

Our aim should be to meet them not halfway, but two-thirds of the way; to be more than fair. Here it might be pointed out that the Soviet Union may be pardoned for concern as the United States tightens its ring of defense bases, equipped for the launching of atomic bombers, around the Red world.

Should we withdraw, our investments in foreign bases and aid to friendly nations have by no means been lost, but have proven valuable pawns in trapping Russia into our terms. Continuing the analogy of chess, we have set up the board for a magnificent sacrifice leading to ultimate victory, which is closing out the remainder of the 20th century in comparative peace.

Our allies in Europe would be very happy to get out of the dangerous dilemma of the present. Great Britain has no desire to be the frontline target in a nuclear war, and France is continuously embroiled in domestic difficulties. And despite our constant prodings, lucrative promises, and implied threats, it is difficult to detect any real enthusiasm for rearming in Western Europe. Our allies, of course, should be consulted on any peace proposals to Russia. It is more than probable that any program leading to the end of the cold war would be highly acceptable to them.

We should also strive to gain an accord with Communist China, which after all is the de facto government over almost 400 million people. We might not only recognize the Red regime, as many neutral nations do, but also actively sponsor its admission into the United Nations.

Let us look at the issue with a historical slant, rather than in the heat of present day emotions. We fought Germany twice in world wars; today we count the West Germans our friends and allies. Japan was our bitter enemy only a few years ago, but for a century we enjoyed a traditional friendship with China. So why should we not strive for the good will of all nations? Who can say what the lineup would be if another world war should erupt? Or who can say that our present policy of pushing Germany and Japan into rearmament will be wise and correct in the long run?

As to alarm over the spread of communism, it should be recalled that no military machine, creed or faith (including Christianity) has ever conquered the world, or even a major part thereof. Violent revolutionary movements inevitably turn conservative with time, and it is not impossible that Russia may some day swing into a more Democratic form of government. For it is quite probable that there are more people in Russia today who would prefer capitalism than there are Communists in America.

Should we succeed in gaining a military accord, it must be nailed down with worldwide economic stability, for this is the failure and the tragedy of two world wars. To this end it is suggested that the United States, in effect, challenge the world to a race in public works. There is now a universal clamor for budget reductions, but the sudden erasure of $20 billion to $40 billion in military spending could have serious consequences. So at least part of this saving should be channeled into harbors and highways and other domestic betterments.

In this peacetime world, we could take action to insure the steady expansion of international commerce.

This could be effected by the United States Government setting up a world trade fund of say $5 billion to $10 billion each year. We would then offer to exchange these dollars for rubles, yuan, pounds, francs, pesos, etc., on condition that the nations receiving them use their American currency (or bank credit) either for the purchase of American goods, for technical assistance, or for internal works.

The world trade fund would by no means be a total loss. Our Government would agree to use some of these acquired currencies for the purchase abroad of goods useful in public works or for stockpiling purposes, and some could be resold to importers, firms doing business abroad, and to outward bound tourists. And any remaining could simply be added, like gold and silver, to the Nation's monetary reserves. It can even be envisioned that at some future date America might suffer some scarcities of goods, and then these stored up currencies would be most welcome.

Currently, this program should help to level off our agricultural surpluses, and open new markets for our manufactured goods. It would also stimulate the American shipbuilding industry, and encourage the construction of international air freighters. The world trade fund should vary considerably from year to year, geared as nearly as possible to the expected surplus of exportable

goods. The overall idea would be to assure the orderly and continuous creation of new markets as production and production facilities expand.

We would be at some disadvantage in trading hard dollars for yen and rupees, and of course there is always the possibility of losses through devaluations abroad. Nevertheless, we would be getting something tangible in return, which is more than can be said for the Marshall plan, or our present foreign aid outlays. And perhaps other nations would prefer to deal with us on a reasonably businesslike basis rather than to accept handouts.

As for the disturbed Middle East, would it not be wise to lend a helping hand, and persuade the Arabs and Israelis to divert their warlike energies into public works? That to assure construction jobs, and the hope of a new and better way of life to these poverity-stricken millions, would be far cheaper in the long run than continued armed camps, or open warfare which must inevitably involve the West?

Instead of guns, planes, tanks, and military funds, we might offer a really substantial grant in return for a pledge of peace. Egypt dreams of a great dam on the Nile to provide power and water; the ancient Tigris-Euphrates irrigation system could be restored; the proposed Jordan River project would aid both Israel and the neighboring Arabs. And it would take but a small fraction of our current arms outlay to launch all these undertakings.

The burden would by no means be on us alone. In return for this assistance, the Middle East nations should agree to contribute the approximate savings they would effect through disarmament and the end to military outlays.

Moreover, in launching a new era of peace and harmony, we should ask both Russia and our western allies to join with us in a Middle East development program. This just might be the first of many cooperative moves for a better and brighter world.

And suppose we do nothing, and allow the cold war to drift along. With the rising costs of armaments, we could be spending $50 billion a year or more, which in 5 years would approximate the entire amount of our current national debt. And we might consider the staggering costs, and destruction, in case some spark in this uneasy world should touch off an open, nuclear conflict.

Private Versus Public Enterprise

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, May 27, 1957

Mr. MARTIN of Pennsylvania, Mr. President, Capt. John M. Cummings, the able political commentator of the Philadelphia Inquirer, has written a very interesting story as it relates to private enterprise against public enterprise. I suggest that my colleagues carefully consider this timely statement. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRIVATE ENTERPRISE BRINGS BACK A LAKE

(By John M. Cummings)

Seventy-two years before hurricane Hazel wreaked havoc on the eastern section of the country (October 15, 1954), W. W. Scranton, a capitalist from the town bearing the family name, headed a company which impounded the waters of Tobyhanna Creek to form what later became known as Pocono Lake.

It was one of numerous lakes and ponds of the Pocono area from which ice was harvested, generally in February, and shipped in long trainloads to Philadelphia, New York and other centers. Ice houses, once so familiar in the mountain section, have virtually disappeared. One by one they fell before the advance of electric refrigeration.

The stout dam built by Bill Scranton's company resisted the onslaughts of many a storm until Hazel came alone. On the night of the big blow the Pocono area was hit hard. Many lives were lost. Rippling trout streams became roaring torrents. Bridges were washed away. Highways became rivers. Much of the damage is still to be repaired although the legislature levied an emergency tax on gasoline to raise funds to speed rebuilding of roads and bridges.

On the night of the big blow John S. Wise, Jr., whose camp Tall Timbers is hard by the lake shore, stood on a rocky eminence near the breast of the dam. An engineer, who for many years headed the Pennsylvania Power & Light Co., Mr. Wise feared that in Hazel the dam had met its master—or mistress. He was right.

An outcropping of rock shielded Mr. Wise from the 92-mile-an-hour wind. It helped, too, to protect him from the terrific rains which in a matter of minutes sent tiny brooks over their banks and gave the ordinary fast-running Tobyhanna a volume of water the dam could no longer resist. It went out with a roar. Down the narrow valley it rushed, carrying everything before it. In the morning the bottom of Bill Scranton's ice lake was visible for the first time in nearly three-quarters of a century.

A week or so ago we stood with Mr. Wise on the spot where he watched the dam bend and break before the might of Hazel. They were not too particular about the bottom of a lake in those days. They were interested in what the surface could produce—ice. Pocono Lake's bottom was a forest of stumps. It was not a deep lake, but it covered a wide expanse. Ninety-four pounds of fishing tackle—spoons, plugs, spinners, flys and hooks of various sizes were gathered from the stumps.

In a few weeks Pocono Lake will be a lake again. A fine concrete dam has taken the place of the one that yielded to Hazel. Mr. Wise estimates that the normal flow of the Tobyhanna will fill the basin in about 3 weeks. The day after the big storm cottage owners at the lake, many of them Philadelphians, heard of the disaster. In another 24 hours enough money had been raised to repair the damage to Pocono Lake Preserve and reconstruct the dam. This is known as private enterprise. Not too far away public enterprise, in the form of the State, is still struggling to replace bridges and rebuild roads. At Pocono Lake they are back in business.

Physical Fitness

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, May 27, 1957

Mr. NEUBERGER. Mr. President, the subject of physical fitness has been of growing concern to the Congress and to the administration. The Vice President, I recall, heads a committee appointed by President Eisenhower which has as its goal the improvement of physical fitness among the youth of our country.

One of the surprising things to many people has been the discovery that athletic prowess is not always an indication of superb physical fitness. The April 29, 1957, issue of the New Republic contained an excellent article on this general subject. The article was written by Mortimer H. Morris, assistant professor of recreation at Oregon State College, Corvallis, Oreg. The title is "Does Sports Equal Fitness?" Mr. Morris asks some penetrating questions in his essay and offers some expert criticism on many of the commonly accepted beliefs and practices of our time.

Because this is a subject of wide interest and general concern, I ask, Mr. President, for unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DOES SPORTS EQUAL FITNESS?

(By Mortimer H. Morris)

The attention being given by the New Republic to the education of the gifted child recalls an incident: Near a Swedish university a mob of wildly shouting students held a lad high on their shoulders. There was a wreath around his shoulders and he was being pelted with roses by the girls, while boys and girls alike shouted cheers. "Some brilliant athlete, I suppose," my American friend inquired of an onlooker.

"No, sir. He is graduating and is the honor student of the year."

"Well, it's the first time I ever saw such wild excitement over scholarship," he commented.

There was a polite glint of amusement in the Swede's eye as he asked, "And for what purpose, then, does your country build schools?"

In contrast to other countries, the gifted child who receives special attention in the United States is the gifted athlete. He we pamper and spoil from the earliest indication of physcal prowess until his graduation into professionalism or oblivion.

Start them young and keep them coming has become a national fetish. Despite warnings by competent medical authorities on the psychological and physiological dangers of high pressure, competitive athletics at the elementary school age, the trend is toward more and more highly organized programs in Little League baseball, Pop Warner football, Biddy basketball and even Iddy Biddy basketball. The midget fad has even passed on to tennis, golf, auto racing, boxing, hockey, and ice skating.

The story of football at Steubenville, Ohio, is illustrative. Nine members of the undefeated starting eleven in 1951 went on to play big-time collegiate football. The high-school teams are in turn constantly fed by a staff of six coaches assigned to leagues starting at the fifth-grade level. The effectiveness of this system is tacitly expressed by the high-school coach. "By the time they come to the varsity, we don't have to waste much time."

Has such sports promotion resulted in an athletically superior America? Emphatically not. The disturbing results of a fitness survey team led by Dr. Hans Kraus disclosed European children to be stronger and more physically fit than our youth and provoked President Eisenhower into calling a physical

fitness conference in late 1955. The President, believing the myth that sports equals fitness, summoned top-flight athletes whose highly skilled performances have long rated newspaper headlines. Fortunately when the conference (delayed by the President's heart attack) was finally held, physical educators, recreators, physiologists, and medical experts were included among the delegates. The decisions reached at the conference were laudable, but no progressive program has resulted.

Why are our sports programs failing to produce a physically fit America? Because by its very nature a highly competitive sports program is selective in its choice of participants. For every boy who makes the team, there are 30 or 40 others relegated to the spectators' stand. And as the boys grow out of the midget or elementary grade classification the ratio becomes higher.

Consider Croton-on-Hudson, New York, where I served as superintendent of recreation. Because of a shortage of gymnasiums, our recreation leagues were able to offer each boy in the community less than an hour a week of basketball. There was no high-school intramural program. But at the same time, the 16 boys selected for the varsity and junior varsity squads spent more than 20 hours a week on the basketball court. Here is the typical situation wherein those already skilled benefit by 20 times, while those of lesser skill are deprived of a chance to play.

The obvious answer seems to be more athletic facilities. But as Dr. Milton Gabrielsen, of New York University, has pointed out, school administrators and boards of education, caught in a vise between a tax-conscious public and the need for additional classrooms, frequently list physical-education facilities as frills, expendable in a building program. These planners do not dare incur the wrath of the community by eliminating the varsity sports program, so that all students might enjoy equal use of recreational and physical-education facilities.

A survey of 252 Pennsylvania high schools playing interscholastic football showed that half of the group permitted no activities other than varsity football on their fields, despite the fact that 98 of the schools involved had no other outdoor facilities of any kind. The extreme instance was a school owning a $50,000 lighted stadium but having neither lockers nor showers for the use of physical-education classes.

Thus far we have considered the loss of physical activity to the boy or girl who has been made a spectator by the highly selective program. There are nonphysical implications. In a discussion of physical education and neurotic behavior disorders, one authority reminds us that "the highest degree of peer esteem among boys is reserved for those who excel in sports. The rare individual who achieves adolescent popularity alongside ineptitude in sports—and such a one occasionally appears—ought to be called a 'social genius.'" There are not many among us who are social geniuses.

By no means am I suggesting that our schools discard competitive athletics. There are many educational values in such programs. I do, however, urge a more moderate attitude toward the importance of competitive sport. The height of hypocrisy is at the collegiate level. Our colleges have become sports promoters. Teams are recruited for the sole purpose of producing victories; the welfare of the students is incidental. Any registered university student is entitled to and should receive an education, but this becomes a non sequitur where athletes are concerned. The collegiate sports picture is, with a few exceptions, an abnegation of the purposes and the principles of higher education.

Moreover, are we doing these young athletes a service by trading free tuition, books, keep, and spending money for their athletic abilities? Many have no right even to be in school; many others have no desire to be in school, except for their realization that the university may be the stepping stone to true professionalism, or possibly a means of delaying a lifetime of work at a level they do not enjoy.

Although the National Manpower Council has shown that 60 percent of our young people over 18 possessing an I. Q. of 110 plus do not enter college, even the dullest athlete can find a college to attend. All-American Sherman White, of Long Island University, who figured in the 1951 basketball fix scandal, has an I. Q. below 100. All-American footballer Glenn Davis flunked out of West Point once, and he and Doc Blanchard rated 305th and 296th, respectively, in their 310-cadet graduating class. The College of Idaho has openly recruited athletes who could not meet the entrance requirements elsewhere. The result—undefeated teams and standing-room-only crowds at the games.

Yet when professionalism was exposed in Pacific Conference schools Gov. Goodwin Knight, of California, proclaimed: "The whole cause of the trouble is because these professors were just a bunch of spindly legged runts back in college who resented athletes, and they still resent them."

Our high-school physical educators are trapped themselves. Most of them were better than average athletes who went to college for training that would prepare them to coach. Although it was a part of their required curriculum, many of these men grasped neither the philosophy nor the physiology of play and exercise. Their understanding does not include a working knowledge of human anatomy nor a working appreciation of correctional procedures where remedial attention is demanded.

These same coaches respond to public pressure to win by turning their physical-education classes in both the high and elementary schools into training grounds for varsity teams, thus increasing the stress on those who would play anyhow, and limiting the physical program to a few sports played by a few.

Fitness and athletics are a lifelong concern rather than merely something for youth. Is it not, therefore, self-evident that schools should teach skills and sports that have a carryover value in later life? Research by Dr. Jay B. Nash has shown that more than 70 percent of recreational activities after the age of 21 were enjoyably indulged in before the age of 12. Adults can develop new recreations, but the overwhelming tendency is to revert to familiar activities. Therefore the athlete trained only in football, baseball, and basketball is very likely to become a spectator before he reaches this 30th birthday.

The fact that 50 percent of the men called for preinduction physicals during the Korean crisis were rejected on mental and/or physical grounds and the estimate that more than 23 million Americans have some physical impairment or chronic disease, have often been cited as evidence of poor national fitness. Actually there is little correlation between physical defects and physical fitness. Mickey Mantle, of the New York Yankees, could hardly be called unfit and yet was rejected from military draft. In fact, sports injuries were an important factor in many military rejections.

Are we even sure that fitness and athletics go hand in hand? From studies made over a period of 20 years, Dr. Pauline Berry Mack has conclusively proved that Americans are overfed but seriously undernourished, and that physical strength and stamina among public-school students can be developed through diet alone.

We would rather not admit it, but in fact our schools today are substandard in facilities, equipment, and leadership. New York City is not untypical. All gymnastic apparatus work has been eliminated from the physical-education program because of fear of injury to students in overloaded and understaffed classes. Many American schools have no physical-education classes whatsoever, and only a few can truthfully boast of a program offering each student 60 minutes of physical activity each day.

The answers to the American fitness problem are available from qualified professional leaders in physical education, health, and recreation. But their knowledge can only be put to work with the concurrence of the public. And the public attitude is not likely to change unless educators themselves dare to debunk the prevailing myths about athletics.

The Enemy at His Back—Book by Elizabeth Churchill Brown

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, May 27, 1957

Mr. GOLDWATER. Mr. President, some time ago it was my pleasure, on the floor of the Senate, to recommend to my colleagues the reading of an excellent book written by Elizabeth Churchill Brown entitled "The Enemy at His Back."

I am happy to observe that one of the distinguished columnists in California, Mr. George Todt, who writes for the Valley Times, has written a column on this excellent book, entitled "Light on 1945 War Blunders."

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LIGHT ON 1954 WAR BLUNDERS

(By George Todt)

"Honor women! they entwine and weave heavenly roses in our earthly life" (Schiller).

It was left to the pen of a brilliant woman—Elizabeth Churchill Brown—to afford me the clearest insight I have yet received into Communist treachery and infiltration as it effectively prevaded American foreign policy during and immediately following—World War II. Her factual and well-documented book, The Enemy At His Back, is a Joe Doakes' must in these crucial times in which we live. I cannot recommend its reading too strongly to my readers who wish to know the confusing international political score for themselves.

Liz Brown is the articulate wife of the outstanding syndicated columnist, Constantine Brown, and her first published book has merit sufficient to do justice to her famous husband. This excellency applies both as to thoroughness and intellectual content. It is completely down-to-earth and written understandably, sans gobbledygook, for folks like you and me. If you want to find out what sinister behind-the-scenes characters like Alger Hiss, Owen Lattimore, John Carter Vincent, et al., did to us and our country, by all means get hold of this masterpiece!

"In the atomic age in which we live," wrote Senator WILLIAM F. KNOWLAND in the book's foreword, "it is important that Americans understand the past so that we may

better plan for the future. Elizabeth Brown has done a great deal of research and with insight has developed additional facts in helping to explain the strange course of our foreign policy during the past 11 years. The Enemy At His Back will be of value to all individuals anxious for a free world of free men. We must recognize that in dealing with the Kremlin, the road to appeasement is not the road to peace. It is only surrender on the installment plan."

As this noteworthy work becomes more widely read—and understood—I am sure it should raise some fascinating questions among intelligent readers. For instance, was it really necessary for former President Harry S. Truman to order the dropping of the first nuclear bombs on an already defeated Japan which was begging to surrender? Or how many additional battle casualties may have been unprofitably sustained as the Roosevelt and Truman administrations stalled out the timetable of the Pacific war in order to enable Soviet Russia to enter the Far East conflict? Did she garnish her undeserved fruits of victory there—as a free gift on a silver platter—only after the United States had carried the brunt of the real fight in Asia? Did Communist strategy published in the "Daily Worker" originate the ill-advised "unconditional surrender" ultimatums to Germany and Japan which made World War II last considerably longer than was absolutely necessary—with the corresponding increase in casualties which goes with every added and unnecessary day of combat? Read this documented book and think it over for yourself!

On page 142 is a highly revealing quote from President Dwight D. Eisenhower: "Another item on which I ventured to advise President Truman involved the Soviets' intention to enter the Japanese war. I told him that since reports indicated the imminence of Japan's collapse I deprecated the Red army's engaging in that war. I foresaw certain difficulties arising out of such participation and suggested that, at the very least, we ought not to put ourselves in the position of requesting or begging for Soviet aid. It was my personal opinion that no power on earth could keep the Red army out of that war unless victory came before they could get in."

And get in they certainly did—but it took the cunning assists of various controversial Americans working overtime backstage to insure that the Reds did so. We fought Japan to a complete standstill and then the Soviet Union came in only when the fight was already over—and stole the international swag under our very noses. This was quite unnecessary, and no one who calls himself an American today should be proud of the sad results which ensued thereafter out of this Pandora's box of evils for our country. Whether this was the result of treachery or asinine stupidity, of one thing we may all be certain: seldom has any inner clique been able to deal their own nation such a distressing blow throughout all of history as was dealt to us in this sorry instance. The ill-fated Korean war was only one of the many direct results, sad to relate.

This is the sort of abominable thing which must cause the teeth to fairly grate of the 16 millions of United States veterans of the last World War. While they were fighting and sacrificing for the preservation of our country, Communist treachery in high places made much of their tremendous sacrifices go for less than naught. We may well wonder at the normal reaction of America's fighting men today after reading this frightening exposé of trickery and deceit against the announced objectives and aims for which they fought so gallantly.

"To sum it all up," says Liz Brown, "the only enemy the American soldier needs to fear is the enemy at his back."

Results of a Public Opinion Poll

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. HENDERSON. Mr. Speaker, during the past several weeks, I submitted a questionnaire on issues confronting the Nation to a cross section of the residents of the seven counties of southeastern Ohio whom I have the honor to represent here. For the purposes of this poll, the recipients were selected at random without regard for political affiliation. This sample of public opinion now has been tabulated and I believe its results reflect a valuable expression of the prevailing feelings in this area which is marked by divers urban and rural interests.

I believe the opinions of the people of the 15th Congressional District of Ohio are typical of many areas of this Nation, since the residents share sentiments and aspirations common to tens of millions of their fellow Americans. For this reason, I feel certain that many of my colleagues will find the results of this poll to be of considerable interest.

The questionnaire was divided into three parts. The first portion sampled opinion on various specific questions. The second dealt with the order of importance with which various general issues are regarded. The third part afforded an opportunity for the expression of relative approval or disapproval of Federal programs and the funds recommended for them in the 1958 budget estimates.

The results of the poll are as follows:

Part I

	Percent of those answering question	
	Yes	No
1. Do you favor United States membership in the Organization for Trade Cooperation, an international organization which would influence tariffs on foreign imports into this country?	65.89	34.11
2. Do you believe Communist China should be admitted to the United Nations?	7.72	92.28
3. Do you favor the sale or barter of United States surplus farm products to Iron-Curtain nations?	29.22	70.78
4. Do you favor the continuation of our foreign aid program which is recommended for $4,500,000,000 next year?	24.94	75.06
5. Would you support economic and military assistance to friendly foreign countries at a reduced cost?	75.39	24.61
6. Should a greater number of Hungarian refugees be admitted to the United States?	17.94	82.06
7. Do you believe Congress should authorize the admission of a greater number of immigrants from all nations?	10.88	89.12
8. Do you believe that the 22d amendment to the Constitution should be repealed to allow future Presidents to serve more than 2 terms?	17.73	82.27
9. Would you support Federal aid for school construction to be paid for out of Federal taxation in preference to such programs financed by State and local effort and taxation?	36.90	63.10
10. Do you favor reducing the present postal deficit by increasing postage on 1st-, 2d-, and 3d-class mail?	57.71	42.29
11. Are you in favor of the continuation of the soil-bank program?	50.72	49.28
12. Would you favor a tax reduction to stimulate expansion and modernization of small business?	86.41	13.59
13. Do you support a recommended Federal program costing approximately $9,000,000 to assist States and cities combat juvenile delinquency?	48.18	51.82
14. Do you believe that persons over 70 years of age should be eligible to receive social-security payments regardless of their income from other sources?	56.61	43.39

PART II

The following is a list of 10 issues listed on the questionnaire which have been arranged in the order of importance in which they were ranked by those responding. The numbers shown are the averages of the relative importance assigned by those who provided opinions on this portion of the poll:

1. National defense	2.95
2. Need for reduced Federal spending and taxation with a balanced budget	2.97
3. Inflation and the cost of living	3.52
4. Maintenance of an honorable peace	4.48
5. Communist subversion in the United States	4.80
6. Preservation of opportunity for small business	5.75
7. Farm prices and policies	6.01
8. Federal protection of civil rights	6.05
9. United States foreign trade policies	7.09
10. United States foreign aid programs	7.80

PART III

In this portion of the questionnaire, an opportunity was provided for the expression of opinion on the level of Federal spending as represented in the budget recommendations for 1958. In each of the 49 programs listed, the budget recommendations were provided. Three choices were presented. The first afforded an opportunity to indicate support of the budget recommendations. If reductions in spending or the elimination of the program was felt desirable, blank spaces for these opinions were provided.

Running through the responses there was a strong trend for reduction in Federal spending.

The first portion of these questions dealt with major national security items—recommended for $43,335 million or 60.3 percent of the budget—and showed general support for these programs. However, a running current favoring reduced spending was noticeable. For instance, 59.8 percent of those responding supported the $12,273 million recommended for the purchase of aircraft, ships, guided missiles, and other military equipment. Thirty-nine percent favored reducing expenditures here. Atomic-energy programs spending received 67.4 percent approval with 30.4 percent calling for reduction. Recommendations for military assistance for

nations abroad received 19.5 percent approval, while 59.1 percent called for reduced spending, and 21.4 percent expressed the belief that this aspect of our foreign-aid program should be eliminated.

A total of 61.7 percent favored reducing technical assistance to foreign nations with 13.5 percent favoring the level of recommended expenditures and 24.8 percent calling for the elimination of the program.

Recommended funds for the Post Office Department received 55.1 percent approval while the highway program was supported by 67.6 percent.

With respect to recommended spending for agriculture, farm price supports and related programs—estimated to cost $2,490 million—were favored by 24.5 percent. Forty-eight percent recommended a reduction in spending for this purpose and 27.5 percent believed the program should be abolished. Feeling concerning spending for the soil bank ranged from 32.3 percent in support to 37.3 percent recommending a reduction of spending, and 30.4 percent favoring the abolition of the program.

Federal spending for public assistance for needy persons was supported by 56.5 percent and funds for the promotion of public health met 61 percent approval.

Funds recommended for veterans' programs met with the general approval of the majority. Of these programs, 74.8 percent expressed support of funds for hospitals and medical care for veterans, 67.8 percent approved recommendations for the insurance and indemnities program, and 65.3 percent favored the recommended spending level for compensation and pensions.

Tour of Korean Front Finds United States Force Weak

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Donald Baldwin of the Associated Press which appeared in the Washington Post and Times Herald on Monday, May 27, 1957:

(By Donald Baldwin)

SEOUL, May 26.—United States forces in Korea today are woefully weak. Their unmanned battle positions are overgrown with weeds—an invitation to Communist attack.

In contrast, the North Koreans and Red Chinese across the demilitarized zone have built up an army in 4 years of armistice far more powerful than at any time during the Korean war.

The Communists have new jet planes, new tanks, new artillery, and in the opinion of South Korean intelligence officers they may also have atomic weapons. All the weapons in South Korea are either obsolete or obsolescent.

TEN-DAY INSPECTION MADE

A 10-day inspection by an Associated Press team found alert, seemingly well-trained South Korean soldiers manning 150 miles of the front from well-entrenched positions, although they were equipped with old, World War II weapons.

But a 5-mile-wide sector, athwart the classic invasion route north of Seoul, is entrusted to an American division only 60 to 80 percent of normal strength. The South Koreans—criticized during the war for failing to stand and fight alongside Americans—call the American sector the weakest link in the battleline. United States field commanders openly express concern.

This is how the opposing sides stack up today:

In the south, there are about 700,000 South Korean troops, about 80,000 Americans including 2 infantry divisions and logistics and command units, and fewer than 5000 other United Nations troops, including a British regiment in the process of being withdrawn.

This compares with an 800,000-man U. N. army at the end of the Korean fighting in 1953—but the weapons are old now and have not been replaced because of a ban in the armistice agreement against introduction of new-type equipment.

RED STRENGTH GREATER

In the north, according to intelligence reports, the North Koreans have a reorganized and reequipped 400,000-man army and the Chinese Communists have a 350,000-man garrison. There are also at least a million Red Chinese troops across the Yalu River in Manchuria. The Communist forces in Korea during the war were estimated at more than a million.

The Communists have ignored the ban on new weapons. They have shipped in 1,672 artillery pieces, 340 new tanks in addition to the 480 they already had, 500 jet and 300 propeller-driven planes.

There are recurrent—but unconfirmed—reports that their new artillery includes atomic cannon with a range of 15 to 20 miles, which is manned by Soviet technicians.

The Red jets include about 250 MIG 17s—later-model interceptors than the Manchuria based MIGs which were bested by United States Sabrejets during the Korean fighting.

The U. N. forces still have about 150 Sabres, half flown by American pilots and half by South Koreans. Other United States fighter-bombers and light bombers have been withdrawn because of their age. Even the Sabres have been superseded elsewhere by newer fighters.

United States strategy appears to be based on the assumption that the Communists will not attack so long as there are any American forces in South Korea, even though under strength. South Korean generals, however, feel sure the Communists will invade the country again as soon as they feel able.

YANKS EXPENDABLE?

On the Allied side is the knowledge that a fast jet bomber could deliver an atomic bomb from its Okinawa base to a Korean target in under 2 hours, and the general assumption here is that no holds will be barred if fighting breaks out again.

In that event, some officers here say, American troops on the scene might of necessity be expendable if evacuation proved impossible. Asked what would happen if there was another Communist attack a high officer in United States headquarters said:

"We'd be in a terrible position."

On paper, both United States divisions are fully manned for action, with Americans firing every gun. But a visit to the two units showed both were far below strength.

All but one of the frontline regiments are miles from the frontline. It would take them from 1 to 3 hours to reach their battle positions, now weathered and overgrown with weeds in the almost 4 years of suspended combat.

The regiment that is close to its positions is located north of the Imjin River above Seoul, and in event of attack would probably have to pull back quickly behind the natural barrier or risk annihilation.

All across the American-held sector, however, continuous and active training programs are underway and morale appears to be good.

Still, a lieutenant colonel commanding a United States tank battalion said:

"If my outfit had to go into combat today I'd be forced to leave 15 or 20 tanks behind because I haven't the crews to man them."

Money Power of Labor Leaders

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, May 27, 1957

Mr. MARTIN of Pennsylvania. Mr. President, there is now much discussion of the effect of certain hidden powers as they relate to politics. The very able commentator, George E. Sokolsky, recently wrote a very interesting article entitled "The Money Prize." I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MONEY PRIZE

(By George E. Sokolsky)

Each generation discovers what has long existed as something startlingly new. Labor racketeering seems such a new discovery in the year 1957, although it has been usual in American labor for a century. Back in the days of the Knights of Labor, there was a racket called the Home Club which, while posing as a labor organization, actually worked for the bosses. These days it would be called a company union. The building trades back in the early days were particularly notorious, because the business agents of the unions speeded up or slowed down work according to the deals that were made with them personally.

The kickback was an old form of union racketeering. The kickback was, in effect, a reduction in wages, part of it going to the foreman or a bookkeeper, but eventually making its way into the pockets of the boss. A kickback is impossible unless the officials of the labor union agreed to it, and for such an agreement they got a rakeoff.

Today the kickback would be chicken feed, because wherever there is a closed shop or a union shop, the take is so big that union officials, except those way down the line, would not bother with such small amounts.

By singling out Dave Beck and his union as corrupt, some of the labor leaders are sure that they have taken the monkeys off their own backs, which is something we still have to see. What is necessary is a complete, overall study of the money prize in American trade unionism. When a labor leader has absolute and personal control of a quarter of a billion dollars of public funds, for which he is in no manner bound to account, then he is a dangerous person, because he can use that money honestly or corruptly at will. No citizens other than labor leaders are so empowered.

The claim is constantly being made that certain labor leaders work with the "mob" and that others do not. The term "mob" is intended to give the impression that sinister forces, gangsters, racketeers, murderers have

formed a conspiracy with labor leaders to control the production and distribution of goods. Again, it is nothing new in American labor relations and the unions which are now praised for their purity have a long history of such associations.

It is supposed to be high strategy in labor circles to speak well of certain labor leaders and to denounce others because of their relations to the "mob." Taking the history of all the unions, over all the years of their existence, it is impossible to discover such Puritanism as we are now asked to recognize. It is the repetition of the big lie that makes such labor leaders little angels in 1957 who were quite devilish in the 1930's.

Until the money prize in trade unionism is abolished, so that being a labor leader ceases to be a profitable enterprise but becomes a job with a fixed salary and nothing more—until that happens, the money prize in labor-union leadership becomes a lodestone for a political type of individual who unites with others of the same kind of person to make what he can out of it. Some men seek power; others money. Some work for both. But no labor leader can afford, under present circumstances, to live among his fellows strictly on his salary without an expense account and without access to strike funds, educational funds, and welfare funds. A close analysis of the political expenditures of unions is more important nationally than Dave Beck's fifth-amendment pleas.

The enormous money power of these labor leaders is having the same effect upon politics as the use of money by big business in the 1890's.

Legal Profession Can Help

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, May 27, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "State Legal Profession Can Aid in Stressing This Inconsistency," from the April 30, 1957, issue of the Jackson (Miss.) Clarion-Ledger.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STATE LEGAL PROFESSION CAN AID IN STRESSING THIS INCONSISTENCY

An attorney friend advises us that the American Bar Association is soliciting contributions from the legal profession to erect a monument commemorating the granting of Magna Carta at Runnymede in England. Magna Carta first guaranteed the right of trial by jury, which is the cornerstone of American freedom and freedom in other English-speaking countries.

Meanwhile, our attorney informant further advises, the same American Bar Association has not yet raised its voice against sinister efforts in Congress to circumvent the constitutional right of trial by jury in so-called civil-rights legislation. Failure to go on record against these efforts would seem to put the American Bar Association in a rather inconsistent position.

The thought occurs that local and State bar associations here in Mississippi, and elsewhere around the Nation, might see fit to voice their protests to the American Bar Association for erecting a monument to Magna Carta while at the same time remaining silent while the United States Congress prepares to violate one of the fundamental tenets of this same Magna Carta.

Many attorneys, especially Mississippians and other southerners, deem it ironic that the American Bar Association should go all the way to England and build a monument to Magna Carta at Runnymede, in the very year that the United States Congress apparently plans to enact so-called civil-rights legislation which would destroy the sacred right of trial by jury to certain accused persons.

This is not to suggest that the Magna Carta memorial campaign lacks merit. On the contrary, it is a laudable project which deserves complete success and fullest support. Our idea is that members of the Mississippi legal profession can perform an invaluable service by urging the American Bar Association to go on record as being opposed to current efforts to destroy the constitutional right of trial by jury.

Certainly the Nation's foremost association of lawyers should take a position one way or another in this all-important issue, in view of the fact it frequently does so in other legislative matters of relatively minor import. While commemorating Magna Carta's guaranty of basic freedoms, the association might do well to cherish and defend our basic freedoms here at home.

Hazleton, Pa., Church Observes 110th Anniversary

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared recently in the Hazleton Plain Speaker on the occasion of the 110th anniversary of the founding of the Grace Evangelical and Reformed Church in Hazleton:

GRACE REFORMED CHURCH WILL MARK 110TH ANNIVERSARY WITH TWO SERVICES SUNDAY

Two special services are planned for Sunday in Grace Evangelical and Reformed Church, North Laurel Street, to mark the 110th anniversary of the founding of the church.

The Reverend Dr. Alfred Nevin Sayres, former pastor, lecturer, writer, and professor in the theological seminary at Lancaster, will deliver the sermons.

MAKING NEW HISTORY

His subject will be Making New History, and will be based upon the Scripture found in Deuteronomy 32: 7–14. His New Testament emphasis will be on Paul's letter to the Philippians in which Paul admonished his listeners to "Hold true to what we have attained."

The junior and youth choirs will sing at the 8:30 a. m. service. The three vested choirs of the church will sing at the 10:45 a. m. service under the direction of Miss Chiora Fey, minister of music.

Many of the families represented in the consistory, the official body of the congregation, have been three-generation workers in the church. The committees and their members are as follows: Church and ministry, John Boettger, George Guscott, George Baum, and Christ Knyrim; kingdom service, Harold Koch, William Toennes, Landis Oberholtzer, Irvin Hoppich; Christian education, John Schnorr, T. D. Kreiger, William Toennes; finance, Landis Oberholtzer, Harold Koch, Robert Pensock.

Worship, George Guscott, John Boettger, Robert Pensock; evangelism, T. D. Kreiger, Robert Pensock, Christ Knyrim; property, Henry Berlitz, John Schnorr, Clarence Shermer.

CITES BENEVOLENCE GIFTS

The total benevolences of the congregation last year were $4,800 in support of the program of the denomination at home and abroad.

Total congregational expenses were $13,918, leaving a working balance in all the treasuries of the organizations of the church and Sunday school.

Fifteen pastors have served Grace Church since its organization and establishment in 1847.

The Rev. William Toennes served the longest pastorate in the history of the church, from January 31, 1898, to December 31, 1935.

A booklet printed in observance of the 90th anniversary and rededication of the renovated sanctuary refers to him as the "master workman in human souls."

The present pastor, Rev. William Y. Gebhard, has served the second longest pastorate in the history of the congregation, a period of 21 years.

Pastor Gebhard attended the public schools in Reading and was graduated from the Franklin and Marshall Academy in Lancaster.

SERVED IN CAVALRY

After graduation he entered in the Eighth United States Cavalry and was stationed on the Mexican border for 1 year and 2 months.

Upon return to civilian life in 1919 he matriculated at Franklin and Marshall College and was graduated from that institution in 1923.

After graduation from the Theological Seminary in 1926, he attended the University of Pennsylvania and received his master of arts degree in educational administration in 1931. During this time he served the East Vincent Charge of the Philadelphia Classis and was instructor in social studies in Spring City Senior High School.

Each year the members of Grace church return a love gift to the church at anniversary time. The range of these gifts since 1936 has been from $921 to $8,860. This was contributed during the 100th anniversary celebration in 1947.

The following men and women serve as heads of the church-wide organizations: William Toennes, superintendent of the Sunday school; Harold Benner, treasurer; Allen Kirchdoerfer, secretary; Mrs. Lloyd Kramer, senior choir president; Mrs. Charles Koch, president of the Women's Guild; Mrs. Carl Sell, president of the Missions Group; Albert Meiss, head of the athletic program, including the Sunday school league in bowling, softball, and basketball; Robert Knyrim, head of the Grace Church dart league.

MEMORIAL GIFT

A gift of $300 from the Spencer and Kirchdoerfer families in memory of John Spencer has been set aside for a permanent trophy case which will house the various trophies won by Grace Church through the years.

A new constitution of the congregation was prepared by a committee composed of Harold Koch, Landis Oberholtzer, John Culp, Robert Pensock, and T. D. Kreiger. This was approved by the consistory and the congregation.

Two symbolic plaques were handcarved and purchased by the primary department for the baptistry. A worship center was prepared by the junior department under the direction of Mrs. Fred Siglin. Crosses were the gift of Mr. and Mrs. Russel Feist. The

kindergarten, under the leadership of Mrs. Harry Howey, is laying plans for the setting up of a worship center for the beginners in the church school work.

INCREASE PLEDGES

Under the consecrated leadership and example of the laymen of the church, more and more members have pledged support for the annual budget in the kingdom roll call.

Hardwood floors were placed in the parsonage's first floor and a powder room was installed. A new chimney was erected for the church at a cost of more than $1,200.

The youth of Grace received "All American" rating from the denomination. There were 88 out of the 600 groups that qualified in the light of their programs during 1956. Mrs. Landis Oberholzer is the adult adviser. Ella Zueger, Forrest Kreiger, and Allen Kirchdierfer are the cub leaders.

Two hundred new hymnals, with the liturgy, have been ordered and many of them will be placed as memorials by members of the church.

Reverend Gebhard invites the public to the anniversary services.

CHURCHES TO UNITE

Next month the Evangelical and Reformed Church will unite with the Congregational Christian Church, and will thus help to bring greater union to the Universal Protestant Christian Church.

These 4 denominations, some of them serving in the United States for more than 200 years, will become one. The new name will be the United Church of Christ.

The new denomination will have more than 2 million members with a nationwide and worldwide program of Christian action.

The White House and the Power Question

EXTENSION OF REMARKS

OF

HON. FRANK CHURCH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, May 27, 1957

Mr. CHURCH. Mr. President, it has been obvious for somtime that the quarterbacking on the administration team has not been working satisfactorily.

Appropos of this is a very illuminating article in the Washington (D. C.) Evening Star of Friday, May 24, by Columnist Thomas L. Stokes. Mr. Stokes points up the amazing sequence of events which shows that the President of the United States occasionally operates in a vacuum of his staff's own making—while the Nation's large and powerful interests get their way at the expense of the taxpayer.

Mr. President, this is a serious situation. We are treated to the astonishing picture of the world's most powerful executive being uninformed and unaware of what transpires within that area of his own jurisdiction.

Mr. Strokes is a well known and reliable reporter. The facts which he presents can hardly be questioned.

Now let us turn to my own State, where the editorial writer of the Lewiston Morning Tribune, Bill Johnston, has suggested that the theme of the Hell's Canyon fiasco may eventually go down in history as, "clear it with Sherman." He suggests even further, in his editorial of Thursday, May 23, that the fumbles of the Hell's Canyon controversy will have a bearing on President Eisenhower's role in history.

I ask unanimous consent that both Mr. Stokes' column and Mr. Johnston's editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of May 24, 1957]

OPERATIONS AT THE WHITE HOUSE—STAFF ACCUSED OF NOT KEEPING PRESIDENT INFORMED ON TWO DAM AND POWER CASES

(By Thomas L. Stokes)

The really important thing about the political debate in the Senate this week is not the personal attack on President Eisenhower by Democrats, surprising as that may be and indicative, as it is, that Democrats now feel this can be done without hurting them politically.

The important thing was the picture built up of a President who is kept in the dark about matters handled by his White House staff, which a President should know about as they deeply concern the public interest. This ignorance, as it was bluntly called by his Democratic detractors, was about natural resources, policy and special privileges for big electric utilities. What has happened once again emphasizes what now is common knowledge here—how powerful business and financial interests operate to get what they want behind the facade of a kindly, popular hero whose interest in social welfare is continually stressed.

Once again the famous Dixon-Yates deal designed to strangle TVA was recalled by Senator ESTES KEFAUVER, Democrat, of Tennessee, in connection with confirmation of J. Sinclair Armstrong, formerly chairman of the Securities and Exchange Commission, as Assistant Secretary of the Navy. When SEC Chairman, he was shoved around by Sherman Adams, assistant to the President. The latter got Armstrong to delay the beginning of an investigation of the Dixon-Yates deal so that the House could act on a $6.5 million appropriation for a transmission line for Dixon-Yates before the SEC investigation. Adams knew that would show, as it did, that an agent of a Wall Street investment firm that was involved in the Dixon-Yates financing was also a consultant for the Budget Bureau in negotiating the Dixon-Yates deal.

This is known as conflict of interest, of which there have been numerous cases in this business administration. It is against the law.

During the controversy over the Dixon-Yates contract, which was finally canceled by the Government because of conflict of interest, we discovered at White House news conferences with the President that he had not been informed by his White House staff of details of this case affecting a big section of the country and an important Government project.

Now we discover that the President still is not kept informed about important matters by his White House staff in another case. This involves another big utility—the Idaho Power Co., of Augusta, Maine, which already has been favored by a grant of the biggest waterpower site still undeveloped in the United States—Hells Canyon in the Snake River along the Oregon-Idaho border.

Twice at news conferences, this week and last, President Eisenhower expressed his disapproval of fast tax writeoffs such as recently was approved for the Idaho Power Co. by Gordon Gray, administrator of the Office of Defense Mobilization. This means of quick amortization, which was instituted to induce private industry to expand for war production, amounts to an abatement of taxes for 5 years that constitutes an interest-free loan. The President pointed out each time that Secretary of the Treasury Humphrey opposes this device, as the Secretary, himself, had made known long ago.

Yet the Treasury head first found out about the Idaho Power Co. case when he read about it in the newspapers. Obviously, the President couldn't have been advised, either; at least it would be assumed that if he had he would have stopped it.

But the White House staff knew about it. So we would gather from testimony of Gordon Gray this week before a Senate committee. He had discussed it with members of the White House staff. We can only conclude that they told him to go ahead and approve it. He refused to tell the details of his conference with White House staff members. Six times he pleaded what is known as Executive privilege, which works like the fifth amendment.

There has been too much of this locking of the barn door after the horse is stolen in this administration. The President regrets—but the big interests always get what they want. He should have known about this Idaho Power Co. case. It has been bruited about publicly in Congress for 2 years. It was 2 years ago that Senator WAYNE MORSE, Republican of Oregon, warned in a Senate speech that Idaho Power Co. would get a quick tax amortization certificate. Several months ago both Virginia Senators—BYRD and ROBERTSON, Democrats—cautioned the Office of Defense Mobilization against granting it. Senator ROBERTSON asked that an ODM representative appear before his committee. None ever showed up.

This week we were told again by the President that we rank-and-file citizens can't have a tax cut yet.

[From the Lewiston (Idaho) Morning Tribune of May 23, 1957]

THE WHITE HOUSE AND THE MIDDLE SNAKE

The disclosure Tuesday that top White House officials were consulted on the Idaho Power Co. fast tax writeoff arrangement before it was announced is one which fits into an interesting pattern.

It increasingly appears that the White House has been consulted by administration officials at almost every stage of the Hells Canyon Dam controversy. There is nothing alarming or sinister about such an arrangement, of course. But when the whole history of the administration's spectacular Hells Canyon fiasco is written, it will be interesting to determine whether the theme of that history was the slogan, "clear it with Sherman."

Gordon Gray, director of the Office of Defense Mobilization, told a Senate subcommittee Tuesday that he had notified Presidential Assistant Sherman Adams and two other White House aides that he intended to grant Idaho Power's application for rapid tax amortization on its proposed Middle Snake River dams.

"I thought they were people who ought to be notified before they read about it in the papers," he said. "This is a matter in which there has been considerable interest and controversy."

He emphasized, however, that if any of the Senators questioning him meant to imply "that I made my decision under any instructions, then the implication is quite wrong."

This would appear to be another way of saying that he passed his decision up to the White House for review, found that it brought no objections, and then announced it publicly. In any event, there is no cause for concern in Gray's wish to inform the White House of his decision first.

The action does fall into a pattern which has become clearer only in recent months.

At periodic intervals during the long and bitter Hells Canyon controversy there have been decisions by the "administration" which seemed to reflect the workings of backstage machinery. The "administration" has evolved river development policies in the Northwest from time to time which departed from the policies of the various agencies charged with water resources—and this has been particularly true in the Hells Canyon case.

Only recently have statements been aired by some Washington, D. C., reporters that the real signal-caller throughout the Hells Canyon dispute has been Sherman Adams. And the evidence is steadily mounting that the White House has been consulted at stage after stage of the Hells Canyon controversy, establishing policies in the ruckus which did not necessarily coincide with those of the various administration agencies most directly involved.

It will be interesting to resource historians of the future if the evidence eventually proves beyond any doubt that the White House itself has been directly to blame for most of the fumbles in Hells Canyon controversy. The record, when it is complete, perhaps will have a minor bearing on President Eisenhower's role in history.—B. J.

Industrial Safety

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, May 27, 1957

Mr. NEUBERGER. Mr. President, safety campaigns and the effort to reduce the injury rates in industry pays dividends in two ways. The suffering, distress, tragedy, and death that are the concomitants of injuries are reduced. The loss of trained employees, impairment of morale, and lowered production, equally concomitants of injuries, are diminished as factors in economic waste.

Labor and management have found in the drive to reduce the injury rate another great area of mutual interest.

The April 1957 Harbor News, issued by the commission of public docks, carries an article, entitled "Efforts of Job Level Safety Committee Reduce Injury Rates 48 Percent in 7 Years," which points up the importance of safety.

I ask unanimous consent, Mr. President, to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EFFORTS OF JOB LEVEL SAFETY COMMITTEE REDUCE INJURY RATES 48 PERCENT IN 7 YEARS

As a result of a plan worked out between labor and management in 1948, Portland's waterfront has become one of the safest industrial areas in the city. Compensable injuries to Portland dock workers were reduced 48 percent between that year and July 1, 1956, the last tabulated six month period, and much of the credit for this satisfactory safety record is due to the Portland Job Level Safety Committee of the stevedoring industry of the Pacific coast.

The committee had its beginnings in 1948, when the Pacific Maritime Association and the International Longshoremen's and Warehousemen's Union wrote a West Coast labor contract that included a far-seeing, effective and workable job safety section which has proven mutually valuable to employees and employers alike.

Since the first Portland meeting of the Committee in August, 1949, monthly sessions have been held for the principal purpose of discussing safety as a means of education, and for exchange of ideas, instruction and cooperation rather than to develop a bargaining position. The Committee confines itself entirely to ways and means of developing procedures for safety instruction to stevedores and employers, safe practices on the job, improvements in supervision, and standardization of safety equipment.

Membership on the Committee is representative of the full range of waterfront employment. In accordance with the Pacific Coast Longshore Agreement, dock men, hold men, deck men, and lift and jitney drivers are represented on the committee. Employers sit in at the supervisory level. Committee membership is divided equally—four longshore representatives elected annually by Local 8, I. L. & W. U., and four management-employer representatives from stevedoring companies and terminal operators. Ninth man on the Committee is its secretary, Mr. Don A. Willhite, Area Supervisor of the Accident Prevention Bureau of the Pacific Maritime Association. Mr. Willhite has served as secretary of the Job Level Safety Committee since its formation.

At each monthly meeting the committee reviews injury reports and receives reports and suggestions from its members as to work practices, methods and conditions that have been observed on the job. Recommendations made by the committee are submitted for consideration and reply to the District Accident Prevention Committee, composed of steamship companies, stevedore companies, and terminal operators on the Columbia River.

As expressed by Mr. Willhite, the Job Level Safety Committee takes the position that safety is not something that can be negotiated into fact; mutual interest must develop an area of mutual understanding and cooperation.

That this cooperation and understanding have been accomplished is agreed upon both by labor and employers. Improved safety records and the 48-percent reduction on compensable injuries since 1949 are proof that the committee has kept its feet on the ground. The fact that longshoremen, by the very nature of their work, have no steady employers but work on a day-to-day job basis, has made it all the more imperative for mutual group effort in safety consciousness.

The Job Level Safety Committee is subscribed to on an industrywide basis, embracing all I. L. & W. U. Pacific Coast ports. In Portland, 5 terminal operators (the Commission of Public Docks, Columbia Basin Terminals, Albina Dock Co., Luckenbach Terminal and Interstate Carloading Co.), 7 stevedoring companies (Portland Stevedoring Co., Jones Stevedoring Co., Oregon Stevedoring Co., Brady-Hamilton Stevedore Co., Pope & Talbot, Inc., Luckenbach Steamship Co., and American Mail Line), and all steamship operators and agents of domestic and foreign lines work cooperatively with the committee.

On a broad basis, section 15 of the Pacific coast longshore agreement is the guidepost for the committee's efforts. This section directs the union and the employers to abide by the rules of the Pacific coast marine safety code. It requires the employer to provide safe gear and safe working conditions and to comply with all safety rules. Employers must maintain, direct and administer an adequate accident prevention program. The union is directed to cooperate in this program to develop and maintain procedures to influence all longshoremen to cooperate in every way that will help prevent industrial accidents and will minimize injuries when accidents occur. In addition, employers individually must comply with all safety rules and cooperate with management in the carrying out of the accident prevention program.

The final sentence of the section adequately sums up the purpose of the committee: "It is further intended that this program will produce mutually practical and effective recommendations regarding corrections of accident-producing circumstances and conditions."

The sincerity and interest of those cooperating on the Committee have been proven. Although the Committee's work may not be spectacular, it is constant and steady and is in the interests of saving human life and in material savings to the men and the industry.

The Commission of Public Docks has entered enthusiastically into the job safety program. The record of awards presented to the Commission during the past 10 years is proof of the policies, leadership, and personal interest and activity of all levels of management in stimulation of job safety practices. The Commission is proud of its own safety record—no CPD employee has been injured on the job since the present safety program was begun.

For the years 1945 through 1949 the Commission of Public Docks was awarded a 5-year memorial trophy by the Accident Prevention Bureau of the Pacific Maritime Association for the lowest injury rate of all terminals on the Columbia and Willamette Rivers. Since then, in 1950, 1953, 1954, and 1955 special wards of merit have been made to the Commission for perfect records of operating for a full year without an injury requiring a time loss of more than 6 days.

This outstanding record received Nationwide recognition when the Commission was invited to participate in the President's Conference on Occupational Safety in Washington, D. C., in May 1956. Mr. George Grove, operating manager, attended as the Commission's representative.

In all possible ways the Commission of Public Docks is entering into every phase of job-level safety. Recent construction at Terminal No. 2 includes the most adequate lighting installation in the Pacific Northwest for night-time operation on berths. The Commission also is using high visual color painting on edges of aprons, along depressed rail tracks, and on bitts for securing ships, and is providing life-saving equipment at every berth at each terminal. Fire prevention equipment is kept always in top operating condition and is tested and inspected at prescribed intervals.

The most modern facilities, rapid, careful handling of all commodities whether bulk or general, and attention to all rules of safety combine to make Portland, Oreg., the progressive port of the Pacific coast.

Interesting Facts About the Shelley Case

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, May 27, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written to me on May 24, 1957, by Hon. R. Carter Pittman, of Dalton, Ga., a distinguished member of the Georgia bar and a noted authority on constitu-

tional law. This letter presents some interesting and heretofore unpublished facts about the much-publicized case of *Shelley* v. *Kraemer* (334 U. S. 1, 68 S. Ct. 836, 3 ALR 2d, 441) and raises some very pertinent questions about it.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PITTMAN, KINNEY & POPE,
ATTORNEYS AT LAW,
Dalton, Ga., May 24, 1957.

Hon. HERMAN TALMADGE,
United States Senator,
Senate Office Building,
Washington, D. C.

DEAR HERMAN: While preparing questions for the 1957 Georgia bar examination, I came across the case of *Shelley* v. *Kraemer* (334 U. S. 1, 68 S. Ct. 836; 92 L. ed. 1161, 3 ALR 2d, 441), and learned something strikingly new and strange. The official United States Reports, the Supreme Court Reporter and the Law Edition do not carry quotations of and excerpts from amici curiae briefs in that case, but I discovered that volume 3 American Law Reports, second edition, beginning at page 443 and running through 455, lists the names of all attorneys and organizations appearing in that case amici curiae.

The Shelley case is the famous case decided on May 3, 1948, in which the Supreme Court usurped the power to amend the Constitution and to make law relating to matters reserved to the States, and held that judicial enforcement by State courts of covenants restricting the use or occupancy of real property to persons of the Caucasian race violates the equal protection clause of the 14th amendment.

Appearing in this private litigation as "friends of the court" purportedly in behalf of certain organizations seeking to have the Court invalidate time honored restrictions on the use or occupancy of property, universally held to be within the right of property owner and beyond the reach of government, prior to 1948, were the following who controlled the judgment of the Supreme Court in the Shelley case (I number them for convenience):

1. Alger Hiss, Philip C. Jessup, Joseph M. Proskauer, Asher Bob Lans, Myres S. McDougal, and Victor Elting, for American Association for the United Nations.

2. Edward C. Park and Frank B. Frederick, for American Unitarian Association.

3. Luther Ely Smith, Victor B. Harris, John R. Stockham, and Eugene H. Buder, for St. Louis Civil Liberties Committee.

4. Perry W. Howard and William C. Huestion, for Civil Liberties Department of the Grand Lodge of Elks.

5. Isaac Pacht and Irving Hill, Clore Warne and Douglas Badt, for the State of California.

6. Robert McC. Marsh and Eugene Blanc, Jr., for Human Relations Commission of the Protestant Council of the city of New York.

7. Herbert S. Thatcher, Robert A. Wilson, and Harry B. Merican, for American Federation of Labor.

8. Tom C. Clark, Attorney General, and Philip B. Perlman, for the United States.

9. Julius L. Goldstein, for Nonsectarian Anti-Nazi League To Champion Human Rights, Inc.

10. Melville J. France and William Kincaid Newman, for Executive Committee of the General Council of Congregational Christian Churches of the United States.

11. Robert W. Kenny, O. John Rogge and Mozart G. Ratner, for National Committee on Civil Rights and Liberties, National Lawyers Guild.

12. Lee Pressman, Eugene Cotton, David Rein, Frank Donner, John J. Abt, Leonard B. Boudin, Herman E. Cooper, Isadore Katz, Victor Rabinowitz, Benjamin M. Robinson, William Standard, Witt & Cammer, Leon M. Despres, M. H. Goldstein, Samuel L. Rothbard, Maurice Sugar, Lindsay P. Walden, W. A. Babcock, Jr., Ralph Helstein, Harry Sacher, David Scribner, and Matthew Silverman, for Congress of Industrial Organizations and Certain Affiliated Organizations.

13. Phineas Indritz, Harry B. Merican, Irving R. M. Panner and Richard A. Solomon, for American Veterans Committee.

14. William Maslow, Shad Polier, Joseph B. Robison, Harry Kalven, Jr., Byron S. Miller, John S. Bernheimer, and William Strong, for American Jewish Congress.

15. Joseph M. Proskauer, Jacob Grumet, Newman Levy, Sol Rabkin and Jacob Schaum, for American Jewish Committee.

16. William Strong, for American Indian Citizens League of California.

17. Charles Abrams, Harold I. Kahen, Victor W. Rotnem, Frederick B. Sussmann, Grover G. Sales, Francis M. Dent, Walter M. Nelson, Eugene H. Buder, Victor B. Harris, Luther Ely Smith, and John R. Stockham, Robert C. Eckhardt, for American Civil Liberties Union.

18. Earl B. Dickerson, Richard E. Westbrooks, Loring B. Moore, and George N. Leighton, for National Bar Association.

You will recall that after Alger Hiss appeared as a "friend of the court," two of the justices of that same court returned the favor and appeared as amici Hiss upon his first trial for telling a lie about a material matter involving his loyalty to his country. Can it be true that those justices of the Supreme Court who deny the existence of eternal principles are controlled by those who are devoid of principles?

The records of the committees of Congress, and particularly the House Un-American Activities Committee, with respect to some of the lawyers and organizations appearing amici curiae in the Shelley case may serve to explain some of the more recent decisions of the Supreme Court. If Hiss led the Court away from the Constitution in 1948 and Myrdal led it astray in 1954, who leads the Court now?

You may be surprised to learn that such a racial restriction clause as was involved in the Shelley case is referred to by some Georgia lawyers as the Roosevelt restriction, because Mr. Roosevelt was one of the few persons ever to insert such a clause in a deed conveying farmlands in Georgia. I first came upon the Roosevelt restriction while a member of the Franklin D. Roosevelt Warm Springs Memorial Commission in charge of the property formerly owned by Mr. Roosevelt at Warm Springs, Meriwether County, Ga. The restriction was inserted in deeds both before and after Mr. Roosevelt became President of the United States. The following is the form used by Mr. Roosevelt which are recorded in the office of the clerk of the superior court of Meriwether County, at Greenville, Ga., book 24, page 388, and book 29, page 411:

"Neither said land, nor any part thereof, shall be sold, rented, or otherwise disposed of to any Negro or other persons of African descent, or to a corporation or association owned or controlled by Negroes."

It is a mystery that lawyers and organizations such as some of those listed above should have such foreknowledge of questions to be decided by the Supreme Court as to enable them to prepare and file amici curiae briefs far in advance of the hearings. If our Commission had had the same notice of pendency of the Shelley case in 1948 as Alger Hiss had, we likely would have felt it our duty to file an amicus curiae brief in opposition to Hiss and for the Franklin D. Roosevelt Warm Springs Memorial Commission.

It will be appreciated if you will attempt to find out, if you think it possible, and let the people know, how it is that Marxists, Communists, and Communist-front organizations obtain advance information as to the nature of cases pending before the Supreme Court while others are kept in darkness until too late to protest. There may be those who would like to have many other questions answered. For example: Who employed Isaac Pacht and others for the State of California?

With every good wish, I am,
Sincerely your friend,
R. CARTER PITTMAN.

Relations Between the United States and Panama

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I received from the president of the Star and Herald newspaper in Panama, T. Gabriel Duque, as well as an editorial which Mr. Duque wrote for his paper, entitled "Unjustified Alarm":

THE STAR & HERALD CO.,
Panama, R. de P., May 14, 1957.

Hon. DANIEL J. FLOOD,
Congress of the United States,
Washington, D. C.

DEAR CONGRESSMAN: It was with the greatest pleasure that I received the clipping from the CONGRESSIONAL RECORD with your extension of remarks including a reproduction of our editorial in the Star and Herald concerning the celebration of the 108th anniversary of the foundation of our newspaper.

You can be assured that such kind gestures as yours are a great encouragement for us and a reward for the efforts we make in trying to keep up with the traditions of those who preceded us in the publication of this oldest daily paper on the west coast of the Americas.

As you undoubtedly know, one of our greatest efforts in recent years has been directed toward the defense of the interest of our Republic and the maintenance of the extremely cordial and friendly relations which have existed between Panama and the United States. As an example of these efforts I am enclosing a clipping of the translation of an editorial which I published in La Estrella de Panama, the Spanish-language twin of the Star and Herald, and later reproduced in our English edition.

By the contents of this editorial you will easily understand that I write in this manner when I sincerely believe that I am fully supported by actual facts and the best interests of our two countries. And in spite of this, I have been accused in Panama of being a defender of the interests of the United States to the detriment of my own country.

You will undoubtedly realize that such unfounded and uncalled for outbursts such as I refer to in this editorial, are extremely harmful to the frendly relations which fortunately exist between our two peoples. And it is our common duty to do our best to combat such deleterious influences.

It is in such a spirit, always seeking to promote our mutual interests and the promotion of always better ties between our countries that we have acted throughout the years and are firmly determined to continue along this path of friendliness on a basis of mutual respect.

With the assurances of my most distinguished consideration, I remain,

Very sincerely yours,

T. GABRIEL DUQUE,
President.

UNJUSTIFIED ALARM

It is well known that certain North American lawmakers and other usually misinformed persons in the United States have been voicing a series of alarms, fears, and worries regarding the future of the Panama Canal as if there existed among us an intent to violently change the juridical status of the waterway, thus more or less placing in danger the security of North America. And it is equally well known that with a purpose wherein there can easily be found a desire to intimidate, they follow up with talk of the necessity of studying other interoceanic routes with a view to the construction of a new canal to eventually replace the Panama route should there be confirmation of these fears developing, through spontaneous creation, in the minds of the aforementioned persons.

It is somewhat unexplainable that many Americans and their representatives in the Capitol at Washington should be so misinformed in regard to what happens beyond the borders of their country. This is especially so in view of the fact that with their daily use of such a large number of newspapers, possession of so many radio and television sets, it is not easy to understand how the average American—despite the predominant role his country has been called upon to assume in the world of today and the huge outlays which it makes in several parts of the world at the expense of its taxpayers—continues without a clear understanding of the most elemental things concerning other countries, and as a result, reacts in such an incomprehensible manner.

Under such circumstances, a wicked and/or ignorant newspaperman is capable of leading millions of North Americans to believe the greatest stupidities inasmuch as his readers, completely lacking correct basic information, are capable of accepting as truthful what they read in the printed page as long as it refers to an "exotic" country and what is said is not very pleasing to such readers.

The foregoing considerations occur to us in view of the fact that certain United States Representatives and Senators have reechoed certain stories of "fears" that have been launched we do not know by whom or for what—nor do we care for that matter—wherein it is more or less stated that we the Panamanians are ready to take over the Panama Canal through good or bad means, to oust North Americans from the Canal Zone, and to carry out, God knows how many other things, being moved by a purpose of which, to be truthful, no one here is informed.

Such agreements and recommendations for initiating studies of a new canal route are mere idleness and loss of time as the authors of such a proposal should very well know themselves. Such studies have repeatedly been carried out in careful detail. There is no possible canal route that has not been measured, calculated and studied in the greatest details and the conclusion that has always been reached, and always will be reached—if such lawmakers desire to waste their taxpayers' moneys in new studies for reaching the same results—is that, for geographical, geological, strategic, political, and above all, for economic reasons, the most logical, sensible, and reasonable way out is to construct a sea-level canal in Panama or instead, to improve the installations of the present waterway so that it may continue to render efficient services for many more years even though it should be exposed, as indeed it is, to total destruction in case of war.

With a basis on this undeniable fact, those American lawmakers may very well discard their false fears and unjustified alarms. In Panama no one is pretending to take over the canal; and our complaints and our claims deriving from agreements now in effect, have been oriented at all times on reasonable and sensible bases. We, the Panamanians, think and will continue to think as long as such a situation is not corrected, that the material benefits which we receive from the canal are neither adequate not proper compensation as is demonstrated, in the first place, by the fact that the United States pays to the Republic of Panama as rental for such an undertaking as the canal, from which it derives benefits, and for all the territory of the Canal Zone which consists of many, many square miles, a sum that can be considered insignificant, and even so, the present sum was obtained only 2 years ago after exhausting discussions and haggling because what was being paid in such a concept until then was even much less.

Panamanians continue to think that those who on the Canal Zone are employed in a certain type of work or render some service whatever should receive the compensation corresponding to such work without taking into consideration the nationality of the employee, and therefore, also, without those unjust discriminations by which a North American should earn more than a Panamanian, simply because he is a North American, if both are doing the same kind of work.

The Panamanians wish—and this has been said a thousand times in all tones, publicly and officially—that a permanent bridge be built over the canal so as to be able to cross from one separated section of our country to the other without having to submit to long delays or suffer discomforts, and we desire also the return of those lands which the United States has been occupying for many years and that are no longer of any use. These things have already been agreed to but they need the approval of the United States lawmakers before they can be put into effect.

The Panamanians also wish that the United States grant us economic assistance for improvement of our sanitation, our roads, our schools, even though with not such prodigality as she has been doing with reference to other countries, such as Yugoslavia, India, Pakistan, Iraq, and others—which, by the way, have never given evidence of any special fondness for North America—thereby acknowledging that Panama always, for more than 50 years and throughout 2 great world wars, has been a sincere friend and ally of the United States.

And in the purely spiritual order, the Panamanians wish and expect from the North Americans understanding and good will thereby to continue together and in good harmony along the path which destiny has marked for us, even though we may at times seem unable to find it.

Do those American lawmakers voicing fears know that we would have been filled with satisfaction and gratitude toward the United States by something so simple and so inexpensive as to have the Panamanian flag hoisted alongside that of the United States on ships crossing the canal? Do those legislators know that such a simple but significant thing was emphatically denied us? How could the granting of such a request have affected the prestige, security, or economy of the United States?

We, the Panamanians, consider wholly unjust the alarm or fears that such American lawmakers have or seem to have regarding the security of the canal to such an extent as to wish that new studies be carried out as to the possibility of constructing another.

We, the Panamanians, do not wish to oust the Americans from the Canal Zone nor do we wish to take over the canal. What we want—and we hope that someday the American lawmakers may learn this—is justice, understanding, and good will to continue solving those problems which we have briefly noted above, and to completely dispel any cause that may sometimes disturb the always loyal and sincere relations which our two peoples have maintained.

Armed Forces Day Address by Maj. Gen. R. P. Hollis, USA, Commandant, Industrial College of the Armed Forces, Washington, D. C., at the Annual Armed Forces Day Program, Altoona, Pa., May 18, 1957

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. VAN ZANDT. Mr. Speaker, it was a pleasure to accompany Maj. Gen. R. P. Hollis, USA, commandant of the Industrial College of the Armed Forces, to my congressional district on May 18, 1957, where he delivered the following interesting and informative address as principal speaker at the Armed Forces Day program in my home city of Altoona, Pa.:

Congressman VAN ZANDT, distinguished guests, ladies and gentlemen, I am honored to have been invited to speak before this group today and to participate in the activities of this afternoon when the Armed Forces Day parade occurs. This gives me an opportunity for my first visit to your city, which has contributed so greatly to the economic strength of the United States. I have read that Altoona has developed with the railroad system of the United States and the growth of that railway system has been a major factor in the unparalleled development of our country during the last century. This growth, and the prosperity of our economy, have forced upon our country a predominant role in world leadership. Everyone here can remember the days when there were many articulate proponents of the thesis that the troubles of Europe or other parts of the world were no concern of ours—that we should remain within our own shores and give small thought to the affairs of the rest of the world. Technological developments and the shrinking of the world because of new means of communication and transportation have long since reduced this theory to an absurdity. Whether we like it or not—whether or not we were prepared by experience or tradition to assume a position of world leadership—we find our welfare and our future inescapably bound up with the future and the development of other countries and other peoples throughout the world.

I have been asked to speak to you today on the theme of Armed Force Day which is "Power for Peace." The most important single factor in this theme is the leadership and the prestige of the United States in the free world today. This leadership and prestige are anathema to the forces of international communism who are dedicated to the destruction of our way of life and the supremacy of their system. In the original writings of Karl Marx there appears time and again the proposition that communism cannot exist and flourish in competition

with an economic and political system which Marx chooses to denominate "capitalism." A study of the writings and speeches of the leaders of the Soviet Republics from the day of their founding reiterate this proposition with monotonous regularity. Whether they choose at the moment to bluster and threaten or to smile and be ingratiating, there has been no slightest deviation in the objectives of the leaders of international communism from this goal of eradicating from the face of the earth those governments which are run on truly democratic principles, where men are free to speak their minds.

There is probably no one here who has not at one time or another been weary and discouraged because of the tensions which pervade the world today. There is always the temptation to succumb to the feeling that the struggle is futile and endless. Where the end may be, nobody can tell fully, but let me assure you that the struggle, however arduous, is anything but futile. If we were to permit our position of world leadership to deteriorate, the ultimate result would be some form of government analogous to that against which the courageous peoples of Hungary revolted last autumn.

It may be that the revolution in Hungary and the unrest in others of the Communist satellites, have foreshadowed the ultimate collapse of a system of ruthless and totalitarian government. It is a lesson of history that no brutal and arbitrary dictatorship continues to succeed over long periods of time. However, much as we may wish such an outcome, we must, if we are to survive, maintain forces which can secure the freedom of ourselves and our allies until such time as there is irrefutable evidence that the fact that—for whatever reason—the Communist objective of world domination is clearly and finally abandoned. The President of the United States in his talk to the people of the country on last Tuesday evening made explicitly clear the fact that we have a personal as well as a magnanimous interest in the free peoples of the world in their capacity as our allies in the preservation of our freedom. The need for national readiness to frustrate an always possible enemy attack, and to retaliate with overwhelming and decisive force requires the maintenance of military forces that are larger than the people of the United States have accustomed themselves to in times of peace. Further, the fantastic developments of modern-day technology have made imperative the arming of these forces with weapons which are complex and expensive to a degree which would have staggered the imagination only two decades ago. The rate of obsolescence of modern-day weapons contrasts dramatically with the situation a century ago, when a naval vessels might have a life of 50 or 60 years and when there were only minor changes between the small arms of our Revolution and those of our Civil War. We cannot, however, be deterred by the cost implicit in this obsolesence since it would be suicidal to depend on weapons which were not the equal of those possessed by our enemy. The aphorism "There is no second prize in war" is far more true in these days of destructive weapons than it has ever been in the past. The results of these facts, as they apply to each of you in the audience are that you find yourselves under individual heavy tax burdens, and that most of the families of Altoona, I am sure, have contributed sons to the Armed Forces within the past 15 years. All of these things constitute a heavy burden, but let there be no mistake—the alternative to this arduous preparation and these personal and financial burdens is the surrender of our freedom.

The Armed Forces appeared but seldom in the columns of our press and the programs of our other communication media prior to World War II. To the majority of our citizens at that time they were some remote and esoteric creatures in which the people as a whole had only an academic interest. Today, almost every edition of our daily papers and our television programs contain some references to them. Not infrequently, these references are critical. I should like for you to ponder my assertion that any activity of our Government which absorbs slightly over half of the national budget and which requires the participation of over two and three-fourths million of our citizens would be frequently in the public eye and would, as a matter of course, be subject to periodic criticism by the people of the United States on whom it placed such a very real burden as the maintenance of our national defense today.

If I may be forgiven a personal reference, for the first 15 years of my service I grew up in an Army with an officer strength of approximately 10,000 individuals. In the summer of 1943, I had occasion to see a management chart of the Army which illustrated graphically the officer strength of the Army since the outbreak of hostilities. I was really shaken to find that the Army at that time had 654,000 officers. For every 1 of the old regulars there were approximately 64 temporary officers who had been brought to duty within the 3 years preceding the date of this report. I should like for you to consider the hazards under which any commercial corporation would work which was required to expand by 6,400 percent in a period of 3 years. Some of the influences which much today be considered by the senior individuals, civilian or military, responsible for the posture of our national defense are almost as difficult to cope with as the fantastic World War II expansion of our Military Establishment to which I have just referred. I have the deep-rooted and abiding conviction that the integrity and sense of dedication of the leadership of our Armed Forces at the highest level leave little, if anything, to be desired. The motto of the Military Academy at West Point which reads "duty, honor, country" has not been without its effect in shaping the philosophy of the leaders of our Army, and there is no question in my mind that other national figures who make our military policies are imbued with the same motives and dedication.

The advent of fantastic new weapons have created a revolutionary period for the Armed Forces of our country. Many of our modern weapons of today have never stood the test of battle, and have been subjected only to laboratory tests. These laboratory tests have been so thorough, so scientific and so effective that I have no misgivings about their adequacy or the effectiveness of these weapons. but another factor enters here. It is not at all inconceivable that our Armed Forces may be required to operate in some peripheral wars about the globe, and that as a matter of policy, our Government may not see fit to resort to certain of the most destructive weapons at our command. Accordingly, all of our forces—land, sea, and air—must have a tremendous versatility and must be prepared for operations of various types and on varying scales.

One of the problems of all of our armed services is a sympathetic understanding and appreciation of the roles and missions—the capabilities and limitations—of their sister services. I am particularly gratified and honored to be assigned as the Commandant of the Industrial College of the Armed Forces. The resident course at this institution is attended annually for a period of 10 months by 145 students. This student body embraces approximately equal numbers of senior officers of the Army, Navy, Air Force, and Marine Corps in the grade of colonel or captain—and 25 senior and responsible civil servants from the executive agencies of the Federal Government whose duties are such that our curriculum is relevant to their work. Our course of study revolves about the problem which might be stated in a sentence as "The emergency management of the national economy." The Industrial College, and its sister institutions, the National War College and the Armed Forces Staff College, enable officers of each of the services to work intimately together on common problems in preparation for senior command and staff assignments which will follow their graduation. It is my personal conviction that no device within the Government is more effective in improving interservice relationships than are the friendships made at these three institutions.

My foregoing remarks sum up to the following.

The maintenance of our defense forces today constitute a heavy burden for every citizen of the United States.

There is no clear indication of the period during which we may have to carry this burden, but the price of the alternative in terms of renunciation of personal liberties is so great as to be unthinkable to every American.

Meanwhile, it is my conviction, and I think you may feel very safe in the same judgment, that the United States and the Free World are today defended by competent and dedicated forces which the world's experts, including our potential enemies, recognize should be adequate to defeat aggression.

In closing I should like to quote a remark of the President of the United States, Dwight D. Eisenhower: "Americans, indeed, all free men, remember that in the final choice a soldier's pack is not so heavy a burden as a prisoner's chains."

Western Hemisphere Unity

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Monday, May 27, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Threefold Way to Western Hemisphere Unity," which appeared in the magazine called U. S. A., an American magazine of fact and opinion.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THREEFOLD WAY TO WESTERN HEMISPHERE UNITY, INVESTMENT, INTERDEPENDENCE, PARTICIPATION

(By Edmund S. Whitman, director of public relations, United Fruit Co., excerpted from an address made to the Export Managers Club, New York City, April 1957)

In 1921, when I joined United Fruit Co. as a timekeeper on one of the company's banana plantations in Central America, our operations, to my young eyes at least, seemed beautifully uncomplicated.

Certainly my own particular job was simple. All I had to do was ride herd on 2,500 acres of magnificent banana lands, keep a check on 200 head of livestock, supervise the farm work, and prepare the payroll once a month.

The rains came, and the sunshine. The bananas grew, and the pickup engine chugged up and down the line picking up cars bulging with the freshly harvested fruit. Twice a week the freight train dropped a 50-pound chunk of ice along the right-of-way in front of the house for my ice box. I kept my own

cow and chickens. Affairs at the labor camp were tranquil. As I say, life was uncomplicated.

Not so today. During the swiftly passing years, we of the West have come up against a mighty and malignant force. It is my earnest conviction that today American business conducted in foreign countries can no longer be regarded as being confined to the traditional commercial lines of exploration, production, transportation and sale. Today, businessmen must be constantly aware of the assault on everything American by the international Communist conspiracy.

Today our very survival is involved in building a strong America that can withstand the Communist menace and grow in the face of it. That means a strong Western Hemisphere, which is considered by goepoliticians nowadays as a single geographical entity.

Clearly, Government must play a part in this buildup. But private enterprise has a vital role, too—in fact, the decisive one.

As American businessmen face up to the leadership role expected of them in building a strong Western Hemisphere, it is imperative that they examine and understand the true meaning and import of the international Communist conspiracy. A couple of years ago, when I first started publicly to attack communism, I must confess to a certain amount of personal anxiety. On the one hand, I knew enough about the international Communist conspiracy to realize that I was up against a ruthless foe; and on the other, I knew that I was striking out as a private citizen with no official skirts to hide behind. Besides, I was a product of the public relations business world in which we are schooled in caution and clearly trained in the techniques of not stirring up trouble and dedicating ourselves to enlarging the horizon of corporate friendships. It was not then, nor is it now, the popular thing for a member of a large corporation to take a strong stand on matters in the political domain or in the field of broad social responsibility.

I soon got over my timidity. And insofar as communism is concerned, I quickly learned that I did not have to confine my efforts to attacking an ideology based on atheism and aimed at the liquidation by force and violence of all that I believe in. I did not have to deal with this evil solely in terms of being against something.

On the contrary, all I had to do was first to identify the enemy so that my audience would know beyond a shadow of a doubt that this was a real and a frightful foe—and thereafter to present case histories of what the private enterprise system has been doing on an international front to offer the world something infinitely better than communism. In short: To fight communism you don't meet the enemy on his own terms at all; instead, you challenge him to meet you publicly on your terms.

PROFREEDOM

As of now—1957—understanding of the nature and duplicity of the enemy is such common knowledge that it is no longer necessary to quote chapter and verse to establish the basic fact that in the world today there are only two great forces—ours and theirs. But just as the reformed alcoholic must everlastingly keep in mind the fact that there can be no compromise with liquor and that only one drink lies between him and the gutter, so, I think, we of the free world must be everlastingly at the business of opposing the enemy without compromise, of exposing his strategies and blandishments in their true light, and of challenging him to meet our own positive program.

The other night I was privileged to attend a private dinner attended by a group of Hungarians who were deeply involved in the heroic uprising of their people in Budapest. Among them was a Monsignor who was at one time Hungary's leading political officer. His work over here is dedicated to the battle against communism and I asked him how he dramatizes it. His reply was that there are three words that explain the Communists' attack on us—remember them and you will forever be alert to their designs. Those three words are: Infiltration—polarization—liquidation.

The moment I heard those words, I thought with enormous pride of the blow to communism that was delivered right here in the Western Hemisphere by the brave people of Guatemala. There was a country which had already received the impact of infiltration and polarization and was on the threshold of liquidation, when her nationals rallied to the banner of their then courageous leader and now distinguished president, Col. Carlos Castillo Armas, and threw off the Communist yoke.

Recently, Congressman ALBERT P. MORANO of Greenwich, Conn., told the Guatemalan Congress: "Guatemala is becoming the showcase of Latin America through your courage, your determination, your wise planning, your concern for raising the standard of living of your people and your resolve to build the sinews of freedom. To be anti-Communist is not enough. You know that better than we. One must be profreedom."

FIVE STEPS TO TRAGEDY

The subject of infiltration has been widely discussed and is generally well understood.

On the subject of polarization—or the technique of "confuse and divide"—let me outline to you the five steps that are drilled into the minds and hearts of Moscow's well-disciplined agents prior to their moving into Latin America:

1. To evoke fear, mistrust and hatred for the United States by propaganda means;
2. To destroy inter-American economic relations and thereby dislocate many Latin American economies and soften them up for easy Communist capture;
3. To cut off major sources of strategic materials;
4. To wreck inter-American defense plans;
5. To prepare for wartime sabotage, with an eye particularly on the Panama Canal.

After infiltration and polarization, finally comes liquidation—the ultimate tragedy which we have seen enacted so many times in recent years in other parts of the world—Czechoslovakia, Hnngary, Rumania and others—and even attempted in our own Western Hemisphere. This is the point at which the curtain drops, be it of iron, bamboo, or whatever.

THREE WAYS TO UNITY

So much for the divisive, negative framework of the Communist conspiracy as it confronts us here in the Western Hemisphere and world today in malignant economic terms. The Communist conspiracy is powerful and dangerous, to be sure. But we are not doomed thereby to exerting merely defensive measures. Rather, we of the free world can mount and are mounting a powerful counteroffensive spearheaded by private enterprise.

This positive approach also can be summed up in three words: investment—interdependence—participation. And these three words point the threefold way to Western Hemisphere unity.

By investment I mean just what the term implies—the outlay of capital funds with a view to profit.

By interdependence I mean the close and harmonious relationship of potential markets and cooperation that stand for the betterment of al concerned.

By participation I mean the sharing of our profits with the countries in which we do business.

INVESTMENT

Lewis Haney, writing in the New York Journal-American, observes that the economic weakening of communism throughout the world is phenomenal. He ascribes this in part to the opening up of opportunities for foreign investment. "One of the greatest gains," he writes, "will be in material things, and will come through investments to develop the great resources of South and Central America."

Eugene R. Black, President of the International Bank for Reconstruction and Development, spoke recently at the annual Congress of American Industry in New York and stated: "Nothing we value is going to remain safe for long if the United States fails to realize its great stakes in foreign investment."

In New York recently, following a directors' meeting of the Creole Petroleum Co. in Caracas, Venezuela, Mr. H. W. Haight, president, discussed future expansion of his company as being necessary to insure our participation in meeting long-term growth in world-energy demand.

At a private dinner given recently by the Pan American Society of the United States in honor of the Honduran Ambassador to Washington, Dr. Ramon Villeda-Morales, the Ambassador stated: "Without capital it is impossible to make the machinery of progress go, since technology alone cannot set it in motion. This fact lies at the root of the problem today confronting the Latin American countries which, having available an abundance of exploitable resources—mineral, agricultural, timber, fashion, travel—are beset by the difficulty of exploiting them for lack of capital. And in this same fact also lies the origin of the growing interest, of those who have capital available, in the possibilities of investment in Latin America, which offers the best conditions and the greatest advantages."

The Ambassador went on to say that "investment should be something more than a movement of money and tools of production; it should be overall cooperation, equitable distribution of gain. That should be the constructive spirit in investment dynamics, because only in this way can investment be adapted to the norms of the Pan American ideal, summed up in the policy of the good friend, the good neighbor, and the good partner."

Honduras may well serve as an example of the friendly and cooperative point of view that exists today in most of the neighboring Republics to the south. According to the Ambassador "foreigners residing in Honduras may freely engage in commerce or industry; they enjoy the same rights and have the same obligations as the nationals of the country. Honduras has traditionally been hospitable and has welcomed foreign capital investments for the development of its natural resources. To offer a more attractive investment climate, it signed in 1955 a treaty with the United States of America, assuring investors that they would run no risk of expropriation or inconvertibility."

In 1955, United States companies operating in Latin America produced about $5 billion of goods and services. This figure was compiled by the Department of Commerce from statistics involving some 300 United States companies and representing roughly 85 percent of United States business assets south of the border. Investment activity by United States companies in 1956 was much higher than in 1955, and is continuing at a high rate.

A few months ago, at the World Trade Dinner of the Foreign Trade Convention, W. S. Richardson, president of B. F. Goodrich Co., stated about the worldwide potential for trade and investment that "looking through the eyes of an importer or an exporter, I see 2½ billion potential customers in the world for all of us; and our problem

is to obtain as actual customers as big a share of that enormous potential as we can."

INTERDEPENDENCE

A positive program of interdependence [of countries in the Western Hemisphere] tends to unify people, to improve them, give greater dignity to the individual—and it works. Moreover [in such a free enterprise program], every single individual in Latin America who produces for profit becomes a capitalist and can, in his own self-interest, be counted on to take an active role in fighting the insidious intrusion of the international Communist conspiracy within the borders of his own country.

It is obvious, I think, that the active practice of interdependence within a system of free enterprise results in an ever-enlarging middle class in Latin America. This growth means the defeat of international communism which aims at wiping out middle classes in order to establish a dictatorship of the proletariat. Lenin, Stalin, and the present leaders of the Kremlin have explained that such a regime means "the dictatorship of one class only; not democracy for all."

PARTICIPATION

According to Webster's Dictionary, the word "participation" is defined as "the act or state of sharing in common with others; profit sharing."

More and more in modern times of scientific and technological progress, the business community in all free nations is being called on to play a major role in the making and carrying out of foreign policy. It seems to me that this is a great challenge for American industrial statesmanship. For surely we have the managerial capacity, capital, and imagination to frustrate the Kremlin's insidious program of economic penetration. All we need to do is to apply our knowledge and our energies to the task at hand.

J. Anthony Panuch states in the Harvard Business Review of March-April 1957,[1] that "American industry cannot embark on a messianic venture of its own. What is needed is a working partnership between Government and industry; the correlation of a realistic policy of foreign economic aid based on enlightened self-interest with a massive expansion by industry of its overseas trade and its direct investment."

I have the honor of serving on the executive board of the Business Council for International Understanding. Its membership embraces 70 international companies with overseas investments. We are energetically trying to encourage North American concerns and individuals to do things abroad that will show our friendliness and our desire to understand different points of view.

I have just returned from a visit to Mexico on a subcommittee job in which we are working hand-in-hand with Mexican industrialists to develop a program of projects in Mexico. We are working with 4-H Clubs there, as well as with the Boy Scouts. We are helping the Mexicans to develop a young safe driving program and a youth traffic control. As a result of our visit, we feel that no doubt remains in the minds of our Mexican friends about the sincerity and spontaneity of our desire to work with them in developing a stronger Western Hemisphere unity.

In my public relations work, I have discovered that it is not enough just to do good deeds. Cardinal Spellman set forth the whole aim when he stated recently: "There is an ancient scriptural saying to the effect that truth shall prevail; but the scriptures do not say that it will prevail of itself. It needs to be clearly articulated, forcefully expressed, effectively brought home to its hearers, and made widely available through every means of communication within the power of those whose duty it is to disseminate it."

I believe that we of the Americas should join together in becoming co-laborers in the fullest development of our economic, cultural, and spiritual resources, allies in defense of western hemisphere unity, and indissolubly dedicated to the protection of those things which God Almighty intended us to enjoy as free men in a free world.

(EDITOR'S NOTE.—U. S. A. believes that the foregoing courageous speech by Edmund S. Whitman sets a new and good example to public relations personnel and officials of American business enterprises who are somewhat inclined to stay away from politics in public relationships, and are somewhat timid about taking a firm stand based on high principles when their opinions are sought on controversial matters. As Mr. Whitman so forthrightly declares, "there are only two great forces in the world today—ours and theirs." Whatever has been the past professional and executive training of public relations experts and industrialists, they now shoulder heavy political and spiritual responsibilities. It is unthinkable that they should weaken our system by giving it less than full support while Socialists strengthen their system by giving it the benefit of fullest endeavor. Now that Mr. Whitman and a few other standing executives of big companies have shown a willingness publicly to stir up trouble for Communists, perhaps American-business men in general will do likewise. Thucydides said of Athens, "her glories were purchased by valiant men, and by men that learned their duty.")

The President and the Budget

EXTENSION OF REMARKS
OF
HON. W. KERR SCOTT
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, May 27, 1957

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Thursday, May 23, 1957, issue of the Kings Mountain Herald, one of North Carolina's outstanding newspapers. The editorial is an excellent analysis of the position of the President in respect to his proposed budget.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POOR MR. EISENHOWER

Wasn't it Herbert Hoover who was supposed to be the last lame-duck President?

Mr. Hoover remained in office, if our editorial memory is correct, from November until March. He was already defeated, but still was running the office. There was complaint that a lame-duck President was of little value to the Nation or to himself. Thus Inauguration Day was advanced to January, and most folk thought it was a wise decision.

Then came Roosevelt and his four successful elections, and Harry Truman followed by astounding the majority of his supporters in winning an election in his own right.

By this time, many people, all the Republicans and some of the Democrats, were beginning to be afraid that the wild Democrats could never be ousted. There resulted the constitutional amendment limiting a President to serving two consecutive terms.

This rule hasn't worked out too well, and particularly is it displeasing to its once-ardent supporters.

Mr. Eisenhower is a lame-duck President, not for a few months, but for 4 years. Knowing he can't seek reelection, many of his former stanch supporters have left him, both in friendship and policywise.

Nothing could have more graphically proved the point than the public reaction to Mr. Eisenhower's address of last week in which he sought to defend his big budget request. In the parlance of the theater, Mr. Eisenhower laid an egg. The economy-minded Congressmen are still of the same frame of mind, and Mr. Eisenhower thus far has been unable to bring pressure on the lawmakers by taking his appeal to the masses.

Of course, there are some basic weaknesses in the Eisenhower budget appeal. Most taxpayers are tired of paying heavy taxes which go overseas as gifts to foreign nations. In addition, the average citizen is well aware of the gross waste in the Armed Forces. They know how wasteful because they learn from their sons, in arms via the draft, or just recently discharged after serving their required hitches.

Long term, the Presidential tenure limit may prove out and certainly there is little chance of changing it at the moment. The Democrats, at whom the tenure limit was aimed, are only too happy to let the Republicans stew in their own juice.

One benefit, apparently, is that Congress has resumed somewhat its role of pre-Roosevelt days. The Congress seems to be assuming some responsibility again, after serving for nearly a quarter of a century as flunkies for strong Presidents.

The Federal Budget

EXTENSION OF REMARKS
OF
HON. WILBUR D. MILLS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. MILLS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following item by Jack Steele, Scripps-Howard staff writer:

WASHINGTON, May 22.—Despite the economy drive in Congress, rising Government expenditures probably will push the 1958 budget to $73 billion instead of the $71.8 billion estimated by President Eisenhower in January.

This forecast of a $1.2 billion increase in 1958 budget expenditures was made yesterday by the Joint Committee on Internal Revenue Taxation.

It emphasizes the great difficulty which confronts congressional budget cutters this year.

And it illustrates dramatically why the economy drive—if it is to make a real dent in the big Federal budget—must continue for 2 or more years.

The real danger—as the committee's report makes clear—is that the economy drive will peter out before Congress can recapture actual control over Federal spending.

If that happens, the budget cuts currently being voted won't justify the tax cuts congressional leaders already are dreaming about for next year.

The figures in the committee's report and those carried daily in newspaper headlines about budget cuts made by Congress seem, at least on the surface, to be contradictory.

Congress already has in the works slashes of more than $4 billion from 1958 appro-

priations. It may slice off another $1 billion before it finishes up with the 1958 fund bills.

How then, as the committee forecasts, can the 1958 budget rise $1.2 billion above the President's estimates?

The committee's staff report cites two reasons:

1. Rising prices will push up Government spending next year, just as happened in the current fiscal year.

This means Congress will have to vote supplemental funds next spring to compensate for inflation.

The big effect of rising prices will be on military procurement.

Last year Congress voted more funds for defense than the President requested. As a result, it has been possible this year to absorb some of these price increases.

Projected cuts in the 1958 military budget will make this more difficult next year.

2. Many of the cuts Congress is now voting will not reduce actual Government spending in fiscal 1958. The budget savings will not become effective until 1959 or later.

The committee cited the experience with the 1957 budget to illustrate how this works.

In January 1956, when he presented his 1957 budget to Congress, President Eisenhower estimated expenditures at $65.9 billion.

But the committee estimates that 1957 expenditures, by the time the fiscal year ends on June 30, will hit $69.5 billion.

This $3.6 billion increase will be recorded despite the fact that Congress last year voted cuts in 1957 appropriations totaling over $250 million.

The real reason for this—and for the fact that it probably will happen again in 1958—is that the Federal budget is not a one-year affair.

Much of the money the Government will spend in fiscal 1958 was authorized by Congress as long as 2 or 3 years ago. As a practical matter it can't be cut this year.

And, while Congress was paring down the current budgets in 1955 and 1956, it often voted increases in contracting authority for future years. These increases will help push up spending in fiscal 1958.

By the same token, some of the cuts now being voted are in contracting authority for future years. They won't reduce spending in 1958.

Others are bookkeeping cuts which involve transfers of funds rather than real savings.

Legislative Branch Appropriation Bill

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. SCHWENGEL. Mr. Speaker, last week we voted on the legislative branch appropriations bill. One amendment was offered to recommit the bill and strike from it, $7,500,000, which would permit the work on the third House Office Building to go ahead. I felt obligated to vote for the recommittal. Although several of my colleagues felt the same way, there weren't enough of us, unfortunately, to approve the amendment.

My action was based not so much on the fact that I might be opposed to this expenditure, as it was to the apparent disregard which has been shown for the legislative procedure which we are supposed to use in determining these expenditures.

As a member of the Public Works Committee, I expected further hearings to be held on a project of this magnitude. I know that many of my colleagues on the committee, many of whom are experts in the field of construction, wanted to testify on this program. Some of them favored the project; others did not. Be that as it may, I am still of the opinion that these programs will be better carried out when they have the benefit of the deliberate pro and con discussion of a committee hearing.

If such hearings had been held, the recommendations would have undoubtedly have a truer relation to the actual needs. The recognition of the needs, and the best ways of meeting them would have had thorough review and I feel confident that it is possible we could have saved the taxpayers some money.

It is not clear to me, Mr. Speaker, how we as Members of Congress can, in good faith, vote for Capitol Hill improvements which benefit us more directly than anyone, and then put the pruning knife to the programs which deal with the welfare of all the people.

We look mighty selfish carrying out this building program as long as there is such a need for post office buildings, dams, water and soil conservation projects, and other internal improvement programs any place in the country.

When Congress starts to build a monument to itself, it is high time that we take another look, pull ourselves up short, and ask ourselves if it is in the public interest. I wish to go on record as being against any more building here until we have provided for new post office buildings where they are so sorely needed for adequate handling of this important service and giving post office employees better working conditions.

The Van Zandt Bill, H. R. 7472, Amending the Atomic Energy Act, Is Viewed as a Realistic Approach in Terminating the Running Battle That Has Occupied Several Vital Years in Our Atoms-for-Peace Program

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. VAN ZANDT. Mr. Speaker, the following editorial entitled "Atomic Partners," appeared in the May 18, 1957, issue of the Boston Herald and describes in a brief and effective manner H. R. 7472 which I introduced May 13, 1957, as a compromise measure in the hope of stressing the need for an immediate solution to problems affecting the Atoms for peace program:

ATOMIC PARTNERS

America's "capital" sources of energy—coal, natural gas and oil—are being tapped at a fantastic rate. By the year 2000, it has been estimated, we shall be digging into our last reserves of coal.

On the other hand 1 pound of uranium, through fission, releases as much useful energy as the burning of 1,300 tons of coal.

It is against such elementary facts as these that we must view the importance of developing atomic energy for peaceful purposes. Whether it should be done primarily through governmental or private agencies is, in turn, the issue that confronts us; and it is a matter of immediate decision.

Representative JAMES E. VAN ZANDT, the senior member of the Joint Congressional Committee on Atomic Energy, has offered a compromise in the running battle that has occupied several vital years in our atoms for peace program. Essentially it takes a middle ground between the Democrats who have been urging a crash Federal program and the administration, which urges private industry to take the lead with some Government assistance.

The Van Zandt design provides for Government sponsorship of plants up to 50,000 kilowatts capacity, private sponsorship of plants over that figure. There would be tax concessions to private enterprise because of the unprofitable nature of the business and the need to spur the effort; and the extension of AEC research assistance to firms constructing large-scale reactors under the program.

The head of the House Appropriations Committee, Clarence Cannon, however, has declared that this assistance is unauthorized. The whole "partnership" approach to development, has thus been cast in doubt.

Yet the "partnership" approach, especially as amplified by Representative VAN ZANDT, would probably be the one realistic method of enlisting the cooperation of both Government and industry in this essential field. It is not the ideal solution. ("Industrial development," says Dr. James G. Beckerley, a physicist who formerly directed the classification of material for the AEC, "will be greatly handicapped by Government control of the dissemination and handling of technical data of potential commercial value.")

But, more importantly, it is the practical solution.

Commercial nuclear power in England started last October with a dual-purpose (energy and plutonium) plant at Calder Hall. The announced British goal by 1965 is as much as 6 million kilowatts. The Soviet Union claims it will have at least 2 million by 1960.

By the end of 1959, we expect 10 experimental plants to be producing nuclear power. Only one of these, though, the Shippingport, Pa., pressurized water reactor, is a large-scale plant, and America's estimate of total nuclear generating capacity as of the end of 1959 is on the order of only 130,000 kilowatts.

Such are the grim facts of the international kilowatt race. The partnership compromise may only be a temporary and expedient measure; but at any rate it is a device to get the laggard United States program into the running. And get into the running we must, or we shall wake up in some future generation, a second rate power as surely as though we lost a war.

The People and the Bomb

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. ROBERTS. Mr. Speaker, there seems to be a growing concern, noted in recent surveys, on the part of the people

of this country about nuclear tests. Many people are worried over the effects of these tests, particularly in regard to fall-out.

An interesting editorial on this subject appeared in the Birmingham (Ala.) News of May 21, 1957. Under leave to extend my remarks, I enter this editorial:

AMERICAN PEOPLE ANXIOUS FOR AGREEMENT TO END H-BOMB TESTS

The latest poll by the American Institute of Public Opinion on stopping H-bomb tests points to a strong and growing sentiment among our people for international agreement to that end.

But it is a broad question, we think, just what kind of agreement would be acceptable to the majority of our people.

The results of this survey indicate what Dr. Gallup calls "a dramatic change in the public's thinking on calling a halt to further hydrogen bomb tests." But what they would favor in specific action would, of course, depend on the terms of any proposed agreement. We do not think they would actually favor such a halt unless the plan included acceptable safeguards and it was clear Russia would not be left in a position of greater advantage in Europe.

Adm. Arthur W. Radford, Chairman of the Joint Chiefs of Staff, returning to Washington after a 3-week tour of Latin American nations, told newsmen Sunday he would have to study the latest Soviet arms proposals before expressing any views on specific points. But he said the Russians have broken their word too many times for him not to be distrustful of them. Any disarmament agreement, he said, must be self-enforcing or subject to genuine inspection. He declared "we must be able to have a fool-proof check" on any limitation in armaments the Russians might agree to undertake."

Distrust of the Kremlin leaders is, of course, generally shared among our people. That feeling would—and should—make us wary respecting any agreement. And it would cause our people to desire to go very carefully into any agreement concerning the stopping of H-bomb tests.

In the latest Gallup poll this question was put: "If all other nations, including Russia, agree to stop making any more tests with nuclear weapons and H-bombs, should the United States agree to stop, or not?"

A large majority—63 percent—favored agreeing to stop. Only 27 percent said the tests should not be stopped. Ten percent had no opinion.

These returns are in sharp contrast to those from a survey toward the close of last year's Eisenhower-Stevenson campaign. Mr. Stevenson had been calling for United States action looking to an agreement to ban further H-bomb explosions. An Institute survey found 56 percent of those questioned against calling off the tests, 24 percent in favor of such a ban, and 20 percent without an opinion.

Unquestionably our people are extremely concerned about these tests. Dr. Albert Schweitzer and other world leaders in recent months have spoken out against continuing these tests. Many believe there is a real danger from fallout from such explosions. Dr. Gallup suggests that such factors and also a lessened fear of early war may account for the apparent change of sentiment.

But whatever the change in public opinion has been, it would be surprising to us if a majority of the people would actually favor definite action to end the tests by international agreement without very strong assurances that such an agreement would be faithfully carried out by the Russians and that such a program would not work to their military advantage.

The Russians still hold the key to real disarmament progress. If they will agree to action fair to all the nations and to an adequate inspection and control system, undoubtedly progress can be made. Lately there have been signs that they may be ready for real moves in that direction. Our explorations and efforts toward an acceptable and constructive agreement should continue to be pressed when the U. N. disarmament subcommittee resumes its sessions in London next Monday.

Myths About Medical Education

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. BOLAND. Mr. Speaker, a distinguished member of the medical profession in my community sent me an interesting article that should be read by the Members of this House. When the Members are discussing or acting on proposals before this body, it is often difficult to separate fact from fiction. Confusing and contradictory attitudes attributed to organizations and individuals are often presented. The purported positions that particular groups take on legislative proposals and their reason for such positions are not always presented in their true light. I am indebted to John W. Turner, M. D., of Springfield, Mass., for bringing my attention to an informative article that deals with the above problem. Mr. Speaker, under unanimous consent I include it with my remarks in the Appendix of the RECORD.

The article follows:

CHICAGO.—Seven myths about medical education are exploded in a booklet released here by the AMA in connection with Medical Education Week this year. This period will cover April 21 to 27, and will be marked by a concerted effort to inform the public of the dramatic progress made by medical schools in this country. Copies of the booklet may be obtained by writing the AMA, 535 N. Dearborn St., Chicago, Ill.

The first myth is that medical school graduates are not keeping pace with population growth. Figures are cited showing a 120 percent increase in graduates over a 45-year period, during which population increased only 80 percent.

Myth No. 2: Medical schools try to keep their enrollments as small as possible. This is refuted by data showing a 128 percent increase in enrollments in the same 45-year period.

Myth No. 3: Medical schools refuse admission to a vast number of applicants. Here the booklet reveals that over half of all applicants to medical schools were accepted in 1954–55. It further states that about 30 percent of each year's applicants are persons who repeatedly have tried to enroll, many of them lacking real qualifications beyond their desire to study medicine.

Myth No. 4: Only "A" students are admitted to medical schools. This is debunked by the 1954–55 figures showing only 17 percent of enrollees had "A" premed averages * * * 69 percent had "B" averages, while 14 percent were "C" students. Character, personality, leadership, and other nonscholastic qualities are cited as bearing heavily on whether a student is accepted.

Myth No. 5: Medical schools in the United States fail to grow with the times. Here the facts reveal that by 1960 the annual output of physicians will be upped to nearly 7,500 graduates, and that the quality of their education is constantly scrutinized by both the AMA and the Association of American Medical Colleges.

Myth No. 6: The AMA attempts to restrict the number of physicians. This erroneous idea is refuted by the fact that the AMA lacks any such authority, and can only recommend sensible limits for a given school, final determination lying only in the hands of school authorities themselves.

Myth No. 7: Medical schools are hard pressed for operating funds and only the Federal Government can meet their needs. While schools do need more income, the booklet states, the truth is that the medical profession opposes any continuing Federal aid, although it welcomes grants for special research in diseases, school construction, school renovation, and similar onetime grants. For continuing funds, other sources constantly are sought and found. This is the same principle applied elsewhere—that, what the Government finances it may some day seek to control, thus undermining individual creative initiative, the booklet states.

Organizations listed as sponsoring the Committee on Medical Education Week, 1957, are the Association of American Medical Colleges, the AMA, the American Medical Education Foundation, the National Fund for Medical Education, the Student American Medical Association, and the Woman's Auxiliary to the American Medical Association.

Golden Jubilee of Slovak League of America

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. MULTER. Mr. Speaker, today, May 27, marks the date on which the Slovak League of America was organized 50 years ago.

The following is a letter which I addressed to Mr. Philip A. Hrobak, president of the Slovak League of America on the occasion of this anniversary:

It is with a great deal of pleasure that I extend my greetings to the Slovak League of America on the happy occasion of its golden jubilee.

All Americans know that in the bloodstream of our Nation flows the aspirations, dreams, and loyalties of men and women of all nationalities. The Slovaks have contributed their share to the growth and greatness of our country. The Slovak League of America, especially, has done much in promoting the welfare and security of the United States of America.

For the past half century, you have enriched American life by your cultural and civic achievements. You have shown your dedication to the American way of life by urging and aiding Americans of Slovak descent to become loyal citizens of this country.

Although Americans first, you are justly proud of your Slovak ancestry. Through the Slovak League of America, the American people have become aware and have learned to appreciate the noble culture, traditions, and achievements of the Slovak nation and

its gallant and hard struggle to gain freedom.

Unfortunately, today, the land of your ancestors is suffering under the godless tyranny of communism. Consequently, there is sadness as well as happiness at this golden jubilee. But there is also determination in this group; a determination to fight communism and its conspiracy against free humanity.

On this golden jubilee day, I would like to join with the members of this American institution in denouncing the tyranny of communism; in praying for the freedom of enslaved Slovakia, and in hoping for continued success of the Slovak League of America.

To Europe Via Miami

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks, I would like to state that recently I had the opportunity of appearing before the Civil Aeronautics Board, along with several other members of the Florida delegation, in behalf of an application of Pan American World Airways to connect the city of Miami, Fla., with Europe and the world beyond. The application of Pan American World Airways is without controversy and is the only one pending for approval of this route from Miami to San Juan to Madrid.

Miami and southern Florida are growing faster than any similar area in the United States. Commerce in Florida is on the march, and new markets are necessary for Florida's great variety of commodities. It is felt that the approval of this application will benefit Florida greatly.

The Fort Myers News-Press, one of the outstanding newspapers in my district, recently carried an editorial pinpointing the great advantages to Florida for certification of this route. I would like to have it printed in the RECORD so that it might be widely read.

The editorial follows:

TO EUROPE VIA MIAMI

A good many people from this area are going to Europe for their vacation this summer. The number of Europe-bound vacationists from this section has been increasing year by year. They all have to go first to New York by train or plane at a cost of some time and expense and then take off from there by boat or plane. Wouldn't it be a great convenience and saving if they could go to Europe direct from Miami instead of by way of New York?

Well, that will become possible if the Civil Aeronautics Board grants an application by Pan American Airways on which final arguments are to be heard next month. PAA is seeking to inaugurate a new direct route from Miami across the Atlantic by way of San Juan, the Azores, Lisbon, Madrid and Rome, where connections would be made with other PAA routes to northern Europe and around the world. There would be 4 round-trip flights weekly between San Juan, Puerto Rico, and Lisbon and Rome, 2 direct from Miami and 2 originating from the Canal Zone providing connections from Miami and San Juan.

Pan American already flies from Lisbon to Rome by way of Barcelona and Nice. In connection with the new service it proposes to fly from Lisbon to Madrid en route to Rome and the only opposition has come from Trans World Airlines which opposed Pan American's entry into Madrid. The Spanish capital is served at present only by TWA. But the Spanish Government and Puerto Rico are strongly supporting the PAA application.

There is no United States airline now operating over the midocean route although several foreign airlines fly from Latin America to Puerto Rico and then across the Atlantic. These foreign airlines transport 55,200 passengers a year across the mid-Atlantic, bypassing the United States. Pan American believes that at least 13,590 passengers would use its new route in its first year and that it would prove so profitable that it would operate as a nonsubsidy route and yield about $2 million a year profit to apply against the present subsidy paid for operating unprofitable routes in the national interest. This would be a $2 million saving for American taxpayers, and this alone seems a strong argument for granting the application.

Another advantage of this proposed route of particular interest to Florida is that it also would bring European tourists here. Pan American reports that foreign travelers, some two-thirds of them Europeans, spent approximately $600 million in the United States last year, nearly half as much as the great throng of Americans spent abroad. A direct air route between Miami and Europe would bring some of this heavy traffic this way.

In the light of these considerations, plus the great advantage it would be to Floridians to have a direct route to Europe from Miami instead of having to go up to New York to go abroad, the granting of the PAA application for this service appears strongly indicated in the public interest. While the new PAA route might let TWA in for some competition at Madrid, it is to be hoped that the CAB will weigh the many other factors which call so strongly for the granting of the PAA application.

America's Walkingest President

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. McCORMACK. Mr. Speaker, I wish to insert in the CONGRESSIONAL RECORD the citation presented to former President Harry S. Truman on May 17, 1957, in Kansas City as America's walkingest President by 60,000 members of the Boot and Shoe Workers' Union, AFL–CIO, headed by Mr. John J. Mara.

The citation was presented as a mark of the union's personal esteem for President Truman, as well as in recognition of Mr. Truman's widely known penchant for frequent walking. It was accompanied by a pair of spiked track shoes and a wardrobe of five pairs of shoes.

Mr. William Scanlan of the Boot and Shoe Workers' Union, who is a resident of Boston, Mass., said the spikes were given to help Mr. Truman get around with greater speed to tell more Americans about the Harry S. Truman Library in Independence.

Because of the sentiments expressed in the citation, I am including it in toto:

The Boot and Shoe Workers' Union, AFL–CIO, presents to Harry S. Truman, America's walkingest President, this tribute in national recognition of his lifelong contribution to the merits of walking as the most invigorating of exercises. He walked confidently through the years of war and peace in quest of a better world for all. He walked alone and with the leaders of the earth. He walked squarely into all issues to face them with honor. He walked for health, for relaxation, and for spiritual sustenance. His step has always been forward. And, with the grace of God, may he walk many more years among us—the American people whom he loves, and who, in turn, love and honor him.

Presented May 17, 1957.

JOHN J. MARA,
President.

KANSAS CITY, MO.

The Overton Canal Waterway

EXTENSION OF REMARKS
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. LONG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

WASHINGTON, D. C., *May 8, 1957.*

Maj. Gen. EMERSON C. ITSCHNER,
Chief of Engineers, Corps of Engineers,
Department of the Army,
Washington, D. C.

DEAR GENERAL ITSCHNER: I am writing relative to a considerable amount of confusion which continues to exist over the feasibility of the Overton Canal in Louisiana.

When I first campaigned for a seat in Congress from the Eighth Congressional District of Louisiana, I advocated a deep waterway from that area to the gulf. The principal question remaining in my mind was to seek the best route and I have refrained from endorsing the Overton Canal because there were several questions in my mind as to its feasibility and from an economic standpoint.

My position with respect to the Overton Canal has been one which has brought considerable criticism upon me. My answer to this criticism has been the same, that is, I wanted to be sure that the Overton Canal was the best answer to the deep waterway problem.

In your recent speech before the Red River Valley Association in Shreveport, La., I gathered the impression that a resurvey and a reevaluation of the Overton Canal and recently been conducted and that on the basis of this resurvey and reevaluation the canal had been fully justified and established as the most feasible waterway. Further, it was my understanding, based on your speech, that the resurvey and reevaluation took into full consideration the possibility of using the Red River as an alternative waterway. The impression received from your speech was that the resurvey and reevaluation definitely justified the Overton Canal and established that the Red River was not feasible to be used as a deep waterway.

Subsequent to the Shreveport meeting, where I received the impression that the justification for the Overton Canal was based

on a recent resurvey, I have been criticized publicly and in correspondence for apparently softening my attitude in opposition to the Overton Canal.

Under date of February 20, 1956, I wrote to General Hardin, posing several questions, to which he replied, in part, as follows: "The project as of this date is in the planning stage. Since no funds have been made available for start of construction, the project has been inactive for a number of years owing to lack of funds. Planning funds were made available for fiscal year 1956, and at the present time the cost of the project and benefits to be derived therefrom are being studied with the view of arriving at a current cost-benefit ratio at present price levels. This study is nearing completion, and as soon as it has been reviewed and approved by the Chief of Engineers, I shall be pleased to make the results available to you."

To date, I have not received this information. Now, have they made such a survey? Is there such a thing as this resurvey and reevaluation? I do not wish to go back and use the old House Document 320 survey which was made some 10 or 12 years ago, as a basis of justification for the Overton Canal. I asked for a new evaluation of the river and the cost of the canal. I asked them to take a new look at the river which they said they would do and give me a report in January. I have not as yet received this report nor a complete answer to my questions.

Now, General Itschner, in order for this matter to be clarified and to know just exactly where we stand, I would appreciate very much receiving the following specific information from you:

1. An appropriation totaling $530,000 was voted for the purpose of resurveying and reevaluating the Overton Canal, and also to examine the feasibility of the Red River serving as a deep-waterway route to the gulf. Has this money been used for the purpose of reexamining the deep-waterway problem with which we are concerned, especially the $150,000 which was voted for fiscal 1957?

2. In your recent speech before the Red River Valley Association in Shreveport, I received the impression, and I think others did also, that the justification outlined by you was based on a recent resurvey and reevaluation and not upon the original justification as set forth in House Document 320, 80th Congress. I would like to know which justification was used in the facts which you outlined in your speech.

3. If the resurvey and reevaluation for which this appropriation was recently voted has not been completed, please give me the best possible estimate you can as to when these further studies are expected to be completed.

Inasmuch as in your speech you said you had justified the Overton Canal, and realizing that you had spent in the neighborhood of $530,000 for this purpose and to evaluate the river, I want to know if you were speaking from a second survey or were you speaking from the first survey. I said in my speech that if and when the Corps of Engineers made the second evaluation and it was proven to be justified, I would be for it, but to date I have not been informed as to whether or not this justification is based on a second survey, or on the original survey and report.

I shall appreciate very much your early response to this letter because I find myself in a rather embarrassing position and am anxious to get the facts regarding this all-important matter.

Thanking you for the attention I know you will give this request, and with kindest regards, I am,

Sincerely yours,

GEO. S. LONG,
Member of Congress.

Appropriations Item Veto, H. R. 830

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. MULTER. Mr. Speaker, the following is the text of my statement which I submitted today to the House Judiciary Committee in support of my bill, H. R. 830, to provide that for the purpose of disapproval by the President each provision of an appropriation bill shall be considered a separate bill:

STATEMENT OF REPRESENTATIVE ABRAHAM J. MULTER, DEMOCRAT, NEW YORK, BEFORE THE HOUSE JUDICIARY COMMITTEE, MAY 27, 1957

Mr. Chairman and members of the committee, thank you for this opportunity to submit to this honorable committee my views on the subject of the principle of the item veto of appropriation bills generally and in support of my own bill, H. R. 830 specifically.

To me it is inconceivable that our Founding Fathers, at any time during the constitutional debate on the veto power, could have visualized the magnitude and complexity of today's appropriation problems. In the principle embodied in article 1, section 7, clause 2 and 3 of our Constitution, they vested exclusive veto power in the Chief Executive, but, at the same time, preserved to the legislative branch the final determination of the fate of legislative measures.

This is a basic point and may be determinative of the power of Congress to provide an item veto by statutory action.

Since the adoption of the Constitution, no one has ever contended that the President has power to veto items of appropriation. If this power is ever to be exercised, it must be granted either by a constitutional amendment or by statute or joint resolution of the Congress.

No one challenges the sufficiency of the constitutional amendment to accomplish the purpose. In the interest of saving time, I shall confine my statement to the exposition and defense of my measure, H. R. 830, which is designed to permit by statute the exercise of this power.

Under the Constitution, article I, section 1, "All legislative powers herein granted shall be vested in a Congress of the United States" and, under article I, section 8, clause 18, the Congress shall have power "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers." "Whenever, therefore, a question arises concerning the constitutionality of a particular power, the first question is whether the power be expressed in the Constitution. If it be, the question is decided. If it be not expressed, the next inquiry must be whether it is properly an incident to an express power and necessary to its execution. It it be, then it may be exercised by Congress. If not, Congress cannot exercise it" (*United States* v. *Harris* (1883), 106 U. S. 629, 636.)

The power of Congress to grant the President the privilege of vetoing items of an appropriation bill is certainly nowhere expressed in the Constitution, nor is it necessary for carrying into execution the clearly expressed limited veto power granted the President in the Constitution.

However, the absolute control of the moneys of the United States, including the terms and conditions under which they are made, is in the Congress. (*Hart's* case (1880) 16 Ct. Cl. 484, affirmed 118 U. S. 62). The power to appropriate Federal funds has been exclusively entrusted to Congress. (Constitution, art. I, sec. 9, cl. 7; *State of Ohio* v. *U. S.* (1946), 65 F. Supp. 776, 780.)

In view of the incredible magnitude and complexity of the financial operations of our Government, the Houses of Congress, acting under their responsibility to the citizens in the operation of exercising their constitutional powers of spending the taxes wisely and well, are entirely within their constitutional powers to employ legislative methods that will best enable the Chief Executive to perform his function of recommending laws thought wise and vetoing laws considered bad.

By presenting appropriation legislation in the form and manner prescribed in my bill, H. R. 830, we are not delegating our legislative authority to appropriate, since Congress must act finally upon the legislation. Instead, we are employing as an incident to the exercise of our express power to appropriate, a device made necessary by the growth of this Nation.

There is nothing in our Constitution and nothing in good reason or logic which should prevent the Congress from adopting a rule (even though not binding on a subsequent Congress) providing, as my bill does, that every part of an appropriation bill should be considered and treated, for veto purposes, as a separate bill.

It is my firm belief that a provision could be written into every appropriation bill so providing.

There can be no doubt that the result sought could be obtained by insisting that each separate item be the subject of a single bill.

For the sake of expeditious action, we put many items in one bill.

The Congress can, if it so desires, direct that, for veto purposes, each item be treated as a separate bill. The Congress would still retain the right to override each veto.

I thank you, gentlemen, for the privilege of presenting my views.

Scars of Democracy

EXTENSION OF REMARKS
OF
HON. WILLIAM E. McVEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. McVEY. Mr. Speaker, under leave to extend my remarks, I should like to include an editorial of the La Grange Citizen, a newspaper published in the Fourth District of Illinois, which I have the honor to represent. This editorial is entitled "Scars of Democracy" and deals in a most intelligent and sensible manner with the wounds that are often left after a political campaign. This editorial follows:

SCARS OF DEMOCRACY

The privilege of free elections, free choice expressed in the secret ballot, is cited repeatedly as the keystone of democracy.

That the ballot is also democracy's most deceptive trap, and a source of disrupting forces are facts not recognized as generally as they ought to be. The wounds that are inflicted in the heat of the campaigns leave scars and tender areas which are slow to heal because they are wounds to pride and conceit, and cherished hopes.

The fact that many people do patch up these scars and wounds, and do work together again is one of the amazing and laudable features of democracy. The proportion of people in a community who can take defeat graciously, and can accept victory with-

out being obnoxious determines the relative harmony of community life.

A saving grace in democracy is the fact that there are many persons who forgive and try to forget. They are persons who recognize that campaign eagerness prompts some people to say and do things that create bitterness and rancor. They know that in every contested election there are persons who, lacking sound reasons to support their side, use innuendo and faked issues to bolster their arguments.

Even where the issues are fought out straightforward and the battle is open and honest opponents resent the thick skulled reluctance of the other side to admit it is wrong.

Where morals are not involved, and high principles are not violated citizens can serve their community, and also themselves, best by not only admitting that the majority determines, but also that once an election is held personal animosities and resentments should be minimized.

In communities where the bitternesses of one election are piled onto the next, eventually the pyramid of prejudices, and the desires for vengeance and retaliation become too great to surmount. Then democracy breaks down completely, and free elections become travesties and farcical.

Interstate Action Needed To Curb "Gretna Greens" in Southern States

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. LOSER. Mr. Speaker, a family court judge at Nashville, Tenn., the Honorable Benson Trimble, has focused attention upon a situation existing in Southern States that points up the need for uniform marriage laws over the Nation. Two great daily newspapers published in the capital city of Tennessee, the Nashville Banner and the Nashville Tennessean, have impressively and forcefully pointed up the circumstance that Judge Trimble described as a "blight on society and nothing short of criminal."

This young jurist calls attention to the fact that in 18 days this family court has had before it between 20 and 30 divorce cases involving youngsters marrying too young in notorious marriage mills in Mississippi and Georgia.

These editorials are timely and good. The Banner entitled its column "Marriage Mills Demand Interstate Action" and the Tennesseean editorial is headed "Send Marryin' Sam Back to the Funnies."

Judge Trimble has suggested that I look into the advisability of congressional action relative to uniformity of marriage law. This I shall do. However, it is my considered opinion that this is a matter for action by the States involved, and Judge Trimble has promptly and intelligently called it to the attention of the chief executives of Mississippi and Georgia. It would seem that nothing else would be required than to advise the Governors of these States, and that appropriate action would follow to stamp out this unholy blight.

In the meantime, I wish to call to the attention of the Congress of the United States this circumstance presented by Judge Trimble. It may ultimately be necessary to debate the matter before the Congress, since these child marriages are interstate in character.

The editorials follow:

[From the Nashville Banner]

MARRIAGE MILLS DEMAND INTERSTATE ACTION

Conscience assuredly backs the urgent appeal of Judge Benson Trimble for surrounding States to act against notorious "marriage mills" whose patrons are chiefly children. He addressed that request to the Governors of Mississippi and Georgia because it is the "Gretna Greens" within those boundaries that are the worst offenders.

Davidson County knows, as does all of middle Tennessee. Underage young people by the dozens—over the years—have been involved.

The Banner repeatedly has called attention to this unsavory business, and authorities within the States themselves have condemned the operation which makes a commercial enterprise out of the tying of the matrimonial knot.

Judge Trimble, even in the short time his family-relations court has been functioning, has witnessed a tragic parade of heartbreak cases stemming from these quickie marriages; particularly those of children. He has recited a number of them in urging authorities of the States involved to do something about it.

It isn't, The Banner repeats, a new subject. It is a situation that should have been corrected by law a long time ago.

The States know it. The legislatures of Mississippi and Georgia have entertained proposals—and good recommendations to strengthen the statutes in question have been presented. Yet for one reason or another the abuses continue.

Conscience is not something on which an area or a community has a monopoly. It is interstate. Mutual effort by the States, for a uniform code, stringently enforced, could end the racket and put these marriage mills out of business.

Judge Trimble has added the judicial voice to this appeal, backing it with facts to which no State can in conscience close its eyes.

The deplorable situation described cannot be ended by less than interstate action—an exercise by each state of its requisite responsibility. Corrective steps merit the best action these governors and all law-enforcement authorities can give it.

[From the Nashville Tennessean of May 24, 1957]

SEND MARRYIN' SAM BACK TO FUNNIES

Only 18 days have passed since Davidson County's new family court conducted its first formal session and already between 20 to 30 divorce cases involving youngsters married too young in the matrimonial mills of Corinth, Miss., and Rossville, Ga., have crossed the docket of Judge Benson Trimble.

This circumstance was properly categorized by the jurist when he termed it "a blight on society and nothing short of criminal." We would heap a similar indictment upon the people responsible for it.

Too often, the well-known happenings at Rossville and Corinth have been brushed aside as merely "a wicked system" about which little can be done. One is reminded that wicked systems are the creation of wicked people, and in this instance the creators are a group of greedy Marryin' Sams more interested in a dollar than in the future happiness of young people.

The perpetrators of such a system as this would, and do, pervert the holiness of wedlock—for a price.

Before our family court was instituted, Davidson County was treading on the verge of becoming a divorce mill. And while not all divorces, obviously, can be traced to these two communities, there is something rotten in Denmark—or Mississippi and Georgia—when 20 to 30 can be so traced within 18 days.

This community's plea joins that of Judge Trimble, therefore, when he calls upon Governors J. P. Coleman of Mississippi and Marvin Griffin of Georgia to smash quickly a pair of marriage mills which are doing little else but mangle the lives of "children."

Since repeated similar pleas have netted no corrections, though, perhaps a better answer would lie in Judge Trimble's request of United States Representative J. CARLTON LOSER that he introduce legislation in Congress setting up a uniform marriage law.

Marryin' Sam may have a place in the funny papers. He has no place in serious society.

Address by Hon. Basil L. Whitener to 11th Congressional District Chapter of Postmasters, Rutherfordto , N. C., May 25, 1957

EXTENSION OF REMARKS
OF
HON. GEORGE A. SHUFORD
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. SHUFORD. Mr. Speaker, our colleague, Congressman BASIL L. WHITENER, delivered an address to the 11th Congressional District Chapter of the North Carolina Postmasters Association at a meeting in Rutherfordton, N. C., on Saturday, May 25, 1957.

This address by our distinguished colleague points up some of the principal problems faced by the Congress and the Nation in the postal-service field. His address follows:

ADDRESS BY HON. BASIL L. WHITENER TO 11TH CONGRESSIONAL DISTRICT CHAPTER OF POSTMASTERS, RUTHERFORDTON, N. C., MAY 25, 1957

It was with a great deal of pleasure that I accepted the very generous invitation to speak to the postmasters of the 11th Congressional District tonight.

Your branch of the Government has been in the news in a very substantial way in recent days. As we tonight have a common interest in the postal service and its future of service to our people, it is fitting that we should think together on some of the problems which face you as postmasters and your elected representatives in the Congress of the United States.

There is much debate today about your service. This debate seems to revolve around two propositions. First: What is proper policy under which to view post office operation? Is it primarily a public service which should not be expected to produce revenues to cover its cost? Or, secondly, is it an organization which, in spite of its public service aspects, should cover as much of its costs as can be covered?

When we resolve those basic questions we then begin to reach the point at which a decision can be made by the people and their representatives.

A brief glance at the history of your service is essential to an understanding of the development of the postal policy of the United States. Time will not permit a detailed discussion of the various historical developments in the postal service, but I think that in a few minutes we can run down some of the major steps in its development.

The Congress has always recognized that the provision of the postal service is a necessary function of Government. It has always attempted to maintain low postal rates but has constantly increased services, regardless of deficits.

The Continental Congress, in 1775, established postal services, and Benjamin Franklin was named as the first Postmaster General. The Continental Congress said: "The present critical situation in the Colonies renders it highly necessary that ways and means * * * be devised for the speedy and secure conveyance of intelligence from one end of the continent to the other."

During the period of the Continental Congress, between 1775 and 1778, very little postal revenue was received, and the cost of the service was met by the Treasury.

In preparing the Articles of Confederation it was set forth that Congress was "expressly forbidden" to raise more revenues than would meet the expenses of the service. It appears on the face of this provision that a deficit was not prohibited but a surplus was not to be permitted.

In 1787 the writers of our Constitution provided in article I that: "The Congress shall have power * * * to establish post offices and post roads." The Constitution is silent about expenditures and revenue policies of the postal service.

Initially, Congress attempted to provide postal services which would pay their own cost. By the Act of February 20, 1792, the Postmaster General was authorized to enter into contracts for carrying the mails, *"Provided*, That no such contract shall be made to the diminution of the revenue of the general post office." Congress further provided that any surplus at the end of the year was to be applied against future deficiencies.

Again, in 1794, Congress passed an act which read: "That it shall be lawful for the Postmaster General to provide for the carriage of a mail on any road on which a stage wagon or other stage carriage shall be established, on condition that the expense thereof shall not exceed the revenue thence arising".

In 1797 Congress liberalized its policy by continuing all money-losing postal routes except one "which shall not, after the second year, from its establishment, have produced one-third of the expense of carrying the mails on the same."

In 1814 Congress further relaxed the policy by stating that a postal route be established "to the courthouse of any county which is now, or may hereafter be, established in any of the States or Territories of the United States, and shall not or will not otherwise be accommodated with the mail".

In 1851 Congress made a real break with the old policy of making the postal service pay its way.

In that year Congress stated: "That no post office now in existence shall be discontinued, nor shall the mail service on any mail route in any of the States or Territories be discontinued or diminished, in consequence of any diminution of the revenues * * * and it shall be the duty of the Postmaster General to establish new post offices, and place the mail service on any new mail routes established, or that may hereafter be established, in the same manner as though this Act had not passed."

The Act of 1851 further ordered that weekly newspapers be carried through the mails free of charge to subscribers within the county of their publication.

Succeeding Postmasters General alternately supported and condemned the service-first, revenue-last, policy provided for by the 1851 Act. Nevertheless, Congress gave increasing support to the service function even though deficits were the result.

Registration of letters was authorized in 1855. The uniform rate of postage for all like mail, regardless of distance transmitted, was established in 1863. Free delivery of mail in cities began in 1863. The money order system was established in 1864. Congress authorized the use of postal cards in 1872.

In the Act of 1879 Congress established the classifications of mail matter which are still in effect. Special delivery services and a 2-cent letter mail were provided in 1885. Funds were provided for rural free delivery in 1896.

The fact that there were deficits in postal operations did not prevent these new functions and lower rates from being established.

1910 brought about the authorization of the Postal Savings System. Parcel post was authorized in 1912 and air mail loomed upon the horizon in 1918.

During World War I the Government used the post-office organization to sell war savings certificates and thrift stamps. Enemy aliens were registered by the Department. Third- and fourth-class postmasters served as recruiting officers for the Army, Navy, and Marine Corps.

Postal notes were inaugurated as a service in the Post Office in 1945. The air letter sheet in 1947 and the air parcel post in 1948 became further services of the post office.

During World War II the Post Office Department had other wartime services. It sold war bonds and stamps and automobile tax stamps. It registered aliens and carried mail from soldiers without charge.

During the first 50 years of operation the Post Office Department earned reasonable surpluses. But from 1841 until the present it has only experienced surpluses in 12 years.

Postal surpluses were checked in 1845 by the reduction of rates and the extension of postal service. The surpluses of 1849, 1850, and 1851 disappeared when the mail rate was reduced from 5 to 3 cents per half ounce. Surpluses appeared again in 1852 and 1884, and the letter rate was dropped first, 2 cents per half ounce and then to 2 cents per ounce.

On other occasions the opportunities to earn a profit have been foregone in order to expand the service along new and often costly lines. Railroad mail was established as soon as the locomotive proved workable.

In the interest of popular education, the postal service has subsidized newspapers and magazines by distributing them at less than cost. In addition to subsidizing the railroads, it has subsidized airlines during their periods of development by the grants of more-than-cost mail contracts. From the close of the Civil War until 1936, mail subsidies contributed greatly to maintaining the American merchant marine fleet.

It is in this historical setting that we find ourselves as we look to our postal service in 1957 and future years.

It must be in the light of the lessons in history that we determine whether presently existing legislation to increase postal rates shall be approved.

To be sure, the first step to be taken in determining this whole problem is that of reaching a decision on the question of the proper post-office policy of this Nation.

I feel strongly that the service aspect must be kept in mind constantly. It seems inconsistent to me that the Post Office Department should be the one department of our Government which is expected to earn money for services rendered to the millions of American citizens.

But I do feel equally strong that the Post Office Department should be run as economically and with as much business acumen as one would expect of a private business.

That brings us to the recent outcries that we have had from our present Postmaster General with reference to the attitude of Congress on the matters of appropriation. He has given to the public a distorted picture of the financial provisions which the Congress has made for the operation of this vital branch of our Government.

The proposed budget for 1958 called for an appropriation of $3,250,000,000 for the postal service. When a hearing was concluded by the Appropriations Committee of the House of Representatives it was determined that this figure could be reduced by $58 million. Thereupon, the committee recommended an appropriation of $3,192,000,000. You have perhaps been led to believe that this was an unwarranted cut in the funds for Postmaster General Summerfield's Department during the fiscal year of 1958.

But that is far from true. The 1957 appropriations for the Post Office Department were $2,984,340,000, and the amount recommended by the House Appropriations Committee was $3,192,000,000, an increase of $207,660,000 above the appropriations available to the Post Office Department in 1957.

So, you see, my friends, the Congress has dealt very generously with the Post Office Department.

My chief concern with the recent outbursts of the Postmaster General is that it tends to destroy the esprit de corps which has been so high among the 500,000 postal workers in some 41,000 post offices throughout the Nation. You and I, as officials in the Government, owe a duty to prevent this demoralization of a great service.

Nothing can break down the morale of our postal workers more quickly than a hodgepodge of false economy. We are all interested in saving the taxpayers money and giving our citizens their mail sooner and oftener.

But, it seems to me, that there is room for grave doubt as to whether the alleged economies introduced from on top are, in fact, economies. I fear that there is a basic incapacity of some of our top-rank planners to understand the problems confronting the postmasters and mail carriers of our Nation.

What are some of these highly advertised alleged economies? There are many of them that we could discuss, but I will limit my remarks to just two of them.

The first that comes to my mind is this sudden penchant of the Postmaster General for little gasoline junk toys called scooters.

These are ¼-ton, 3-wheeled, covered-type vehicles. Except for the fact that they delight the children of a neighborhood, and serve as an extra provocation for barking and biting dogs, they constitute—for the mail carrier—nothing but a cumbersome nuisance. That, it seems to me, is one of the demoralizing factors in a great segment of the post-office personnel.

These men do not want the scooters because they are a hindrance rather than a help. I am told by those who have used them that they would much prefer walking with their mail bags to the use of these gasoline go-carts. They just are not suitable for house-to-house delivery in congested areas.

But what is the Post Office Department doing about this situation? There are, as I speak to you, 300 of these contraptions now in service.

But more alarming, is the fact that the Department proposes to purchase some 1,500 more of them.

These ridiculous comic pieces of apparatus cost upward of $917.50 apiece. Some cost one or two hundred dollars less.

Eighteen hundred of these 3-wheeled monstrosities at almost $1,000 apiece seem

to me to be very poor economy. It constitutes a waste of the Post Office Department money and an abuse of the morale of the post-office employees.

Perhaps this foray into the land of fancy by our present Postmaster General will be recorded in history as "Summerfield's Scooter Folly."

Another far graver error in the administration of the Post Office Department during the past year is one which I prefer not to refer to as a "folly." It is rather to be called a "tragedy."

It is another instance of false economy that completely ignores the historical concept that the postal service is a public service.

The tragedy of which I speak is the discontinuance of no less than 713 of our 14,185 fourth-class post offices in the United States.

By cutting down the postal service for scattered segments of the American people through the elimination of their fourth-class post-office facilities and calling it an economy is just about the worst possible misuse of power.

The removal from the service of 713 fourth-class post offices strikes me as brutal hatchetman tactics to make a good financial showing at the expense of an indispensable service to the people in the fourth-class postal category. It is a callous indifference to the public weal.

The necessity of service to our rural people through the fourth-class offices is not to be dealt with as a strict matter of bookkeeping. I am sure that there are some of these fourth-class offices which may be wisely discontinued, but I hardly think that it is reasonable to say that we can afford to eliminate 713 out of a total of 14,000.

If the kind of logic which the Postmaster General has applied in his policy toward fourth-class post offices is to be followed to its ultimate conclusion, then he could effect even greater savings by eliminating all of the post offices. The burden of my thinking is that we must not crippie the postal service, whether it be in the urban centers or in the rural areas.

Perhaps it would be well to call to the attention of Mr. Summerfield the words of the late Will Hays, a former Postmaster General, and—I hasten to add—a Republican, who said: "The post office is not for profit nor for politics, but for service."

It is my earnest hope that our Postmaster General will revise his thinking and correct his action as he approaches a solution to the many problems which are presented to the people of this Nation by the current post office situation. There mere pointing out of a $515 million estimated deficit for 1957 does not warrant the hacking away of services to our people.

The problem should be approached in a state of mind which would lead to real economies and not the alleged economies which I have already mentioned to you.

There are no more dedicated men and women to be found in America than the postmasters and employees in the various post offices of all classes in the United States. They are entitled to the same type of dedicated leadership on the executive and legislative fronts as we seek to reach a solution to our problems.

I commend you posmasters of the 11th Congressional District. You have done an excellent job. I believe that you can be of great service in bringing about the proper answer to these questions which I have outlined to you tonight.

But whatever the ultimate legislative decision shall be, it is my firm conviction that the people of the Nation will always feel that the post office is an institution of service and not a mercantile establishment.

Problems and Goals of Organized Teachers

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. ASHLEY. Mr. Speaker, a great many of our Toledo teachers are members of the American Federation of Teachers. Mr. Brendan Sexton, of Detroit, the director of education for the international union, United Automobile, Aircraft, and Agriculture Implement Workers of America, an affiliate of the United Automobile Workers, made the following address at the annual dinner held recently by the Toledo Chapter, AFT.

Mr. Sexton's speech reviewed the outstanding role of the teacher in today's society and evaluated the pressures brought to bear on organized teachers as well as the role of the Union in helping teachers receive new recognition for their service. I respectfully commend this address to the attention of my colleagues.

The address follows:

SPEECH BY BRENDAN SEXTON AT ANNUAL DINNER OF TOLEDO CHAPTER, AMERICAN FEDERATION OF TEACHERS, FEBRUARY 9, 1957

I am glad to be here to help you celebrate this 24th anniversary of your union.

Your union is, as you know, even older than most of the great and large industrial unions. My own union, the UAW, is just this month celebrating the 20th anniversary of the sit-down strikes which occured at Flint and other industrial cities, and which led to the signing of the first union agreement with the General Motors Corp.

I am told that here in Toledo a substantial majority of the teachers in the public school system belong to the American Federation of Teachers. This is as it should be. I am also told that you face the same kind of opposition faced by unionized teachers in other communities, from those who argue that joining a union amounts to unprofesional conduct for a teacher.

Now, I have never been able to understand just what it is that membership in a union has to do with professional conduct. It has been, and is, my view that whether or not a teacher is truly professional is determined by the teacher's conduct and show of ability in the classroom, rather than by his attitude toward the question of unionism.

The argument, it seems to me, is senseless. At the time of his death, so I am informed, Arturo Toscanini had been a member of a union, the American Federation of Musicians for something like thirty or forty years. Like Toscanini, Jascha Heifetz, Artur Rubinstein, Yehudi Menuhin and others of similar artistic stature are members of the same union. I hardly think that the most ardent defender of the National Education Association's argument that unionism for teachers is not consonant with professionalism, would also be willing to argue that the men I have mentioned are not professional, though they have belonged to a union. In fact, almost all the great figures in the performing arts are members of trade unions, affiliated with the AFL–CIO.

In the newspaper world most of the great writers, and many leading editors and columnists are now, or have been members of the American Newspaper Guild. The guild is a very militant union, and has been able to carry through strikes without injuring its members' professional status or reputation.

The founder of the American Newspaper Guild, Heywood Broun, was the most thoroughly professional of newspapermen. Those who remember him will testify that he was certainly one of the greatest figures in the history of American journalism—and certainly one of the greatest craftsmen of all time.

Teachers, more than most any other group in our society, should feel kinship with the organized labor movement. The modern educational system owes much to the organized workers. The American labor movement of the 1820's and the 1830's played a leading role in the development of the first public schools.

Horace Mann, who has been called "the father of American public education," is said to have credited the early labor movement with having been the most important community bulwark in the struggle for the development of a system of free and universal public education.

Labor parties in Pennsylvania, New York, and other centers emblazoned upon their banners the demand for free public schools. These parties, which sometimes won limited electoral victories, later helped form the Jacksonian coalition which did so much to democratize our Nation and to extend to all the people a degree of educational opportunity.

Furthermore, education and labor have enemies in common. Historically, at every level of our society, the labor movement has supported demands for extension of educational opportunities. (A responsible union cannot do otherwise, since, obviously, it is the children of trade unionists who are most likely to suffer if public educational opportunities are restricted, and who will benefit most from the extension and expansion of such opportunities.)

If you check the records of your State legislators and Members of the Federal Congress you will discover in the records of some individual members a pattern of opposition to the extension of education and support of antilabor legislation. Conversely, you will find, I know, that legislators who support measures which are designed to improve the education system, are generally the same legislators who oppose legislation designed to restrict the activities of the labor movement.

In fact, if I were a betting man, I would offer to make a series of wagers based upon this generalization and I know they would return me a significant sum of money. If we took the membership roll of the Congress and marked those names, in both Houses, who were Members in 1946 when the Taft-Hartley was adopted, and still Members last year when Federal aid to education was defeated, and then made bets that every man who supported Taft-Hartley also opposed Federal aid to education, I could clean up quite a bundle of money at the rate of a $5 bet per Member. I wouldn't win every bet—but my profit margin would be great.

Of course, not every businessman is an enemy of education—and not every unionist is a friend; but, on balance, the labor movement has demonstrated that its support is a lot more vigorous and trustworthy than is that of the business community.

Mr. Cola G. Parker, president of the National Association of Manufacturers, in his inauguration speech to the delegates attending the national convention of that organ-

ization, in which he said: "Creeping socialism is now walking. A hundred years ago, Karl Marx set down 10 ways to communism, from the abolition of poverty in the land, to free education for all in public schools, When you check them off, you'll find we are already well on our way to the achievement of the Communist state as blueprinted by Marx."

It has not occurred to Mr. Parker that perhaps Marx took this idea from the United States, rather than the reverse. The Communist Manifesto in which Marx set out this program was published in 1848, by which time the American free public education system already had been established. Many of the newly admitted States already had included in their constitutions provisions calling for the establishment of free public schools.

Article 10 of the constitution of my own State of Michigan, which was adopted in 1835, 13 years prior to the appearance of Marx's manifesto, provided for the establishment of (a) "perpetual funds for support of schools * * * the legislature shall encourage by all suitable means the promotion of intellectual, scientific, and agricultural improvement. The proceeds of all lands that have been, or hereafter may be granted by the United States to this State for support of schools, which shall hereafter be sold or disposed of, shall be and remain a perpetual fund, the interest of which, together with the rents of all such unsold lands, shall be inviolably appropriated to the support of schools throughout the State."

Though I cannot quote from it, I am sure that the constitution of the State of Ohio includes a similar provision.

The supplements to the Northwest Ordnance, which were promulgated 1 year later in 1836, provided for the allocation of section 16 of the land of every township granted to the States for the use of schools, as well as for the allocation of additional lands in Michigan for university purposes.

Mr. Parker's reference is history stood on its head, but it does serve to give an insight into the actual opinions of the NAM. Historically, the National Association of Manufacturers has opposed the extension of the free public education system. In recent years, the NAM has been at great pains to pretend to an interest in the schools. But if any branch of the NAM has endorsed a single specific recommendation which would have given the schools more adequate financial assistance, then it has succeeded in keeping such support secret—at any rate, from me.

On the other hand, on countless occasions, State and local manufacturing associations, more or less allied with the NAM or with the United States Chamber of Commerce, have opposed efforts to increase funds available for the school support. And the National Association of Manufacturers, as such, together with the United States Chamber of Commerce, continues in vigorous opposition to Federal aid to education.

Every civilization, it is said, carries within it the seeds of its own destruction. There is considerable evidence indicating that we may be destroying our own civilization from within by failing to support the educational system which has given it life and vigor.

More than any other single factor, the education system of this country has contributed to the growth and development not only of democracy, but of the great economic machine from which we all derive so much benefit. A great many Americans say, and some apparently believe, that America is the last and only remaining bulwark of democracy throughout the world. The United States, in fact, is not the only remaining democracy.

Just across the river from my own home city of Detroit we can visit a great nation which in every way is as democratic as our own. Canadians, as do citizens of other nations which comprise the British Commonwealth, live in a society democratic in form and in fact. In Europe, there still exist a number of democratic nations. As a nation, what sets us apart is not the democratic form of our government, nearly so much as the fact that here, more than in any other country in the history of the world, we have come closest to affording free and equal educational opportunity to all of our citizens.

Without the vast network of public grade schools, high schools, colleges, and universities, we could not have built in this country the great scientific community from which so much of our material progress derives.

Whatever contribution the captains of industry, the leaders of the free enterprise system may have made toward the development of our economic substance, their contribution does not compare with the contribution made by the "longhairs and eggheads" living in the scientific communities at our State universities. All modern technological advance, in fact, derives from prior scientific work carried on at such places as Ohio State University, the University of Michigan, the University of California and other State-supported educational institutions.

Furthermore, the technologists and engineers whom we have produced in such profusion are, by and large, also products of our free public education system.

Always, we have produced the greatest pool of skilled and technically competent labor that has been available to any industrial system throughout the world. There is some evidence that in the current period, we may be losing to the Soviet Union the race to develop scientists, engineers, and technicians. But up until now, we have kept far ahead of all others, and we have been able to do so only because of our education system. Our great material power and abundance is, in the very largest measure, due to the fact that we have had a flourishing and strong educational system.

If I have any complaint with teachers, it is that they have been too timid in their claims upon our society. They have failed to make clear how great has been their contribution in the development of America's great material strength. They have failed to make clear how important and indispensable is their contribution to the health and vigor of American democratic society.

We all know that for a democratic society, education becomes increasingly important with each passing year. The gap between the amount of knowledge possessed by the best educated man and the amount possessed by the least educated man continues to grow. As our civilization grows more complex, the problems with which its citizenry must deal also becomes more difficult and more complex. If we are to continue to have a genuinely democratic society, this gap must be closed, or at any rate narrowed, so that large numbers, rather than small numbers, of citizens are competent to make decisions dealing with the extremely difficult problems we confront as a people.

Yes; each year we allow thousands of our most intelligent young men and young women to go on the educational scrapheap. One of the saddest measures of the inadequacies of our educational system is the percentage of dropouts before the completion of all schooling which the individual is capable of absorbing.

The Commission on Human Resources In Advanced Training has estimated that of those high school students with an IQ of more than 130, only 56 percent go to college, and only 47 percent graduate.

If we drop slightly on the scale to those with IQ's of 120 or more, only 47 percent go to college, and only about 37 percent graduate. Yet, the Armed Forces regard all with an IQ of 110 or higher as fit material for Officer's Candidate Schools.

If you apply these percentages to the college-age population, which is defined by the Bureau of Census as 18 to 24 years of age, you find that there are, in round numbers, about 2,300,000 young people in this age group. Of this number, only slightly more than 1,100,000 will enter college, and only slightly more than 410,000 will earn degrees. This represents a loss of nearly 2 million young people with IQ's higher than 120 who do not complete college.

In a very great many cases, these more brilliant young people fail to enter or remain in college simply because they cannot afford to pay their way.

It seems pretty clear that no amount of private assistance is going to remedy this situation. The amount of money needed to insure equal educational opportunities for all these young people is so great that it can be met only by governmental action.

Now, more than ever, we need the services of an education system which we have let fall into disgraceful disrepair because we have lacked the courage and the will to face up to our needs.

Teachers, out of their timidity, have failed to make demands appropriate to their situation. Average increases of not less than $1,000 a year are needed if teachers' incomes in this country are to be raised to the professional standards which teachers should enjoy. Teachers should cease comparing themselves with factory workers. Teachers are professionals, as are doctors and lawyers, and they are entitled to be paid as professionals.

It is commonplace for some people to say that much of the satisfaction of teaching comes to the dedicated teacher in the form of psychological rewards for work well done. Undoubtedly, this is true, but much the same kind of reward comes to the dedicated doctor who performs his job well. Yet, we do not ask the dedicated doctor to work for the kind of wages paid teachers in our society.

A nation in which millions of people are wealthy enough to have two television sets in their homes, is a nation wealthy enough to provide adequate educational opportunity for its children.

When America was primarily an agricultural country, a man's wealth and his income were closely related to the land he owned, and the tax levied on its value seemed to be a logical way to meet the needs of government.

Furthermore, the major benefits which government rendered very largely related to the protection of property from fire and theft, and the increase of its value through the building of roads, sewage systems, and the like. As our Nation has become industrialized and urbanized, wealth and income have taken on new forms. The basic wealth of the Nation resides in its capacity to produce, and is a result of rising productivity, which is very quickly transformed into income—private and corporate.

The only agency which can effectively tax and distribute this increasing wealth is the Federal Government, through the operation of the Federal income-tax laws. The amounts of money needed to develop our education system do not seem so enormous if we consider the fact that, as a result of periodic declines in our economy, we often lose more than enough money to make up our educational deficits. For example, as a result of the decline which began in late 1953, and continue through 1954, we lost, it is estimated, more than $30 billion of wealth as a result of underemployment.

If we maintain full employment and adopt wise social policies with respect to the distribution of our national wealth, we can underwrite the elimination of every social inequity in our Nation. Our gross national product during the year 1956, reached about

$420 billion. Considering that productivity is now rising at the rate of not less than 3 percent a year, and that about 1 million additional workers are entering the labor force each year, we can, if we maintain full employment, double this amount in between 12 and 15 years.

To some, this may seem a fantistic projection; but, even considering many bad years of underemployment, we previously more than doubled our ability to produce between the years 1937 and 1955. During that period, our gross national product rose from $153.5 to $391 billion. Even if we adjust these figures and express them in terms of 1937 dollars, the gross was from $153.5 billions in 1937 to $328.2 billions in 1955. In the face of these figures, only the excessively timid or greedy would say that, as a Nation, we are not in a position to establish and maintain decent schools in every community throughout the country.

The same people who often oppose granting adequate financial assistance to the schools for the protection of our greatest natural resource—our people, most especially our children—will often, at the same time, rant against the individual juvenile delinquent and will ascribe to the schools much of the responsibility to the alleged rise in juvenile crime. Yet, all of us know that much can be done to ameliorate the effects of juvenile delinquency merely by reducing class size, and by increasing counseling and visiting teacher services. It is perfectly obvious that a neglected, misunderstood child who may be a candidate for juvenile delinquency at age 16 will likely go unnoticed and uncared for in a classroom with 38 or 40 children. Whereas he might be noticed and saved by a talented teacher in a classroom with a student population of reasonable size; where a teacher would be able to give each child the amount of individual attention needed and deserved.

Only the most shortsighted will say that, as a Nation, we cannot afford to do this. According to the table of expenditures by civilians in the United States, as compiled by the United States Department of Commerce and published in the Survey of Current Business in July 1953, we spent, during the year 1952, more than $254 million for chewing gum; more than $145 million for aspirin and aspirin compounds; more than $107 million for shampoos; more than $65 million for home permanent kits; more than $48 million for toilet water and cologne; more than $37 million for stomach sweetners; more than $26 million for playing cards; and more than $18 million for nail polish. If we can afford to spend these sums on such obviously dispensable items, we can afford to reduce class size to an average of 30 or below.

We can afford a national salary schedule for teachers beginning with a minimum of $4,500 a year for those entering the profession, with rapid advance to not less than $8,000 a year for experienced and qualified teachers. We can afford to pay for adequate counseling, for visiting teachers and psychiatric services in every school system. We can afford to provide for unusual children, both the handicapped and the gifted; for a system of federally subsidized scholarship grants, which will make it possible for every qualified boy and girl who wants to go to college to do so. We can, in fact, underwrite the establishment of an educational system the like of which no nation has ever before dreamed of, much less made a reality.

A Nation which can afford to put power brakes, power steering, and automatic window controls on every one of its automobiles, can afford to subsidize an education system which can help to keep our Nation a flourishing democracy and enable it to continue to add each year to its great store of material wealth.

The Army and Navy Hospital at Hot Springs, Ark.

EXTENSION OF REMARKS
OF
HON. W. F. NORRELL
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. NORRELL. Mr. Speaker, the Army and Navy Hospital at Hot Springs, Ark., is the best physical plant of any Army hospital in the United States. This positive statement was made by the Surgeon General of the Army. At that time he said that it was the second best hospital the Army operated anywhere in the world. The only one better was the new hospital in Honolulu. Our inquiry has revealed that this new installation cost somewhere between fifty and seventy million dollars. Following this statement the Army Surgeon General reiterated that the Army and Navy Hospital at Hot Springs was the best hospital facility he had in the country. It certainly is difficult to understand why the best hospital facility would be closed. From a purely good business standpoint, in any business where there are multiple operations, when there is apparent overproduction, business does not close the best operating unit it has.

Unlike the conception that some people may have, who are not personally familiar with the Army and Navy Hospital, it is not the same building that was erected in 1870. At that time the hospital was built here as the first Army general hospital because of the strategic central location and because it afforded the Army the use of the famous hot mineral baths. The present hospital was built in 1933 and is a complete integrated, modern "general" hospital. It is almost identical to the basic unit at Fitzsimons and Brooke and is larger than the latter. It is not, by any stretch of the imagination, a glorified bathhouse as some of you may have been led to believe. The hospital has had exceptionally good care and looks even newer than it is. Modern air conditioning and other improvements have been installed within the past 3 years. The instruments and installed medical and surgical equipment are of the very finest, equal to those at Walter Reed or Bethesda.

The second point, and one which seems of utmost importance, is the strategic location of the hospital. Unlike most Army hospitals which are located in coastal areas, the Army and Navy Hospital is located in the interior central portion of the United States with natural protection. The Department of Defense has quite appropriately been asking defense industries to move some of their operations off the coast. In fact, some airplane manufacturers have been told that in order to be eligible for future contracts, their point of manufacture will have to be off the coast and out of potential attack areas. In addition, the Federal Civil Defense Administration has been urging the maintenance of interior defense areas which can be used in event of coastal attack. Even here in the city of Washington, a huge underground retreat area has been provided away from the present area to which the nerve center of our Federal Government can be dispersed. If it makes sense, and we think it does, to think of defense in terms of safeguarding war production and other Government operations, then it also makes sense to provide for relatively safe hospital care of military personnel. In Hot Springs, Ark., the Army and Navy Hospital can be maintained and operated with a moderate number of patients and at the same time be the center in which additional hundreds can be cared for overnight. The hospital alone cared for as many as 1,777 patients at one time during World War II. In addition, 3 hotels were taken over as a redistribution center which cared for some 2,000 personnel at one time. This is only the beginning of potential use. There are approximately 300 hotels, motels, and apartments which provide accommodations for 37,000 in this resort at one time. These can be made available if and when needed. This hospital can be expanded from 250 to 2,500 beds overnight. It could be made the medical treatment center for up to 30,000 beds. There is no other military or industrial organization that would be competing for expanded facilities in the event of mobilization. The Army and Navy Hospital would have first priority on every facility in the community.

One of the reasons given by the Department of the Army for wanting to close the hospital is the fact that it is not located near a troop concentration. Rather than being a reason to close it, we think it is a strong reason to maintain it. Certainly there was no troop concentration at the time the hospital was built and there has never been a troop concentration here. No Army general hospital has been built in a troop-concentration area for that reason alone. The philosophy on which we are told Army general hospitals were built was one of general central location to take patients from posts, camps, and stations and troop-concentration areas. Located as it is, it is easily accessible from all sections of the country and yet is not within any so-called target area.

This central location provides the basis for answering the question of where should patients for the Army and Navy Hospital come from. The Department of Defense, early in December 1955, issued a directive stating that those hospital facilities nearest to any post, camp, or station should be used regardless of the branch of service involved—an order which made good business sense and was in keeping with the intended unified use of common services within the military. The hospital at Hot Springs is the only Army general hospital between Fitzsimmons at Denver, Walter Reed here in Washington, and Brooke at San Antonio. A major segment of the central United States, then, is the area from which such patients would come, according to this Department of Defense directive. Such troop concentration areas as Fort Ben-

ning, Ga.; Fort Sill, Okla.; Fort Leonard Wood, Mo.; Fort Campbell, Ky.; Fort Chaffee, Ark.; and many others would be a source of patients since they are closer to the Army and Navy than to any other Army general hospital. If the class II beds presently allocated to the post hospitals at these and other stations were reassigned to Army and Navy, it would produce both patients and staff. At Little Rock, Ark., some 50 air miles away from the Army and Navy, the Little Rock Air Force Base has some 7,000 to 8,000 military personnel. Instead of making use of the Army and Navy Hospital, the Little Rock Air Force Base is paying to send the great majority of its patients to a Veterans' Administration hospital in Little Rock and thereby creating a shortage of Veterans' Administration beds in Arkansas. It can be shown that transportation, which is readily available from the Air Evacuation Squadron, can be provided from the Little Rock Air Force Base to the Hot Springs Municipal Airport and thence by ambulance to the Army and Navy Hospital as easily and quickly as patients can be transported by ambulance through the metropolian areas of North Little Rock and Little Rock to get to the Veterans' Administration hospital. The Air Evacuation Squadron has offered any amount of service at any time needed directly to and from the runway at the Little Rock Air Force Base.

The greatness of the United States military organization has been due largely to its ability to expand rapidly. Expansion time in recent years has dwindled from months to hours. The Army proposes to put the hospital on a standby basis so that it can be reactivated within 60 days. In this day of atomic weapons and guided missiles, I can find little comfort in knowing that the hospital can be reopened within 60 days. We are told repeatedly by these same military experts that there will be virtually no time to prepare for attack. The Army and Navy Hospital is in the safest location of any of our hospitals and must be continued in operation, readily equipped to be expanded in a matter of hours. While we are asking for continued operation of the hospital, let us provide for continued operation on a more satisfactory level. No hospital designed for 500 patients can operate economically on 75. With very little additional cost, primarily in terms of personal service of attendants, this hospital can care for 250 patients. With this kind of patient load it can show an operation cost on the level with any other institution of similar size.

TVA

EXTENSION OF REMARKS
OF
HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. C. W. Bailey, president of the First National Bank of Clarksville, Tenn.:

THE FIRST NATIONAL BANK
OF CLARKSVILLE,
Clarksville, Tenn., May 24, 1957.

Hon. ROSS BASS,
House Office Building,
Washington, D. C.

DEAR MR. BASS: We want to go on record as unqualifiedly in favor of the operation of the Tennessee Valley Authority, the maintenance of the present program and the avenue open for future developments.

Out here in the country we have had an opportunity to observe, through travels and otherwise, how TVA has carried conveniences, comforts, and contributions to better ways of life in remote sections and in valleys and distant places where there is a deep sense of appreciation of the opportunity to enjoy these elements of deeper thinking, fresher view points, and wider horizons. All of this has come to these people.

Then we see industrial improvements in our city, as well as elsewhere, resulting in more and better employment as well as constant income throughout the year.

We know there are a lot of folks who use to drive trucks and perform tasks that were rather hard and difficult, with very modest pay, now enjoying good income, better houses and furnishings and, unfortunately for some, driving bigger automobiles.

It has been right heartening to go into modest homes out in the rural areas and see refrigerators, electric stoves, deep freezes, washing machines, and various and sundry other equipment operated by electricity. Usually a big television aerial on top of the house.

There are a lot of other reasons why we are very earnest in our approval of TVA which could be outlined to you in an extensive manner, if an opportunity presented.

Sincerely yours,

C. W. BAILEY,
President.

Trinity River Partnership Plan a Savings to Taxpayers

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. SCUDDER. Mr. Speaker, in a recent series of editorials on high taxes as the way to State socialism, the Santa Rosa Press Democrat called attention to the fact that—

No Government ever has, or even can, give its taxpayers anything it has not first taken away from them in taxes. It never can return as much as it takes away. Robbing Peter to pay Paul is both ridiculous and unjust. But governments do an even sillier thing—they rob Peter to pay the same Peter back a portion of what they took in the first place.

The Santa Rosa Press Democrat invited its readers to "write to Congressman SCUDDER and to Senators KNOWLAND and KUCHEL" if they would rather spend their own money "instead of having Uncle Sam constantly do a worse job" at their exponse. I have subsequently received a good many letters. Some of the pointed to the Trinity partnership project as a place to save over $300 million for the hardpressed taxpayer.

There is legislation now pending before Congress to provide joint development of the Trinity River project in California's Central Valley as endorsed by the Secretary of the Interior. Under my bill, H. R. 6997, the Pacific Gas & Electric Co. would be permitted to construct and operate the power facilities of the Federal Government's Trinity project and purchase the use of its falling water to run the powerplants. In this way, not only will the power development and distribution be achieved in the most efficient and economical manner, but the taxpayers will be saved an immediate capital investment of $56 million for the facilities, and another quarter of a billion dollars in the long run for net savings to the Government for lease of its falling water and for tax payments.

Mr. Speaker, I desire to include with my remarks the May 7, 1957, editorial from the Santa Rosa Press Democrat entitled "High Taxes—The Way to State Socialism":

HIGH TAXES—THE WAY TO STATE SOCIALISM

Yesterday in this space we claimed that one thing high Federal taxes buy for you is state socialism, and we claimed you could figure it out for yourself.

Figuring it out is simple.

No government ever has, or ever can, give its taxpayers anything it has not first taken away from them in taxes. It never can return as much as it takes away. Robbing Peter to pay Paul, we all know, is both ridiculous and unjust. But governments do an ever sillier thing—they rob Peter to pay the same Peter back a portion of what they took in the first place. The balance has to go to pay the wages of those who take the money away and then give part of it back.

Unless restrained by its people, every government constantly grows bigger and more expensive. Every civil servant who heads a bureau of subdivision is paid on the basis of how many people are under him. So, being human, he wants more people to boss. Unless he is a complete synic—and most bureaucrats honestly believe in what they are doing—he thinks his job is important and that he should expand his work.

What's that got to do with socialism?

Just this—socialism is nothing more or less than governments attempting to do for people things they could do better for themselves—or things which do not need doing at all.

As every government bureau grows in size, so does its regulatory power over the people. In this country we already have a large and growing socialized electric-power industry. The purchase of surplus foods for school-lunch programs is socialization of one meal a day. Any handout system of public funds to individuals or states is socialism.

The United States mail is a socialized delivery system which hides its true cost of giving service because it does not charge the users the full cost of service, but instead runs at a loss—and makes up the difference by taxes.

There is nothing wrong with socialism if it works. But in all history it never has worked, and it never can work. Soviet Russia is a completely socialistic nation. It recently announced it would not, at least in the lifetime of the suckers who had to buy them, pay back bonds its people were forced to buy despite the fact the bonds pay no interest.

Socialized services operated by a government are so inefficient and costly that the government proceeds to impoverish its people with taxes to cover the losses. This creates a vicious circle in which the people, made poor by taxes, demand still more help

from the government which impoverished them in the first place.

High taxes make it difficult to save money for your old age. So the government gets in the old age assistance business. And that makes taxes even higher.

Free school lunches go to children whose parents could provide lunches if the tax man didn't take so much out of the pay envelope in the first place.

These are only a random few of hundreds of examples of the way in which every government, unless restrained by its people, heads inevitably into state socialism—and the ruin of both itself and its people.

Figure it out for yourself. If you'd rather spend your own money instead of having Uncle Sam constantly do a worse job of it at your expense, write to Congressman SCUDDER, and to Senators KNOWLAND and KUCHEL. Tell them what you think.

Labor Federation's Code on Financial Practices

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. ROOSEVELT. Mr. Speaker, there was released in Washington on May 22, 1957, the text of the Code on Financial Practices, adopted by the executive council of the American Federation of Labor and Congress of Industrial Organizations.

Putting aside those who would wish to see all organized labor destroyed, most Americans have had hope and many have had faith that the organized labor movement would not only clean house to get rid of the racketeers and evil influences, but would constructively adopt a program which would effectively guide local unions in the conduct of their internal affairs. The eight-point program described and listed below, if followed by all labor organizations, would without question set a fine standard of ethics.

It has been properly pointed out that the executive council has no punitive powers outside of expulsion from the labor movement if these provisions are not lived up to. It is encouraging, therefore, to know that organized labor is supporting the proposal of Federal legislation by the Congress to implement this program.

In evaluating the various suggestions which will be put forth for this purpose, it would be well for all Members to see how closely they conform to the basic principles enumerated in the code of ethical practices printed below, and thus, to weed out the purely punitive and destructive proposals which will be advanced by the implacable opponents of organized labor.

I enclose below the text of the Labor Federation's Code on Financial Practices as published in the New York Times of May 23, 1957:

TEXT OF LABOR FEDERATION'S CODE ON FINANCIAL PRACTICES

This is the fifth in a series of recommended codes which the committee on ethical practices has developed in accordance with the direction of the executive council that it should "develop a set of principles and guides for adoption by the AFL–CIO in order to implement the constitutional determination that the AFL–CIO shall be and remain free from all corrupt influences." On August 29, 1956, the council approved a code dealing with the issuance of local union charters; on January 31, 1957, the executive council approved codes dealing with health and welfare funds, racketeering, crooks and Communists, and investment and business interests of union officials.

There are principles inherent in the conception of a free, honest, and democratic trade-union movement, which, the committee believes, virtually dictate the outlines of any code of ethical practices dealing with union finances. The first of these principles hardly requires statement. It is simply that a labor union is an organization whose primary function is to improve the wages, hours and working conditions of the employees it represents, through the processes of collective bargaining with employers. It is not a business enterprise or an investment company. Unions, of course, must have funds with which to operate and it is clearly desirable that they should maintain reserves to cover contingencies which may arise in the course of the performance of their functions as workers' representatives. But, equally clearly, the accumulation of funds per se is not the objective for which the union exists. A union is not a profit-making institution, but a democratic organization with definite social aims and principles. Union funds are held in trust for the benefit of the membership. But a union, unlike a bank, a trustee, or other fiduciaries, is not primarily a manager of funds vested with the duty of enhancing their value and making distributions. Increasing the value of the union's funds should never become an objective of such magnitude that it in any way interferes with or obscures the basic function of the union, which is to devote its resources to representing its members, honestly and faithfully.

SECOND PRINCIPLE OUTLINED

A second basic principle which dictates the terms of a code of ethical practices with respect to the handling of union funds is again simple. It is that unions are democratic organizations. The fact that a union is a democratic organization plainly implies that the members of the union are entitled to assurance that the union's funds, which are in essence their funds, are not dissipated.

They are also entitled to be reasonably informed as to how the funds of the organization are being used or invested. Finally, their delegated representatives in the union's governing body and conventions should have the power and responsibility to oversee the expenditure of the union's moneys so that the members can be guaranteed that funds are expended solely for the purposes for which the organization exists.

A final fundamental principle, the committee believes, is involved. That principle is that each national or international union affiliated with the AFL–CIO, in the words of the Resolution on Ethical Practices which was unanimously adopted by the founding convention of the AFL–CIO in December 1955, "has clearly accepted the responsibility for keeping its own house in order and to protect the movement from any and all corrupt influences and from the undermining efforts of Communist agencies and all others who are opposed to the basic principles of our democracy and free democratic unionism."

From these three basic principles, the committee believes that certain conclusions necessarily follow. Since a union holds its funds for the benefit of its membership and to further their interests, it should comply with standards generally applicable to fiduciaries or trustees with respect to the manner in which it keeps its records and accounts. Regular audits should be made and there should be appropriate distribution of summaries of such audits so that the membership and the public are adequately apprised of the state of the organization's finances.

SET OF CONTROLS OFFERED

In this connection, a committee of secretary-treasurers of AFL–CIO affiliates has drawn up a suggested set of minimum accounting and financial controls for affiliates of the AFL–CIO. This set of controls represents, the committee believes, the minimum with which any affiliated organization should comply in order to fulfill the constiutional mandate that the labor movement should be kept free from any taint of corruption.

Almost all unions, the committee believes, today comply with the minimum controls set forth in the recommendation of the secretary-treasurers. Many, indeed, have much stricter controls suggested by the secretary-treasurers, therefore, should not be regarded as an optimum. Unions are to be commended and encouraged to establish and maintain even more stringent accounting and financial controls.

In addition to accounting and financial procedure necessary to conform to the controls applicable generally to well-run business organizations and fiduciaries, the committee believes that certain other rules follow from the basic principles set forth above. Because a union is a union, not a business organization or a trust company, the rules which guide its use and investment of funds are necessarily different. For example, investments by business organizations in other businesses from which they buy or sell so that the investing business may get favored treatment in its sales or purchases may be an acceptable business practice; similar investment by a labor union in business enterprises with which it bargains collectively presents serious problems. Such investment is not good practice for a union.

The fact that the basic objective in the management of trade union funds is not the maximizing of profit, but to further the objectives of the members joining together in a union, leads to additional conclusions. A business organization has one function: To make money for its stockholders. A fiduciary's primary obligation is to preserve and, within limits defined only by the necessity for safety, to augment the funds which the trustee is charged with holding for the benefit of the beneficiaries. Since these are not a union's primary function, a union's investment policy may properly be governed by different considerations. For example, business institutions and corporate trustees might question today the propriety of investing all of their reserves in Government bonds because of their comparatively low yield.

MUTUAL AID BACKED

Yet, for a trade union, one of whose fundamental objects is "to protect and strengthen our democratic institutions" such an investment policy is to be commended. Similarly, since another object of a trade union is to aid and assist other unions and "to promote the organization of the unorganized into unions of their own choosing," loans and grants for mutual aid and assistance are part of the proud tradition of the labor movement even though foreign to the business community and not justified by any considerations of financial gain or even security.

Similarly, the business community may not regard it to be a bad business practice for a business enterprise to buy or sell from firms in which the officers of the business have a financial interest. Nor may the business community regard it as bad practice for a business organization to lend money, on adequate security, to members of the organization. Because the funds of a labor union are both held in trust for the benefit of its mem-

bers and to further legitimate trade-union purposes, practices which may be acceptable in business organizations, the committee believes, should be limited if not completely eliminated among labor organizations.

All of these considerations lead to this ultimate conclusion. With repect to accounting and financial controls and the expenditure of its funds for proprietary [housekeeping] functions the labor movement, it goes almost without saying, should follow the strictest rules applicable to all well-run institutions. With respect to the policies governing its financial and proprietary decisions, a higher obligation rests upon the trade-union movement: To conduct its affairs and to expand and invest its funds, not for profit, but for the benefit of its membership and the great purposes for which they have joined together in the fraternity of the labor movement.

SAFEGUARDS URGED

On the basis of these considerations, the committee on ethical practices, under the authority vested in it by the constitution of the AFL–CIO and pursuant to the mandate of the first constitutional convention of the AFL–CIO and of the executive council recommends that the executive council of the AFL–CIO adopt the following policies to safeguard the good name of the AFL–CIO and its affiliated unions:

1. The AFL–CIO and all affiliated national and international unions should comply with the minimum accounting and financial controls suggested by the committee of secretary-treasurers and approved by the executive council, which is annexed hereto.

2. The AFL–CIO and all affiliated national and international unions should conduct their proprietary functions, including all contracts for purchase or sale or for the rendition of housekeeping services, in accordance with the practices of well-run institutions, including the securing of competitive bids for all major contracts.

3. Neither the AFL–CIO nor any national or international union affiliated with the AFL–CIO should permit any of its funds to be loaned, invested, or otherwise dealt with in a manner which insures to the personal profit or advantage of any officer, representative or employee of the union.

4. Neither the AFL–CIO nor any national or international union affiliated with the AFL–CIO should enter into any contracts of purchase or sale or for the rendition of services which will insure or to result in the personal profit or advantage, including gifts of more than nominal value, other than his regular salary or compensation, to any officer, representative, or employee of the union.

5. Neither the AFL–CIO nor any national or international union affiliated with the AFL–CIO should invest in or make loans to any business enterprise with which it bargains collectively.

6. The provisions of paragraph 5 shall not be construed as prohibiting investment by unions in the publicly traded securities of widely held corporations, which investment does not constitute a substantial enough holding to affect or influence the course of corporate decision; the provisions of paragraphs 3 and 4 shall not be construed as applying to the profit that may result from a proper investment by a union officer, representative, or employee. Nor shall such provisions be construed as preventing investment in a business or enterprise in which an official of an affiliate is engaged by virtue of his office, provided (a) no substantial personal advantage is derived from the relationship, and (b) the business or enterprise is one in the management of which the affiliate participates for the benefit of its members. The provisions of such paragraphs, however, shall apply wherever third persons are used as blinds or covers to conceal the personal profit or advantage of union officials.

7. Neither the AFL–CIO nor any national or international union affiliated with AFL–CIO should make personal loans to its officers, representatives, employees, or members, or members of their families, for the purpose of financing the private business or investment of such persons.

8. Each national or international union affiliated with the AFL–CIO should promptly take whatever internal steps are needed to insure that the standards set forth in this code are made applicable to itself and to each of its locals and other subordinate or affiliated bodies. Wherever constitutional amendments or changes in international administrative procedures are necessary to fully comply with those standards, such amendments and changes should be undertaken by the affiliates at the earliest practicable opportunity.

Civil Rights

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following report of the Bar Association of the city of New York on the civil rights bills pending in the Congress. The association has approved the three major purposes of the pending bills.

REPORT ON PROPOSED CIVIL RIGHTS BILL

There are at present several bills pending before both the House and the Senate which are generally referred to as the civil rights bills. The administration bills and the other bills having widespread support have three major purposes:

First, to give the Federal Government the power to seek the civil remedy of an injunction where there is a threatened deprivation of the right to vote or of other civil rights (viz, S. 83, 85th Cong., 1st sess., p. 16, line 24 to p. 17, line 9).

Second, to create a new division in the Justice Department, headed by an Assistant Attorney General to be appointed by the President, to handle all civil rights cases.

Third, to create a bipartisan commission to investigate civil rights matters and report within 2 years.

The proposal to create a bipartisan commission to investigate civil rights matters appears to us desirable on the grounds stated by the Attorney General in his statement before the Subcommittee on Constitutional Rights of the Senate Judiciary Committee in support of the administration bills. As the Attorney General stated, the need for accurate information on this subject is great.

Again, for the reasons stated by the Attorney General, we are in favor of creating a separate division in the Justice Department to handle all civil rights cases. Criminal and noncriminal civil rights cases should be handled by the same division and the added responsibilities placed upon the Department of Justice by the proposed bills justify a separate division to handle them.

Turning to the most important provision, the granting of civil remedies to the Federal Government, we believe that the Attorney General's arguments for granting such remedies are sound. Briefly these arguments are: The 14th and 15th amendments prohibit State election laws which discriminate on account of race, color, religion, or national origin and both amendments expressly confer upon Congress the power to enforce them by appropriate laws; these amendments, however, prohibit only official action; apart from them, Congress has the broad power to protect voters in elections for Federal offices from actions of private individuals which interfere with the right to vote; the right to choose Federal officials "is a right secured by the Constitution. And since the constitutional command is without restriction or limitation, the right, unlike those guaranteed by the 14th and 15th amendments, is secured against the action of individuals as well as of States" (*United States v. Classic* (313 U. S. 299, 315)).

The Attorney General then points out in his statement that pursuant to these constitutional provisions, Congress has enacted statutes making the interference by private individuals with the right to vote for Federal officials a criminal offense (18 U. S. C. 241 and 594) and statutes granting civil remedies to those deprived of the right to vote in any election, State or Federal, on account of race or color by persons acting under color of State law (42 U. S. C. 1971 and 1983) and statutes making such interference a criminal offense (18 U. S. C. 242); Congress has not, however, granted to the Federal Government the power to invoke civil remedies; such power is necessary because criminal prosecution can be invoked only after the harm has been done and jurors are reluctant to indict and convict local officials in criminal prosecution even when they recognize the illegality of what has been done; furthermore, criminal prosecution may be unduly harsh and may stir up great local dissension where respected local officials are involved.

There is one question, however, that Attorney General Brownell does not touch upon: whether persons charged with contempt for disobeying an injunction obtained by the Federal Government in a civil rights case should be granted the right to a jury trial on the contempt issue.

Title 18, United States Code, section 3691, provides that whenever a contempt is charged which involves an action or failure to act which in itself constitutes a crime under Federal or State law, the accused is entitled to a jury, except when the contempt is committed in the presence or near presence of the court and except when the contempt consists of disobedience of an order in a case in which the United States is a party. Therefore, a person charged with contempt for disobeying an injunction obtained by the United States pursuant to the provisions of the proposed bills would not be entitled to a jury trial. This has caused much controversy and there are pending amendments to the civil rights bills to grant the right to a jury trial. (The amendments referred to here are amendments to the civil rights bills and should not be confused with S. 1735 which is a proposed amendment is 18 U. S. C. 3691.)

If there is justification for the exception to the right to jury trial where the United States is a party it would seem that the exception should apply in civil rights cases as well as in other cases. The legislative history of Section 3691 indicates that it was adopted in the face of strong opposition based on constitutional[1] and practical grounds. Not only was it argued that granting a jury trial in contempt cases violated the doctrine of the separation of powers but it was also argued that the judge would thereby be rendered powerless to enforce his own decrees. The background for much of the argument both for and against the provision was the labor injunction.[2] It was felt by many that if the accused were tried by "friends of the accused"[3] he would be acquitted and the court's injunction thereby rendered ineffective with resulting anarchy. To allay these fears a compromise was reached. Exceptions were made to the right

Footnotes at end of speech.

to jury trial in cases where the contempt was committed in the presence or near presence of the court and where the United States was a party. Apparently it was felt that if the United States were a party the public interest must be involved and therefore the risk of a court order being disobeyed with impunity should not be run; in other words, the basis of the exception appears to be the principle of "the sovereign." To the extent that legal thinking is now coming more and more to believe that the United States when a litigant should be treated by the courts as an ordinary litigant, the exception may no longer be justifiable.

However, if this is so, the remedy is to amend section 3691 to provide for a jury trial in criminal contempt cases generally whether or not the United States is party. There appears to be no justification for treating civil rights cases any differently than any other cases in this regard. Therefore, if the proposed civil rights bill were to be amended to give the right to jury trial, the inference would be inescapable that the motive was to secure acquittals by juries sympathetic with those who disobey civil rights injunctions, rather than to grant the right to jury trial as a matter of principle.

Recently a bill has been introduced (S. 1735, 85th Cong., 1st sess.) which would amend title 18, United States Code, section 3691, to grant the right to a jury trial in all cases involving contempt of a court of the United States, civil as well as criminal, except where the contempt was committed in the presence or near presence of the court.

If any such extreme revision of our judicial procedures were to be seriously considered, a thorough study should first be made of the far reaching effects which would be bound to follow.

In conclusion, the Committee on the Bill of Rights approves the three major purposes of the pending civil rights bills outlined above.

Respectfully submitted.

Committee on the Bill of Rights: Fifield Workum, Chairman; William T. Andrews; Ernest Angell; Walter E. Beer, Jr.; Oliver C. Biddle; Vincent L. Broderick; William A. Delano; Hyman N. Glickstein; Kenneth W. Greenawalt; E. Douglas Hamilton; Arthur Levitt; Stanley H. Lowell; John C. Meleney; Walter Mendelsohn; Gavin Miller; John F. B. Mitchell, Jr.; Roger B. Oresman; John W. G. Tenney.

Mr. George T. Townley does not concur in this report.

Kentucky Loses a Great Citizen

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose herewith an editorial entitled "Let Us Finish Steve's Unfinished Job, the Industrial Fund, as a Memorial," which appeared in the May 23, 1957, issue of the Owensboro Messenger and Inquirer of Owensboro, Ky.

On May 22, the city of Owensboro, Daviess County, the Second Congressional District, the State of Kentucky, and, indeed, the entire country lost an outstanding citizen. Mr. William T. Stevenson was not only a sparkplug for the Industrial Foundation, as mentioned in the editorial, but he encouraged industry throughout Kentucky. As president of the Texas Gas Transmission Corp., he was successful in advancing that enterprise, while at the same time he manifested his civic pride by way of active participation in every worthwhile project which would benefit Owensboro and environs. Mr. Stevenson was a self-made man whose innate ability, kindness and energy made him a great man. He believed in the future of his country. By reason of this fact, and through having the courage of his convictions, he was enabled to attain noteworthy achievements for the business with which he was connected, as well as the city and State in which he resided. I, personally, have derived benefit from his sound viewpoint and philosophy of life in general. It can truly be said that by reason of his kindness and knowledge he laid a sure foundation of usefulness to mankind. His services will stand as a worthy monument to his memory.

The editorial is as follows:

LET US FINISH STEVE'S UNFINISHED JOB, THE INDUSTRIAL FUND, AS A MEMORIAL

Owensboro has lost an ardent advocate, and her citizens a loyal friend. William T. Stevenson, whose best years were spent in helping to build great industries in this city, died at 2 o'clock yesterday morning. Fortunate indeed is the city that has a leader of his genius for industrial development, and his loyalty to the city which, when he was yet a struggling young man, he chose as his home, and then set out to make a vehicle for the realization of his greatest ambitions.

Having made Owensboro the pivot for one the Nation's greatest gas distribution systems, Stevenson recently envisoned new factories lining the Ohio River here, with more numerous and more beautiful homes dotting the landscape and contented families residing therein. Realization of this ambition, was the goal of the Industrial Foundation of which he was initially the sparkplug.

Having had something to do with the initiation of this foundation, and having seen Steve give of himself for its success until there was no more strength to give, as he did for his other private and public interests, we now ask the liberty of suggesting thta the people of Owensboro and Daviess County will complete the last project he started, by raising the necessary $250,000, as evidence of their appreciation of him. And, after that is done, let us name the fund the W. T. Stevenson Memorial Industrial Fund for Owensboro and Daviess County.

Steve's death is a loss to the natural gas distribution industry, in which he was destined for highest honors at the national level. In their councils in the top areas, his opinions were sought and respected. As busy as he was with his companies' business interests, he took time at the expense of his health to help in Owensboro's civic affairs and to be a State leader in the cause of little independent colleges by serving on the boards that promote them.

Owensboro marked itself as an appreciative city, so far as Steve was concerned, while he was at the height of his productive power. It was on December 20, 1949, that 350 business and professional people poured out their admiration and respect for him at a dinner which they gave in his honor. He knew it was a sincere, and genuine expression of a community's appreciation of him, and of the Texas Gas Corp., for permitting him to have the corporation's headquarters offices in Owensboro. He knew then that there was no pretense in the line on the frontispiece of the program: "Owensboro is might proud of William Taylor Stevenson."

William Taylor Stevenson will continue to be honored by the people among whom he chose to live and work. They will continue to be proud of what he did here. They will not cease to marvel at the heights to which his great intellect carried a never-very-strong constitution, and that he was able to do so much for so many in the comparatively short span of his life. They will remember proudly, too, his business acumen and willingness to work, which dated back to his youth when at 13 he sold magazines for an agent, and when the agent left town he was ready to take his place. Life's favors are often seen as luck in the other fellow by people who lack them. But, Steve's life reveals the story of a man who made it a habit to be where opportunity might knock and to be ready to receive it when the time came.

And so, we say farewell to one of the friendliest, finest, fightingest (for things we have felt were right) men that it has ever been our pleasure to know, and join with his friends, who are legion, in expressing deepest sorrow to his family.

More About the Gerry Murphy Case and the Dominican Republic

EXTENSION OF REMARKS
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1957

Mr. LONG. Mr. Speaker, I am indeed sorry that my good friend and colleague, Mr. PORTER, of Oregon, sees fit to continue this unfriendly controversy with regard to one of our foremost neighboring republics to the south and one of our stanchest friends in the free world, the Dominican Republic and its President Trujillo.

What I have been trying to do in my articles and in my association with our Latin American friends, is to work toward building up a friendship and an understanding of our way of thinking and our way of life, which would be mutually beneficial. It behooves all of us in the Western Hemisphere to build friendly, relations and to eliminate, so far as possible, all traces of the godless philosophy of communism. Without a doubt communists are at this very moment working with all the forces at their command, and using every possible subterfuge to distort and confuse the minds of our peoples in a concerted and frantic effort to create dissension and dislike between the United States and our Latin American neighbors.

It is unfortunate that the Gerry Murphy case ever occurred but at the same time it is unthinkable for us to attack and to attempt to convict one of the

great leaders of a democratic and progressive Republic with hearsay evidence. I, for one, cannot bring myself to sit idly by and see our good neighbors and stanch friends attacked and maligned in such a manner.

In the interest of good will and friendly relations with another of our fine Latin American neighbors, which also is known to be democratic, Christian, and anti-Communist, I recently had breakfast with several of my coleagues in the House of Representatives and a number of esteemed officials both local and abroad. This breakfast was given by the Honorable Jimmie Morrison. It was an honor to breakfast with such outstanding leaders as the majority floor leader of the House of Representatives, the Honorable JOHN MCCORMACK, of Massachusetts. Four of my esteemed colleagues from Louisiana were present: Congressman JIMMIE MORRISON, Congressman EDWIN E. WILLIS, Congressman T. ASHTON THOMPSON, and Congressman F. EDWARD HÉBERT. A spirit of friendship and goodwill prevailed at this meeting, which included as honored guests officials from the Republic of Mexico, our own State Department and one of our national associations, as follows: Hon. Abelardo de la Grajales, head of all Government employees of Mexico, who was the guest of honor; Hon. Senor Don Manuel Tello, Ambassador of Mexico to the United States; Hon. Rafael Avelyra, Minister-Consular of the Mexican Embassy; Hon. Don Justo Sierra, Consul, of the Mexican Embassy; Hon. Robert Hill, our new Ambassador to Mexico; Hon. Donald Barnes, of the Department of State; Hon. John Fishburn, of the Department of State; Hon. Anthony Albrecht, of the Department of States; Hon. William B. Macomber, Jr., the new Assistant Secretary of State; and Mr. William Doherty, president of the National Letter Carriers Association.

I have been privileged to enjoy many outstanding gatherings, but this was one of the most inspiring that I have ever attended. These men have faith in their fellow man and are seeking ever constantly to spread confidence and good will among the nations of the Western Hemisphere. They are striving, with marked success, to afford their country an exemplary government and their people the highest possible standards of living and the peace of mind and comforts of life which go hand-in-hand with a stable and progressive government. All of these men are outstanding in their efforts to stamp out communism and the evils of the communistic concept of life. Most of the troubles that we find in governments today have their roots in communism and the communistic theories and practices. This was true of Guatemala when that country experienced trouble. The Communists put out their insidious propaganda to try to destroy those patriots who were fighting to liberate their country with all the force at their command. Those same communistic influences are now at work in an effort to create unrest and dissension in the Dominican Republic. A so-called exile government has been established in Puerto Rico, which is working day and night in its efforts to overthrow the present great and democratic Government of the Dominican Republic. The efforts of this group become evident in many shapes and forms. The Gerry Murphy case is one in point. Professor Jesus de Galendiz apparently was kidnapped and transported out of this country supposedly by Gerry Murphy and an accomplice, in a rented plane which he was not licensed to fly. The drugged Professor Galendiz was picked up near New York and transported by air to Miami and thence on to obscurity.

It is unfortunate that the heads of the Dominican Republic have been saddled with the responsibility for the disappearance of Professor Galendiz. Gerry Murphy, who was clearly connected with a nefarious group, lost his life. There have been charges and countercharges as to who is responsible. It is unthinkable to take the side of an irresponsible and exiled group who are out to fight democracy and to agitate against the word of our friends who are trying their best to maintain a progressive, free, and democratic form of government. I expect to use every power that I possess to see to it that the kind of suspicion that has been attempted to be cast on the good names of our friends in the Dominican Republic is completely removed.

When I addressed this House of Representatives on April 17, concerning our friendly relations with the great people and Government of the land where America began, the Dominican Republic, I expressed the hope that the publicity and notoriety connected with the disappearance of Gerry Murphy would cease to continue its prominent place in the press, magazines, and so forth. Incidents such as the Gerry Murphy case come and go in this complicated world and for this case to be hashed and rehashed and kept alive long beyond its logical closing could only be attributed to those communistic forces which seize upon any and every morsel to feed its growth and spread its propaganda. The facts in the case are clear that Gerry Murphy succumbed to greed and became involved with the criminal element to the extent of joining in a conspiracy and being guilty of kidnapping. The regettable part is that innocent and outstanding public officials continue to be maligned and abused, in the traditional communistic way, through twisting the facts.

I deeply regret that these irresponsible and concerted attacks upon the people and government of the Dominican Republic, to whom we are so firmly bound, not only by the mutual affinity of our Christian religion, but by solemn treaties as well, continue unabated. Actually these attacks on a friendly government constitute a smear upon the honor and integrity of our own country, but it is wishful thinking to expect this matter to wane and fade as it rightfully should. Continued attacks appear containing biased and prejudicial statements against our friendly neighbor, the Dominican Republic, based upon pure hearsay. Recently in a national magazine a sensational article appeared about the Dominican Republic, an article that is a lurid rehash of ancient and hoary tales which had been circulated throughout the Caribbean by the dissident pamphleteers for so many years, material which is not only hoary with age, but which reeks with its communistic origin. Included in the article was an almost unbelievable attack with reckness abandon and disregard of the facts upon one of the greatest of contemporary statesmen, a man who enjoys the greatest respect of his colleagues on both sides of the aisle—an honest and kindly man—the Democratic floor leader of the House of Representatives, the Honorable JOHN MCCORMACK, of the State of Massachusetts.

Mr. Speaker, it is obvious that the author of this article, Representative PORTER of Oregon, did not understand the gravity of his actions in casting reflections, even by implication, upon JOHN MCCORMACK. I also state that I cannot believe that any Member of this House could have any feeling whatever about the gentleman from Massachusetts [Mr. MCCORMACK], other than the highest regard and affection, nor could any Member of this House entertain the slightest question as to his honor and integrity.

In his article in the June 1957 issue of Coronet magazine, my distinguished colleague, Representative PORTER, of Oregon, states, and I quote:

> Consequently, for as long as I persist in carrying on my campaign against Trujillo, I intend to carry a gun.

Now, I would like to ask the gentleman from Oregon, does he carry that gun on the floor of Congress? I was on the House floor when the Puerto Ricans shot at the Members of Congress and was in direct line of fire, yet, I have never found it necessary or desirable to carry a gun.

It is those of us who have taken the trouble to keep ourselves informed who know that out of the 5 predominant political parties in the Commonwealth of Puerto Rico, the next-door neighbor of the Dominican Republic 3 of them—Partido Independentista, Partido Nacionalista, and Partido Comunista—all cooperate and make common cause not only among themselves but with the "Vanguardia Revolucionario Dominicana," the largest group of Dominican professional exiles who carry on their nefarious work from the island of Puerto Rico and whose self-styled President, Dr. Miguel A. Prado, the possessor of a long criminal record, has taken me to task by means of a long and scurrilous letter for standing up and being counted on the side of decency, honor, God and country. Why this group, as well as the renegade Romulo Bethancourt, one-time President of friendly Venezuela, and probably the most dangerous Communist or leftwinger in our hemisphere, are permitted to ply their nefarious machinations and plot revolution against our friendly neighbors on soil under our jurisdiction, is quite beyond my comprehension. I hasten to add, Mr. Speaker, that Gov. Luis Muñoz-Marín, of the Commonwealth of Puerto Rico is not a member of any of the three dangerous leftwing parties mentioned. Governor Muñoz-Marín heads the Partido Popular

Democratico, a political party much more liberal than the Partido Estadista, headed by the patriotic Luis Ferre, but in no way connected with the three anti-American parties named, and the Dominican exiles living in Puerto Rico, which constitute one radical atheistic block, and from whence came the cowardly assassins who attempted to take the life of the President of the United States and Members of this House. Likewise, Mr. Speaker, events are very significant and point to a concerted drive going on by left-wing elements to bring about chaos and confusion in the Caribbean. The undoubtedly dictatorial but fiercely anti-Communist President of Nicaragua was assassinated a few months ago. The government of our nearest island neighbor, the Republic of Cuba, is even now under attack by a man reputed to be a Communist, and who is certainly pursuing exactly the same tactics as were displayed by the Communist Ho Shi Minh and various other trained Communist revolutionaries over the world. Recently two reporters from our own country gratuitously broadcast a highly biased telecast from his secret headquarters, during which a young man from our own country, serving under the rebel leader, described his motives for joining that movement in exact and timeworn Communist terms.

The small Negro Republic of Haiti, sharing the island of Hispaniola with the Dominican Republic, has been, for many months, in a state of complete political chaos, completely "strapped" financially, and unable to form a government or hold national elections. Our neighboring Republic of Mexico has a continuing and dangerous Communist problem. The Republic of Honduras has long been without an executive and is being ruled by a military junta, while all-out war between that country and its neighbor, Nicaragua, has just been narrowly averted by the Organization of American States. The people and Government of the Republic of Panama continue to be stirred up on the completely unrealistic issue of sovereignty over the Panama Canal, stirred up by those evil anti-Americans who thrive on chaos. The canal issue is unrealistic because it is, in fact, nonexistent. Of course, the Republic of Panama, however, in the exercise of that sovereignty, long ago made a binding and honorable contract concerning the canal and the Canal Zone, a contract made with our own Government, a contract made between sovereign equals for their mutual profit and interest.

Mr. Speaker, as one who has lived practically next door to the nations of Central America and of the Caribbean all of my life, and thus having gained some little insight into Communist intrigue in that area, I would like to touch briefly and factually, upon the classic Communist takeover of power in our sister Republic of Guatemala. In explaining what happened in Guatemala and what we may expect to happen in the Dominican Republic if communism has its way, I ask my esteemed colleagues to remember, to paraphrase a somewhat famous statement of an officer of the exceutive department, that I firmly believe that what is good for Central America and the Caribbean is good for us. As a Christian, I am concerned with the welfare of all people everywhere, and particularly with those Latin American peoples and nations who are our neighbors. First, however, I am concerned with the security and welfare of our own United States, and I am realistically convinced that we must never again, whatever the price, permit a Communist government in any of the Americas. Bishop Fulton Sheen, a great American and a great Christian, has said that history never changes; that rather, the same thing happens to different people. I believe we can all agree with that meaningful statement by Bishop Sheen, and by looking briefly at what led to the tragedy of Guatemala, we can determine what would happen to the Dominican Republic—if we should permit it—or even to us.

Prior to 1944 the Republic of Guatemala was ruled by a fiercely anti-Communist but benevolent strong-man dictator, General President Jorge Ubico. In its issue of November 18, 1940, page 37, Time magazine had this to say about President Jorge Ubico on the occasion of his 62d birthday:

> Jorge Ubico has made Guatemala the glamour girl of the Central American Republics. He has reduced the national debt 50 percent, has got his paper currency covered 100 percent by gold, has built and paid for public works. * * *
>
> President Ubico introduced a probity law, requiring that public officials register their assets upon taking and leaving public office. * * *
>
> Though he loves his own power, he has made love to the ideals of democracy.

Little did the world then know that the Kremlin had already picked Guatemala as its first American conquest and that the downfall of benevolent "Dictator" President Jorge Ubico was, in the face of our own ignorance and complacency, inevitable.

In its issue of July 3, 1944, Time—page 42—in an article entitled "Tyrant Defied," refers to the same President Ubico as a tyrant and takes credit for an article about the tyrant which it ran the previous week. In its issue of July 10, 1944—page 43—in the lead article under Latin America, entitled "Tyrant Down," Time uses an entire column to detail the downfall of the dictator of whom it had spoken in such glowing terms 4 years earlier. Jorge Ubico, admittedly a dictator, but a staunch friend of our own country and a courageous anti-Communist, lies buried in an unmarked grave in New Orleans. A dictator and controversial figure while he lived, he was a great American patriot nevertheless. Since death removed him many years ago from the realm of controversy, his memory is entitled to better treatment at the hands of our own country as well as his own. Probably no better way could be devised to demonstrate to our Latin American friends that we are dedicated to them in their fight against communism than to return the mortal remains of this Guatemalan hero to his own country aboard one of our own great warships.

President Ubico was succeeded immediately by a military man, then by the suave Communist Juan Jose Arevelo, who was in turn succeeded by another Communist, Jacobo Arbenz Guzmann, who was overthrown in the restoration of June 1954, and whose fate it was to become the first Communist leader in history to lose his country for communism. Juan Jose Arevelo and Jacobo Arbenz Guzmann today wander about the world, living proof of the fact that communism is not invincible, that Communist governments can be overthrown and liberty and decency restored to a Christian people.

But Guatemala's experience in communism cost her dearly in suffering, terrorism, loss of life and financial ruin. Every "do-gooder" in our Nation, be he public official or otherwise, should know and understand all of the facts of the work performed by Mr. Phieffer at Ciudad Trujillo which cannot, perhaps, be gone into. That his work was important and was material in the defense of our country is apparent to every thinking American. Those of us who love our country are grateful to Ambassador Phieffer. I am sure this sentiment is shared by every Member of this House, including my distinguished colleague from Oregon.

In conclusion, Mr. Speaker, let me point out to my distinguished colleague from Oregon, that, as a freshman Member of this House, he has made at least two mistakes, mistakes which I sincerely hope will not prove fatal to his future political career which looms before him so brilliantly. The first mistake was to impugn, if only by implication, the honor and dignity of our distinguished majority floor leader, JOHN MCCORMACK. Only by the exercise of the greatest of Christian charity can he be forgiven by his colleagues who know and love Representative MCCORMACK. Our colleague made his second grave mistake when he permitted the use of his name in connection with a scandalous and trite article in a national magazine, an article intended by that cynical magazine for one purpose and one purpose only: increase in its circulation. If our distinguished colleague believes that he has gained any fame by that course of conduct, he is badly mistaken. Notoriety, perhaps, but not fame. There is a vast difference. By his reckless and unwarranted statements that he must carry a gun he has, in effect, impugned the honor of every Member of this honorable House, and he has provided the enemies of our country with a valuable propaganda weapon. Such conduct is difficult for the patriotic Members of this House to forget.

Mr. Speaker, again I reiterate my sincere wish that we hear no more of the infamous Gerry Murphy. As a Christian, I shall humbly pray that my young colleague from Oregon shall see the error of his ways and that he shall be moved by God to turn his undoubted ability and aggressiveness to fighting our atheistic Communist enemy, and that in the future he render unto the great leaders of this House the respect which is their due. But, Mr. Speaker, while I shall so make my prayers to God, in my humble way, let there be no mistake: Our great Christian Nation shall live up to its obligations. It shall continue to honor and

respect our neighbors in Latin America who tender to us the hand of friendship. It is quite beyond the power of our distinguished colleague from Oregon to make it otherwise. In all Christian charity, I do not believe that our colleague from Oregon would want it otherwise. I am sure that his actions heretofore have grown out of a lack of understanding of the tense peril in which we live. I am sure that his further efforts in this direction could and would result only in further notoriety, of which he already has too much.

Protest Against Reduction in Wheat

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. BREEDING. Mr. Speaker, because of the high cost of living, and due to the increased cost of operation, the good people of the farming communities of Harper, Anthony, Attica, and the surrounding territory realize that the reduction in price of 22 cents a bushel for wheat for the year 1958 will mean money drained from their pocket. To show their concern, over 160 farmers of that area of my district have signed a protest against this action taken by the Department of Agriculture. I would like to extend my remarks in the RECORD to include their names:

To Whom It May Concern:

We the undersigned wish to protest against the recent order of the Agricultural Department to set the 1958 loan price on wheat at less than $2 per bushel.

Byron M. Childs, Harper, Kans.; Frank Biberstein, Clarence A. Oliver, G. J. Biberstein, Harold Patterson, Marion Cox, Attica, Kans.; Elsie Burns, Harper, Kans.; C. C. Marchel, O. C. Mirrell, Ira O. Brooklyn Shows the Way to Good Labor-Management Relations

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. ANFUSO. Mr. Speaker, it was my happy privilege last Thursday, May 23, to be present at a heartwarming event in my district in Brooklyn which noted significant advances both for business and labor in our community.

In a spirt of friendly cooperation, the members of a labor union agreed to forfeit half of their accrued vacation pay in order to enable a large plant from another state to move into Brooklyn and establish itself in our community. A vice president of the company frankly stated that his firm was influenced in its decision to move to Brooklyn by the cooperation offered by the union.

The astute labor leader who managed this feat was Mr. James Landriscina, president of Local 452 of the Candy and Confectionary Workers Union. He was ably assisted in this effort by the local's vice president Miss Anna Russo, and its secretary-treasurer Mr. John R. Alaio. The enlightened businessman who took advantage of this offer from the union was Mr. Leonard Stone, executive vice president of the Sweets Company of America.

Those who stand to gain most are 700 members of the union and their families who had been forced out of work last March when another candy manufacturing firm, Rockwood Co., had closed its plant in Brooklyn and left its employees without work. Now these and perhaps many others will return to their jobs. The Sweets Co. gained, too, because Brooklyn provides an excellent quality of workers, skilled and dependable, devoted to their families and to the community in which they live and work.

A ceremony to welcome the new plant in Brooklyn took place on Thursday, May 23, in front of the plant. On hand at the welcoming ceremonies were the Honorable Carmine G. De Sapio, Secretary of State of New York; Ambassador Richard C. Patterson, Jr., Commissioner of Commerce and Public Events of the City of New York; the Honorable Edward T. Dickinson, New York State Commissioner of Commerce; Commissioner Frank Noland, representing Borough President John Cashmore of Brooklyn; Mr. Chester Allen, president of the Brooklyn Chamber of Commerce, and Mr. Howard Swain, executive director of the chamber of commerce; and Congressman VICTOR L. ANFUSO. Also present were many prominent labor leaders representing various unions in New York.

Mr. Speaker, I am pleased to call attention to this matter because I feel that it is this kind of labor-management relations, this kind of give-and-take negotiations, which will help strengthen both business and labor. It is in this spirit of true cooperation that a real service can be rendered in promoting the welfare of the American people and the security of our country.

Lee and Meade at Gettysburg

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. DORN of South Carolina. Mr. Speaker, it is my pleasure to insert the following two editorials which appeared May 20 in my hometown newspaper, the Index-Journal, one of the best afternoon daily papers in the country:

LEE AND MEADE AT GETTYSBURG

President Eisenhower is ready to call a truce over the "Second Battle of Gettysburg."

He and British Field Marshal Viscount Montgomery both agreed after visiting the famed Civil War battlefield that Generals Lee and Meade blundered and should have been fired. The reaction was what one could naturally expect.

Meade did offer his resignation after the battle, as a matter of fact, but it was refused and he continued in charge of the Army of

the Potomac until the end of the war. His offense was not in fighting the battle unwisely however, but in failing to pursue Lee's battered army.

Some biographers say that Lincoln was more discouraged over this failure of Meade than over anything that occurred during the war.

Lincoln is quoted as saying that Meade "would be ready to fight a magnificent battle when there is no enemy to fight."

Lee's reputation does not rest on Gettysburg, and he cannot be judged on that one battle. As Eisenhower wrote in his own book, "Crusade in Europe," in reply to criticisms made of Montgomery, "In war about the only criterion that can be applied to a commander is his accumulated record of victory and defeat."

Lee had a magnificent accumulated record from the high point at Chancellorsville, called "the truest, the most splendid victory Lee ever won—an absolute masterpiece beyond which no further art is possible," to Gettysburg, "where the high tide of the Confederacy broke in tears and blood and despair, ebbing back to the sound of 'it's all my fault' from the anguished lips of Robert Lee."

Lee himself considered the irascible Meade a good general, and when the two armies lay along the Rapidan River following the bloodletting at Gettysburg Lee withstrained his fiery generals who would take chances.

"General Meade is an exceedingly able officer," he told them, "and if I make any mistake before him he will be prompt to take advantage of it."

Perhaps the two critics made their greatest mistake in talk about "sacking" Lee after Gettysburg. Fire General Lee? For whom?

Fletcher Pratt in his story of the Civil War, "Ordeal of Fire," terms Lee "the only cohesive force within the Confederacy," in the late stages of the war.

And Henry Wise is quoted as exclaiming to him at Appomattox, "Country be damned! There is no country. There has been no country, General, for a year or more. You are the country for these men. They have fought for you. If you demand the sacrifice there are still thousands of us who will die for you."

Pratt also says that "Lee's own judgment was less bad than he and some of the recent critics who claim he underestimated Meade would like to have us think."

Anyway, Gettysburg will be debated for decades to come. It does not take any such incident as the two distinguished critics to keep alive the controversy over who should have done what at what might well be the high dramatic point in the history of this Nation.

ESTIMATE OF EISENHOWER

An estimate of Eisenhower in his World War II role of supreme allied commander has been made by Field Marshal Alan Brooke, of England, whose book, The Turn of the Tide, has just been published.

In the current issue of Look magazine, there is a condensation of the volume.

Of Eisenhower's operations in Tunisia Brooke wrote, "I had little confidence in his ability to handle the military situation confronting him, and he caused me great anxiety. He learned a lot during the war, but tactics, strategy, and command were never his strong points."

He says, "It was a moment when bold and resolute action might have gathered great prizes. Eisenhower was far too much immersed in the political aspects of the situation. He should have left his deputy, Clark, to handle these, and devoted himself to the tactical situation."

Brooke adds that "It must be remembered that Eisenhower had never even commanded a battalion in action when he found himself commanding a group of armies. No wonder he was at a loss, and allowed himself to be absorbed in the political situation."

He praises Eisenhower for "his ability to handle Allied forces, to treat them all with strict impartiality, and to get the best out of an inter-Allied force."

Eisenhower was "blessed with a wonderful charm that carried him far; perhaps his great asset was a greater share of luck than most of us receive in life."

Brooke concluded that "If Ike had more than his share of luck, we Allies, were extremely fortunate to have such an exceptionally charming individual as Supreme Commander. What he may have lacked in military ability, he greatly made up for by the charm of his personality."

Of General Marshall, Brooke commented: "He is, I should think, a good general at raising armies and at providing the necessary link between the military and political worlds, but his strategical ability does not impress me at all."

"I have often wondered since the war how different matters might have been if I had had MacArthur to deal with," he writes. "From everything I saw of him, I put him down as the greatest general of the last war."

Brooke's comments on Churchill are extremely interesting, as well as the comments on Roosevelt and other war leaders.

Climbing Cost of Debt Menaces United States Treasury

EXTENSION OF REMARKS

OF

HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1957

Mr. LOSER. Mr. Speaker, a most interesting and enlightening column appeared in newspapers over the Nation a few days ago. One of the foremost newspapermen of our generation writes about the terrific cost of refinancing our national debt. He suggests that "if the Government keeps on raising its own interest rates, the cost of carrying the Government debt may be increased from the $7 billion annually to ten or eleven billion."

Mr. Bascom N. Timmons, Washington columnist for many southern newspapers, has written intelligently upon the financial problems facing the United States Treasury in refinancing under what he calls the Government's hard-money policy.

It is one of the best articles I have seen recently, and I believe it would be most useful to have it included in the CONGRESSIONAL RECORD. Under unanimous consent, I submit it for inclusion in the RECORD. Mr. Timmon's column follows:

CLIMBING COST OF DEBT MENACES UNITED STATES TREASURY—GOVERNMENT BONDS ARE GOING BEGGING

(By Bascom N. Timmons)

WASHINGTON.—A sudden but inevitable tension in Government financing has pointed up the coming inquiry into Government fiscal policy by members of the Senate Finance Committee, which will cast a penetrating light on the current inflationary situation and the threat of a decline in present national prosperity.

The inquiry will be directed by Senator HARRY F. BYRD (Democrat, Virginia), often called the "Watchdog of the Treasury," but other Democrats will take over various phases, with Senator ROBERT S. KERR (Democrat, Oklahoma) as second to BYRD, and Senator J. ALLEN FREAR (Democrat, Delaware), RUSSELL B. LONG (Democrat, Louisiana), and ALBERT GORE (Democrat, Tennessee) participating.

The tension in the Treasury Department over refinancing is possibly not as serious as some critics have viewed it, but it grows out of the handling of the public debt, and emphasizes the burden which now rests on the neck of every taxpayer.

What has happened is an aftermath of the sale of large size Government bonds—the F and G series—to large investors, mostly corporations, trust funds, and insurance companies, who were expected to put them into their portfolios and hold them until maturity.

THE RUSH FOR CASH

But as the Government's "hard money" policy has forced up interest rates on bond issues of local and State governments and of private corporations, the investors in Government bonds have been redeeming their bonds, receiving billions of Government cash. In many instances the bondholders were able to reinvest the funds they had originally loaned the Government at rates from ½ to 1 percent higher than they were receiving from Government bonds.

The Treasury has usually enjoyed an established priority in the investment field, which is now seriously threatened.

In the financial world, it sells short term notes at low rates of interest which the holders redeem at the end of a 3 or 4 month period, usually exchanging them for new Government obligations of the same character. Now, almost one-third of the holders of such notes are turning them in at maturity for cash, and not reinvesting the money with the Government.

This in turn, broadens the market for private bonds and these of governments subdivisions at higher rates of interest. If the Government keeps on raising its own interest rates, the cost of carrying the Government debt may be increased from the present $7 billion annually to $10 or $11 billion, which can only be reduced by cutting the Federal Government's $275 billion debt burden. The cost of local government and of manufactured products is also increased.

The Government is not short of money. Of that it has plenty, but to put additional cash into circulation without borrowing is considered an inflationary practice, and opposed by both the Treasury and the Federal Reserve Board. Yet expenditures are increasing because of inflated costs, and there is not much prospect of any retrenchment in that direction.

PATMAN INQUIRY REJECTED

Recently the House turned down a resolution for an inquiry by the House Banking and Currency Committee into the Government's money policies, supposedly because Representative WRIGHT PATMAN (Democrat, Texas), who favors easier Government money policies, would have headed the investigation. Democratic and Republican leaders, along with President Eisenhower would prefer to have the conservative Byrd direct such a probe, rather than a competing House inquiry pitched at a different level.

What this all means to the taxpayer is quite obvious. His hope of a tax cut rests on reduced Government expenditure, and with the Government interest rates being forced up the hope of a tax cut grows dim. His expectancy of reduced living costs is lessened by continued high money rates. In addition successive wage increases have jumped the cost of Government by 61 percent in the last 10 years, according to the United States Department of Labor, and now

account for 28 percent of the final price level.

Interest charges and taxes add to the cost of materials and profits have risen at about the same rate as labor costs.

The tremendous annual defense cost of around $38 billion annually, which amounts to more than half the Federal budget has been scored by Ralph J. Cordiner, president of General Electric—which produces billions worth of defense equipment—and chairman of a special committee investigating the Defense Department, as being increased by political waste and false reasoning.

All around it is a dangerous and menacing situation, and the threat it carries is growing, without a way out in sight.

Residual Oil Imports

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. SAYLOR. Mr. Speaker, President Eisenhower is to be commended for his forthright attitude toward the oil imports problem. I was gratified to hear that the President had announced that there is reason to believe that alien oil is entering the United States in such quantities as to threaten to impair the national security. The White House at the same time ordered the Honorable Gordon Gray, Director of the Defense Mobilization, to begin an immediate investigation and take the action necessary to keep import levels in conformity with the stipulated provisions of the national security amendment to the Trade Agreement's Extension Act of 1955.

In the course of Mr. Gray's work, I trust that he will take a very close look into the residual oil imports situation. I remind him that the report of the Presidential Advisory Committee on Energy Supplies and Resources, which was basic to the development of the national defense amendment, very definitely treated residual oil as a separate problem. Let me read two paragraphs from that report:

> The committee believes that if the imports of crude and residual oils should exceed significantly the respective proportions that these imports of oils bore to the production of domestic crude oil in 1954, the domestic fuels situation could be so impaired as to endanger the orderly industrial growth which assures the military and civilian supplies and reserves that are necessary to the national defense. There would be an inadequate incentive for exploration and the discovery of new sources of supply.
>
> In view of the foregoing, the committee concludes that in the interest of national defense imports should be kept in the balance recommended above. It is highly desirable that this be done by voluntary, individual action of those who are importing or those who become importers of crude or residual oil. The committee believes that every effort should be made and will be made to avoid the necessity of governmental intervention.

Obviously, Mr. Speaker, any action which fails to consider residual oil separately would be of no value whatsoever to the protection of the domestic bituminous coal and anthracite industries. If a limitation on imports is enforced, and a specific quantitative restriction on residual oil is not included, then, of course, residual oil could conceivably make up the major portion of the total imports. The amount of residual oil coming into this country at the present time comprises too great a peril to our defense structure to tolerate this condition any longer. Fortunately the coal industry last year increased production over the alarmingly low level to which it had fallen in 1955; however, output is still far below what it would be if Government policies on imports and on other matters affecting the industry were fair and proper.

Government officials and fuel experts from private industry acknowledge that coal will have to accept a progressively greater share of the responsibility to meet increasing energy needs of the future, yet there is a glaring lack of concern for the industry's immediate welfare.

Coal producers must, of necessity, be given an opportunity to build up their resources. The coal miner needs to have steady work if he is expected to remain at this occupation. Today's labor force consists of trained engineers and technicians who, through experience and devotion to their jobs, have helped to make America's mining industry the most productive in all the world. They must be encouraged to stay in mining communities if they are to be ready to produce the fuel that will be needed in succeeding years. This encouragement will not come with 2 or 3 days of work per week; nevertheless, reduced workweeks and completely shut-down mines are imminent unless a more realistic approach to coal's problems is taken by Congress and the executive department.

One glance at the year's production figures will explain why a feeling of insecurity persists among mine operators and the labor force. To remove this tension and provide a spirit of optimism in mining towns requires positive action here in Washington.

Last year, when the bituminous coal industry reached an output level of 500 million tons, there was a popular tendency to assume that the problems of the industry had been overcome and that the upward trend would continue at a healthy rate on into the future. One of the factors that many analysts overlooked was a production chart extending back sufficiently far to provide a sound basis of comparison with other periods. For 10 years ending in 1956, average production amounted to just 500 million tons, which was below even the 1920–29 average and is prima facie evidence that 1956 cannot be considered any great shakes for the coal industry. There is no cause for rejoicing in the 1956 figure.

Coming down through the first portion of 1957, we might very well expect to find that at least the moderate gains made in 1956 over the preceding year were holding fast. Any upward movement, regardless of the rate of ascendancy, would constitute a stimulating development. The blunt truth, however, is that there is no increase in coal production to report at this time. Through May 4, bituminous coal production amounted to approximately 175 million tons, a decrease of some 3 million tons under the figure covering the corresponding period for 1956. Anthracite production is also down, with commercial production through May 4 almost 10 percent below the preceding year's output. The anthracite industry has been so hard hit in recent years that heaven knows it cannot withstand further losses brought about by unreasonable Government policies. As you see, in both the anthracite and bituminous industries, the anticipated gains have failed to come about. Production is down. A strong and sustained demand must be recorded during the remaining months if any substantial improvement is to be recorded for the year.

Now, here is what has happened in residual oil imports. Ten years ago the foreign residual oil entering this country's markets amounted to just about 45 million barrels. A relentless upsurge then got underway, and the coal industry has been suffering ever since. President Eisenhower took notice of the situation when he appointed a Cabinet Committee on Fuels and Energy Resources in 1954. It was that committee which recommended that imports of crude and residual oils be held at the respective proportions that such imports bore to domestic production in 1954. The 1954 figure on residual oil imports was 129 million barrels. For 1956 it was almost 162 million barrels, which in energy equivalent is a little less than 39 million tons of bituminous coal.

I trust that Mr. Gray will refer to the remarks of Members of the House and Senate when the bill to extend the Trade Agreements Act was debated in 1955. He will learn that it is the unequivocal intent of Congress to restrict oil imports to these designated levels. Even such a limit is far from a just mitigation for the producers and the laboring forces in the bituminous coal and anthracite industries. It will at least protect them from extended piracy on the part of international oil shippers.

A Vote of Confidence for the President

EXTENSION OF REMARKS
OF
HON. EDMUND P. RADWAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. RADWAN. Mr. Speaker, I submit herewith an article which appeared in the Buffalo Evening News, Buffalo, N. Y., on May 23, 1957, reporting a unanimous resolution by the New York State Republican delegation in support of President Eisenhower:

NEW YORKERS IN CONGRESS GIVE IKE VOTE OF CONFIDENCE—MORHOUSE TO GET CONFERENCE WITH PRESIDENT

(By Arthur L. Davis)

WASHINGTON, May 23.—President Eisenhower today got a unanimous "vote of confi-

dence" from the New York Republican delegation in Congress, 28 strong. However, the Members threw back at the President his recent words that there must be room in the GOP for divergent points of views.

State Chairman L. Judson Morhouse delivered the confidence resolution to the White House. He said he had made tentative arrangements to confer with Sherman Adams, Presidential assistant, and hoped to get a few minutes with the President.

The resolution of confidence was drafted at a stormy session of the New York congressional delegation, attended by Senators IVES and JAVITS and by all but 4 of the State's 26 Members of the House.

WRANGLE OVER STATEMENT

Reports that leaked out of the closed-door dinner meeting Wednesday evening, at which Chairman Morhouse was host, indicated that the session almost broke up in failure to agree on terms of any statement in support of President Eisenhower.

But Representatives COLE of Bath and RADWAN of Buffalo pointed out to their colleagues that once the subject had been brought up, it could not be dropped in disagreement, even behind closed doors, without the fact becoming known.

Mr. RADWAN was reported to have remarked that a refusal by the big New York delegation to express confidence in President Eisenhower at this crucial point for the Chief Executive's program would be like "firing the first torpedo into the Republican ship."

COLE SUPPORTS RADWAN

Representative COLE is said to have rallied additional support for a statement of confidence, and one was finally worked out as follows:

"*Resolved*, That the New York Republican congressional delegation at its first meeting of this session endorses and approves the President's declaration of policy for the Republican Party made to the Republican National Committee's regional conference at Providence, R. I., as follows:

"'There are differences of opinion within our party and I hope there always will be. Under our two-party system a national party must contain within its divergent points of view varying opinions on national issues from State to State, region to region.

ANGER OVER PATRONAGE

"'This is a healthy condition as long as the fundamental beliefs within that party provide a common nucleus of thought—a set of unalterable truths that bind us together into an inseparable whole, dedicated to conducting the Government of the United States in the best interests of its people.'

"*Be it further resolved*, That the New York Republican delegation reaffirms its admiration of and support for the leadership of the President, both of the country and of the Republican Party."

According to reports that leaked out today on the meeting it was first taken up with a discussion of patronage problems, during which some "angry yelling" was done. Then dissatisfaction was expressed with the size of contributions by the Republican Congressional Campaign Committee to the campaigns of New York legislators, and a committee was appointed to study this problem.

DEPLORES LACK OF LIAISON

Representative TABER of Auburn, ranking GOP member of the House Appropriations Committee, then brought up the President's $71.8 billion Federal budget, and—as he confirmed to the News today—complained that "the folks in the administration just don't understand this budget."

He said he told the New Yorkers that there was no liaison between the executive branch and Congress on budget matters, and that there had been better understanding of budget problems when there had been better liaison. He refused to amplify but it was reported he also declared at the closed meeting that the President would agree no harm would be done by a $1.5-billion budget cut if Mr. TABER could get an opportunity to explain the cut to him.

One legislator said Mr. TABER had raised "a very sore point" about liaison with the White House.

WHITE HOUSE "CLOSED SHOP"

"There seemed to be no communication to speak of between the Members of Congress and the White House," this Representative said. "It's just a closed shop down there, surrounded by the palace guard. When JOHN TABER can't discuss budget matters with the President, that's a pretty sad affair."

This same Congressman said the confidence resolution was intended to express a general consensus that the New York Republicans in Congress all acknowledge President Eisenhower's leadership in international and domestic affairs but are reluctant to give him rubber-stamp approval of all his program.

"We're still going to vote as our conscience tells us, on the basis of our considered judgment," the legislator said.

ANXIOUS TO SUPPORT IKE

Chairman Morhouse expressed the intent of the resolution in different terms.

"The consensus is," he told the News, "that the New York delegation to a man is extremely anxious to express support for the President and his policies and program, and to follow this with action.

"This does not mean that every Member from New York will vote the same way on every detail. No one indicated that he was flatly behind the President no matter what, but in terms of the program and general policy they were behind him 100 percent."

Mr. Morhouse said that, since the President has taken his budget program to the people for support, the people are beginning to get the problem into thoughtful balance. He said public opinion generally is swinging now to the viewpoint that the national-defense budget should not be reduced and that there is not much room elsewhere for major reductions.

Mrs. Elizabeth W. Lewis: A Remarkable Lady

EXTENSION OF REMARKS

OF

HON. WILLIAM M. TUCK

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1957

Mr. TUCK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Richmond Times-Dispatch of Sunday, May 26, concerning Mrs. Elizabeth W. Lewis, a former resident of Mecklenburg County, Va., and a most attractive, distinguished, and beloved lady. Later Mrs. Lewis resided in Hanover County, Va., and in the city of Richmond. She has many friends in Virginia, and I am proud to be one among them. I have known her for many years.

Mrs. Lewis is the widow of the late Honorable John Taylor Lewis, who represented Mecklenburg County in the House of Delegates of the General Assembly of Virginia for a number of years. She has several children, among whom are Mr. W. M. Lewis of Halifax, Va., an able attorney and distinguished member of the Halifax County bar, and Mr. Meriweather Lewis of Carksville, Va., a prominent farmer and cattle grower. Virginia and the Nation are proud of the Lewis family as one of the famous pioneer families of America.

Mrs. Lewis has had an interesting career which is an inspiration to all of her friends.

The article is as follows:

NO TIME FOR TEAS—LOCAL WOMAN TO ADD NEW TROPHY TO LONG LIST OF ACCOMPLISHMENTS

(By Thomas P. Lee)

A Richmond woman who "got tired of frittering away her time at ladies' teas," will be graduated from New York University (NYU) next month. She is 78 years old.

The degree candidate is Mrs. Elizabeth W. Lewis. She is interested in helping old people. Said a Richmond friend recently: "She is always interested in new frontiers."

Mrs. Lewis, widow of John Taylor Lewis, of Mecklenburg County, already has passed a number of frontiers. She has been a wife, a mother, a suffrage worker, a candy maker, a housing developer and real estate saleswomen, and an air raid warden.

A son, Lawrence Lewis, who lives at 6309 Ridgeway Road, says she also has been a good swimmer all her life, and currently is taking dancing lessons. She has won bronze and silver medals from a dancing studio, and is working for the gold medal.

TO START NEW CAREER

When she receives her bachelor of science degree June 6, she will set out on her newest career—in gerontology (the study of old age).

She already has made a start—as president of New Horizons, a group of older people in New York planning for later life.

Mrs. Lewis was feeling "tired and blue" during World War II, when she was an air raid warden here. (Her son says she "got tired of frittering away her time at ladies' teas.") Then a geriatrician and a psychologist got her interested in helping old people.

Recently, when these two doctors claimed credit for motivating her success at NYU, she protested vigorously: "What about me?"

Mrs. Lewis is the daughter of the late W. T. C. Wardwell, once lieutenant governor of Rhode Island. Her husband, John T. Lewis, represented Mecklenburg County in the House of Delegates in 1912–13. He died in 1930, after moving to Gwathmey, near Ashland.

ARDENT SUFFRAGE WORKER

Her son, Lawrence, now in the wholesale lumber business, recalls his mother was an ardent suffrage worker in the 1920's, and active in the League of Women Voters.

In the early thirties, he said, "she went to some candy-making school somewhere in Pennsylvania," then set up a small candy factory in her home at Ashland.

"She was selling candy for $1.50 a pound," said Lewis. "You know if people paid that much for candy during the depression, it had to be good."

It was so good, said her son, that the demand quickly exceeded the supply. So Mrs. Lewis forsook the bonbon business and took a correspondence course in real estate.

First she worked for a realtor in Richmond, then founder her own firm—Lewis Co.

In the late thirties she specialized in waterfront property in Middlesex County, said her son, and built and sold a number of houses at Deltaville.

A number of years later, when a reporter remarked on the vigor of her enterprise, she retorted:

"What are you supposed to do when you reach the age of 59? Go jump in a lake?" (She admitted then to being over 60.)

"You don't get old," said Mrs. Lewis, "if you have an interest or a hobby."

LIVES IN GREENWICH VILLAGE

When she lived here Mrs. Lewis made her home on West Franklin Street. Since going to New York in 1948, she has kept an apartment in Greenwich Village.

It's taken her 9 years to earn her degree, since she spent a good deal of time working to rehabilitate elderly people. And when she tired of studying, she went for a ride on the Staten Island ferry—"to get away from it."

Despite her outside social and church work, spirited Mrs. Lewis made only two grades below B in her courses. Those two were C's.

All 7 of her children and 20 grandchildren plan to attend the graduation exercises, after which Mrs. Lewis will travel and relax for a while.

Then she may set up an old-age rehabilitation clinic. "If I can just convince young people that they can stay around and be enjoyably active as long or longer than I," she says, "and if I can motivate them to work at it, it will be worth all the trouble."

Government of, by, and for the People

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. NEAL. Mr. Speaker, after the adoption of the Constitution, Benjamin Franklin, on being asked what kind of government had been adopted, replied: "A republic, if we can keep it."

His reply implied both a knowledge of world history and a deep appreciation of human reaction to mass psychology.

Were he here today, he would marvel at the rapidity with which we, the people, have veered from the original concept of republican form of government. We, the people, negligent of our civic obligations, overlooking our constitutional duties, permitting our elected officials to secure positions of responsibility by a minority of voters, and failing to interest ourselves in their political and economic behavior in their official capacities, have permitted our executive and legislative bodies to succumb to the pressures of minority interests until the average citizen has relinquished most of his claim to government of, by, and for the people and surrendered little by little to what is now an overgrown system of bureaucratic agencies and departments.

Most of us have been too occupied with our day-to-day well being to realize how our individual freedoms are being usurped by rules, regulations, and administrative orders issued by department heads where authority stems from the actions of Congress, members of which, under the Constitution, are their only direct representatives in matters of government.

Throughout the years, the Congress has delegated much of its original powers to the departmental bureaus and to executive agencies. With such delegated authority, the execution of laws passed by Congress become increasingly subject to the interpretation of officials holding their positions by appointment and who therefore are not directly responsible to the people.

There are 2¼ million persons employed in our Government today in its various bureaus and agencies.

Legislation instead of being initiated by the leadership in Congress, without advice, consent, and approval of bureau heads and executive officials, depends largely upon bureaucratic leadership to suggest blueprints and objectives.

The result is that laws or legislative changes sought by individuals and groups are determined in their final form by the respective agencies entrusted with their administration.

Now agencies and bureaus, interested in self-preservation, are selfishly impressed with the advantages of expansion of activities and the accompanying need for additional employees and appropriations with which to pay their salaries and the added expense for facilities in which to operate.

To persuade Congress and the public to support their demands, many top echelon officials of these bureaus and agencies spend a large portion of their time and energies appearing before committees and communication centers for the purpose of sponsoring their programs and convincing the Congress of the necessity of authorizing expanded operations and appropriating the necessary funds.

In many instances, the Congress and the public have been told these new ventures are only needed as temporary emergency measures, but experience bears out the fact that once an emergency increase is authorized, it invariably finds convincing reasons why it should be continued.

The bureaus and agencies of Government seem to have successfully sold the Congress on the advisability of not only maintaining existing agencies, but, in recent years, have succeeded in having more and more special branches of Government created annually.

The result is a big overgrown Federal Government which today requires the income from two days of a week's work to support. Even though the Federal budget is in balance as of today, there is little prospect that any part of our tax contribution will be left over to apply to the $275 million national debt. With present tempo of Federal spending, there can be little hope of tax reduction.

There can be only one answer—reduce spending programs, both domestic and foreign. That means, cut the proposed $71.8 billion budget and refuse to appropriate new money for more bureaus and departments. Public demand for such action is now at an all-time high. It has impressed Members of Congress as to that great need.

Yet, I would add a word of caution.

This Congress can wield the cleaver of the butcher in trimming the budget and with a consequent grave danger to the precarious security we have built up for ourselves and our free-world allies in a perilous age.

Or, it can apply the surgeon's scalpel to our fiscal affairs by trimming away an admittedly great amount of financial fat in this budget and retain our posture of present security.

I would remind the House that this is no time to play the role of partisan politician in trimming the budget. The times are too dangerous, the imminence of global disaster too close each hour, for us to heedlessly use our constitutional power of the purse to embarrass and hamstring those portions of the executive branch entrusted with our defense and security.

Foreign Aid Speech Flaw: It Came 3 Months Late

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. LOSER. Mr. Speaker, a well-known daily newspaper, the Nashville (Tenn.) Tennessean, called to the attention of the Nation the plight of the President in his foreign-aid speech of several days ago. This great southern newspaper suggests that the address came 3 months late.

This editorial is worthwhile reading for the Members of Congress, and, under the unanimous-consent rule, I include it in the CONGRESSIONAL RECORD. It follows:

FOREIGN AID SPEECH FLAW: IT CAME 3 MONTHS LATE

President Eisenhower made a speech to the Nation on foreign aid Tuesday night. As the President's speeches go, it was better than usual, but it had a flaw: it was 3 months late.

For this attempt to rush and play Horatius at the bridge is a pathetic effort, weighted by his failure earlier to defend his budget instead of weakly agreeing with Treasury Secretary Humphrey that there are a lot of places in this budget that can be cut, and finally winding up by slicing $520 million from the foreign-aid request.

Congress is sharply split over foreign aid, but the economy-minded segment is still determined to look over the President's requests with a searching scrutiny to detail. In the end, some of his requests will be lopped.

Sentiment is strong in that direction. So is criticism. Mr. John Knight, publisher of the Knight newspapers, and once a strong supporter of President Eisenhower, has this to say:

"Your tax dollars have helped Norway and Denmark to reduce their internal debts while our national debt was mounting. We have financed a six-lane highway in Portugal, numerous uncompleted projects in Iran, and are now providing free airplane excursions for thousands of Arabs visiting their religious shrines * * * The record is filled with innumerable instances of foreign aid so dubious and downright silly as to be beyond belief. It includes dress suits for Grecian undertakers, public baths for Egyptian camel drivers, and even ice boxes for Eskimos.

This is one of many such oblique attacks that have been made all along at all sections of the budget. They have succeeded, in part, in undermining the confidence of the

...le in the budget. There was a strong ... for a vigorous defense of its spending ...e administration rather than for Mr. ...ower to dismiss them by saying he ... doubt "isolated incidents could be ... to support charges of waste and ...efficiency."

Fresh in the minds of most is the trip by the President's special ambassador, Representative JAMES P. RICHARDS, into the Middle East with instructions to get rid of $200 million by July 1, at any cost. Mr. RICHARDS experienced a turn-down by Egypt, Syria, Jordan, and Israel and silence from other Arab countries.

But Mr. Eisenhower rightly pointed out that the cost of peace is high and the price of war is higher and is paid in bloody coin. This conclusion he could have used earlier in the year.

No one questions the need or practicality of strengthening our Allies into a bulwark of collective stability, or of helping nations to resist the threat of communism. There can be no argument that aid measures have not helped greatly in places such as Iran, threatened by the Reds 4 years ago, or Vietnam, or Guatemala in our own hemisphere.

These are only a few examples of the tremendous burden of responsibility confronting this Nation in every corner of the world at a time when the struggle between the free world and the Communist orbit for economic supremacy is so clearly defined.

But beyond a doubt, foreign aid spending has not always been administered wisely or well. There are a great many examples of bungling. The administration has failed to come up with new forms of assistance tailored to the needs of the time until such a decision is forced. It has failed to plan beyond the various brinks that Mr. John Foster Dulles feels compelled to lead us, and contrary to Mr. Eisenhower's assertion, it has sought to buy friendship with American dollars when that friendship could have been had for free had the proper leadership been available.

There is serious danger in a major slash in foreign-aid funds, and inept handling should not justify arbitrary axswings into the sinews of military and economic structures in the free world.

As Senator LYNDON JOHNSON, of Texas, said, "Congress will give Mr. Eisenhower's requests careful, thorough, and prudent consideration. The question of what is a minimum figure is one that can be determined only after a searching scrutiny."

But for "Horatius" at the White House there can be no joy in realizing that some of the cuts that will be made could possibly have been saved had he fought earlier instead of faltering on the budget.

Swedish Carpetbagger Dreams Up Another Modern Theory

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1957

Mr. DAVIS of Georgia. Mr. Speaker, under leave to extend my remarks, I insert herewith an excellent article by Mr. Garland B. Porter, of Atlanta, Ga., entitled "Swedish Carpetbagger Dreams Up Another Modern Theory." This article was originally printed in the magazine, Southern Advertising and Publishing, in January 1957. I commend it to the careful consideration of my colleagues:

SWEDISH CARPETBAGGER DREAMS UP ANOTHER MODERN THEORY

(By Garland B. Porter)

Readers of Southern Advertising and Publishing have gained, no doubt, an idea of how deeply we condemn Dr. Gunnar Myrdal, the "Swedish carpetbagger"—what a wonderful sobriquet for him; we thank the Chicago Tribune for it. Myrdal's An American Dilemma was used by the Supreme Court to amply support its modernization of the Constitution of the United States on May 17, 1954, in its edict that Negro children cannot get education free of complexes except in the presence of white children.

This Myrdal should bear closer study. We tried to give his insulting American Dilemma an exposé in our August 15 issue; in it he referred to the United States Constitution as "in many respects impractical and ill-suited to modern conditions." Yet his book was practical enough for the Supreme Court to cite in support of its radical edict. As we say, this Myrdal should be watched closely. Not only has he supplied the answer to changes in our way of life as a nation; he has ideas as to how we can underwrite the socialistic reforms of the world.

Our national debt is already larger than that of all the rest of the world combined, but Myrdal and others of like thinking would have us go deeper into debt to pay for the errors of the world's crackpots and to appease foreign leeches. How could the Supreme Court, sworn to uphold the Constitution, reasonably expect the American people to accept him as authority for their radical edict?

On December 18 a patriotic service was rendered our Nation by the Chicago Tribune. The lead editorial that day was a wonderful alarum (that's old-fashioned spelling) for those who love this Nation. It must have been a surprise to many readers, for none except those who know something of Myrdal could possibly imagine that such a thinker would be asked to preach his doctrines in the halls of the mighty. Myrdal is one of the star pitchers of the United Nations Economic Commission.

Read this editorial which was titled "Five Billion a Year in Hush Money." It follows:

"Gunnar Myrdal, a Swedish economist who is Executive Secretary of the United Nations Economic Commission for Europe, made some presumptuous remarks the other day on the subject of American foreign aid and technical assistance to underdeveloped countries. Mr. Myrdal was speaking at a seminar on welfare democracy, which we assume to be the concept that the state has a right to frisk those who, by their own efforts, have achieved a theoretical prosperity and redistribute the proceeds to those less well off.

"Myrdal suggested that, although America pays close to 90 percent of the capital aid and technical assistance being given to the poorer part of mankind, it was not doing so in any spirit of unselfishness. On the contrary, said this Swedish gentleman, the United States, by persisting in carrying on its ordinary business relations with the rest of the world on the principle of selfishness, had demonstrated that its handouts were no more than a palliative or conscience money.

"Myrdal seemed to believe that the grants and credits wrung from American taxpayers not only ought to be much more substantial, but that they ought to be stabilized—i. e., made permanent commitments—and handled through U. N. or one of its agencies. This would take away from the United States any identification it may now have as the donor of such aid and any claim it might have on the dubious gratitude of the collecting nations.

"'When international aid becomes unilateral and politics thus enters into the distribution of it,' Myrdal said, 'both moral and economic standards are apt to crumble.'

"Mr. Myrdal's modest proposal, therefore, would be that Americans submit to heavy taxation to prop up the rest of the world and that they assume this burden as a duty dictated to them by the need of the less fortunate nations. The underlying assumption is that it is a good thing to socialize wealth all over the world, and, as a disproportionately large share of the world's wealth happens to be in the United States, it is to be socialized for the benefit of all peoples except Americans.

"Mr. Myrdal has long been sympatico with Russia. As Sweden's minister of trade some 10 years ago, he negotiated a trade agreement between Sweden and Russia which provided for a large loan and trade advantages to the Communists. The deal was so unpopular in Sweden that he was driven from office. When the economic committee for Europe was being organized in U. N., Russia agreed to participate in it only on condition that Myrdal be made executive secretary.

"'This Swede capped his presentation at the seminar on 'welfare democracy' with the observation that 'generous America often turn out to be niggardly selfish in its regular commercial and financial policies and practices.' He charged that 'the United States has until this very day preserved much of the narrow nationalistic attitude toward its participation in world commerce from the time when it was itself 'underdeveloped.'

"It is not enough for the United States Government to be a patsy, providing for all the indigents in sight. Mr. Myrdal would have American business emulate the example—a sure way, perhaps, of going broke in a hurry, but an outcome which could not conceivably offend Mr. Myrdal's view that justice would be well served and the advent of world socialism speeded if this were to occur.

"American participants in the session on 'welfare democracy' numbered Prof. Arthur Schlesinger, Jr., a campaign brain buster for Adlai Stevenson and a leading light in the left wing Americans for Democratic Action; Adolf A. Berle, former boy wonder of the New Deal, now teaching law at Columbia, and Milton Katz, the inevitable professor from Harvard Law. None of these patriots opened his mouth to defend his country or rebuke this Swedish carpetbagger."

It is not amazing to see such alien doctrine being launched to pollute the thought streams of the world, through the executives of United Nations? The Tribune merits the thanks of those who cherish these United States for alerting us to the continued activities of this Myrdal. I suggest that you go back and read the editorial again—then dedicate yourself to the business of opposing these alien doctrines and philosophies. There is indeed afoot in the world today new ideas, not just modern ideas, that come to us under guise that modern and new always mean progress. A new idea can be as deadly as an old one; we have no right to call any new idea good until it is proved good. Our constitutional system has proved itself good for nearly 2 centuries.

If it is a good idea for America to disburse her goods, anonymously and with a profligate hand hidden from the eyes of the recipient, then I am really a fool. But I'll submit that this Nation is full of fools like me who view with contempt some scatter-brained socialist-welfare stater who can dream up such a piece of nonsense. But did you get the last paragraph of the Tribune's editorial? Men like Professor Schlesinger, Adolf Berle, Milton Katz—men high in the brain-truster ranks—sat there on their patriotic brains and uttered not a word of protest. How dumb can men become.

When Myrdal and his kind get through squandering the wealth of America throughout the underdeveloped regions and peoples of the world, then all of us will be on the same level. Nobody will be jealous of anybody else—and why should they? The billions we already have given now have simply been "a palliative or conscience money." We must stabilize this paupering process, we are told. But do it so secretly that nobody will be able to thank his benefactor: that would be bad for the morale. Great God of hosts. If the recipient of Uncle Sap's generosity were to know where the handouts came from, that might engender an inferiority complex from which the recipient might never recover, you see?

Does that sound familiar? It does to me: in the integration edict of May 17, 1954, the Supreme Court said, speaking of Negro schoolchildren:

"To separate them from others of similar age and qualifications solely because of their race generates a feeling of inferiority as to their status in the community that may affect their hearts and minds in a way unlikely ever to be undone."

The Court went on to say 1 paragraph later, "Whatever may have been the extent of psychological knowledge at the time of *Plessy* v. *Ferguson*, this finding is amply supported by modern authority." [11] The 11 footnote listed a number of modern authorities (quite a few on Federal subversive list) and ended "And see generally Myrdal, 'An American Dilemma.'" Personally, I don't see what else the Swedish carpetbagger has to say to get on that list himself. We make a big point of condemning people who attempt to overthrow our Government by violence—can it be more completely overthrown by violence than by insidious propaganda? Is a man more dead if he is shot than if he is leeched and bled to death?

The chances are that with such credentials, accepted at the highest bench and assemblage of nations, Myrdal will keep on pecking away at us, at our way of life, and the horn of plenty that we have developed. What chance have we against such propaganda that labels us as isolationists if we wish to preserve our Nation, and selfish if we wish to work out our own destiny and let other peoples work out theirs? We have no chance at all unless we exercise constant energy, intelligence, and patriotism to keep the fuzzythinkers within bounds, and the enemies of our way of life away from our birthright.

It is to be wondered if the Supreme Court knew of Myrdal's record with the Russian Communists when they held him up as authority for radically changing the Constitution of the United States. Does it require much knowledge of sociology to size up a man who the Communists insisted be placed as chairman of the United Nations' Economic Committee for Europe?

Not much imagination is needed to see that such a man as Myrdal would not wish governmental control in our country left in the hands of the States, as laid down by the Constitution. The school edict, which the Supreme Court had no constitutional right to promulgate, was one of seven decisions we can recall that undercut the sovereignty of the States. In fact, we can say without fear of supportable contradiction that no period of our history has witnessed such an assault on the original bastions of our Government, the States.

Nor have all the previous decisions of the Supreme Court combined to centralize power and drain so much from the source from which the National Government and the Constitution itself sprang—the separate States. That the Court which is staging this radical process would honor a man with such credentials as Myrdal is nothing short of astounding.

Labor in Politics

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. RHODES of Pennsylvania. Mr. Speaker, ultra conservative elements in the United States express concern about the role of labor in politics, but their real fear is of democracy itself. Labor's long record in politics is an honorable one. It has contributed much to the well-being of our Nation. No group has done more than organized labor in helping to bring about needed social and economic reform. Social security, public housing, minimum wages, unemployment compensation are but a few of many great social reform programs which have helped millions of citizens, many of whom never belonged to a labor union.

Reactionary opposition to these programs more than anything else, inspires those behind the antilabor drive. These attacks will only increase labor's interest and determination in the political field.

Mr. Speaker, under leave to extend my remarks in the Appendix, I would like to include a statement, We Are in Politics, from the April 1957 issue of Ammunition, official publication of the United Auto Workers.

The declaration, which follows, tells why labor is in politics and why it is in to stay despite reactionary effort to destroy labor's political rights and freedom.

LABOR IN POLITICS

We are in politics. Democratic politics, Republican politics, and nonpartisan politics.

UAW members are Democratic and Republican legislators in State legislatures. We sit in the legislatures in Michigan, Wisconsin, Ohio, New Jersey.

We are mayors, members of school boards, aldermen (one of us, a woman, is a member of the city council in Indianapolis), members of township councils, county supervisors, county auditors, tax collectors and dogcatchers.

Never has it been true that any American child could grow up to be President. Not even dogcatcher, if he was a Negro, or Spanish-American or Indian, or a Catholic in some cities, or a Jew in some cities. Before we went into politics, if a child grew up to be a factory worker, or a simple wage earner at some other occupation, political office was not for him, or her. Political office was reserved for the well-to-do, for lawyers.

In our time we have made a declaration of Walt Whitman come true—the Government is for you, oh people.

Yes, for all of us.

But we did not choose politics to make ourselves careers.

We went to the Government seeking justice.

The Government, we found out, decided what our wages would be when we were unemployed, what would happen to our families if we lost an arm or a leg or a life in a factory accident.

We can bargain for our wages in the factory, but the Government decides whether our wages will buy much or little by its tax policies, by changing the interest rate, by expanding or contracting the economy.

We found we could not achieve the justice we seek within the factory walls. Only through Government can we secure education for all. Only by law can we end discrimination on jobs and in public places.

So we are in politics, but when we look at the cities where we have a voice in politics, we see that politics are better for the morality we bring to the rallies and conventions and balloting.

Our political decisions are in the people's interest—the public interest.

Government of all the people, by all the people, for all the people.

Critical Classroom Shortage

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
Monday, May 27, 1957
IN THE HOUSE OF REPRESENTATIVES

Mr. BAILEY. Mr. Speaker, under leave to revise and extend my remarks, I include the text of advance summaries of two articles which are to be published in the July issue of Architectural Record, a business paper published by the F. W. Dodge Corp. I am indebted to James Zeisel, assistant research manager of Architectural Record for forwarding to me the advance text, and for permission to quote.

Mr. Speaker, one of these articles discusses the size and explains the causes of the current emergency classroom shortage. Your attention is particularly invited to the data on first quarter, 1957 school construction. This compilation of actual school construction contracts, shows that 51.9 million square feet of school space is being built.

On the basis of 103 square feet per pupil—and this is a figure arrived at by the United States Office of Education on the basis of its experience with Public Law 815, as reported in printed hearings before an appropriations subcommittee of the 84th Congress, second session—and an average of 30 pupils per classroom, these F. W. Dodge data indicate that classrooms are being constructed at a rate of slightly less than 69,000 per year.

This is precisely the figure submitted to the Committee on Education and Labor by the Honorable Marion Folsom, Secretary of the Department of Health, Education, and Welfare, and which adverse witnesses attempted to discredit as being far too low.

Your further attention is invited to the estimate of 322,400 as the size of the current backlog of classrooms. This compilation tends to bear out the conclusion reached by the gentleman from Pennsylvania [Mr. McCONNELL] who, after hearing a detailed explanation from the Office of Education of its conscientious efforts to try to obtain accurate reports from each of the State school agencies, suggested that the 159,000-classroom shortage indicated by the USOE Circular 490 was too low. The gentleman from Pennsylvania [Mr. McCONNELL] has also told us, following a personally financed inspection tour of

4 States, that he was more than ever convinced that the estimated backlog of 159,000 classrooms was more than on the conservative side.

Mr. Speaker, your attention is also invited to the second of the two articles, which discusses the reliability of bond issue sales as a gage of school building. This article plainly and clearly indicates how confusing a picture may be presented when witnesses play the numbers game.

It is respectfully suggested, Mr. Speaker, that the F. W. Dodge Corp. is hardly likely to be interested in promoting socialistic causes, a charge that has frequently been leveled at any individual or organization which has produced data indicating that States and local communities, admittedly doing a superlative job, are not, on their own, able to provide adequate classroom space within the next 5 years.

Once we recognize this, we must agree that it is in the national interest to take emergency action to speed up classroom construction.

The two articles follow:

SCHOOL CONTRACT AWARDS SET FIRST QUARTER RECORD; CLASSROOM SHORTAGES CONTINUE TO GROW IN 1956

Both dollar and physical volume of construction contracts for educational buildings in the United States reached an all-time first quarter high, according to F. W. Dodge Corp. The dollar volume for the 3-month period was $717,904,000. 5 percent above the previous high set last year. Physical volume was 51.9 million square feet.

Although the current gain comes on the heels of 10 consecutive years of record-breaking school construction, there is evidence that school backlogs have continued to grow. If we are to wipe out the existing backlog in the next 10 years, the annual rate of classroom construction should be higher even than this year's estimated 69,000.

CLASSROOM SHORTAGE TODAY

Today's classroom shortages are the result of two factors:

1. A huge backlog reported 5 years ago in phase I of the School Facilities Survey;

2. The inability of classroom construction during the past 5 years to keep pace with additional classrooms needed due to enrollment increases, obsolescence and loss.

In 1950, the Department of Health, Education, and Welfare and the 48 States and Territories began at $3,9 million School Facilities Survey. In phase I States and Territories inventoried their existing school facilities and estimated their school needs as of September 1952.

This is the only study which has examined in detail the status of the Nation's school facilities. It is still the only study scientifically designed to measure classroom needs in terms of what is necessary to house every school-age child in facilities up to acceptable educational standards.

THREE HUNDRED AND TWELVE THOUSAND CLASSROOM SHORTAGE REVEALED

Phase I revealed a shortage of 312,000 public elementary and secondary classrooms at the beginning of the 1952–53 school year.

When in 1955 the White House Conference of Education queried the States as to the accuracy of their phase I estimates, 11 States of the 35 replying said they had underestimated their needs: 23 said their original estimate was correct; 1 State said it overestimated.

CURRENT BACKLOG—322,400 ROOMS

The phase I report plus the needs created in the last 5 school years from increasing enrollments, obsolescence, and loss, when compared with classroom construction from 1952–56 leave the following situation today:

Backlog estimated in phase I	312,000
To house increased enrollment (1952–53 to 1956–57)	207,000
To replace obsolescence, etc. (1952–53 to 1956–57)	100,000
Total	619,000
Classroom construction (1952–53 to 1956–57)	296,600
Current backlog	322,400

Undoubtedly the consolidation of school districts over the past 5 years has had some effect on classroom shortages. However, the amount of classroom shortages overcome by such consolidation, if any, is not known.

CONFUSION ON SHORTAGES

A recent release by the Office of Education estimating a classroom shortage of only 159,000 would appear to be in conflict with the 322,400 backlog shown above.

The 159,000 figure was based on replies by the States—not including Territories—to a brief yearly questionnaire issued by the Office of Education. (Adding in replies of the Territories to the same questionnaire brings the total to 167,000.)

Although there is no one standard definition of what constitutes classroom needs, professional groups feel that the replies received reflect the most pressing schoolhousing problems currently facing the various States and that unlike phase I it does not give an accurate picture of the overall classroom need of the States in terms of the number of classrooms which ought to be built.

Representative RALPH H. GWINN (Republican, New York) in a statement before Congress on March 11 stated that he felt the current survey to be an unreliable measure of classroom shortages.

To quote the February 14, 1956, Building Trades News on the same problem:

"(The States) tend to equate need with financial ability and feasibility."

WHAT ABOUT FUTURE NEEDS?

Along with the backlog of 323,400 classrooms, here are further reasons why the rate of classroom construction should be increased:

Enrollments: Latest Office of Education estimates show that public school enrollments will increase by an average of 983,000 every year for the next decade. Thirty-two thousand seven hundred new classrooms will be required annually to handle these increases.

Even these figures don't reveal the full picture. To quote the National Education Association:

"So far the (enrollment) impact has been largely felt in elementary schools, and our local communities have exerted themselves to build elementary classrooms while putting off building more expensive high schools for which the need is clearly predictable.

"Between 1957 and 1964 high school enrollments will increase by 49 percent while in the previous 7 years they have only increased 21 percent."

OBSOLESCENCE A MAJOR FACTOR

Obsolescence: One of the most difficult factors to measure. However, some 47 percent of our public elementary and secondary schools are over 50 years old.

Fact is, since teaching methods and programs are continually changing, the need to replace old schools can be compared with the need to replace industrial facilities obsoleted by modern construction and manufacturing methods.

Based on previous Office of Education estimates, some 20,000 classrooms are needed annually due to obsolescence, loss by fire, storm, etc.

ANNUAL NEED—85,000 CLASSROOMS

To work the current backlog of 322,400 classrooms off in the next 10 years, and provide for forthcoming enrollment increases and losses, due to obsolescence, etc., 85,000 classrooms would have to be built annually.

ARE BOND ISSUES A RELIABLE GAGE OF SCHOOL BUILDING?

In February the Investment Bankers Association of America, stated that "the school financing for the past 4 months (October 1, 1956—January 31, 1957) projected for a full year would mean an expenditure for school construction of approximately $2.9 billion to provide about 96,600 classrooms in addition to the 69,200 scheduled as of October 1, 1956, for completion during the school year."

The 12-month $2.9 billion figure was arrived at by taking the dollar value of school bond issues from October 1 through January 31, ($684,606,000) adjusting the figure (to $978 million) to reflect the approximately 30 percent of total school construction funds ordinarily obtained from sources other than bond financing and then multiplying by 3.

The total number of classrooms this would account for was estimated by dividing the $2.9 billion by $30,000—a figure which the IBA estimated as the average cost of a public-school classroom.

DIFFERENCES CITED

While these figures are informative there are these important points to consider:

1. Not all municipal bond authorities would agree that the 4-month figure should be multiplied by 3 to arrive at a 12-month estimate. At least one authority would use 2½ rather than 3.

2. Not all the proceeds from school bond issues are used for financing school construction. They are also used to finance related facilities such as gymnasiums and buses, and, on occasion, refunding.

3. The IBA's statement of 30 percent of school construction funds being obtained from sources other than bond financing is based on a report on page 7 of the June 1956 Construction Review issued by the Departments of Commerce and Labor. It represents an 8-year average from 1947–1954.

On page 8 of the same issue, the report states:

"The school program indicates less and less financing of expenditure from current revenues and more and more reliance on borrowing. Current revenues plus Federal aid provided only 15 percent of the funds expended for school capital outlalys in 1954, ing contrast to an 8-year average of 29 percent."

Therefore it is now probably more accurate to use a figure no higher than 15 percent to estimate funds obtained from other sources.

4. School bond issues of 1956–57 are not solely for classrooms in addition to the 69,000 scheduled * * * for completion in 1956–57. They are for financing part of these same 69,000 classrooms and for classrooms in the next school year.

5. Estimates show that approximately $2.5 billion were spent in the 1955–56 school year to build 62,600 classrooms. Based on these figures, the average cost of a classroom—including a proportionate part for land and related facilities—is $39,900 rather than the $30,000 figure suggested above.

An Observation on Immigration

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. AUCHINCLOSS. Mr. Speaker, it is no secret that we Members of the House of Representatives receive a great deal of mail on the subject of immigration, expressing views about the McCarran-Walter Act, whether it should be modified or amended, and sometimes it is difficult to answer these letters. We certainly do not want our country flooded with persons promoting communistic ideologies who may disturb our security as well as our economy, nor do we want the indolent or the incapacitated who may become at any time dependent on us for a living. We must secure ourselves from the influx of such people and be guarded against them. People from all the countries of the world want to come to America to escape from tyranny and oppression, a feeling that is understandable and rouses our sympathy, and I believe the great question we must ask and which must be answered is what will these people contribute to the strength of our economy as well as to our security? What will they do to make us even a greater Nation, dedicated to peace and good will, and enhance our belief in the dignity of man and his personal liberty? These are searching questions, but the answers must be known if we are to hold secure the ideals of our country and its destiny to lead the world into the paths of peace and amity among nations.

Citizens of the United States are all descended from emigrants who came here from all parts of the globe. Our forebears did not come to our shores to run away from anything; they came to be able to do something for themselves and for others and by working together create a Nation "indivisible under God with liberty and justice for all." They set high standards of morality and fair play, and thereby planted the seed of a great Nation whose influence is felt the world over, yet whose power is never used in oppression, but in the promotion of liberty and truth.

May I point out to my colleagues an example of how an immigrant to this country came here and contributed much to our country's welfare? I find stimulating courage in the examples of such people and my friend, Arnold L. van Ameringen, is typical of many citizens like him. He came here to work and do what he could to aid in the growth of America, and he has contributed much.

Mr. van Ameringen will celebrate his 66th birthday in October of this year, having been born in Holland. There he received a public school education, was active in a Netherlands organization equivalent to our Boy Scouts, and served in the Dutch army. He worked for a manufacturer of perfume materials and in 1917 he was sent by his employer to sell his products in America, arriving in this country on Memorial Day. On his way over he became acquainted with a Mr. Pfalz, an American citizen, who was met at the dock by his sister Hedwig, of Newark, N. J. She was the first American girl he met in this country and 3 years later they were married. It is easy to see he really appreciated the good things to be found in the United States. Mr. van Ameringen immediately saw the opportunities offered by our country and realized that if he worked hard for himself and his community, he could own his business and prosper through his own efforts. He realized, also, that he would have the opportunity to contribute something to the growth of the United States and play some part in the development of our great Nation. So he stayed and in November 1926, became a naturalized citizen and has proved his worth ever since.

What has this man accomplished in accepting the opportunities presented to him by America? He started his own business with 2 employees and 500 square feet of space—a small-business man indeed. His business prospered, he merged with another firm, and became the leading spirit not only in the new firm but was a dominant figure in the entire industry of the manufacture of fragrances for perfumes, colognes, creams, powders, soaps, lipsticks, and such products in which fragrance plays a part, and in addition various food flavors. Here are a few of the voluntary positions he has held for the benefit of his fellow citizens:

President of the Essential Oil Dealers Association.

Member of the board of directors, Toilet Goods Association.

Governor of the board of Synthetic Organic Chemical Manufacturers Association.

Secretary of the Fragrance Foundation.

Trustee of the College of Pharmacy, Columbia University.

Teacher in the College of Pharmacy.

He cooperated in World War II with the United States Army by furnishing supplies to Armed Forces.

He received a certificate of achievement from the United States Navy and a letter of commendation from the Quartermaster Corps.

He is now the chairman of the board of directors of van Ameringen-Haebler, Inc., which employs more than 400 people with 64,000 square feet of office space in New York City, and 2 factories in New Jersey. He and his business have grown with our country and are no longer small business.

But this is not all, as though these contributions of self-sacrifice and service are not enough. Mr. van Ameringen became interested in the study of mental health which he believes to be one the great problems of humanity, which indeed it is. It was through his friend, the late Dr. James Plant, a noted child psychiatrist and director of the Essex County juvenile court of New Jersey, that his active service in this field was aroused. For 20 years or more he was served as treasurer and a member of the executive committee of the National Committee for Mental Hygiene which was later merged with the National Association for Mental Health. He is still active in this important movement to make the future generations of Americans better equipped to face the challenge of life and contribute their share for the benefit of mankind.

America wants and needs such men and women as citizens, and we must be careful not to prevent their coming to our country. They rejuvenate our lives of service, they bring us new hope, and by their example, keep fresh before us the basic faith in personal liberty on which our forefathers built our future. So, when we consider legislation about immigration, let us bear in mind the value of people like Arnold van Ameringen who came here to do business and stayed because he wanted to play a constructive part in the promotion of individual liberty and in service to our great Nation.

Agricultural Insecticides

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 10, 1957

Mr. METCALF. Mr. Speaker, I have introduced a bill (H. R. 783) directing the Secretary of the Interior to begin continuing studies of the effects of insecticides, herbicides, and fungicides upon fish and wildlife.

Studies would lead to a determination of the amounts and percentages of such chemicals that can be used effectively without killing or injuring fish and wildlife.

When I introduced the bill, I called attention to the fact that at least 3 billion pounds of these chemical sprays were dumped over more than 70 million acres of our crop and timberland to kill insects, weeds, and diseases last year. Not only are more acres being sprayed more efficiently each year, but more efficient pesticides are continually being developed.

As I have said before, research into their effects on fish and wildlife—and man—has not kept pace with the development of these more powerful controls.

I have evidence that this also is the position of at least part of the industry. I have a copy of a letter announcing the withdrawal of the Thompson Chemicals Corp., of Los Angeles, Calif., and St. Louis, Mo., from the production, distribution, and research of the presently known agricultural insecticides.

In the letter, Mr. William T. Thompson, president, says in part that the "currently known and used broad spectrum insecticides and their wide-scale application to agricultural crops—although giving temporary control and temporarily increased yields—are at best palliative, and perhaps will prove dangerous and uneconomic in the long run."

Mr. Thompson's letter in full follows:

THOMPSON CHEMICALS CORP.,
May 1, 1957.

Subject: Agricultural insecticides.

GENTLEMEN: We have decided to withdraw entirely from the production, distribution, and research of the presently known agricultural insecticides.

A 12-year study has convinced us that the currently known and used broad spectrum insecticides and their wide-scale application to agricultural crops—although giving temporary control and temporarily increased yields—are at best palliative, and perhaps will prove dangerous and uneconomic in the long run.

The growing number of insect pests of economic importance that are becoming resistant to presently used agricultural insecticides demonstrates a serious inherent danger in the wide-scale use. The imbalance of the fauna population caused by the destruction of the natural predators and parasites (thus allowing the uninhibited development of the insect pest) is further proof to us of the unsoundness of the current chemical insecticides. This cannot only result in rapid and dynamic developments of the insect pest from the few not controlled by the application, but can easily cause heretofore unimportant insects to increase to the status of economic pests, once the predator-parasite balance has been upset.

The ingestion of presently employed insecticide residues by humans and other warm-blooded animals is a correlative problem of a highly serious nature. The industrial hazards inherent in the indiscriminate, wide-scale application of chemicals of such highly toxic nature also cause concern.

Our study convinces us that any sound approach to the control of agricultural insect pests must be sought in chemical mechanisms that are selective between the insect pest and the beneficial insects. The study of such mechanisms, both of physiologically and ecologically selective natures, we feel, must be the primary concern of research.

We intend to hereafter devote our research energies in the field of insect control to the exploration of selective insecticidal chemicals. It is our hope that in this field we may be able, as time goes on, to create some worthwhile contributions to the agricultural control of insect pests and subsequent yield increases of a more permanent nature.

Our current production will be devoted to the following chemicals in which we are admirably qualified: Selective brush killers, selective weed killers, general weed killers, crop desiccants, Penta products, plant hormones, plant growth regulators, livestock insecticides, small package and garden chemicals, emulsifiers, and chemical specialties.

Very truly yours,

WM. T. THOMPSON,
President.

Foreign Imports Threaten Profits for American Producers and Idleness for American Workers

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to call the attention of my colleagues to a recent resolution passed by the City Council of Fort Smith, Ark., in the nature of a plea that the Congress halt the ever-increasing amount of foreign imports that threaten profits for the American producers and idleness for the American workman.

The resolution follows:

Whereas the city of Fort Smith, Ark., and many other industrial cities of the United States are engaged in processing and producing certain materials, articles, and products that are competitive with certain foreign countries, who are importing into the United States such materials, articles, and products; and

Whereas due to insufficient tariffs and quotas, such importations tend to saturate our markets and the demands for such, seriously affecting our domestic industry as well as our economic conditions; and

Whereas there is now pending in our Congress a bill, H. R. 2815, known as the General Imports Quota Act, which proposes to alleviate such conditions by establishing tariffs and quotas, when such imports affect our economy; and

Whereas the mayor and commissioners of the city of Fort Smith, Ark., are vitally interested in such domestic industry, the welfare of its citizens dependent upon such industry, and the economic conditions in general; and therefore, be it

Resolved, That the mayor and the commissioners, representing the citizens of Fort Smith, Ark., sincerely request and urge that our Congress expedite the processing and passage of H. R. 2815, the General Imports Quota Act.

JACK PACE, *Mayor.*
CHARLES S. MANKIN,
Commissioner No. 1.
HUGH H. BREWER,
Commissioner No. 2.

Attest:

CARL ATKINS, *City Clerk.*

Good Architecture Is Good Government

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 21, 1957

Mr. REUSS. Mr. Speaker, recently Congressman FRANK THOMPSON, JR., and I jointly introduced legislation to provide for the establishment of the highest possible standards of architectural design and sound decoration for Federal public buildings. The measures we have sponsored are H. R. 7071 and H. R. 7106, and they are, we hope, a contribution to the advancement of American architecture.

Congressman THOMPSON and I introduced this legislation at the time of the holding of the centennial convention of the American Institute of Architects.

Henry R. Luce, editor-in-chief, Time, Inc., in an important speech, recently told the architects that good architecture is not only good economics, but good government.

GOOD ARCHITECTURE IS GOOD GOVERNMENT

(Speech by Henry R. Luce, editor in chief, Time, Inc., at centennial celebration of the American Institute of Architects, Washington, D. C., Sheraton-Park Hotel, Thursday evening, May 16)

I don't know whether you can properly be called a "captive audience" but I do know that in me you have a captive speaker.

For one thing, I speak as the titular editor in chief of two architectural magazines, and therefore must not offend any of you. Note the word "titular"—I am sure you did—it is obviously the built-in escape hatch which I have provided for my associates. Tomorrow morning—or even over a highball tonight—they will be free to disavow everything I've said.

And I am a captive in another sense. At the moment, we of Time, Inc., happen to be in the relatively painless clutches of two of your members—Mr. Harrison and Mr. Abramovitch. However, when doubts assail us on this score, as they inevitably do, it is reassuring to know that while Harrison and Abramovitch have us in one clutch, they have the Rockefellers in the other. And we are lulled, to paraphrase a Cabinet member, by the notion that what's good for the Rockefellers must be good for us.

Reverting to my status as titular editor, perhaps this is a good time to explain how I got into this business in the first place. It is very simple. A quarter of a century ago when America was deep in that traumatic episode known as the great depression, I came across LeCorbusier's famous dictum: "Either you will have architecture, or you will have revolution." Not being sure which I preferred, but knowing that I was loaded up with revolution, I went out and bought the Architectural Forum. And what happened then? What happened was, we just got more revolution—revolution in architecture.

The major premise of my remarks tonight is that the 20th Century Revolution of Architecture has been accomplished. And it has been accomplished mainly in America—no matter how great our debt to European genius. The founding fathers of the revolution in architecture, the great and the colleagues of the great—many of them are in this room tonight. I salute you. If I should live to an old age and my grandchildren should ask me where I was and what I did during those world-shaking decades of the mid-twentieth century, I will tell them that on May 16, 1957, in Washington, D. C., there was celebrated the 100th anniversary of the American Institute of Architects. And I was there. If that doesn't sound as exciting to my grandchildren as might the mention of war or interplanetary travel—then I will explain to them that, here, on this occasion, I shook hands with the men who gave the shape to their America, the men who raised the towers toward the sky, who stretched the roofs across the land, who formed the facade—the face—that their America presents to all the world. And I am sure I will be able to add—these were the men who, in the fullness of time, made God's country a splendid habitation for God's most fortunate children.

Is this wishful thinking? Objective facts support my prophecy.

The American revolution in architecture has been accomplished at a providential moment. For it comes precisely at the moment when there is taking place, and is about to take place, the most staggering mass of building ever done on this planet.

The quantitative projections must be more vividly in your minds and imaginations than in mine. There are tens of millions of prosperous Americans to be housed and rehoused. A quarter of a century from now, only a small fraction of the houses which now stand will be tolerable to the Americans who in 1976 celebrate the 200th anniversary of this Nation. And besides houses, there is everything else to build—factories, offices, stores, schools, churches, airports, sports arenas, parks, playgrounds, places of art and entertainment—the list is endless, as varied as American life itself. And let's by no means forget highways—a great symbol of a continental and democratic people. This moving of the earth and making the waters to flow—this is the picture of modern man, of the

American, making a new dwelling place on earth.

Well within a decade this picture of a whole new physical environment for Americans will be in the imaginations of the people. It will even be in the algebra of politicians.

But you may say, granted the hundreds of billions of dollars, granted the billions of tons or iron and concrete and glass that will be put in place, granted the billions of rivets that will hold the millions of girders, et cetera, et cetera, what guaranty is there that any appreciable part of all this will express good architecture? Does not a lot of the evidence so far point to ugliness rather than to beauty?

I must now take account of two things—the appalling amount of ugliness in the American scene at this moment and the degradation of democratic taste.

Nor do we have to go to our friends in Europe to hold a mirror up to us and find ourselves to be horrifying monsters of bad taste.

We find outraged critics right here at home. Thank God we do. In fact, the most readable description of ugly America is to be found right in the Architectural Forum, written by an esteemed colleague, Mary Mix Foley. In one sweeping phrase she speaks of "this mess that is manmade America." In her catalog of horror, she lists 19th century buildings modernized at street level with chrome, glass, and neon—the restaurant in the derby hat, the candy-striped motel, and the frozen-custard stand, dripping silvered concrete icicles. * * * "Probably never in the history of the human race," she continues, "has a culture equaled ours in the dreariness and corrupted fantasy of a major part of its buildings."

The whole story is even more appalling. For dreariness and ugliness were not thrust upon the American people; they chose it, they, the freest people in history. To quote Mrs. Foley once more: "In no previous culture have people in general been so free to choose what they like with so little deference to authority."

Here I am prophesying a splendid age of architecture on a continental scale. What chance is there for architecture if the will of the American people is for ugliness?

This cry of distress raises many more questions of philosophy and sociology than I can even venture to list tonight. There is implicit, for one thing, the old question as to whether democracy is, after all, any good. None of the world's great architecture up to now, none of the architecture that American tourists go to see every year—none of it arose at the wave of the magic wand of democracy. Except Periclean Greece, you might say. But then you might also say the Parthenon, that wonder of light in the shining sun, is really a monument to the fall of Greek democracy which was in any case a very short-lived affair. As for the Versailles of Louis XIV—l'etat c'est moi; as for the Taj Mahal, as for the Great Wall of China so infinitely romantic, as for the Mayan temples, as for the stately homes of England—you go on with the list—nearly all of majesty or beauty in architecture springs from imperial autocracy or from aristocracy with a very capital A.

Is then our choice between democracy and architecture? Is real political freedom incompatible with pervasive beauty?

These are big questions. In the phrase made famous by Dr. Tillich, they are even ultimate questions. I shall not attempt ultimate answers. But there is one answer which can be given—an answer drawn from the experience and character of the American people.

Stated in briefest terms, my argument—and prophecy—is this. First, for 200 years, the American people have been faithful to one dominant purpose—namely, to the establishment of a form of government. Secondly, that purpose has now been fulfilled and we are at present seized by a broader challenge, namely, the shaping of a civilization. Third, we will meet that broader challengt too; we will succeed in creating the first modern, technological, humane, prosperous and reverent civilization. This creative response to challenge will be most vividly expressed in and by architecture.

Having told you what I'm going to say, let me now try to say it.

The founding of the United States of America was an event unique in all history. As is stated in a famous passage of our national scripture, this Nation was conceived in liberty and dedicated. * * * Dedicated to what? Dedicated to a proposition. What proposition? That all men are created equal. That's one way of putting it. More precisely, dedicated to the establishment of a form of government. A form of government which, while profoundly recognizing the frailty of human nature, should nevertheless seek a realization of all political wisdom—the balance of liberty and justice, the balance of freedom and equality, the balance of individualism and social cooperation.

This task was providentially begun by our Founding Fathers—the most remarkable group of men ever brought together for the making of a Nation.

And now after 200 years, here in this city of Washington, we can say that, to an extraordinary degree, we and our forefathers have carried out our tremendous purpose. Today our America is an amazing example of functioning law and order—in all the turbulent flow of our commerce and our daily life. Today America is an amazing example of liberty. Of course we must keep everlastingly vigilant to keep it so—and we will. We will work at it. We will not be deterred either by smugness or by fear, by the atomic bomb or any other terror.

So here we are, here is the plateau we have reached after so long a struggle. And now what? Now we are not satisfied. We are enjoying immense prosperity, widely spread among our people, and yet we are not satisfied with the quality of American life. If too many Americans seem contented, that is an illusion. Millions of us are grateful, as we ought to be, for the blessings we enjoy. But divine discontent is at work everywhere. We wust have more and better education, says this one. We must have more and better medicine, says another. And mental health. Yes, and though we go to church in tens of millions, we must seek deeper spirituality. So it goes.

All of this I have summarized by saying that we are challenged to build a civilization. Another way of putting it is to say: We must build a better America.

A curious fact strikes one at this stage. When an American today hears the words "build a better America" he will grasp the meaning more readily in a figurative than in a literal sense. "Let's have better education," he will say, "more pay for teachers, more scholarships—but let's don't spend too much money on 'bricks and mortar'."

Today the American people are "sold" on education, as they always have been. They are sold on medicine, yes, and on culture, too. Witness, in the last 20 years, the tremendous increase in the enjoyment of music, of the theater, of painting—from Giotto to Picasso to the Sunday painter. And now comes architecture. To use an American expression of elegant lineage, the American people are beginning "to get the word"—about architecture.

It's up to us to send out the word more vigorously. You have accomplished the American revolution in architecture. Now it's for editors and good citizens to make known the news of that revolution.

We couldn't have done this 20 or 30 years ago. The revolution was underway then. But there weren't enough actual buildings to show it. And those that were, seemed odd. But now you've given us the buildings—enough of them. And to millions of Americans they don't seem queer; on the contrary, they seem right.

Furthermore, millions of Americans, not only the professionals, have begun to see that in our 20th century, architecture is more than a building here and there, vitally important though each good building is. Architecture is a whole city. Architecture is the whole sweep of the American continent.

That is my answer to the nightmare doubts about the derby hat and the candy-striped motel. Not that all ugliness will be abolished. This is indeed a free country and a man must be free to sin against beauty just as he is free to sin against truth. We will not have a State with a capital "S"—l'etat, lo Stato, das Reich—we do not have, we will not have any state to decree our morals, our religion, our culture, our taste.

But we do work at these things—and they work on us. The ideal will not leave us be. It nags us, prods us, inspires us. The vision of the good, the true and, yes, of the beautiful, is like our conscience—it catches up with us sooner or later.

Today, the vision of good architecture has been held up before us, the vision spreads. There is the conviction that architecture is essential to the physical and spiritual health of this Nation. The vision and the conviction will spread—and as they do, ugliness will recede and grace and worth will grow.

I have spoken of the revolution in architecture, but I have not defined it. Perhaps it is best defined in terms of an extraordinary affirmation: Good architecture is good economics.

Modern architecture did not grow up in the palaces of emperors or maharajas. It was not designed to proclaim pomp and glory—except the glory of a free and self-respecting people. Modern architecture, or at least a large part of it, grew up in response to the people's needs. They were badly housed: let us build good, clean, economical housing. That is only one example of the fact that modern architecture is not the servant of imperial luxury or of aristocratic vanity: it has to meet an economic test and its chance for freshness and vitality was in making use of the vast wealth of material and technology produced in a profit-and-loss economy.

To be sure, a great deal of bad building is being done and people make money out of bad building. But the affirmation remains. I am speaking of the idea which is now implanted in our civilization: good architecture is good economics.

Tonight in this capital city of Washington, let me make a further affirmation: Good architecture is good government.

Good architecture is good government for a number of reasons. First of all, in our age, good government is required to be good economics.

Your ears have recently been assaulted by an uproarious hubbub about the Eisenhower budget. One might suppose from all this that the Eisenhower economics or the Eisenhower government or both are so bad that they can only be a prelude to the deluge. After us, after us modern Republicans, the deluge—or, at least—the hair curl. There is evidently a degree of exaggeration in all this uproar. I am sure you are not unduly alarmed, for it must be apparent that one purpose of all this righteous indignation about economy is not so much to save the Republic as it is to liquidate modern Republicans. That being the case I am proud to accept the label modern Republican, and I will make the modest assertion that we modern Republicans have no intention of being liquidated. We will be around for a long time, modern Republicans and modern Democrats, the cheerful companions of

American progress. Yes; we will have modern republicanism and modern architecture.

Still, this digression into current politics points up one great and good fact about our age. Good government in our age must meet the economic test.

But Government is more than economics. Government must stand for things, for principles, for ideals. Government must be a symbol. And architecture is, above all, the symbolizing art.

I would be the last ever to agree that human life is bounded and prescribed by economics. Let us clearly reject the economic interpretation of history or of life—a narrow, wretched philosophy shared by Marxists and robber barons. Life is more than economics. And so is architecture. You would be miserable if you felt you could never express anything but economics. And indeed perhaps you do often feel miserable because you feel bound in an economic straitjacket. Never fear—life will burst that straitjacket. But also, rejoice that as modern architects you can express good economics. I do not say you always do, but you can. And that makes you contemporary—servants of our present and future needs.

But will you be given the chance to transcend economics, the chance to express the noneconomic, the more-than-economic character and aspirations of the American Nation? That is what we must mainly strive for now: to get buildings, many of them, big and little, which point beyond themselves to the best in American life. The chance to express more than economics must be given you by the home builders of America, by the industrial corporations, by the universities, and notably by Government in all its many branches, Federal and local.

The relation of Government to architecture may be put under two heads. Most importantly perhaps there is the effect of Government laws and policy on architecture. Government's influence for better or for worse is enormous in terms of urban renewal, city planning, housing policy, even the lowly local building codes. All Americans who wish to build a better America must learn how to teach politicians that bad architecture is bad politics. I believe this can and will be done.

There is one powerful lobby missing from the American scene—the lobby for architecture. Let us try to develop a powerful lobby for architecture. Not for handouts, for favors; but for good architecture as such. When that is done the better and beautiful America will be in sight.

But Government is itself a big builder. It is in its own buildings that Government has the duty—and the right—to symbolize what Government stands for. This is the proposition which brings together the threads of my thought tonight.

We applaud the founders of this Capital City because they laid out a magnificent city plan. But they did something else, equally important. They fixed on a style of architecture to symbolize the great American determination to establish a form of government. The choice of style was the classical Greco-Roman style—the natural and perfect choice for that time. To be sure Rome did not symbolize democracy or liberty in our hard-won sense of the word. But it did symbolize good government—it symbolized order, law, and equal justice under law.

What the Founding Fathers said and what Jacksonian democracy said was this: "We will have a government of freemen, we will even have a democracy, and we will prove that a democracy does not have to slide into chaos and tyranny. We will prove that you can have a democratic government which will be both honorable and honored. We will prove that a nation of freemen can be dignified, maintaining self-respect at home and respect throughout the world.

That is what our forefathers said 150 years ago. They said it partly as fact, partly as bold aspiration. They said it symbolically.

Today, America has the same thing to say—in greater fact and in greater aspiration. We, too, must say it symbolically. And we have more to say, new things to say, the determination to build a great civilization. We must say the old and the new in new language—your own language, the architectural language of the 20th century.

We are already doing it. Witness the new American embassy buildings. Some of the new embassies are triumphs of modern architecture. They are also great acts of statesmanship. The Department of State deserves, I think an award from this institute not only for the buildings themselves but for the magnificent directive under which they are being built. The Department of State has written a Magna Carta of fresh, imaginative architecture, an architecture of symbolism symbolizing the dignity of this Republic and its profound concern for all mankind.

What we have done abroad we must do at home. We must do it here in Washington and down to every county courthouse and postoffice.

No one architect can tell another how to express, how to symbolize, a great virtue or a great aspiration. And certainly a layman cannot. This sort of expression is an act of inspiration. But the architect who touches Government has a duty to steep himself in the meaning of America. The citizen and politician has a duty to pray that out of the architect's profound understanding of America will come the inspiration to express what we want to say as a Nation.

What do we want to say? Perhaps it could all be put in two words. We want to say democracy and we want to say dignity.

Modern architecture can certainly express democracy. We say democracy by requiring that buildings meet an economic test, the test of wise, farsighted economics. We say democracy by buildings which are frank, open and unaffected. Our welcoming shopping centers, our cheerful new schools, our glass front banks, all emphatically say democracy.

And what about dignity? I choose that word because in World War II and after, the phrase most commonly used to express what we fought for was the dignity of man. It may not be your favorite phrase or mine because it so readily reminds that most often man exhibits himself as a most undignified animal. Yet right there perhaps is the clue. Man is not a noble savage, and never was. He is a created creature having implanted in him the power to create nobility. He is a striving creature. We Americans are striving creatures. We have achieved magnificently. And now we have set out upon a magnificent adventure. To express step by step, the progress of that adventure, to express it in fact and in aspiration, so to do will be the fulfillment of the American revolution of architecture.

In the dawning light of that fulfillment, I salute you. I salute you in faith and in hope. In reasoned faith in our own fellow-Americans. In confident hope that the divine discontent which has led us to this hour will abide with us now and forever.

Smear on Chief Parker

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. HILLINGS. Mr. Speaker, I have been disturbed as have many people in southern California over the unfair attacks made recently via television on Chief of Police William H. Parker and the Los Angeles Police Force. I consider these attacks unwarranted and unfair.

I wish to call to the attention of the Congress an editorial on this subject which appeared in the May 21 edition of the Los Angeles Evening Herald-Express.

The editorial follows:

SMEAR ON CHIEF PARKER

It is astonishing that officials of a major national broadcasting organization would allow its facilities to be used to televise an attack on Chief of Police William H. Parker which they were so dubious about that they made the attacker sign an agreement that he would be financially responsible for any libel damages.

The character of the person making the attack should have been taken into consideration. Anyone, the lowest, most foul criminal, can make remarks or false charges against the most circumspect citizen or official, but this does not give the privilege to broadcast such damaging charges, any more than it gives a newspaper the right to print such charges.

Mickey Cohen for many years was known as a Los Angeles gangster leader, climaxing his checkered career and long police record by going to Federal prison for income-tax violation. Yet he was allowed by ABC–TV to make a lengthy, violent attack on Chief Parker in which he accused the chief of having a low moral character and of being "politically ambitious." He called the chief low names that a newspaper would not dare to print because of the laws against libel.

Allowing charges to be made concerning a person's moral character, whether he is a chief of police, a person prominent in industrial or social life, or just a plain, honest John Q. Citizen, by a person of known, irresponsible character without there being any facts to support such charges, is not only grossly unfair but in bad taste.

If TV stations are permitted by the Federal Communications Commission to do these things, no one's reputation will be safe anywhere.

Mr. Murray and the AEC

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include an editorial "Mr. Murray and the AEC," a splendid tribute to Hon. Thomas E. Murray, member of the Atomic Energy Commission, appearing in the Catholic Standard of May 24, 1957. The editorial effectively presents reasons why President Eisenhower should reappoint Commissioner Murray. If the President wants to evidence to the country leadership showing his sincere desire for real bipartisanship, and to do something that will cement and strengthen, not weaken, bipartisan action, he would do so by reappointing Commissioner Murray. Whether or not President Eisenhower reappoints Mr. Murray is being watched by circles much broader than the field of government and of politics. Probably more than anything President Eisenhower may do in, at least, the

near future, convey his desire or nondesire for bipartisanship as well as evidence his leadership for the same, will be construed by countless of persons on the action he takes on this appointment.

The editorial follows:

MR. MURRAY AND THE AEC

When 11 of 18 members of the Joint Congressional Committee on Atomic Energy request the retention of a member of the Atomic Energy Commission, it is time to consider whether such a request can be refused without violence to our concept of democracy.

The essence of democracy is the free expression of opinion, and the essence of a representative form of government is the expression of the views of a group of its spokesmen.

In our day, there is nothing more vital to the welfare of our citizens than the problems connected with atomic energy. The Atomic Energy Commission holds almost a sovereign position in the affairs of our lives that transcends any difference of partisan politics.

Mr. Thomas E. Murray, whose term expires in June, represents in his studied opinions the views of a very considerable number of citizens belonging to both parties, of many different religious beliefs, and of all sections of the country. His candid and judicious views about more attention to the "small" nuclear weapons and the development of an international nuclear agency have merited a wide acceptance.

It must also be admitted that no man in the Government has labored more zealously or reasoned more cogently on building an atomic policy on morality than Mr. Murray. In a time of contending ideologies, his voice of informed conscience has been of great value.

Admittedly Mr. Murray's views are not shared by other members of the Commission. There is no doubt of the integrity and dedication of the other members of the Commission. But because Mr. Murray does differ and differs in such brilliantly reasoned opinions, he should be retained. The concept of representative and democratic government seems to demand it.

A Falsely Advertised Nostrum

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. NEAL. Mr. Speaker, since the days of tribal priests who assumed the dual role of administering to the spiritual and the physical welfare of their subjects, peoples of all ages have been subject to the appeal of some purported "cure."

Faith of afflicted human beings may rest in another human of recognized superior mentality and reputed success or in some object or token believed to possess supernatural power over disease.

Even in this day of universal literacy the power of mind over mind and faith in medicines or some inanimate object of reputed healing power apeals to the faith of mentally or physically disabled persons. This is particularly true when one is suffering from one of the afflictions for which no known positive cure has yet been found.

Trained physicians have learned that certain cancer potential lesions can be removed before cancer develops. They know, too, that skin diseases containing certain forms of cancer cells can be removed with promise of permanent cure, but by and large the causes and cure of cancer remain in the realm of the unknown.

The following editorial from the Journal of the American Medical Association in its issue of April 27, 1957, should serve as fair warning to those who seek healing for that dreadful disease for which postive and permanent cures are being energetically sought but not as yet attained.

It is just another one of the falsely advertised nostrums that have periodically caught the attention of cancer sufferers who see no other promise of cure; they occupy the stage for a short period, then disappear into oblivion:

WARNING AGAINST HOXSEY TREATMENT

On page 28 of the advertising section of this issue of the Journal there appears a reduced reproduction of the Federal Food and Drug Administration's public warning of the dangers involved in patronizing the Hoxsey cancer treatment. Readers of the Journal may wish to remove the page and post it conspicuously in their offices. The Government warning has been distributed to post offices and other Federal buildings for posting.

This unusual activity on the part of an agency of the Federal Government is necessitated by reason of a concentrated campaign by Mr. Hoxsey and others who not only claim merit for the treatment but are petitioning Congress, through those who are in sympathy with them, to investigate the Federal Food and Drug Administration's efforts to stop Hoxsey's misrepresentations.

In April 1956 the Food and Drug Administration issued a warning and thereby notified the public that the Hoxsey treatment was not only useless but imminently dangerous if it was relied upon in neglect of competent and rational treatment.

The Government was successful in 1953 in obtaining an injunction against the interstate distribution of liquid mixtures containing potassium iodide and herbs in water, or potassium iodide and lactate of pepsin, for the treatment of internal cancer. After this action, Mr. Hoxsey substituted certain black or red pills, the composition of which, he claimed, was identical to that of the liquid preparations.

A large quantity of these pills was seized in Pittsburgh in March 1955. It was not, however, until October 1956 that the matter was heard in Federal court in Pittsburgh. The Government demonstrated the worthlessness of the Hoxsey method, and the seizure was upheld by a Federal court and jury in November 1956. At this writing a motion for a new trial is still to be heard; yet the possibility remains that, if such motion is lost, an appeal will be filed by Hoxsey. In the meantime, he and his agents remain in business.

Concerning the activities spearheaded by a Mr. Gerald Winrod, who publishes a magazine of alleged religious quality, there has been a considerable response on the part of a surprisingly large segment of the population, directed to the Congress, asking for a congressional investigation of the Food and Drug Administration. It is suggested, particularly to those physicians who have seen the effects on cancer patients who have attempted to obtain relief through patronizing the Hoxsey Clinics, that they write their Congressmen, outlining briefly such experience. These physicians and others may wish to express their appreciation of the need of this agency to develop a continuing educational and enforcement program against this and other forms of quackery. The work that this agency does in the protection of the public in this country cannot be measured in terms of dollars and cents; yet it operates on one of the lowest budgets in the Government.

The Hoxsey promotion may be the greatest immediate problem, but it is well appreciated that there are other so-called treatments or cures that merit Federal regulatory action.

Statement by Hon. George McGovern, of South Dakota, in Regards to Senate Concurrent Resolution 3 and House Concurrent Resolution 160

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. METCALF. Mr. Speaker, our colleague, the gentleman from South Dakota [Mr. MCGOVERN], well stated the case for a point 4 program for the American Indians in his recent appearance before a subcommittee of the other body.

Mr. MCGOVERN and I are cosponsoring companion measures to Senate Concurrent Resolution 3, by the senior Senator from Montana, Senator MURRAY, to extend to the first Americans the same type of economic assistance that we have extended to the people of underdeveloped areas of other parts of the world.

Mr. MCGOVERN'S concern for the welfare of our Indians—and for the communities which serve them—predates his election to the Congress. Therefore, it is not surprising that he has taken such an active interest in this important policy declaration. Mr. MCGOVERN'S statement follows:

STATEMENT OF REPRESENTATIVE GEORGE MCGOVERN BEFORE SUBCOMMITTEE ON INDIAN AFFAIRS OF SENATE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS RE SENATE CONCURRENT RESOLUTION 3 AND HOUSE CONCURRENT RESOLUTION 160, MAY 13, 1957

Mr. Chairman and members of the committee, I am very much pleased to have this opportunity to testify before you today in support of Senate Concurrent Resolution 3. I have a very special interest in this item of legislation as I am the sponsor of a companion resolution, House Concurrent Resolution 160, in the House of Representatives, where it is also sponsored by the gentleman from Montana [Mr. METCALF].

I sponsored this resolution because of my deep concern over the status and conditions of the Indian people of my State. Anyone who has visited the Indian reservations of South Dakota will agree that there are few places in our country where people live in greater misery, in greater want of the basic necessities of human life. And what is most disturbing about their situation is that, with some localized exceptions, nothing truly constructive is being done to improve present-day conditions.

On the Indian reservations of the State of South Dakota, you find a population of more than 30,000, a population which is constantly growing, subsisting on what is far below a minimum living standard. The great economic advances of our Nation have passed these people by. And the gap be-

tween them and the rest of the country is constantly widening. It is essential that a sincere effort be made to close it.

For many years we have been appalled by the statistics on infant mortality, tuberculosis, mortality from infectious disease, and the short life span generally on Indian reservations. Recently, the Congress has given vigorous support to the efforts of the Public Health Service to improve Indian health conditions. But the service soon recognized that as long as Indians from early childhood on suffer from malnutrition, and live crowded into unhygienic shacks, the chances of success of any public health program are severely limited.

Malnutrition and poor housing conditions, in turn, are simply the result of extreme poverty. These factors also breed all the other social ills on Indian reservations, just as they do in other areas: crime, juvenile delinquency, and social disorganization. Beyond that, they lead to a general climate of disillusionment, hopelessness, and despair, which makes it extremely difficult for a younger generation to lead the Indian people toward a better future.

Let me make it clear that in describing present-day conditions on Indian reservations, I am not approaching this problem in a partisan manner. I would certainly hope that in dealing with the problems of human misery among Indians we can achieve bipartisan cooperation.

As my remarks so far have indicated, I believe that improvement of the economic status of Indians would help solve many ills which today beset them. But what I have seen in my State is that conditions instead of getting better, are rapidly deteriorating.

Living in an agricultural State, being dependent on agriculture, the Indians of South Dakota have, of course, suffered from the general decline in agricultural income in recent years. But they have suffered more than the rest of the population. If you ask a South Dakota Indian today as to what constitutes the most important problem on his reservation, he will tell you that it is land sales. When you ask him whether it is not true that these sales are voluntary, he will tell you that they are, but only in a technical sense, as it is sheer need which forces people to sell their land.

From my observations I find that most Indians who sell their land have not made a satisfactory adjustment to life off the reservation. They either stay on their reservation, becoming an even greater burden to the other members of the tribe, or move off to the Indian slum areas of our cities, which certainly does not constitute any visible improvement of their status.

In trying to tackle the problems of the Indians of South Dakota, the Bureau of Indian Affairs has placed great emphasis on its relocation program, which tries to place reservation Indians in industrials jobs in cities like Chicago. In many cases this program has undoubtedly succeeded. In cases in which it has failed, it was surely not for lack of sincere effort. But anyone who knows the Indian reservations and the Indian people of our State, knows that for a long time to come relocation cannot be the sole answer.

Something must be done for the Indians who stay on the reservations or who eke out a meager existence in the slums of our cities. It must be done in recognition of the fact that the Indian communities of the Dakotas are here to stay for some time to come, both because many Indians want it that way, and because there is no realistic alternative.

The resolution before you recognizes these basic facts. It lays down a policy under which we would extend to our own Indian people the same type of economic assistance that we have extended to the people of underdeveloped areas of other parts of the world. Isn't it almost self-evident that if the Indian people of Bolivia or Guatemala qualify for our economic and technical assistance, the Indian people of the United States, our own citizens, should have the same benefits?

By extending this assistance we would be discharging a moral debt to the first Americans. We would also be maikng a sound investment, for better economic conditions for Indians would not only reduce Indian health and welfare costs, but, by eliminating these pockets of squalor, would raise the economic level of entire areas, affecting non-Indians as well as Indians.

This resolution is by its very nature a mere policy declaration. It would necessarily have to be followed up by concrete actions of both the executive branch and the Congress. But I would hope that by passing this resolution, we can help inaugurate an era in which we can, for once, be proud of what we are doing for our Indian people.

International Economic Policy

EXTENSION OF REMARKS
OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1957

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to insert the following letter from the general secretary of the New Jersey Council of Churches with respect to United States economic policy in relation to underdeveloped countries:

NEW JERSEY COUNCIL OF CHURCHES,
Newark, N. J., May 23, 1957.

The Honorable HUGH ADDONIZIO,
House of Representatives Office Building, Washington, D. C.

DEAR CONGRESSMAN ADDONIZIO: The 1957 session of the General Assembly of the New Jersey Council of Churches, meeting in New Brunswick on May 6, uanimously endorsed the resolution on United States economic policy in relation to underdeveloped countries adopted by the General Board of the National Council of the Churches of Christ in the United States of America in February 1957, and instructed me to notify New Jersey's representatives in both Houses of the Congress of the United States of this action.

It is my understanding that you are familiar with this resolution of the National Council of Churches which expresses our "Christian concern for our fellowmen in economically underdeveloped areas," and our conviction that the United States, out of its abundance, must give them "increased support and encouragement" in "their own efforts to improve their level of living." A copy of the complete text of the resolution is enclosed herewith.

We trrust that you will exert your influence, and use your vote, in connection with the current consideration of the Federal budget for fiscal year beginning July 1, 1957, to further the principles enunciated in the resolution of the National Council of Churches.

Respectfully yours,
HENRY REED BOWEN,
General Secretary.

DENOMINATIONS REPRESENTED AT THE GENERAL ASSEMBLY OF THE NEW JERSEY COUNCIL OF CHURCHES ON MAY 6, 1957

African Methodist Episcopal, National Baptist, American Baptist, Congregational Christian, Protestant Episcopal, Evangelical and Reformed, Evangelical United Brethern, Methodist, Presbyterian, U. S. A., Reformed, United Lutheran.

The resolution in question reads as follows:

RESOLUTION FOR ACTION BY THE CHURCHES AND BY REPRESENTATIVES OF THE NATIONAL COUNCIL OF CHURCHES ON INTERNATIONAL ECONOMIC POLICY—ADOPTED BY THE GENERAL BOARD OF THE NATIONAL COUNCIL OF THE CHURCHES OF CHRIST IN THE UNITED STATES OF AMERICA MEETING IN WILLIAMSBURG, VA., FEBRUARY 27–28, 1957

On a number of occasions the National Council of Churches has made official statements of policy on the basis of Christian responsibility supporting technical assistance, economic aid to the underdeveloped areas, and trade policies which will strengthen the economies of our allies and underdeveloped areas as well as our own.

A new situation of utmost urgency has arisen with regard to international economic policy. During recent months there have been four major governmental reviews of foreign aid programs: The President's Citizen Advisers on the Mutual Security Program; the Senate Foreign Relations Committee—Special Committee To Study Foreign Aid Programs; the House Foreign Affairs Committee; and the International Development Advisory Board.

These offer some possible opportunities for improving and expanding such programs. At the same time, other voices are heard in government, suggesting that foreign aid programs should be curtailed, discontinued, used primarily for military purposes, or employed as political weapons in the cold war. However, the President of the United States in his second inaugural address, January 21, 1957, took the unusual course of dealing mainly with world affairs and clearly set forth the responsibility of our Nation to the rest of the world, including economic, technical, and other assistance. Such a broad-visioned pronouncement will get translated into policy and program almost in proportion to public support. In this background, the current session of Congress will be making crucial, far-reaching decisions on technical assistance, economic aid, and trade matters which will affect the whole direction of our United States foreign policy and its impact on the world. Again, what Congress does or fails to do will depend in no small measure on what the churches and church members of this country do or fail to do in influencing public opinion and in expressing their views on these matters to their respective representatives in government.

In the light of present issues and the imminent decisions of our people and Government, the general board of the National Council of Churches reaffirms the previous positions of the National Council on technical assistance, economic aid, and trade policies, and sets them forth in the following statement:

"On the basis of Christian concern we believe that our Nation should seek ways of being of greater assistance to our fellowmen in economically underdeveloped areas. Their own efforts to improve their level of living must be given increased support and encouragement. We can aid them by means of expanded programs of technical assistance. We can aid them by making larger sums of capital available. We can aid them by facilitating the expansion of trade so that goods may be sold and bought more readily, and we can aid them by demonstrating our understanding of their problems and our sincere interest and continuing concern in their economic development.

"The United States has both public and private programs of mutual aid in all these fields, but these need to be strengthened and expanded to the full extent of our capa-

bilities. The test of the extent of our aid should be how much assistance can be effectively used.

"Financial contributions to these programs need to be so assured as to permit long-run programing and continuity of policy and operations. In the interest of strengthening the world community, we should place greater emphasis upon the use of international agencies, including regional organizations, and in particular the United Nations.

"We recognize the interrelationship of all parts of our foreign policy. It would be our earnest hope that United States economic assistance programs could be related primarily to economic and social need and opportunity rather than to immediate political and security considerations. They should be administered separately from military assistance programs. It is equally clear that any increased assurance of peace and any reduction in the burden of armaments would be themselves important factors in contributing to world economic development."

We call upon our member churches and their constituents to fulfill their responsibilities in the shaping of public opinion and in making their views known to their representatives in government.

Further, we hereby authorize the representation by duly designated representatives of the National Council of Churches of the concerns of the churches in these matters to the proper authorities in the Congress, in the administration, and in the United Nations.

RECOMMENDATION TO THE GENERAL ASSEMBLY OF THE NEW JERSEY COUNCIL OF CHURCHES (PRESENTED BY THE DEPARTMENT OF SOCIAL EDUCATION AND ACTION)

1. That this resolution of the National Council of Churches be endorsed;

2. That our Senators and Representatives in the United States Congress be notified of this action; and

3. That our constituent churches, and local councils of churches be urged to take similar action.

Legacy of a Great Woman

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1957

Mr. O'HARA of Illinois. Mr. Speaker, I am bringing to the attention of my colleagues an article by Ethel L. Payne in the Chicago Defender, of May 25, 1957, that I have found most interesting, informative, and inspiring. It is well worthy of preservation in the pages of the CONGRESSIONAL RECORD and in scrapbooks that are used by some persons as the source of future speech material. The article is entitled "The Legacy of a Great Woman" and is devoted to the life, the accomplishments and the philosophy of Mary McLeod Bethune. It follows:

THE LEGACY OF A GREAT WOMAN—MARY MCLEOD BETHUNE LEFT A COLLEGE AND A POWERFUL ORGANIZATION OF WOMEN TO CARRY ON THE WORK SHE SO NOBLY BEGAN DURING HER LIFE

(By Ethel L. Payne)

This week in observances all over the country, the second anniversary of the death of Mrs. Mary McLeod Bethune is being commemorated. She was a remarkable woman who left the imprint of her unique personality etched indelibly on the annals of her race, her country and time.

Today, even in a remote village of India, if her picture were to be shown, there would probably be some who would recognize her, such was the impact of her life. In the 79-year span of her life, she was the friend and confidant of sharecroppers and statesmen alike, and she was one and the same with each.

Born with the virtual strikeout handicaps of poverty and color, she turned these adversities into such shining assets that she won the admiration of millions.

SOUTH CAROLINIAN

As a small girl in the South Carolina backwoods, she looked at herself in the mirror and she said firmly to the homely reflection in homespun cloth, "Mary McLeod, you are beautiful and since you are beautiful, you must do beautiful things."

The child was mother to the thought which she never stopped nourishing. For all the rest of her life, she not only did beautiful things, but she followed the course she had charted for herself and her people as surely as the evening star moves in its orbit.

She literally made bricks from straw and mud and out of nothing came the institution that now bears her name, Bethune-Cookman College in Daytona Beach, Fla.

Born of slave parents who purchased their freedom and bought land, she was the 15th of 17 children. Poverty was their daily bread, but courage and fortitude were in plenty.

Mary had a burning hunger for knowledge and so she walked the 5 miles to Mayesville, S. C., to the Presbyterian Mission School for colored children. When she returned at night, she brought with her riches to share with her brothers and sisters, teaching them to read and write as she had learned.

ATTENDS SCOTIA

One morning after she had finished the limited course, she was back working in the cotton fields when her former teacher appeared with an offer for furthering her education at Scotia Seminary in Concord, N. C.

For 8 years, she studied and worked here and having completed the course, she went north to Chicago to Moody Bible Institute.

There for the first time Mary McLeod learned what it means to be a Negro in a world of whites, and it was here that she developed the self-confidence and poise that somehow were always a shield against barbs and hurts.

Years later, among her gems of philosophy, was the saying "We all want the same things. We all intend to get them. We've all been hurt and the hurt affects us in different ways. Hurts are sometimes very useful and serve us better than we sometimes realize. They have drawn us together. They have drawn friends to us. They have made us organization minded. They have solidified us and our organizations with the organizations of others on an intelligently aggressive front."

INTELLIGENTLY AGGRESSIVE

The two words, "intelligently aggressive" are perhaps the keystone to the phenomenal achievements of this indomitable woman. She was born to lead and leaders must be made of stern stuff.

Mary McLeod Bethune—she was married to Albertus Bethune in 1897—had the basic qualities of a true leader. She was commanding without being arrogant. She was a firm disciplinarian. She knew human frailties well enough to head off destructive bickering within organizations by making prompt and unalterable decisions.

She listened to sound advice as well as dispensing it; but she was impervious to criticism even when sometimes it took the form of petty, but vicious personal attacks against her.

She was calm and extraordinarily wise and invariably, those who had made the sharp vilifications ended up contrite and penitent, seeking her forgiveness.

Lastly, she had sheer nerve, oceans of it, so that she confounded hardheaded business men-philanthropists and was able to get funds for her school and her innumerable causes when logic on the surface said there was no guaranty. Yet, the investments were never defaulted upon.

HOW SCHOOL BEGAN

The stories about her are legion. In 1904, the desire to carry out the missionary work that she had accepted and been trained for, led her to a lonely stretch of land in Daytona Beach, Fla.

She had a "hunch" that this was the place; but her total resources were one dilapidated shack, some soap boxes, one dollar and a half and five little colored girls for pupils.

With all the aplomb as though she had a campus dotted with buildings and a faculty of doctors of philosophy, Mrs. Bethune announced the founding of the "Daytona Educational and Industrial Training School," with herself as president.

Soon afterward, she invited the industrialist, James N. Gamble, son of the founder of Proctor & Gamble, to visit the school. Gamble had a winter home in Daytona near by.

When he entered the president's office furnished with a wooden crate and a wobbly chair, he demanded. "And where is this school of which you wish me to be a trustee?"

SCHOOL IN MIND

Undaunted, Mrs. Bethune shot back. "In my mind, Mr. Gamble and in my soul." The industrialist gave financial assistance and became chairman of the board, a position which he held until his death 20 years later.

In 1923, the former grade school for girls was merged with the Cookman Institute to become the Bethune-Cookman College. It is fully accredited by the Southern Association of Colleges and Secondary Schools as an "A" grade college. It has a faculty of 100. Its 29 buildings are dominated appropriately by Faith Hall, and its student body numbers 1,000.

Bethune-Cookman graduates go on to become teachers and in other professions. Life at the schol hasn't always been placid. One election eve, Ku Klux Klansmen marched across the campus as a warning to Negro teachers and older students not to vote.

Mrs. Bethune ordered every light in all the buildings turned on and kept them on until daylight. The next morning, she marched her flock to the polls unmolested.

HAD SHARP WIT

She had a rapierlike wit that could be positively devastating. Once riding a train in the South, a brash conductor came through the coach in which she was sitting and said loudly.

"All right Auntie, give me your ticket." Came the sweet and deadly reply, "And which one of my sister's children are you?"

Another popular story goes that during the war, she was changing planes in a southern city while on her way to keep a speaking engagement. Because she had about 30 minutes to wait, she took a seat in the waiting room and immediately a guard rushed up to her and demanded that she get up; that the seats were for whites only.

The old lady just sat there listening to his cursing. Finally, she said, "I'm old. I'm sick, and I'm tired and I just don't think I'll move," whereupon the guard threatened to bodily remove her.

A young white Army captain limping from a war wound walked up and took command.

"She stays," he said quietly. "I didn't go over to fight and come back to something like this."

The soldier stood by her until the plane was announced, offered her his arm and escorted her out the gate.

By 1935, Mrs. Bethune was 60 and suffering from asthma; but she was just beginning a new phase of her extraordinary organizational ability. She had always believed that women when mobilized could be a potent force in national and international affairs. Though there were hundreds of organizations, still she felt there was a need for some cohesive unifying link.

UNITES 800,000 WOMEN

So on December 5, 1935, she called together representatives of various associations and individuals and founded the National Council of Negro Women. Its chief objectives were to pool the corporate strength of Negro women in order to develop outstanding leadership with increasing integration into the spiritual, social, economic, political, and cultural life of America.

The council was successful even beyond her dreams. Women flocked to the call. Soon the membership swelled to over 800,000 and it came to have the 14 carat reputation of a select few groups regarded as having powerful influence in public affairs and in molding public opinion.

Under her guidance, farflung programs of social welfare, political action, constructive legislation, participation in national and international affairs and the preservation of the archives of Negro women pioneers were developed.

SERVED 14 YEARS

After serving 14 years as national president of the council, Mrs. Bethune retired, satisfied that the organization would continue on in the purpose of its founding.

Today from its headquarters at 1318 Vermont Avenue NW. in the Nation's capital, the council carries on an active program of participation in national and international affairs under the leadership of its president, Mrs. William Thomas Mason, of Norfolk, Va.

The council was Mrs. Bethune's legacy to the struggle for full citizenship. Bethune-Cookman College was her legacy in the preparation of her people to go out into life.

Mrs. Bethune served as adviser to two Presidents. She was director of the Office of Negro Affairs in the National Youth Administration from 1936 to 1944 and the special adviser to President Roosevelt on minority affairs during that period. She served in a consultative capacity to President Truman.

Along with the later Walter White and A. Philip Randolph, she was a member of the delegation which held historic conference with President Roosevelt at the White House in 1942 which resulted in the creation by Executive order of the Fair Employment Practices Committee. Out of that came the establishment later of FEP Committees in many States and cities.

In her own words she gave promise to the future. "I see no cause for discouragement in viewing the years ahead. Democracy in this country is neither dead nor dying. As ever mother knows the pangs of childbirth are keenest just before the child is born.

"If our hurts are great now; if our country is torn with controversy over the expansion of social responsibility, over the acceptance of civil rights, it is because a new and more powerful democracy is being born to serve more greatly the people of all races, of this country, and of the world.

"The one world toward which we are rapidly moving will not, I think, be a world of one race, or a world of one thought, but a world of mutual understanding, respect, and tolerance based on knowledge of ourselves and knowledge of our neighbors."

Hazards of Nuclear Fallout

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1957

Mr. PRICE. Mr. Speaker, I would like to include in the RECORD an editorial from the St. Louis Post-Dispatch, of Sunday morning, May 26, 1957, together with an interesting article by Richard Dudman, Washington correspondent of the Post-Dispatch, on the fallout problem.

As you know, there has been a great deal of confusion on the subject and I believe this will help to provide information on some of the issues which I believe the hearings now being held by the Special Subcommittee on Radiation of the Joint Committee on Atomic Energy will consider:

[From the St. Louis Post-Dispatch of May 26, 1957]

HOW GREAT ARE HAZARDS OF NUCLEAR FALLOUT AND WASTE OF ATOMIC PLANTS?—SPECIAL CONGRESSIONAL SUBCOMMITTEE SET TO START HEARINGS IN SEARCH FOR DEFINITIVE ANSWERS ON DANGERS OF RADIATION—AEC SHIFTING ITS STAND AND NOW IS WEIGHING NECESSITY OF TESTS AGAINST RISKS TO HEALTH OF WORLD

(By Richard Dudman)

WASHINGTON, May 25.—A special subcommittee headed by Representative CHET HOLIFIELD, Democrat, of California, will start a 2-week series of public hearings Monday on radioactive hazards. The investigation could hardly have been better timed.

Great Britain, going ahead with its Christmas Island weapons tests despite bitter opposition at home and abroad, this month became the third nation to have exploded a hydrogen bomb.

The United States Atomic Energy Commission, similarly in the face of growing and scientific opposition, is going forward with its current "Plumb bob" series of atomic weapons tests in Nevada.

Possibly of even greater long-range significance is another development. A subtle change has taken place in the argument over radioactive hazards, a dispute that continues to split the scientific world.

The question of radiation hazards now concerns mainly weapons tests. Eventually, it will involve the safety and economics of the entire field of peaceful uses of atomic energy. Recent findings indicate that wastes from atomic power generating plants by 1975 will contain 20 to 40 times as much radioactivity as now is produced by the bomb tests, to say nothing of the possibility of industrial accidents involving nuclear energy.

Until recently, the controversy was principally over whether weapons tests at present levels were harmful to human life. Genetic risks seemed far off, affecting small percentages of future generations. As for danger to the individual persons exposed to worldwide fallout, the AEC felt itself justified in viewing this hazard as imperceptible.

Chairman Lewis L. Strauss of the AEC was able to say in February 1955 that the amount of radiostrontium then present in the soil as a result of all nuclear explosions to date "would have to be increased many thousand times before any effect on humans would be noticeable." Radiostrontium, or Strontium 90, one of the main products of atomic fission, lodges in the bones of human beings as a long-lasting source of radiation.

AEC SHIFTS ITS LINE

AEC Commissioner Willard F. Libby, who has become the agency's principal authority on fallout, said in January 1956 that "the worldwide health hazards from the present rate of testing are insignificant."

Early this year, the AEC's official line began to change. It began to admit that injuries might be experienced in noticeable numbers and to emphasize the necessity of weighing the risks. The shift became evident last February in a speech by Dr. C. W. Shilling, Deputy Director of the Commission's Division of Biology and Medicine. He said: "The game we are playing with Russia is for enormously high stakes and is for keeps. Therefore, we must gamble with the probability of radiation damage to a few individuals in order to secure the survival of the total society."

Libby's reply last month to Dr. Albert Schweitzer, who had warned that further nuclear tests would be "a catastrophe for the human race," abandoned the old claim that fallout is harmless. "I do not mean to say that there is no risk at all," he wrote.

But he continued to minimize the danger. A person moving from a wooden house into a brick house, he wrote, could get more radiation exposure than he could get from test fallout. He said that the Strontium 90 in children's bones gives them only as much radiation as the additional dosage a person would get from cosmic rays by moving from a beach to the top of a hill a few hundred feet high, where the atmosphere would be slightly thinner. The additional radiation in a brick house could come from the natural radioactivity in clay in certain parts of the country, Libby has explained.

NEW REPORT A FACTOR

The change may stem partly from a biologist's report which has been circulating among scientists since last December and was published last week in Science, the weekly publication of the American Association for the Advancement of Science. It is regarded as a milestone in the study of radiation hazards.

In the report, Prof. E. B. Lewis, of the California Institute of Technology, describes an analysis of four groups of persons who have been exposed to radiation—survivors of the atomic bomb explosions in Hiroshima and Nagasaki, patients given X-ray treatments for a spinal disease called ankylosing spondylitis, children treated with X-ray as infants for thymus gland enlargement and radiologists.

In each group, he calculated the incidence of leukemia, a fatal disease sometimes called cancer of the blood in which there is overproduction of white blood cells. Overexposure to radiation has long been recognized as one of the causes, but it had been assumed that there was a threshold below which there would be no detectable increase in leukemia.

Statistically, the results were startling. In each of the four groups, there appeared to be a direct relationship between the amount of radiation a group of persons received and the number that developed leukemia. Applying the results to strontium 90, Lewis concluded that the present incidence of leukemia in the United States would be increased by about 5 to 10 percent if the level of strontium 90 were maintained at the AEC's "maximum permissible concentration"—one-tenth of a microcurie in the average standard adult.

Since there are about 10,000 deaths a year from leukemia in this country, the expected new leukemia deaths that otherwise would not occur would amount to between 500 and 1000.

LIBBY FINDING CONTRADICTED

Dr. Linus Pauling, Nobel prize-winning chemist, also of the California Institute of Technology, extended the calculation to the entire world and concluded that 10,000 persons were dying or had died of leukemia as a result of nuclear weapons tests. He warned last month that the British tests would result in another 1,000 leukemia deaths.

The leukemia findings directly contradict one of Libby's most important assumptions. He assumes that the radiation from strontium 90 is comparable in biological effect to the cosmic rays that get through the atmosphere to the earth's surface. Libby then goes on to point out that the leukemia incidence in 1947 in mile-high Denver was considerably lower than that in San Francisco and about the same as the incidence in New Orleans. He suggests that cosmic ray dosage has relatively little to do with the leukemia rate and that we can have "some assurance" that a small amount of fallout radiation will not cause a detectable increase in leukemia.

Strontium 90 and its possible effect as a cause of leukemia have attracted much scientific attention, but there are other fission products and other diseases that also are being studied in order to get a full understanding of radiation hazards.

Most important of the other fission products are cesium 137, which has a half life of 33 years (compared with strontium 90's 28 years) and iodine 131, which has a half life of only 8 days and is important only in the area immediately downwind from a test blast or reactor stack.

Some of the other diseases and injuries that can be caused by heavy doses of radiation are bone, lung and thyroid cancer, eye cataracts, temporary sterility and congential malformations.

Lumping all possible pathological effects together, Dr. Pauling estimated recently in a speech at Washington University in St. Louis that radiation from nuclear bomb tests that already had been conducted by the United States and Russia would ultimately cause the deaths of about 1,000,000 persons in the world.

WIDE RANGE OF ESTIMATES

As for the genetic effect, the estimates vary widely. Dr. Pauling, in his St. Louis speech, estimated that bomb tests up to this year will cause the birth of 200,000 seriously defective children in the next generation. Libby, on the other hand, predicts that the human mutation rate would level off at an increase of about two-tenths of 1 percent if the present rate of test fallout continued indefinitely. This would come to no more than 4,000 in the next generation and not all of these could be considered serious defectives.

Scientists agree, however, that there is no threshold for the genetic effects of radiation. They agree that any radiation is bad, from a genetic point of view. The Lewis findings, if generally accepted, would expand this area of agreement to pathological results, as well.

Geneticists have been aware for many years of the direct relationship between radiation exposure and hereditary mutation. Dr. Hermann J. Muller of the University of Indiana, pioneered in this field with his experiments on fruitflys. Similar experiments have been performed on laboratory mice. But many scientists questioned for a time whether these findings could be extended to man.

Evidence of the genetic effect on man has been presented by Dr. Stanley H. Macht, director of the radiology department at Washington County Hospital, Hagerstown, Md., and Dr. Philip S. Lawrence of the United States Public Health Service. They reported, after a survey of 2,700 radiologists throughout the country, that radiologists had a significantly higher proportion of abnormal offspring than did a control group of physicians having other specialties. The difference was not great, but it was pointed out that most hereditary abnormalities do not show up until after the first generation.

Looking into the future, Dr. H. Bently Glass, Johns Hopkins University biologist, foresees great new hazards from the peaceful applications of atomic energy. In a recent speech in New York, he said:

"The threat to mankind of exposure to radiation arising from the peaceful development of atomic energy may outstrip not only that from the exposures due to weapons testing and fallout, but even that from the exposure necessary for medical and dental diagnosis."

This prediction was based on an estimate that the United States will have 20 million to 40 million kilowatts of atomic generating capacity by 1975. Each 100,000 kilowatts puts out as much radioactive waste as the fallout from 1 megaton bomb (the equivalent of 1 million tons of TNT). About 50 megatons of bombs now have been exploded and the rate is roughly 10 megatons a year. Thus, peaceful atomic plants by 1975 will be pouring out radioactivity of at 20 to 40 times the present rate of weapons testing.

Libby estimates that radioisotopes, which are the radioactive materials in the waste from atomic plans, already are saving American industry $500 million a year and that more use and new applications will raise this figure to $5 billion by 1960 or 1962.

MORE CHANCE OF ACCIDENT

At the same time, however, wider use will mean more chance of accident. A case in point is the recently disclosed case last March at Houston, Tex., where seven workmen were contaminated with radioactivity when irradiated metallic pellets broke open while being removed from cans for use in testing structural steel.

Until atomic wastes can be used fully, their safe storage presents a dangerous and expensive problem. Phillips Petroleum Co. solves it temporarily at the reactor-testing station in Idaho by building 350,000-gallon stainless steel tanks encased in concrete underground at a cost of $750,000 a piece. Five of these have been built and one of them is already full.

As for the chance of one of the atomic plants running out of control and spewing radioactive products across the countryside, the AEC last March made public an inch-thick analysis of the hazard. Using the most pessimistic assumptions, this study concluded that, when 100 reactors are in operation in the United States, a person in this country would have one chance in 50 million a year of being killed by a reactor accident. This was compared with the present 1-in-5,000 chance in the United States of being killed in an automobile accident.

It will be noted that most atomic hazards, when expressed in percentages, are extremely small. Even Dr. Pauling's estimate of 1 million fallout deaths over an indefinite number of future years comes to only a tiny percentage a year of the world's total population.

Furthermore, fallout—the hazard that has attracted by far the greatest attention—is estimated by the AEC to have a present rate of only one-tenth of 1 roentgen a year reaching the average person's reproductive organs. This can be compared to average individual annual doses of three roentgens from natural radioactivity including cosmic rays, and 4.5 roentgens from medical X-ray. A single pelvic X-ray can give a dose of 0.1 to 1 roentgen to the reproductive organs and a fluoroscopic examination of the pelvis can give up to 2 roentgens.

DANGER FROM X-RAYS

Much has been made of the smallness of the fallout hazard in relation to the danger from medical X-rays. Prof. Joseph Rotblat, of the University of London, recently made this comment on this comparison:

"The relief which many felt on this score is something like that of the patient who went to the doctor complaining of a cold in the chest and was told that in addition he suffers from angina pectoris. This relief certainly does not apply to the majority of the world's population who do not have X-ray examinations and who, moreover, live most of the time in the open and thus do not benefit from the considerable shielding which our houses offer us."

The relative unimportance of fallout hazard was discussed recently by Dr. Warren Weaver, former president of the American Association for the Advancement of Science and a vice president of the Rockefeller Foundation. Taking an estimate that bomb tests will cause an increase of one five-thousandths or a total of 6,000 in the 30 million babies that already will be born with serious handicaps of genetic origin to persons now living on the earth, Dr. Weaver asked:

"Now what impresses you as more significant—that 6,000 is a good many babies to subject to serious handicap, or that one five-thousandths is a very small fraction and correspondingly is a very small relative addition to the 30 million babies that, without fallout, will have serious genetic handicaps?"

Representative HOLIFIELD has lined up an impressive group of expert witnesses to discuss these and other aspects of the radiation problem. Their testimony may change some minds and it certainly will give new ammunition to those whose minds are made up on such questions as the future of bomb tests.

[From the St. Louis Post-Dispatch of May 26, 1957]

GET THE TRUTH ABOUT FALLOUT

The Joint Congressional Committee on Atomic Energy, when it opens hearings on radioactive fallout this week, will confront an extraordinary opportunity for public service. It could, of course, simply compound the confusion that already exists about the degree of hazard to public health from testing of supernuclear weapons. We hope that, instead, it will clarify and illuminate the controversy.

Despite the efforts of the Atomic Energy Commission and scientists favorable to its viewpoint to belittle the hazards of fallout, a persistent and widespread belief exists that the public is not getting the whole truth. Partly this is due to the fact that some ostensibly reassuring statements of the AEC spokesmen turn out, on close examination, to mean less than they seemed to mean at first sight. Partly it is due to the AEC's record of concealment and evasion.

One question we hope will be elucidated is the theory of strontium 90 fallout advanced by AEC Commissioner Willard Libby. He argues that only a small amount of strontium 90 fallout is sprinkled near the nuclear explosion or at places in the same latitude, and that the rest is carried into the stratosphere, whence it falls slowly and uniformly around the earth. Because of this, he argues, the dose at any one locality is far below the level of serious hazard.

But this theory has been challenged by other scientists, notably Dr. Linus Pauling, Nobel prizewinner, and United States Weather Bureau data are reported to indicate that the dosage of strontium 90 at various points in the United States does vary considerably, some localities receiving 2 or 3 times as much as others.

So long as responsible scientists like Dr. Pauling and Dr. Barry Commoner of St. Louis continue to challenge the soothing sirup put out by AEC spokesmen, there will be an urgent need for clarification. We agree with the Washington Post that the committee ought to call foreign as well as American scientists. The testimony of able experts from Japan and Britain should balance the discussion. Above all, the committee has an opportunity to help the public reach sound and unexcited conclusions.

New M–14 Rifle Born Fully of Armory Minds

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks, I would like to have printed in the RECORD the following article from the Springfield (Mass.) Union, published May 24, 1957, telling how the Army's newly adopted M–14 rifle was completely developed at the Springfield Armory:

NEW M–14 RIFLE BORN FULLY OF ARMORY MINDS—GARAND MADE SIGNIFICANT CONTRIBUTIONS TO ITS DEVELOPMENT

Springfield Armory's experts in rifle development have helped to give more firepower to America's fighting men since the ordnance facility was established by Congress in 1794.

Latest in its long line of world-famed weapons for the foot soldier is the M–14, adopted this month as the new standard shoulder rifle for the Armed Forces, to replace the M–1 Garand.

WAS KNOWN AS T–44

The M–14 was known as the T–44 until its formal acceptance. A model with heavier barrel, the M–15 has been accepted to replace the Browning automatic rifle.

Both new rifles use the same ammunition—the new NATO 7.62-millimeter cartridge—and both are identical in operation, firing either fully or semiautomatically.

John Garand, retired Springfield Armory employee who invented the M–1 that bears his name, made significant contributions to the development of the M–14. During 1944 and in the first 7 months of 1945, Garand was developing an automatic version of the M–1 from which evolved a model designated as T–20E3.

The rifle, basically of M–1 design, had the added features of a selector for semi- or full-automatic fire, a 20-round magazine to replace the 8-round clip, a roller on the bolt operating lug, and a gas shutoff valve for use when the rifle doubled as a grenade launcher.

These improvements, with modifications, have been incorporated in the new M–14.

STEMMED FROM T–20

"The T–44 originated primarily from the T–20 developed by Garand," an armory weapons expert said yesterday. "The new rifle is entirely the brainchild of the Springfield Armory."

In addition to the advantages of being a lighter, more versatile weapon using a smaller and lighter cartridge than the M–1, the M–14 will not bring any special problems in training troops in its use.

"Millions of soldiers who have served in the United States and allied forces are familiar with the Garand," the armory expert said. "It should require only a very slight amount of training to indoctrinate them in the use of the M–14."

For the foot soldier, the new rifle has many other advantages. When the Garand fired its last round, the cartridge case was ejected with an audible click—a giveaway sound that could tell an enemy lying in wait the soldier had to reload, and was vulnerable if charged on.

The M–14's 20-round magazine remains attached, does not click when emptied, and can be reloaded by pushing in 10 rounds through the top of the open receiver assembly from an expendable packet charger.

"M–1 THUMB" GONE

Gone, too, is the danger of "M–1 thumb." In the Garand, the rifle stayed open after the last round was fired. To close it without reloading, the soldier usually pushed down the follower with his thumb. If he wasn't quick enough pulling his hand away, the thumb got a mighty wallop.

A basic difference in the Garand and the new M–14 is in the gas systems that open the rifles after firing, eject the used cartridges, and insert new ones.

In the M–14 and M–15, expanding gases from firing the weapons enter the gas cylinder through a small hole in the barrel and build up pressure to activate the mechanism for ejecting, reloading, and automatic firing.

In the Garand, the initial force of the gas entering the cylinder, rather than its accumulated pressure, operates the rifle.

Ordnance men compare the two systems to pushing a door shut and slamming it shut.

Because the M–14 embodies many features of the Garand, the Armory was able to effect many savings in developing the new weapon. Rear sights and many pieces in the trigger group are identical, as well as the rear butt plate and rear sling swivel.

OTHER PARTS VERY SIMILAR

Many other parts, while not identical, are so similar that they can be made "with minor changes in tooling," an Armory expert said.

A feature of the M–14—and its companion M–15—is the flash suppressor, a slotted extension of the barrel that dissipates gases before they can ignite and leaving the weapon during firing.

Typical of the many simple yet ingenious devices incorporated in the M–14 and M–15 is the gas shut-off, a turn valve that can close off the hole into the expansion chamber to use the full blast from firing for launching a rifle grenade.

The M–14, with empty magazine and without sling, weighs 8.7 pounds. Fully loaded and ready to fire, it weighs 10 pounds. It has a maximum range of 3,500 yards with 2,800-feet-per-second muzzle velocity and its maximum gas-chamber pressure is 50,000 pounds per square inch.

The M–15 weighs 13.75 pounds with empty magazine and bipod and weighs 14.80 pounds loaded and ready to fire. Its overall length is 45½ inches—1.36 inches shorter than the M–14.

Firing characteristics of the two weapons are identical.

The standard NATO cartridge is 2.8 inches long—one-half inch shorter than the old M–1 .30-caliber cartridge. But in spite of its reduced size and weight, it packs equal or greater hitting power than the ammunition it replaces. This is due partly to the new ball powder—so called because each grain is a sphere—which burns faster than the old "IMR" powder. Also, the NATO bullet tapers at the end to a boat shape, giving it less air resistance, experts say.

Fifty Million Visits Were Made to Historic Sites and Buildings Open to the Public in 1956

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, in the keynote speech opening the centennial convention of the American Institute of Architects held in Washington the week of May 13–16, 1957, Edward A. Weeks, Jr., editor, the Atlantic Monthly, pointed out that 50 million visits were made to historic sites and buildings open to the public in 1956.

Mr. Weeks urged that every city set apart certain old houses, certain breathing spaces, certain outlooks on the harbor or the river "to show the more impressionable teen-agers that American life does not consist merely of gasoline stations, the drive-in diner, and the second-hand car park with its frantic little flags urging you in for the quick bargain."

Mr. Weeks declared that Virginia has made preservation of America's historic past a fine art.

I include here an item from the New York Times regarding the buildings in the vicinity of the White House which this administration has slated for destruction in the name of progress. Also, I include a part of the great speech by Mr. Weeks, of the Atlantic Monthly:

[From the New York Times of May 27, 1957]

LETTERS TO THE TIMES—CAPITAL CHANGE CRITICIZED—PRESERVATION URGED OF WASHINGTON BUILDINGS OF INTEREST

To the EDITOR of THE NEW YORK TIMES:

Certain matters of interest to architects and conservationists in Washington should be brought to the attention of your readers, for affecting as they do the appearance of the National Capitol, they are of national concern.

First is the proposed destruction of the old State, War, and Navy Building that flanks the White House on the west, balancing the neoclassic Treasury Building on the east. It is now known as the Executive Office Building.

While taste has changed since its erection, when it was considered the finest building in Washington, it is still just as impressive in design and scale as it was then, and its granite steps and columns and details are unblemished by 80 years of weather. With its superposed orders and mansard roofs and towers it is a monumental example of Second French Empire architecture, simplified to suit the hard stone.

Its ample, ornate corridors and curved, cantilevered staircases are impressive. Its offices are spacious with high ceilings and decorative cornices and window embrasures. All appears in perfect repair.

HISTORIC HOMES

There seems no reason for a Nation already overstretching itself economically to tear down and replace a structure so sound, of historical significance, and well suited to its present use.

Second is the proposed destruction, with the exception of the Blair-Lee and Decatur houses, of the entire block just opposite on Pennsylvania Avenue and otherwise bounded by 17th and H Streets and Jackson Place, which fronts on Lafayette Square, directly in front of the White House. Most of the block is now given over as parking lots except for the houses named, the Court of Claims (a rather charming brick and brownstone building by Renwick but obviously past repair) and the mid-19th century houses on Jackson Place. These, which have considerable historic interest—Theodore Roosevelt occupied one during an earlier alteration of the White House—and the traditional domestic character of the square, which is part of the national scene, should not, in my opinion, be replaced by a vast megahyaline front.

About a year ago the old Patent Office was saved for good use, chiefly through the efforts of Representative THOMPSON of New Jersey,

as I recall. At present the Executive Building is put to excellent use, as are the old houses on Jackson Place—one of them the office of the National Trust for Historic Preservation—and they should not be destroyed.

EDWARD STEESE.

SCARSDALE, N. Y., *May 22, 1957.*

BUILDINGS WHICH SHAPE OUR LIVES

(By Edward A. Weeks, Jr., editor, the Atlantic Monthly, centennial celebration of the American Institute of Architects, Washington, D. C., Sheraton-Park Hotel, Monday evening, May 13, 1957)

In an age of great insecurity we depend more than we realize upon that intangible known as community spirit. The cover of a recent issue of America Illustrated (the magazine which the USIA distributes in Russia) showed a panoram of San Francisco's sunset district, a panorama which made me shudder. For here were row on row, block after block, of two-storied, identical concrete houses with not enough room in between to swing a cat. The uniformity and the lack of space are stifling, and what was more benumbing was the lack of any green oasis. The only green spot in these square miles of concrete were the lawns and trees surrounding the public school. Californians have told me that in the beginning the city planners on the West coast called for a ratio of 1 to 10, 1 acre of parks and recreation areas for every 10 acres of buildings. But in San Bernardino County, that area which J. B. Priestley once described as "Six suburbs in search of a city"—in Los Angeles today, the subdividers are having their way. Oases which should have been parks have been plowed up, and if this goes on much longer, the ratio will not be 1 in 10 but 1 in 60 or 1 in 80. It is not a pretty sight to see how the suburbs have devoured the orange and walnut groves in California. In Seattle which has one of the most beautiful sites in the United States, one has to go 10 miles out of town to find a reasonably good specimen of Douglas-fir, that superb native giant. There once were beautiful trees on the campus of the University of Washington, but they have been destroyed to make room for more buildings.

Community spirit is kindled when people have room in which to devote themselves. It is kindled today in churches and in schools; it is kindled when old and young come together to watch the Little Leaguers play ball; it is kindled when the neighbors who believed in Ralph Bunche and who put together a purse of $1,000 to send him East to study, meet together in the high school of an evening to hear their local boy tell them of what is happening in the Middle East; it is kindled by the swanboats in the Boston Public Garden, by the picnics in Central Park, and by art festivals; it is kindled by having a place to fish when the shad are running; it is kindled by the PTA, by community orchestras (of which we have more than 300 in the United States), by community singing in which the Negroes took such a leading part in Westchester County; it is kindled when mothers, dragging fathers with them, go to see their daughters dance in the high-school auditorium. When you scant the space for such gatherings in our metropolitan centers, you mutilate the community spirit.

If the home will no longer provide privacy and fulfillment, and if the community subdivides its green oases until they are no more, then, and inevitably, the American families will have to compensate by getting into their cars and seeking refreshment elsewhere. We are in the process of shifting from a 5- to a 4-day week; it will come gradually, and it will come with the increase of holidays and the extensions of weekends. You architects should have visible influence on the use which is made of this new leisure. As the eastern seaboard fills in from Bangor to the Florida Keys, people in the thickly settled areas will take their Sunday suppers to the picnic grounds, the fringe of woods, the stretch of flowering shrubs which borders the great throughways and which may come to be the only uncut land in the vicinity. Already the picnic grounds on Route 128, the big road which encircles Boston, are jammed with family parties every weekend.

Your aid will be required in the piecing together and preservation of the old colonial villages like Sturbridge in Massachusetts, like Shelburne, that vivid reconstruction of old Vermont which Mrs. Watson Webb has assembled on the shore of Lake Champlain, or like the Farmers' Museum and its Crossroads Village in Cooperstown, N. Y.; you will have to fight for the preservation of historic sites which are in the path of bulldozers (50 million visits were made to historic sites and buildings open to the public in 1956). You will try to set apart in every city certain old houses, certain breathing spaces, certain outlooks on the harbor or the river to show the more impressionable teenagers that American life does not consist merely of gasoline stations, the drive-in diner, and the secondhand car park with its frantic little flags urging you in for the quick bargain.

In a State like Virginia, preservation has become a fine art. In Williamsburg where every fence rail and Kleenex carries the arms of William and Mary; and in the gracious houses along the James: Westover, Stratford, Shirley, and Berkeley Hundred—it is so easy for the 20th century to imagine the grace and the quality of colonial America. One is grateful for the care which has kept these shrines alive, and it is fortunate for us all that they do not lie in the path of suburbia, that relentless stonecrusher.

I must say the Virginians had a more difficult time with Jamestown. The natural surroundings, if you remember, were not too impressive. They had to begin with the crumbling ivy-covered ruins of a chapel, a small island from which the public was excluded, and a sandy peninsula holding a large statue from which someone had mercifully removed its head. Now, what have they done? They have left the island right where it is with the padlock on it; they have left the chapel right where it is with the ivy on it; they have left the winged victory right where it is—but now they have a head on it. They have dug out a couple of sod houses and a "little old fort"—and to this hallowed spot they are attracting thousands and thousands of tourists who can stand there and gaze at each other in a wild surmise. This is one of the most quietly spectacular achievements in the whole long history of sightseeing. Yet I notice that the *Mayflower* has been blown south and maybe that will help.

But the real fight today, and the one which has challenged some of your greatest ability, is the fight to revitalize and to beautify an old smoke-streaked city. Recapturing the beauty of the Golden Triangle in Pittsburgh, as the Allegheny Conference has done; restoring the usefulness and beauty of the St. Louis waterfront, recapturing the open Declaration of Independence Mall in Philadelphia—these are the hard fights already half won. There will be many more of them ahead.

"Sleeping under a hedge," said the late G. K. Chesterton, "is not a new form of architecture." To that witticism I should like to add my postscript: That sleeping by a throughway is not the most desirable form of American architecture. Men have always lived by the side of a road because it was convenient to do so. But this country we loved is going to fill up at an astonishing rate in the next 25 years, and I say that we can no longer permit this filling to be done haphazardly, as the local contractors and subdividers choose. It is difficult to learn just how much rural land is being alienated for urban expansion each year, but Paul B. Sears, chairman of the conservation program at Yale University, thinks that the estimates in the order of 1 million acres a year are not far off. One million acres a year of woodlands, meadows, abandoned farms, and marshes, taken out of the rural zone and into the city hopper. At that rate, how long will it take us to convert the eastern seaboard into a replica of the neon-lit, chromium-plated landscape which stretches from Los Angeles to San Diego. If that urban sprawl is to be avoided, it will be avoided because you architects join forces with city planners and conservationists—men as farsighted as Robert Moses and Paul Sears—in devising a building philosophy for the future.

If each man plans for himself, if each contractor or each industry works solely for a single aim, the intentions may be good but the country will suffer. As an example of what nonplanning can do, look at lower Bucks County, Pa. Here on the Delaware River an enormous steel plant has been erected to process the ore coming in from Venezuela. One hundred and sixteen allied firms dealing in iron and steel products followed in the wake of the giant plant. Houses were at a premium, and so a new town was erected, Levittown, Pa., a community of 16,000 houses for approximately 70,000 persons. The question of schools, sewerage, plumbing, and social services, were of incidental concern to Mr. Levitt; they were foreign to the steel company, and so there was a minimum of coordination between the local authorities and the newcomers as this huge slice of prefabricated America went up. There were even some hit-or-miss calculations on the part of the steelmasters. Not until the plant was erected did they discover that they had placed it at the exact spot on the Delaware where the fresh water from upstream meets the salt water from the estuary. Here the silt is deposited to such an extent that there was not sufficient depth to float the incoming freighters. So an $8 million pier was erected in Philadelphia where the ore could be transshipped to scows which would then be towed upstream. If the engineers are susceptible to an error in judgment as fundamental as this, think of the errors in human engineering, in human living which could be perpetuated as we fill in the future gridirons of industry.

On October 28, 1943, Sir Winston Churchill was speaking to the Members of the House of Commons who because of the blitz were meeting in secret. He said, "On the night of May 10, 1941, with one of the last bombs of the last serious raid, our House of Commons was destroyed by the violence of the enemy, and we have now to consider whether we should build it up again, and how, and when. We shape our buildings, and afterward our buildings shape us." In those simple magnificent words "We shape our buildings, and afterward our buildings shape us," Sir Winston revealed the nobility of architecture.

When you stand in the gloaming of Westminster Hall, that great cool, highvaulted room, you may remember that here Richard II was dethroned and Charles I condemned, here were the trials of Sir Thomas Moore, of Essex and Warren Hastings, here the indecision and anguish of Parliament, and remembering, you feel the heartbeat of the English spirit. So the Catheral of Chartres gives you to see the French genius, and with your first view of the Acropolis, you begin to understand the Greeks. And where does the geunius loci reside in America? What are the buildings that have shaped American character so indelibly that when we visit them today, or stand in their shade, we too feel the invisible pressure of history. We find this deity on the New England village green with its church and white spire, its white orderly houses, its elms and quiet common; we find it in Mount Vernon with its com-

manding view high above the water, the slopes, and the fields which Washington loved; we find it in Monticello where the enterprise and the vision of the man who wrote the Declaration of Independence still lives; we find it in the Lincoln Memorial, the most heart-stirring evocative building in the Capital.

But what of the buildings of tomorrow, the buildings which you will shape and which in time to come will shape our grandchildren and great-grandchildren? What will they be? On the campus, in the new high schools which are more and more tending to be community centers, in the factories which have become so colorful with your use of new materials, in laboratories like the General Motors technical center, in the recreation areas, and most needful of all, in the network of new communities which cannot live without a heart—there you will find your greatest challenge to be American.

Dr. Winthrop Adams

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1957

Mrs. ROGERS of Massachusetts. Mr. Speaker, the following articles relate to the retirement of Dr. Winthrop Adams as United States Veterans' Administration hospital manager at Bedford, Mass.

Everyone who spoke at the retirement exercises mentioned Dr. Adams' great ability and his great kindness to his patients and their families, to his staff and to all of the veterans' organizations who have taken such interest in the hospital, and to all civilians interested in veterans. A truly great man, he and his lovely wife are greatly beloved.

The articles follow:

[From the Lowell (Mass.) Sun of May 21, 1957]

BEDFORD VA HOSPITAL HEAD TO RETIRE AFTER 25 YEARS—RECEPTION TOMORROW FOR DR. WINTHROP ADAMS WHO HAS SERVED AGENCY 38 YEARS

BEDFORD, May 21.—Patients, hospital staff members and friends will pay tribute to Dr. Winthrop Adams at a reception at the Bedford veterans hospital tomorrow at 2 p. m. in honor of his retirement after 38 years of distinguished service in the VA.

Formerly medical director for the entire Veterans' Administration, Dr. Adams transferred to the Bedford hospital as manager in 1930 because he was primarily interested in working directly with mentally ill patients. Under his direction, the Bedford VA hospital which opened as a psychiatric unit in July 1928, expanded continually from the original capacity of 354 beds to the present 1,800 bed hospital. He remained there until the present time except for a period of approximately 2 years at the end of World War II. The heavy requirements of that war upon the VA demanded a doctor of his administrative ability to serve as medical head of the Veterans' Administration in this area, and he was chosen to serve in this position at Branch No. 1 in Boston.

PERSONNEL INNOVATIONS

At Bedford he has initiated many programs and practices that have become generally accepted and adopted throughout the country. Dr. Adams formally inaugurated the first training program for psychiatric social work students in January 1945. Even before the program began, however, the entire class in casework of what is now the school of social work, Boston University, was sent to Bedford for classes under the direction of Dr. Adams and the chief social worker. Now students of social work come to Bedford for training from Boston University, Boston College, and Simmons.

One of the first to envision the effective utilization of volunteer workers with neuropsychiatric patients, Dr. Adams in 1932 initiated and conducted the first training course in the country for Red Cross Gray Ladies in a mental hospital. The training of volunteer workers is now standard practice in every VA hospital in the country.

SELF-AID PROGRAM

It was under his direction that the community employment project for mental patients was started. In this program, groups of patients are taken each morning of the work week to farms and factories of various kinds where they work alongside the regular employees. They return to the hospital every night. The patients are paid regular wages. This plan and others similar to it are rapidly becoming standard procedure in the treatment of the mentally ill.

Dr. Adams' rise in medical administration was rapid. Following his discharge from the United States Navy after World War I, during which he served as lieutenant in the medical corps, he accepted an appointment to the United States Public Health Service in Boston. In 1921 he was appointed district medical officer to the, then, United States Veterans, Bureau, District 1, Boston. He transferred from the Boston area to Washington as chief medical officer expert in the Veterans' Bureau, later becoming medical executive officer and then medical director in 1929.

BIOGRAPHY

Dr. Adams was born in Cambridge, Mass., on May 18, 1887, the son of Charles and Sarah (White) Adams. He is descended directly from Henry Adams on his father's side, who was a grandfather of President John Adams, and from Peringrine White, whose parents arrived on the *Mayflower*. He graduated from Rindge Technical School. He was active in both high school and college athletics, being prominent in baseball, football and hockey. He received his degree from Brown University where he was a member of Kappa Sigma Fraternity. He received his medical degree from Tufts College medical school in 1915. In 1908 he married Freda K. Knowles, of Providance, R. I.

Two of the prominent guests on the program to honor Dr. and Mrs. Adams will be Congresswoman EDITH NOURSE ROGERS, who is famous for her interest in veterans' affairs and in Bedford Hospital in particular, and Dr. Francis B. Carroll, area medical director of the Veterans' Administration.

[From the Lowell (Mass.) Sun of May 23, 1957]

REPRESENTATIVE ROGERS LAUDS DR. ADAMS AT RECEPTION AT BEDFORD—VA HOSPITAL HEAD RETIRING AFTER 25 YEARS AS INSTITUTION MANAGER

BEDFORD.—Dr. Winthrop Adams, manager of the Veterans' Administration hospital here for a quarter century, was honored at a farewell reception yesterday by Federal and civic leaders and associates.

During the program Dr. Adams was cited for his lengthy and meritorious service for the benefit of hospitalized veterans who have been under his care. He was lauded for his unselfish service and for his performance as the director of the VA hospital during the critical period when the patient load was so heavy.

One of the principal speakers on the occasion was Representative EDITH NOURSE ROGERS of Lowell, a longtime friend of Dr. Adams and of the hospital. During her talk, Mrs. ROGERS praised Dr. Adams as "the finest commanding officer in the Veterans' Administration and the finest medical director they ever had in Washington in the VA."

The Lowell congresswoman spoke of the enlightened administration of the hospital by Dr. Adams which has seen the institution pioneering in the use of all the new scientific methods and drugs in the treatment of mental illness. She spoke of the effective cures and how "Dr. Adams sent patients out into the sunshine and the world."

Speaking from her long experience with the Veterans' Administration in general and the Bedford Hospital in particular, Mrs. ROGERS said:

"Dr. Adams is sorely needed in the world today when so many are distressed and upset. He was a great soldier, a great doctor and a fine citizen. I do not know what we are going to do without him in Massachusetts or in the VA, but I am indeed glad that he will be nearby for counsel."

[From the Boston Traveler of May 21, 1957]

BEDFORD VA CHIEF CITES MENTAL HEALTH GAINS

(By Joe McLaughlin)

Tranquillizers and shock treatments mean little when families adopt the skeleton in the closet attitude toward the mentally ill.

That's the opinion of Dr. Winthrop Adams, manager of the Bedford Veterans' Administration hospital where 1,800 mentally ill veterans are cared for.

RETIRES NEXT WEEK AFTER 38 YEARS

Dr. Adams knows whereof he speaks. He retires next week after 38 years of caring for ailing war veterans.

In that span of years, he has seen the treatment of the mentally ill run the gamut. In World War I it was shell shock; in World War II, battle fatigue.

"Things have changed radically," the tall, scholarly-looking doctor said.

"The days of the tub-and-sheet treatment and the locked room have gone forever. Modern drugs and personal care have given new hope.

REJECTED PATIENTS SPECIAL PROBLEM

"But the feeling of guilt, or shame, has been and still is the problem among the families of some of our patients.

"We have still another group who are not susceptible to new methods of treatment. We call them rejected patients.

"These are the elderly veterans of the Spanish War or World War I. They have outlived their immediate families in most cases.

"Most of them could do very well if they had a home to go to. We're trying to do something about that.

FOSTER HOMES ASSIST SOME

"We started a pioneer program here at Bedford of assigning these oldtimers to foster homes. Right now, there are 45 or 50 out in private homes and doing very well."

Dr. Adams said there are some patients at the sprawling 354-acre hospital who have no visitors. They number between 100 and 150. Members of the women's auxiliaries of veterans' organizations see to it they are not forgotten at Christmas.

When Dr. Adams retires next week, he will be completing a career that started in the examining rooms of the old Veterans' Bureau on Cornhill Street in Boston. He was fresh from the Navy's Medical Corps then.

He served as district medical officer in Boston until 1924, when he moved to Washington as executive of the entire Veterans' Bureau.

He took over as medical director of the Veterans' Bureau in 1929. In 1930, he returned to this area as manager of the Bedford Hospital.

CAMBRIDGE NATIVE, BROWN, TUFTS GRADUATE

A native of Cambridge, Dr. Adams was a three-letter man at Rindge Tech, Brown, and Tufts, where he received his medical degree.

"Medicine in veterans' hospital has come a long way in those 38 years," Dr. Adams said.

"Back 20 years ago, we had a turnover of about 200 patients at most, in a year. We have more than doubled that figure today, averaging 500 sent back to their families each year.

"Personal attention has much to do with it, in addition to new drugs and treatments. We have sufficient personnel to enable us to give the individual patient the time and attention needed to help bring him back to the world of reality.

"All of these things combined have helped us rule out what used to be the last alternative—the lobotomy—cutting of nerve centers.

"We haven't performed one of those operations at Bedford now for 2 years. That's one thing I can look back on with pride after 38 years of dealing with the mentally ill."

Importance of Adequate Classroom Facilities

EXTENSION OF REMARKS
OF
HON. CHARLES B. BROWNSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. BROWNSON. Mr. Speaker, President Eisenhower has placed special emphasis on the importance of providing adequate classroom facilities for the education of our children. The Members of Congress with whom I have discussed this problem are as mindful of this growing need as our great President and his advisers. These legislators agree with the President that there is a need for more classrooms.

Most Members of Congress recognize, as did the President in his speech before the National Education Association that, "modern weapons must be manned by highly educated personnel if they are to be effective, and the energy of the atom can only be understood and developed by the most highly trained minds in the country." Congress realizes that education is indeed vital to national security.

Congress agrees with the President that schools are more important than our Nike batteries, our radar warning nets or the energy from the atom.

Many Members of Congress, however, can still remember when the President said, in 1952, "To bring government closer to the people we will set up these principles and adhere to them: That no Federal project, large or small, will be undertaken which the people can effectively do or be helped to do for themselves; that no Federal project will be undertaken which private enterprise can effectively undertake; that no project and no program will be started on the Federal level which can be undertaken and effectively carried through on the State or local level."

Those Members of Congress who really want better schools must, in all sincerity, ask the question, "What level of government is best able to finance, develop and plan the school construction essential to care for a rapidly expanding population?" The honest answer to that question does not seem to me to be, "The Federal Government."

Yesterday's Washington Sunday Star carried a very objective appraisal of the way my State of Indiana is trying to solve this problem without recourse to Federal printing press money or an increase in the national debt. True, this solution has raised our local property tax rates—the bank just asked me for another $8 a month to apply to my real-estate taxes, and Indiana has just raised her gross income tax by almost 50 percent. We are paying for our schools the hard way. We do not want any Federal aid for school construction because we do not expect to be forced to pay for schools for someone else after we have solved our own problem. If other States will assume the same painful responsibility, we will jointly point the way to lower Federal budgets, as well as increased sovereignty for the individual States. States rights with Federal aid is an incongruous cry too often heard on Capitol Hill.

Indiana turns gratefully to the Federal Government for national defense. We know what that costs and we pay our share willingly. With the Federal Government $276 billion in the "red," and with Indiana debt free, it would be unconscionable for the Hoosier State to dump its educational problems at the shrine of the Federal Government in Washington. In accordance with a unanimous consent request, previously granted, I will read the article from the Washington Sunday Star into the RECORD at this point.

The article follows:

INDIANA HAS NEW SCHOOL CONSTRUCTION PLAN

(By Phil Yeager)

Indiana has a notion that it can get the schools it needs without any particular help from Uncle Sam.

At least the Hoosiers have come up with an alternative to the "Federal aid" concept—an alternative which, if it works, might set a pattern other States will want to follow.

A lot of ingredients are mixed up in the Indiana formula, but the major ones are:

A system of private financing designed to get around the sluggish bond market and avoid the need for immediate big cash outlays.

A slashing of the legal redtape which hamstrings many States in contracting for new schools.

Unique teamwork between designers and builders in providing, at low cost, the flexible, modern schools demanded by the future.

Legislation begun by the Indiana General Assembly in 1955 and completed at the current session a few weeks ago laid the groundwork for the "Indiana plan."

Under the old system, a locality wanting a new school first acquired the necessary site. Then an architect drew plans for the school on speculation. If plans were approved by the school board, construction bids were asked. If and when bids were submitted within the desired financial limits, bonds were issued to finance the building. If the bonds sold, construction began.

Many States today operate in that fashion.

A PACKAGE DEAL

Under the new Indiana plan, a district wanting a new school advertises its intention to build with a description of what it wants. Bidders submit design and a construction bid combined, which cuts fees as well as costly construction corners. A single contract is let with a company which finances and builds the school, even providing the site if necessary. Component parts of the school are made, and sometimes partially assembled, at the builder's plant and shipped to the site where the school is erected.

Construction time under the new system is likely to be half, or even a third, that of conventional schedules. When the building is finished it is leased by the builder of the school board for a period of years, at the end of which time title passes to the appropriate school authority.

Here is what the State assembly did to get its plan set up.

To cut school costs without sacrificing quality, it passed an offsite construction act which permits the acquisition, assembly and construction of schools away from the eventual site. The act takes advantage of the economies allowed by prefabrication, but gets around the inflexibility of function often associated with prefabrication by providing for use of component parts which may be assembled according to need, location, size, etc. The parts can be made cheaply but meshed with any plans the school district may have in mind.

The law also authorizes the acquisition of plans, parts and construction in a single package contract.

To ease financing problems, the assembly passed a profit-and-lease act which authorizes private financing of new schools by permitting school boards to lease sites and buildings through private corporations for profit.

Under this law, school boards contract with private groups to provide the site and school and, at the same time, arrange for their long-term lease. A fair and reasonable rental is allowed such groups, the rental being paid by local taxes. Leases may run anywhere up to 50 years, but when they expire the school becomes the property of the community. School boards have the option of purchasing the facilities outright at any time, nominal penalties attaching only during the first 10 years of the lease if the purchase takes place then.

Four other States—Maine, Pennsylvania, Georgia, and Wisconsin— are also authorized to make use of the lease-purchase principle. But none of them has advanced to the stage set by Indiana and, apparently, no other State has ventured into this kind of financing.

NEW STYLES IN SCHOOLS

A critical element in the success of the Indiana plan is the development of more economical, more flexible schools. In this respect, parallel endeavors by two of the Nation's industrial giants, Republic Steel and United States Steel, are held highly significant.

During the past few years the steel companies have been working with designers to create flexible prefabricated components which will permit quality construction of the cheaper schools desired.

Republic has developed a pattern based structurally on 3-, 6-, and 9-foot component modules; it is a flexible scheme, and it permits a choice of different building materials such as tile, brick, concrete block, and porcelain panel to suit the needs and financial limitations of the builder. A United States Steel system is based on all-steel room units; it emphasizes more rapid construction and is somewhat cheaper to build.

Republic is completing the first of its modular schools at Hymera, Ind. United States Steel has finished 2, 1 at Gary and

the other a parochial school at Emmitsburg, Md.

In both systems costs range between $18,000 and $22,000 per room, whereas the national norm is around $30,000 or more.

This kind of saving, added to the economy of construction time, is expected to more than compensate for whatever cost increase, if any, comes out of Indiana's new private financing system.

THERE ARE QUESTION MARKS

The Indiana plan is not without its question marks.

First, how would the system benefit the poorer areas of the country where need is greatest and the tax base lowest?

Protagonists say that the actual cost to the community of the new component-part type of school is markedly below going rates in any part of the country—an absolute saving factor.

Meanwhile, the financing scheme puts a practical alternative at the disposal of small communities which cannot borrow the money or which do not have it on hand. Even in the larger communities it may make new schools financially possible. This is because in many areas (Indiana is one of them) the market is glutted with low-interest obligation bonds, or because the community has reached the legal limit of its borrowing power.

The system involves no big lump requisition of cash which major building programs usually require through a bond issue. Costs can be distributed among a number of financiers.

Finally, backers say, the Indiana plan may offer a lower and more flexible amortization schedule.

Second, would the plan conform to the laws of other States?

The answer is that in some places it undoubtedly would not. Some State constitutions, for example, do not permit title to facilities used for public schools to be in the hands of any owner but a governmental agency.

However, legislation sometimes can solve the problem. In Wisconsin recently, the State supreme court declared a school-lease plan invalid. Subsequent legislation smoothed the legal wrinkles.

Third, will financiers be willing to get involved without Government insurance to minimize the risks of having the school community's tax-base depleted, impaired, or withdrawn?

On this point there appears to be a difference of opinion. Some think it is unnecessary or undesirable. Others, however, think that a kind of Federal insurance, similar to the guaranty provided on FHA or VA loans, will be needed to induce price lessor corporations to put up the money. The idea is to guard against recession, in which case tax revenues to support lease payments might dwindle, and to guard against political changes which might find a school board reluctant to continue arrangements made by its predecessor.

It is reported that a delegation of interested businessmen will be meeting with Members of Congress in the weeks ahead to draft legislation that would authorize Federal insurance for such purposes.

Among those who feel that a Federal insurance plan is needed, there seems to be a companion belief that if it can be obtained Indiana's plan might well "go over" on a national scale.

Those who suggest that our school system cannot keep pace without Federal aid to school construction, and to education are somewhat less than realistic in their overemphasis on the Federal contribution to our educational system. I ask unanimous consent to read into the RECORD an article from yesterday's New York Times which details the Office of Education's actual figures on the Federal Government's 4.5 percent contribution for the school year 1953–54. Under unanimous consent previously granted, I will now read the article from yesterday's New York Times into the RECORD.

The article follows:

UNITED STATES LISTS SOURCE OF SCHOOL FUNDS—STUDY SHOWS COMMUNITIES PAY 54.7 PERCENT WITH STATES CONTRIBUTING 27.4 PERCENT

WASHINGTON, May 25.—Public school statistics compiled by the Office of Education for the school year 1953-54 show that local communities furnished 54.7 percent of school funds.

States put up 27.4 percent and the Federal Government 4.5 percent. The rest was from county and other sources. The total was $7,867,000,000.

In that year school expenditures increased 23.8 percent over those of the 1951–52 school year, to a total of $9,092,000,000.

The biggest proportion of this increase was in capital outlay for land, buildings and equipment. Capital outlay in 1953–54 totaled $2,055,178,000, as compared with $1,477,332,000 for 1951–52.

Total enrollment that year was 28,836,000, a gain of 23.9 percent over a 10-year period.

The instructional staff numbered 1,100,000, an increase of 8.5 percent over 1951–52. Average salary for this staff, which included teachers, principals, and supervisors, was $3,825. The average annual income of members of the Nation's labor force was $4,245.

TWENTY-FIVE PERCENT NEW TEACHERS

Almost 25 percent of the teachers were men, highest percentage in recent years. The report said that the record for male teachers was 43 percent in the school year 1879–80. The record low was 14.1 percent in 1919–20.

Transportation of pupils at public expense was said to be expanding. About a third of public school pupils were transported to and from schools.

Single-teacher schools were declining.

In a little more than 2 decades, the report said, more than two-thirds of the 1-teacher schools, which numbered 143,000 in 1931–32, have disappeared from the American scene.

There were 43,000 such schools in 1953–54. Sixty-four percent of them were in the north central region. In that region 1 teacher in 11 still taught in a 1-teacher school.

The 141-page biennial report is available from the Superintendent of Documents, Washington, D. C., at 55 cents a copy.

Armed Forces Day, Charleston, W. Va.

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. BYRD. Mr. Speaker, it is with pleasure that I direct to the attention of our colleagues the address delivered by Brig. Gen. C. W. G. Rich, Director of Military Personnel Operations for the Department of the Army, on the occasion of the Armed Forces Day ceremonies in Charleston, W. Va., May 18, 1957.

General Rich in his address described so well the methods by which the Army is today helping to deter war. His address follows:

ADDRESS BY BRIG. GEN. C. W. G. RICH, CHARLESTON, W. VA., ARMED FORCES DAY, MAY 18, 1957

Ladies and gentlemen it is fitting that all Americans take recognition of our Armed Forces for they are the very bulwark of our freedom. Today I shall touch briefly on some of the important points that we should emphasize on this particular occasion.

During the last 30 years we have seen the holocausts of World War II and Korea, the Soviet oppression in Hungary, and the present armed peace. The impact of these world events in shaping our military defense structure has affected every individual and community. It is our hope that we may minimize or even negate the occurrence of similar events in the future.

Always a good starting point is to ask "Why?"—in this particular case why a need for power for peace? To well informed Armericans who have watched the continuing pressures exerted by the forces of communism in Korea, the Soviet satellites, the Middle East, and in other areas of the world during the past several years, the answer is obvious. So I won't belabor you with an extensive discussion of world affairs. I believe the need can be summed up quite concisely in the words of our President when he said "A weak nation can bring neither hope to its own people nor help to its friends. It can only beg mercy of its enemies."

During these ceremonies today we are focusing our attention on only one segment of our national power—the military. But we should never lose sight of the fact that our real power lies in a nation strong economically and politically as well as militarily. This is the essence of national strategy. No one segment—neither the economic, the political, nor the military—must be so overemphasized that we become vulnerable in another area. And the same holds true on the military side. Our military must have strength in the air, on the sea, and on the ground. No one segment should be overemphasized if we are to have the versatility necessary to meet any condition that may arise in today's unsettled world. We must not gear our defense program to a single weapons system, strategic concept, or combination of allies. We must be capable of supporting national policy in all international situations. We should attract rather than repel allies.

Only by joint endeavor and integrated effort, relying on no single service, philosophy, or weapon, can our national military posture be such as to deter war or, the deterrent failing, to win victory in any type of war.

How then, do the Armed Forces contribute to the necessary national strength to deter war? Together, our land, sea, and air forces in Europe and the Pacific, standing guard day and night with the forces of our allies, constitute a living, visual proof of our Nation's strength. In a sense these forces are a form of insurance. We are expending annually large sums of money to provide not large, but effective military forces. These sums are the premium we must pay to insure this country against the effects of total war. I do not believe it is necessary to elaborate on the fact that the price of total war would not only surpass many times our current expenditures in terms of money but would result in substantial losses of that priceless commodity, our sons and brothers. Indeed as we conceive the nature of a future war, these towering mountains and fast-flowing rivers do not afford us the protection that they once did. The advent of the air age and atomic bomb may bring all parts of the earth onto the battlefield of the future.

There isn't time today to cover everything that all the services are doing, so I will speak only of my own service, the Army. In so doing, I wish to discuss briefly five ways in which the Army is today helping to deter war.

First, there are those Army deterrent forces deployed overseas which we have in Europe and also in the Far East. There, deployed along the Iron and Bamboo Curtains, they are a constant reminder to an aggressor that a forward movement into the areas which they defend will be promptly checked by American military strength. They are a constant reminder of the willingness of the American people to share the hazards of living in proximity to the Communist military power. We now have in Europe an Army of five divisions which constitutes an integral part of the NATO ground forces. Our deployments in the Far East are the residual strength to which our forces have been reduced since the Korean armistice. While the number of our divisions has been reduced from 8 to 3, there has been a compensation in the increased strength and efficiency of the Korean Army which now includes 20 infantry divisions and 1 marine division. Japan, also, is making progress in building up its own forces to add to the free world's defenses. All in all, it appears that our oversea deployments are about the most acceptable under the present circumstances.

The second component of the Army which contributes to the deterrence of war is the Army Strategic Reserve of active Army divisions at home. The readiness of these units is important for two reasons. First, they must be ready to move promptly to reinforce our overseas forces in case the latter are attacked. Second, they provide a worldwide strategic reserve of forces constantly ready for movement to any spot in the world where it is to our interest to resist aggression. The combat readiness and the mobility of these divisions are matters of primary national and international concern. Their visible strength in being is a reminder to an aggressor that in a short period of time the American flag can be carried by significant military forces into any part of the world. At the present time we have a total of nine divisions in the Army Strategic Reserve in the United States. Our primary concern is to guarantee their quality and their readiness to fight.

A third type of deterrent force is the antiaircraft element of the Army which contributes to the continental defense of the United States. It is essential to assure an attacking air force that our vital centers are adequately protected by forces capable of repelling or inflicting serious losses upon an invader. The Army's contribution is represented largely by surface-to-air missile batteries. As we know, the Nike Ajax was the first operational surface-to-air missile developed after World War II. It is now in position covering many of the important cities in the United States. It will be replaced progressively by its big brother, the Nike Hercules, which will be capable of firing missiles with a powerful warhead at incoming hostile aircraft. While we still have a certain number of conventional antiaircraft gun batteries in position, we plan progressively to eliminate the cannon and replace them with missiles.

A fourth category of Army deterrent forces is represented by our reserves—the National Guard and the United States Army Reserve. We have never had, and probably never will have, sufficient active Army forces to meet all of our military requirements of the early months of war. It is important that we have Ready Reserves capable of filling the gaps in our active Army structure and which will have the capability of generating new units in accordance with the mobilization requirements of war. The National Guard and the Army Reserve are designed to meet this indispensable need. Our efforts in the Reserve field are mounting as the result of the implementation of the Reserve Forces Act passed in 1955. The great merit of this bill provides the means for getting us reservists who are thoroughly trained and have a requirement to serve in Reserve units. Commencing in August of this year, all selective-service men who return to civil life after 2 years of active service will be required to join a Ready Reserve unit and to serve therein for 2 years. Thus, for the first time, we are developing sources of trained manpower which will progressively give new life and vitality to our Reserve forces structure.

The final category of Army deterrence is represented by the aid which the Army gives to allied army forces throughout the world. We cannot consider our own strategic and tactical problems without giving due consideration to the role of our allies. Thus the military missions which we have about the world helping to develop the defensive strength of friendly forces make a significant contribution to the overall deterrent effect. The manpower aspects of our contribution to the training of allied divisions is not great since our total manpower engaged in this important work does not amount to more than 6,000 individuals. However, these are officers and men of outstanding ability who have been carefully chosen because of their skills and their ability to teach. I can indicate, however, the magnitude of the Army effort in training foreign troops by pointing out that we are, directly or indirectly, helping to train over 200 allied divisions with Army missions or advisory groups in 44 countries of the free world. In addition, substantial amounts of the implements of war are being furnished our allies. This entails considerable logistical effort by our Army, extending from oversea depots to the military sources of supplies here in the States. Obviously, our allies make a major contribution to worldwide deterrence of aggression and thus our efforts are fully repaid to our country.

Now I have cited 5 categories of Army forces which are definitely a part of our national deterrence posture—our oversea deployments constituting approximately 40 percent of our active Army strength; the Army Strategic Reserve at home; the Army antiaircraft units defending the United States; our civilian reserve components; and the training missions engaged in increasing the defensive capability of our allies. This is the Army's contribution to our power for peace—our strength to deter war or to fight successfully if deterrence fails.

To insure that the Army will retain this vitally necessary strength, we have been making far reaching changes during the past few years—changes that are in progress today to add to the Army's capability to meet any challenge that may be presented at any time or any place. We are reorganizing our divisions to the pentomic concept, giving us greater adaptability for fighting any type engagement. The pentomic divisions, though smaller, can bring to bear increased firepower. New missile commands are being organized to translate the great scientific knowledge of our people into battlefield application. Our tactical doctrines are being revised to meet conditions which will exist in a faster moving, more fluid battle area. We are improving our communications to give us better control in situations where our troops will be widely dispersed. And these are but a few of the changes. They vary in scope from items the size of our newly adopted lightweight rifle to our largest missile; from the small mechanical mule for moving the infantryman's supplies in the forward areas to our largest tanks, from the one-man flying platform to large helicopters.

We have generally referred to these changes as evolutionary. But, when you consider that until just a few years ago the pace of warfare had for centuries been geared to the speed of the foot soldier and the horse and the power of rifles and short-range cannon, it would seem that our development over the past 5 or 10 years is more revolutionary than evolutionary—probably the most revolutionary changes in the concept and conduct of warfare in all the history of mankind—at least since the invention of gunpowder.

It is against this background of revolutionary change and fabulous scientific progress that the Army's greatest asset stands out more importantly than ever before—that asset is the man, the individual fighting soldier. The Army's new equipment, new organizations, and new doctrines are ineffectual without competent men to use the equipment and carry out the doctrine. So there is no place for the unqualified in our ranks today. To do our job, we must have men of intelligence to master the complex equipment and men of great moral courage to give strong leadership to our troops on battlefields, where the psychological impact of new weapons on the minds of men cannot be measured—where troops led by men without this great moral courage and fortitude could quickly lose their will to fight for their country and become a purposeless mob. The men in this Army of the future we are building cannot be second-rate Americans—they must be first-rate Americans in every sense of the word.

I suggest that as you examine the weapons on display here today that you give frequent thought to the man that these weapons are designed to support—the United States Army's soldier, the man in whose hands lie the final decision in war. It is this man to whom the Army, for its part of Armed Forces Day, pays especial honor. This is the man you can help by recognizing his real value to the welfare of our Nation. This is the man who, by his very presence on the ground, defies Communist aggression in our far-flung outposts around the world.

Yes; our Army is indeed a dynamic and mighty element of America's power for peace.

Ladies and gentlemen, the record shows that no armed aggression has ever been initiated within the range of the guns of the United States Army—this is a record we hope and pray that we can maintain intact. "Power for peace"—it may even insure that the ranks of those we honor and remember on the approaching Memorial Day, will be limited to those who fell in past wars and not in a war of the future.

Thank you.

Tuberculosis Control on Guam

EXTENSION OF REMARKS

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1957

Mr. SAYLOR. Mr. Speaker, I wish to call the attention of our colleagues to the successful tuberculosis-control program under way on our Pacific territory, Guam. For decades the Guamanians have been fighting their foremost enemy, tuberculosis, with limited success. However, during the past 5 years, thanks to a well-planned and executed program by territorial and naval officials, a definite decline in the tuberculosis death rate has been achieved and it is anticipated that before long the incidence, prevalence, and morbidity rate will approach the low that has been attained in mainland United States.

I submit for the reading of our colleagues an article entitled "Tuberculosis

Control on Guam," written by Dr. Niels H. Poulsen, Chief, Division of Public Health, Department of Medical Services, Guam, which appeared in the South Pacific Commission Quarterly Bulletin for April 1957 and describes the commendable control program that is being pursued.

The article follows:

TUBERCULOSIS CONTROL ON GUAM

(By Niels H. Poulsen)

Because of its isolated location, and since Navy clearance is compulsory for all travelers to and from Guam, this Pacific island presents an almost ideal place for the establishment of a tuberculosis control program with a fair chance of success.

Since its discovery by Magellan in 1521, Guam has been the focus of influence from many parts of the world. The first Spanish missionary who landed on Guam described the native Chamorros as a strong and healthy people, and estimated the population to be about 70,000 souls—a tremendously high population for an island of only 225 square miles of which a rather big part consists of mountains and coral rocks unfit for agricultural development.

Certainly, with a population of more than 300 capita per square mile, no serious epidemics or communicable diseases could have been in existence on Guam in ancient times without having limited considerably the size of the population.

Unfortunately the Spanish not only brought Christianity with them but also smallpox, tuberculosis and other diseases. Through the influx of war, spread of tuberculosis, and epidemics of smallpox during the next two centuries, the population was decimated to such an extent that in the beginning of the 18th century only 1,600 Chamorros, mostly women, had survived.

The permanent civilian population has now increased to 38,000, of which about 32,000 are native Guamanians originated from the Chamorros but mixed with Spanish, Filipino-Malayan, Japanese, Chinese, and in the later years also some American blood. The last 6,000 are mostly stateside Americans employed by the local government or in private business.

The military personnel, civil service, and their dependents and hired laborers, mostly Filipinos, constitute an even larger, constantly changing group of people under military jurisdiction and medically under the care of the military medical authorities. Due to scrutinous control before the arrival on Guam, tuberculosis is practically nonexistent in this last group, and when occasionally found the patient will as a rule be sent to the mainland and will therefore not figure in our statistics.

Our tuberculosis control program is therefore mainly aimed at eliminating tuberculosis among the native Guamanians where tuberculosis still is a major public health problem.

With the introduction of the three big drugs: Streptomycin, para-amino-salicylic acid (PAS), and isoniazid (iso-nicotinic acid hydrazide), the mortality of tuberculosis dropped drastically in the United States. In the last few years, however, the decline has been slower, and it seems that the modern treatment of tuberculosis at present has reached its maximum effectiveness to prevent death of tuberculosis, and an increasingly high number of patients will develop strains of tuberculosis bacilli resistant to the modern drugs.

In many cases modern therapy will be able only to prolong the life expectancy of the patient but not to completely arrest his disease to a degree where he does not constitute a potential danger of infection to his surroundings if not constantly under medical surveillance.

In Guam the decline in the death rate of tuberculosis has been still sharper than in the United States, but our experience here also points in the direction that modern therapy, including drugs as well as surgical procedures when indicated, will not be able to eradicate the remaining and still too big tuberculosis problem.

This theory is firmly supported by the fact that the morbidity, the incidence and prevalence of tuberculosis has not dropped nearly as rapidly as the mortality rate, neither in the United States nor on Guam. In the United States the mortality rate dropped 56 percent, in the period from 1952 to 1954 compared with only 8.2 percent, in the incidence of new reported cases. In Guam there were still 119 new admissions of active pulmonary tuberculosis to the TB hospital in 1955.

Although this is a drop in the incidence of new reported cases, this figure is at least 5 times as high as in the mainland per 100,000 population, and even if death from tuberculosis has dropped from its leading position as the number one killer on Guam to a minor position far below cancer, pneumonia and accidents, the prevalence of this disease is still so high that it causes more sick days and constitutes a bigger economic problem than any other communicable disease.

These facts made us realize that a more rigid preventive tuberculosis program was indicated.

B. C. G. VACCINATION PROGRAM FIRST STEP

The first step was the introduction of a B. C. G. vaccination program in April 1956. The program is aimed at vaccinating:

1. All newborn babies when they are 2 days old.

2. All school children, starting at the first graders.

3. All contacts of tuberculosis patients.

4. Other groups especially exposed to tuberculosis such as hospital and public health personnel and teachers.

All the Public Health district nurses were trained in the tuberculin testing, for which it was decided to use Old Tuberculin (O. T.) in the concentration of 1 : 100. Recent research work (e. g., the South Pacific Commission, Research on Tuberculosis, 1950) has proved that this test is superior to the commercial Purified Protein Derivative (PPD) available in this part of the world, and that a correctly performed test with this high concentration of O. T. will be positive in almost 100 percent of cases with active tuberculosis.

All cases who show a positive tuberculin reaction will have a chest X-ray to evaluate whether or not they have active tuberculosis, and active cases will be admitted to the tuberculosis hospital. All negative cases will have their B. C. G. vaccination for which we use deep frozen B. C. G. vaccine from the Research Foundation, University of Illinois. The vaccination is performed with the multiple puncture disk method as developed by Dr. Sol Roy Rosenthal, medical director of the Research Foundation. Eight weeks after the B. C. G. vaccination a retest with O. T. will be given to all who received vaccination and those who are still negative will be revaccinated.

The X-ray mobile unit consists of a General Electric X-ray equipment for 70 millimeter chest X-rays, installed in a truck with space for an X-ray technician, a small office for the nurse and dressing room for patients. Efforts are made to work out a schedule to send the unit to each of the 17 districts of the island once a year. The nurse will contact the local commissioner (chief of the village or district) and a committee will be made who will be responsible for getting all inhabitants of the district to have a chest X-ray, free of charge.

Competition is encouraged between villages to obtain the best results in the different districts where the X-ray mobile unit has already been. So far the percentage of population who had an X-ray varies from 70 to 85 percent. In the high schools it is hoped to get 100 percent of the students X-rayed.

The films are read by the radiologist of the health department. In all doubtful cases, he will request the patient to come to the hospital for a retake of a 14-by-7 inch film and for further evaluation.

All persons who apply for foodhandler certificate (foodhandlers, restaurant personnel, people working in bakeries, butchers, etc.) must have a chest X-ray once a year. The aim is that Guam shall be the first territory in the United States where all the population has had a chest X-ray.

Up till now approximately 3,000 persons have been tuberculin tested and/or B. C. G. vaccinated.

Re 1—Newborn babies: More than two-thirds of all babies in the civilian Guamanian population are born in the Guam Memorial Hospital, and it is the duty of the nurses in the obstetrical department to perform the vaccination against tuberculosis in the second day of the baby's life after a written permission from the parents has been signed.

This permission is given in almost 100 percent of the cases, and no complication whatsoever has occurred until now from the vaccination. If there is any known case of tuberculosis in the family, the baby will be isolated at least 8 weeks or until turned tuberculin positive.

The midwives will report to the district nurse whenever a baby is born in the district and the nurse will perform the B. C. G. vaccination. It is also the duty of the district nurse to perform the tuberculin tests 8 weeks after birth on the babies discharged from the hospital as well as on the babies born in her district.

Re 2—School children: One specially trained public-health nurse has been assigned to test and vaccinate all the 15,000 school children on the island, starting with the first graders. Before the schools were closed for summer holidays in 1956 she succeeded in testing and vaccinating 93 percent of all the first graders in the schools all over the island. The 7 percent not tested or vaccinated were either absent or their parents did not give the requested written permission.

Of the more than 1,200 children tested, 13 percent showed positive tuberculin reaction. These 13 percent did all have a chest X-ray and all contacts of these children were advised to have a tuberculin test and a chest X-ray in order to find the source of the tuberculosis infestation.

In this way our B. C. G. vaccination program has proved to be a most valuable source of case finding and has in a most encouraging way stimulated the interest and the knowledge of tuberculosis problems in the parents.

Re 3—All contacts of TB patients: In order to minimize the risk of spreading tuberculosis through discharged tuberculosis patients, a close cooperation between the tuberculosis hospital and the tuberculosis control unit of the public health department is effected. Before the discharge of a TB patient from the hospital, the TB control nurse will be advised. She will pay a visit to the patient's home, check the economic and sanitary conditions of the family and the patient will not be discharged before all contacts have been examined, tuberculin tested, X-rayed, and before all tuberculin negative contacts have had their B. C. G. vaccination and have turned tuberculin positive.

It is our experience that this plan has strengthened our TB control program considerably. Not only do we find 40 percent of our new cases among the contacts of known tuberculosis patients, but through the education and the interest that the whole family of the TB patient is taking in this program, it is much easier now to per-

suade the patient to follow his chest clinics and routine chest X-rays and thus in time find recidivists and have the patients readmitted to the TB hospital when necessary.

Re 4—Other groups especially exposed: More than 80 percent of the hospital personnel, public-health personnel, and the teachers so far examined were tuberculin positive. However, a few tuberculin negative cases were found among the personnel working in the TB hospital or in other ways in close contact with patients suffering from active pulmonary tuberculosis. These cases were all given B. C. G. vaccination and removed from their jobs until turned tuberculin positive.

It is evident that no person should ever be allowed to work in close contact with active tuberculosis before having acquired either a natural resistance or having been immunized against tuberculosis—that is, in both cases before a tuberculin test has proved positive.

EDUCATION OF PUBLIC IMPORTANT

Much stress has been put upon informing and educating the Guamanian population about this tuberculosis-control program.

Articles in the newspapers in English as well as in the Chamorro language, announcements in the radio, B. C. G. film shown in television and talks and movies about tuberculosis in village meetings and parent-teacher association meetings, have helped in disseminating knowledge and stimulating the interest in tuberculosis problems.

The Public Health Department, jointly sponsored by the TB and Health Association of Guam, has started a new quarterly health bulletin called Salud (the word used by the Guamanians for "Health"). The first number of Salud was dedicated to tuberculosis problems of Guam and 15,000 copies were distributed to all Guamanian schoolchildren.

COMPLETE CONTROL EXPECTED

Our expectations are high of having completely controlled tuberculosis on Guam within a limited number of years. Time alone will prove if our hopes can be realized, but our experience so far has shown us that the introduction of a well-planned B. C. G. vaccination program beyond its own merits also has helped us in stimulating the interest for tuberculosis in the population, helped us in finding new cases of tuberculosis and strengthened our control program. The TB and Health Association is jointly sponsoring the whole program, so that all examinations, including tuberculin tests and chest X-rays and vaccinations, can be offered to the population without any charge. Fortunately, as another proof of the fine reception afforded this program by the people, the Christmas seal campaign of 1956 was a greater success than ever before, and will thus make it possible for us to continue our efforts in 1957.

St. Mary's Church, Lynn, Mass., Celebrates 3 Anniversaries in 1

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1957

Mr. LANE. Mr. Speaker, the pride of a people in their home city takes many forms.

Perhaps some historical event that took place within its boundaries, has singled it out for special remembrance. Or the famous men and women it has produced. Maybe the accomplishments of its local government, or the success of its principal industry, or the accumulated advantages that make it a good place in which to work and live; these and other factors build proper pride in one's community.

But none is greater than its beautiful temples of worship, and the devoted pastors who are forever associated with them.

St. Mary's is the mother church of the large Catholic population of Lynn, Mass.

This week, it celebrates the 100th anniversary of its founding. By a most happy combination of circumstances, the congregation will also honor the golden jubilee of its pastor, the Right Reverend Monsignor Joseph F. McGlinchey, P. A., D. D., LL. D., who was ordained as a priest 50 years ago. At the same time they will observe the 30th anniversary of his pastorate at St. Mary's.

In a spirit of fervent thanksgiving, all the people of this industrial city will join to congratulate St. Mary's and its good shepherd, in a remarkable exemplification of faith and fellowship.

The pervasive influence for good that has been exerted by the mother church, is a source of pride for all the inhabitants of Lynn.

The story of St. Mary's humble beginnings, and the pioneering efforts of its first communicants, is one that will evoke general admiration.

I ask unanimous consent to insert in the CONGRESSIONAL RECORD a copy of the sermon of His Excellency Richard J. Cushing, archbishop of Boston, celebrant of the solemn pontifical Mass of Thanksgiving in St. Mary's Church on May 25, 1957, marking the opening of a 9-day observance of the centennial of the church, and the 50th anniversary of the ordination of the Right Reverend Monsignor Joseph F. McGlinchey, pastor for 30 years.

ARCHBISHOP CUSHING'S SERMON

It is with happy hearts, joyful and proud, that we gather this morning to commemorate the centenary of St. Mary's Parish and the golden anniversary of the priesthood of its illustrious pastor, Monsignor McGlinchey.

St. Mary's Parish is a monument to the zeal of the priests, the religious, and the loyalty of the people. No priest, no succession of priests, can possibly build parishes like St. Mary's, traditions like those of St. Mary's, unless they are supported and inspired by the loyalty and generosity of the parishioners.

There is a strange but real law of mutual formation constantly at work between priests and people in the Catholic Church and in every Catholic parish. God accomplishes His eternal decrees through priests and people alike, and priests and people exert a mutual influence on one another in the bringing to perfection of God's providence for His church.

Great priests make for great people; great people make for great priests. Holy priests lead people into the ways of sanctity; holy people bring out whatever of sanctity our priests may possess. Our parishes are not built by the priests alone, they are not built by the people alone. They are the glorious result of mutual inspiration, common labor, a truly family unity of action between our good priests and our great people.

St. Mary's is a perfect example of what I mean: The vision of the priest is made possible by the generosity of the people. The loyalty of the people receives its reward through the leadership of the priest—and thanks to both, a parish is given to God where the church universal functions for the formation of saints.

So the purpose for which we are met this morning is solemnly to commemorate the centenary anniversary of the priests and people of St. Mary's Parish. It is impossible to honor all who have passed to their reward but we salute them nevertheless with our prayerful remembrances in token of gratitude for the heritage they bequeathed to us.

Who are they? The pioneers who founded this great parish, the priests, people and religions who contributed by their works and sacrifices toward its growth and development. They planted the seeds and nourished them with their devotion. We have profited by the harvest.

At all times the Master of the Vineyard delegated His authority to outstanding pastors who guided and inspired the work. The most recent is Monsignor McGlinchey, a priest of God for 50 years. To him, our honored jubilarian, it becomes my privilege today to pay a special tribute.

The measure of any priest's greatness in the eyes of Almighty God is his faithfulness to the demands made upon him by the church to which he has pledged his service. As ministers of the sanctuary, we do not please God by accomplishments which are spectacular in the eyes of men if at the same time we are indifferent to those aspects of our ministry that are less attractive and less satisfying.

Nor are we great in the eyes of God if we are content with a quiet and uneventful existence, and shrink from the effort and self-sacrifice that would open up possibilities of extraordinary achievement.

The priest whom we most admire, as coming closest to what Christ our Lord would want him to be in our own day and age, is the priest who is first, last and always a servant of the church; the priest who gives his attention to every side of his ministry in the position to which he has been assigned; the priest who patiently accepts the personal sacrifices incidental to the faithful discharge of his duty; the priest who is ambitious to do great things, not that he himself may appear great in doing them, but rather that the church may prosper in its divine mission of gaining souls for Christ.

MEASURES UP TO STANDARDS

I am happy to be able to single out our eminent jubilarian, Monsignor McGlinchey, as one who measures up to these standards of priestly perfection. As he completes half a century of intense and dedicated priestly activity, his record of outstanding accomplishments presents itself not merely as the realization of the hopes and desires of his own interior life, but as the fulfillment of a ministry for which divine providence has destined him in a special way.

We cannot look back over the past 50 years, during which the archdiocese of Boston has grown from adolescence to adult maturity without thanking God that this period has been contemporary with the priesthood of Monsignor McGlinchey. For certainly our venerable jubilarian has done much for the church in Boston at a time when Boston has been able to do much for the church throughout the world.

Monsignor McGlinchey's golden jubilee is an occasion, therefore, not only for the personal tribute which we are happy to pay to him as his friends, but, far more significantly, an occasion for grateful recognition of his completely impersonal and self-immolating fidelity to his priestly ministry.

Fifty years ago today Joseph McGlinchey was ordained to the priesthood in the Eternal City of Rome, after competing his studies at the North American College. During his earlier years at Boston College he had impressed all who knew him as one whose efforts might be rewarded with extraordinary success. When he returned to Boston to work as a young priest in the parish of St.

Paul in Cambridge, he manifested at once those qualities of leadership and resourcefulness which made him an inevitable candidate for a position of responsibility in the archdiocese.

The late Cardinal O'Connell, then at the beginning of his own providential career as archbishop of Boston, turned to Father McGlinchey for the work which has proved to be so vitally important in the development of the church in modern times.

In 1911, still a young priest, Father McGlinchey was appointed diocesan director of the Society for the Propagation of the Faith, a position that he was to hold for 17 years.

Before Father McGlinchey's time the Society for the Propagation of the Faith had functioned much as does every diocesan agency in the early stages of its development. The needs of the missions were brought to the attention of the faithful. Appeals for missionary aid were made in a weekly column in the Pilot. Individual priests and individual parishes afforded considerable help to struggling foundations in fields afar; but as yet the work had not been organized in such a way that consistent results might be hoped for.

Father McGlinchey was able to effect a reorganization of the Society for the Propagation of the Faith and to bring it into proper integration with the worldwide missionary activity of the church. A new era was beginning in the relations of the archdiocese of Boston with the universal church. Only a short time before, Boston was itself dependent on aid from other countries.

Now it was to become a center from which help would be sent to missionary lands throughout the world. Father McGlinchey undertook the important task of reorganizing and coordinating the efforts in behalf of the missions which were being expended so generously by the priests and faithful of the archdiocese. Quietly, persistently, devotedly, he went from parish to parish, building on what had already been accomplished, substituting intelligently conceived plans for previous trial-and-error methods, developing in both priests and people a sense of personal responsibility for the spread of the faith which they were themselves coming to know more comprehensively.

It was my good fortune to come into contact with Father McGlinchey during my own years of preparation for the priesthood at St. John's Seminary. My interest in the missions was nurtured under his fatherly guidance and my understanding of the missionary needs of the church was deepened and broadened by what I learned as I listened to his monthly talks and met the missionaries whom he brought with him from time to time.

LEARNED MUCH FROM MONSIGNOR

As I became associated with Monsignor McGlinchey in the early years of my priesthood, I learned from him, as does every young priest from an older priest who is devoted to his work, many lessons whose value can be appreciated only with the passing of years and the gaining of personal experience with the problems of the church.

What I was able to accomplish as his successor was dependent entirely on what he had done before me, and on the possibilities which he had opened up to me as I worked under his direction. Monsignor McGlinchey was truly a leader to be admired, an exponent of the selfless and objective devotion to the interests of the church which transcends all human and personal considerations, a priest of sterling character, unfailing in his determination to work for God and unswerving in his loyalty to those whom God had placed over him as his ecclesiastical superiors.

Hundreds of young men and women inspired by Monsignor McGlinchey's forceful and supernatural presentation of the cause of the missions, have sanctified the land of their birth by leaving all things to follow Christ in fields afar. These courageous soldiers of Christ, among them Monsignor McGlinchey's own dear brother, whose mortal remains lie in the mission fields of India, have had no small part, we may be sure, in the spiritual growth of the church in our own archdiocese.

Nor must we forget the less important, but no less necessary part which Monsignor McGlinchey played in raising our diocesan contribution to the foreign missions from $53,000 in 1910 to more than $800,000 in 1927.

It was in this year that Monsignor McGlinchey completed the first part of his priestly ministry and turned to the work here in Lynn in which he has been so actively engaged up to the present day. One needs but to glance at the magnificent group of buildings from which the spiritual life of St. Mary's Parish radiated to understand how much the faithful of this entire area are indebted to Monsignor McGlinchey's broad vision of their needs and to his fearless determination to bring his widely conceived plans into execution. The priests who have assisted him here in St. Mary's over the years can see in retrospect how much he has done that would have been completely impossible under less efficient and more hesitant leadership.

I doubt if any parish in the archdiocese can present a more serviceable and a more comprehensive program of activity than Monsignor McGlinchey has developed here at St. Mary's. I doubt if any group of curates are more thoroughly cooperative and more genuinely interested in their work than those who labor under Monsignor McGlinchey's intelligent and inspiring direction.

To enumerate in detail all the accomplishments of Monsignor McGlinchey's pastorate would be to repeat what is well known to all of us. What stands out, I am sure, in everyone's mind as we rejoice with our jubilarian today is the personal triumph which he has gained in the development of St. Mary's High School. We need only to note the figures which are cited in the current Boston Catholic Directory; St. Mary's High School—618 boys, 456 girls. What joy must fill Monsignor McGlinchey's heart today as he reflects that under God's grace he has provided an education under the helpful influence of the church to these young people and for hundreds of their predecessors.

Let me recall another set of figures which I was happy to make public a short time ago. In our diocesan major seminary at the present time there are 22 graduates of St. Mary's Boys' High School. With the single exception of Boston College High School, no other high school in the archdiocese has so large a representation in our seminary. Looking back to 1927, we find that vocations to the priesthood and the religious life from this area were few and far between. We cannot escape the conclusion that St. Mary's High School, over the past 30 years, has provided the church with many vocations that would otherwise have been lost, and that to Monsignor McGlinchey belongs the inestimable merit of having organized an institution which has strengthened the foundations of the faith throughout Essex County.

We have had proof in recent months of the powerful influence for good which St. Mary's High School exerts not only on its own pupils, but on those of other schools both in Boston and throughout the country. In an age in which young people have become confused and disturbed by harmful attacks on the ideals of Christian virtue, St. Mary's High School stands out at a tower of spiritual strength and a center of effective resistance against modern paganism. May God bless Monsignor McGlinchey for having created and maintained in St. Mary's High School the standards of both scholarship and Christian character which have contributed so mightily toward sturdy citizenship no less than toward the building up of the Mystical Body of Christ.

The three decades of Monsignor McGlinchey's parish life have brought him sorrow and frustration, as well as deep and lasting consolation. He has experienced, together with his faithful parishioners, the direful results of industrial strife and economic depression. He has encountered the resistance of the subversive philosophy of life which cannot tolerate the growth of the church.

Some 10 years ago, a disastrous fire destroyed the beautiful church around which had clustered the precious traditions of this wonderful parish. Through all these reverses of fortune Monsignor McGlinchey has maintained a peaceful and serene confidence in the providence of God. He has met rising costs and diminishing resources by skillful management and personal sacrifice.

He has conquered ideological warfare by steadfast fidelity to the faith in which his own spiritual life has found its support. With supreme courage he began and completed the work of raising up this beautiful temple over the ruins of its flame-scarred predecessor.

LAUDS ACHIEVEMENTS FOR COMMUNITY

Today, as the shadows of the past lengthen over the vistas of the future, Monsignor McGlinchey stands erect and unshakable as the symbol of the strength of the church. In the annals of the city of Lynn and of Essex County his achievements will be recorded as an example of what a righteous man can do for God and country when he determines to live for others rather than for himself, and resolves to defend, both as a priest and as a citizen, the highest ideals of Christian virtue.

And in the annals of the archdiocese of Boston let me say myself what every priest of my time knows full well, I am here today in my present capacity because as a young priest only a few months ordained, Monsignor McGlinchey placed me in the diocesan office of the Propagation of the Faith Society. From that assignment came opportunities for me to serve the church in positions of great trust and grave responsibility. I can only hope and pray that I have been faithful to the extraordinary confidence he placed in me when the oils of consecration were hardly dry on my hands.

Ad multos annos, dear Monsignor McGlinchey. This is our prayer as we offer with you the holy sacrifice of the mass on this your day of golden jubilee. May He who has brought you to this day be with you as you complete in years to come the work which remains for you to accomplish.

May all whom you have helped to know God and to love Him carry into eternity the sentiments of gratitude which we who are with you today express in their name.

We salute you with love and admiration, O man of God. You have served God faithfully over these 50 years; He will be your strength and your consolation. May His blessing decend upon you and remain forever. Amen.

Slow Death to Native Industry

EXTENSION OF REMARKS

OF

HON. WILL E. NEAL

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1957

Mr. NEAL. Mr. Speaker, the payrolls of small but widely dispersed industrial plants have heretofore contributed much to encourage small communities' growth of home owning, civic minded, self-supporting citizens who constitute the eco-

nomic stability that tends to direct migrations to populous areas.

Facts presented in the following editorial explain why so many of our former prosperous communities are fast becoming ghost towns:

AN OPEN LETTER TO PRESIDENT EISENHOWER: WILL YOU LET OUR INDUSTRY DIE?

DEAR MR. PRESIDENT: Twice now you have been elected to the highest office in the land through an overwhelming outpouring of popular support based on your belief in the American way of life.

It is not for us to set in judgment of those phases of your administration upon which we are not qualified to speak. But there is one policy of government upon which we are well qualified to speak because it concerns us initimately. The tariff and trade policies of your administration are destroying the American pottery industry. The same may be said of the handblown-glass industry.

Here are the figures:

Members of the United States Potters Association, who make close to 90 percent of all the semivitreous dinnerware made in this country, produced 27,466,000 dozens of pieces in 1948. There has been a steady decrease each year since then, with the exception of 1950, until in 1956 the total shipment of domestic potteries amounted to 17,721,000 dozens.

Earnings in 1948 for these same plants were $4,150,350 after taxes. This figure rapidly decreased until in 1954 there was a net loss for all plants of $1,107,862. The net loss was slightly less for 1955 and no improvement is expected to be shown when 1956 figures are in.

During this period, which was probably the most prosperous the country has ever enjoyed generally, imports from Japan increased more than five times. In 1956 alone, imports of Japanese dinnerware sets were more than double those of 1955. While this was going on, four large American potteries closed their doors completely.

What has all this accomplished? If the motives behind your program are to help the Japanese, you have not even succeeded in doing this. Seventy-five percent of the cost of making American pottery is in labor; Japanese labor costs are barely one-tenth those in this country. Therefore, as far as the Japanese themselves are concerned, their pottery could be sold in this country at far lower prices than it is and still be profitable.

Is this fair? The Japanese laborer, whom we are apparently committed to uplift, is still working for next to nothing; the American importer is making a huge profit at the expense of the Japanese, and the American pottery-industry is dying a horrible death.

Raising tariffs will not help. Japanese ware as it comes off the boat is so cheap that tariffs would have to be at a fantastic rate to begin to bring it up to the American level. The only chance for the survival of the American pottery industry is the application of a quota on the quantity of ware to be imported from each country.

Will anyone suffer under such an arrangement? Not that we can see. The Japanese worker can't get much less than 15 cents an hour; the importer might have to settle for a smaller, but perfectly reasonable profit, and maybe the American pottery industry can turn some of its multi-million dollar losses into a small profit before it is totally extinct.

We've heard all the opposing arguments to this, including the one that if we don't help underprivileged countries they will turn to communism. Well, if the Japanese pottery worker isn't ripe for communism at 15 cents an hour under the present system, he looks pretty safe to us. And how about the American pottery worker? Aren't you worried about what he may be thinking?

The industry is ready to support its position with facts and figures and plans. Won't you listen before it's too late? Or must we soon sit down to dinner, raise our Japanese cups to our lips and silently mourn the passing of a great American industry?

Respectfully,

THE EDITORS.

P. S.—Not only do we hear of the tribulations of the dinnerware industry but also from the vitrified china industry, the artware industry and most recently the plate glass and window glass industries. Will you look into this from the American point of view?

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

International Atomic Energy Agency—Address by the Late Senator McCarthy

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, May 28, 1957

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the late Senator Joseph R. McCarthy at a Wisconsin GOP Club dinner in Milwaukee on February 9, 1957. It contains an analysis of the International Atomic Energy Agency and the proposed treaty, which I believe warrants the attention of all.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR JOE MCCARTHY, WISCONSIN GOP CLUB, LINCOLN DAY DINNER, FEBRUARY 9, 1957, MILWAUKEE, WIS.

My fellow Americans, there are a number of vital issues that Congress will be dealing with between now and July. I wish we had time tonight to discuss each one of them. But if I may, I would like to concentrate on a treaty—an extremely important treaty—that will come up for Senate ratification in a few weeks. So far, this treaty has been all but ignored by the press, and by practically all of the Senators who will vote on it.

Ordinarily, I would not take up your time discussing a treaty; they are usually fairly boring matters. But this one will not bore you. More likely, it will shock you; for it presents a threat of enormous proportions to the safety and independence of the United States. I am referring to a treaty that would in the name of "Atoms for Peace," set up an International Atomic Energy Agency.

I am sure you have all heard of the highly touted "Atoms for Peace" program. And you have probably been wondering what, exactly, is involved behind the glowing generalities. Well, this proposed treaty furnishes the answers—and they are not exactly reassuring. So tonight I suggest we lift up the curtain of pious platitudes, and take a look at the concrete proposals. Unless we can alert the American people to what is in the treaty, and arouse them, it is a foregone conclusion that when it comes up for ratification, the Senate will—as it has so often in the past—simply roll over and play dead.

First of all, what is this treaty supposed to accomplish? The idea, roughly, is to provide a means by which nations that have the technical know-how and material necessary to produce atomic energy can give their know-how and atomic materials to nations that do not have them. For this purpose, an International Agency is to be set up which will act as a kind of international broker to receive the atomic information and material from the "haves" and distribute it to the "have-nots." This idea of sharing the wealth might seem rather appealing on the surface. As we shall see, however, offering to share our atomic wealth is in a class with the Chicago Police Department offering to share its pistols and submachine guns with the Dillinger mob.

The United States is, of course, a "have" nation with regard to atomic materials—and we have already acted accordingly. The President of the United States has already promised to give 5,000 kilograms of Uranium-235 to the Agency for distribution to other countries, effective the day the Agency comes into being. What is more, we have promised to give an additional 15,000 kilograms during the next 3 years—provided a similar amount is given during that period by all of the other nations of the world combined.

I want to repeat that: as of now, the President has already committed the United States to make a gift of 5,000 kilograms of U–235, which will be made available immediately, no strings attached. In addition to that, we will give 15,000 kilograms between the time the Agency is set up and 1960, if the other nations of the world, combined, furnish a like amount.

No other nation has made any commitment whatsoever. Nor are they required to; the treaty provides, simply, that each nation "may" contribute "special fissionable materials" to the Agency, and that each nation "should" make available to the Agency technical atomic information. So that for the moment, the United States is the only nation on the "giving" end of the deal.

The "giving", of course, will be done by you, the American taxpayer. Twenty thousand kilograms of uranium 235 costs, roughly, $500 million—a half a billion out of your pockets to finance atomic energy development in foreign countries. And this does not take into account the operating expenses of the Agency of which, naturally, the United States will pay the lion's share.

But money—however important—is only a small matter compared with the threat to our national security presented by a gift of uranium 235. For U–235 is a military material.

We are planning to furnish the uranium isotope 235, enriched by 20 percent. Every competent scientist agrees that such uranium can be quickly brought from 20 percent enrichment to enrichment sufficient for production of atomic bombs. Moreover, the Atomic Energy Commission has said that 94 percent of the cost of enriching uranium to the 90 percent necessary for making atomic weapons has already been paid when the isotope is 20 percent enriched. This means that when the United States gives the International Agency 5,000 kilograms of U–235, we will, for all practical purposes, have given the material to make in the neighborhood of 550 atomic bombs.

By the time we have given 20,000 kilograms we will have given the material to make 2,200 atomic bombs—enough to wipe every major American city off the map.

In other words, what has been sold to the public in glowing terms as an "Atoms for Peace" program is, potentially, an "Atoms for War" program.

The nations that receive this atomic material are not, of course, supposed to use it for war purposes. But my point is that no responsible scientists and no responsible proponent of the treaty—in the administration or outside of it—will deny that this material can easily be converted into atomic bombs. That being the case, the next question becomes terribly important: Who will belong to the Agency—what countries will receive our atomic materials?

The answer is: Every member of the United Nations that ratifies the treaty. This means, of course, that Communist Russia, Communist Yugoslavia, Communist Rumania, Communist Bulgaria and all of the Communist satellites in Eastern Europe will belong, and will be entitled to atomic materials furnished by the United States. But that isn't all. Nations that are not members of the United Nations may, by majority vote of the Agency, be admitted to the Agency after it has been set up. Therefore, since there is no veto, it is a foregone conclusion that Red China will be among the nations to which we will be donating materials that can be used to make atomic bombs.

Now, how will the Agency make its decisions? This is another matter that the "Atoms for Peace" propagandists do not discuss.

Overall policy recommendations for the Agency will be made by a "General Conference" in which the United States will have 1 vote out of some 70 or 80.

The day-to-day decisions as to how and where the atomic material will be distributed will be made by a Board of Governors, to be composed of 23 members. Thanks to the incredibly confused language of the treaty, it is impossible to be sure just who will belong to this Board. As I interpret the gobbledygook, the United States is likely to have 1 representative on the Board, and the Communist bloc is likely to have 4. But another interpretation is possible: the United States could have 2 members on the Board, in which case the Communist bloc could have 8.

Anyway you look at it, the United States has about as much to say about what the Agency does as Uruguay or Afghanistan; and we have a good deal less to say than Soviet Russia with her string of satellites.

Now, my good friends, do you begin to see the picture? The United States will give to the International Agency 5,000 kilograms of U–235—15,000 more later on—which can be used to make atomic bombs, enough bombs to destroy every major city in the United States. We then lose all control over the U–235. The Agency, in which the Communists have more power than we do, can turn around and allocate our atomic materials to Nasser in Egypt, or to Nehru in India, or to Communist Rumania, or to Russia itself; and there is nothing we can do about it. But that isn't all.

The Agency can require the United States to put the material on American ships and deliver it, if you please, to Communist ports. I ask you, my friends: How insane can we get in this topsy-turvy world of ours? Incredible as it seems, I, a United States Senator, am being asked to vote for a treaty that would take your money and use it to pay for the transportation of our atomic materials to Communist nations—materials that may very well be returned to us in the form of atomic bombs dropping on American cities. I promise you, I shall never cast that vote.

Those who favor us joining the International Atomic Energy Agency answer these objections by citing the treaty's so-called safeguards. I say "so-called safeguards" because, for all the protection they give us, they might as well not be there. The treaty provides that the Agency shall have the authority to send inspectors into the countries that receive our atomic materials in order to see if the materials are being used for peace-

ful or military purposes. The inspectors are to be chosen by the Agency after consultation with the state or states concerned, that is after consultation with the country that has received the material.

Now there are at least four reasons why this inspection provision gives us inadequate protection. Here is the first. Our atomic experts have testified that in order to detect the diversion of atomic materials to military projects, inspection would have to be carried on 24 hours a day, 365 days a year. But the treaty does not require that kind of inspection; it leaves it up to the Agency in which the United States has only one vote.

Here is the second reason. The inspectors may themselves be Communists, and in all likelihood, at least some of them will. If the country to be inspected is, let us say, Communist Russia, the inspectors must be chosen after consultation with Russia. Whether this gives Russia a veto over the inspectors, the treaty does not make clear. In any event, the Russians and other Communist countries are heavily represented in the Agency itself, and they would be bound to insist on at least some of the inspectors being Communists. You can imagine the chances of getting a straightforward, unbiased report from Communist inspectors, or, for that matter, from a team composed of Communists, neutralists, and a few representatives of the Free World. The Communists know how to deal with such situations, and they would probably be able to obstruct things so that a report would never be made.

The third reason is this: even assuming that the inspectors report to the Agency that, say Egypt or Red China, has started to build atomic bombs with the material we have furnished, there is nothing the Agency can do about it except to deny any further materials to the country in violation of the agreement. And there is no assurance that even that would be done.

In other words, there is no corrective provision at all, no provision for going into the country and forcibly retrieving the material that is being used for atomic bombs. At best, the Agency will simply wring its hands and say, "Well, just for that, you don't get any more."

This assumes, of course, that a majority of the Board of Governors will go along with us if a Communist country starts making atomic bombs with our materials. The Board—on which we would have only one, or at most, two representatives—might very well close its eyes to the violation and, in that case, the shipments of atomic material will continue, and the United States will be left wringing its hands in a solo act.

But the worst is still to come. The fourth reason the so-called safeguards are inadequate is that, under the treaty, the Agency charter can, itself, be amended by a two-thirds vote of the General Conference. Therefore, it is possible for two-thirds of the members to get together and say, "We will amend this treaty so as to provide expressly that all materials that have been contributed to the Agency can be used by the countries that receive them for military purposes, and, in addition, we will do away with all inspections."

Such an amendment would not, to be sure, be binding on the United States unless the Senate ratified it. But supposing the Senate refused to ratify it; what would happen? Well, the treaty is very generous about that. In case an amendment is made that we can't stomach, we may withdraw from the Agency. That is just fine, isn't it? After we have contributed millions of dollars' worth of atomic materials to the Agency and after the Agency has decided, against our wishes, that it will formally approve the use of those materials for military purposes by our enemies, and will cancel all inspections, we may, if you please withdraw.

Wouldn't it be a good deal easier, my friends, if we were just to send a shipload of atom bombs over to the Communist empire and be done with it?

In short, the International Atomic Energy Agency is a device by which the United States can be trapped into building up the atomic armament potential of our enemies. Of course, the administration does not intend it to be used for that purpose; the point is that it can be used and most likely will be used, for that purpose under this treaty—our intentions notwithstanding. And I shall vote for no such treaty as that.

There is one further point I want to make. The United States has already entered into 37 bilateral agreements with various friendly countries concerning research and the construction of atomic power reactors, under conditions that provide some measure of self-protection to the United States. Therefore, why can't the "Atoms for Peace" program be pursued under these bilateral agreements? Why do we need this treaty? Why do we have to go into an international monstrosity that deprives us of our protection and that includes our enemies along with our friends as recipients of American largesse?

The answer is that there is no answer, except that some of the people who make our foreign policy are always at work, thinking up some new, splashy proposal to take our minds off our continued foreign policy defeats. This treaty is one such proposal. Well, I can tell you this: The United States is not going to defeat communism by trying to out-Hollywood the Soviet Union. Flashy, spectacular giveaway programs are no substitute for a foreign policy. And when they involve, as this one does, a dire threat to the military security of the United States, they must be firmly rejected.

Now, let me jump to a somewhat different, though not entirely unconnected, subject—the probable headlines in tomorrow's newspapers. It will be said in some quarters that President Eisenhower is in favor of the International Atomic Energy Agency and that, therefore, by opposing the Agency, McCarthy "attacked" Eisenhower.

Now it is perfectly true that the President has come out for the treaty I have been discussing with you tonight. I may add that I hope he will change his mind. In fact, I have been advised by some Republicans—not "modern Republicans," mind you, but the other kind—that the President was badly advised on the treaty and is now considering changing his position.

But regardless of what the President finally does, and regardless of his reasons for doing it, I am getting sick and tired of attempts to construe every difference of opinion on issues between the President and myself as evidence of a personal feud.

I have not the slightest desire to enter into a personal controversy with the President of the United States—on this or any other issue. I have never attacked the President on a personal level, and I shall never be provoked to do so. But this does not mean, I trust, that I must follow the President, willy-nilly, when I think he is wrong.

Yet, it is suggested in some quarters that I do just that. Let me read a part of a letter from a very good friend of mine who, because he is a good friend, I shall not name. This is my friend's advice: "Joe, what I am trying to say is that a tremendous number of people agree with your ideas and principles, but it is apparent to me that we must go forward along the conditions of the President, as they are, and not as we think they should be." That is putting the proposition in its baldest form; that we Republicans must conform with the conditions the President has laid down, even though we believe them to be unwise and wrong. Now I ask you: Can any man of integrity do that? Do you want me to do that?

There is another course, one that I prefer. I have taken an oath to defend the Constitution of the United States as best I can; and I am under a solemn contract with you, the people of Wisconsin, that as long as I am your United States Senator I shall work for the policies I believe to be right. Therefore, when the administration adopts policies that I think are wrong, I have but two alternatives: Either I can oppose those policies, or I can resign. I have no intention of resigning.

To the extent that I am able to support the policies of the administration I shall continue to do so, readily and enthusiastically. But if the administration promotes policies that I believe will harm our country, then I shall oppose those policies and champion others. I shall take my stand on the issues and I shall do so regardless of the respect I might have for the President and his office, and regardless of the contempt I may have for the "palace guard."

Let me add that this would be my policy no matter who is in the White House—whether it be Dwight Eisenhower or Harry Truman, or, for that matter, someone like my great and good friend, the late Senator Taft. If Senator Taft were President, I imagine there would be a number of occasions when I would feel I had to oppose some of his policies—and being acquainted with the right and duties of a United States Senator, that is exactly what he would want me to do.

As a matter of fact, when we were in the Senate together I did oppose Taft on a matter very close to his heart. I thought that Taft's housing bill was, in some respects, inadequate, and, in others, to costly and unrealistic. As a result, I rewrote the entire Housing Act, which, incidentally, passed the Senate without a single dissenting vote. Bob Taft bore me no ill will for that; in fact, as I have indicated, he ended up supporting my bill. I do not, obviously, insist that President Eisenhower adopt my views. But I do insist that the differences of opinion between us be resolved on the merits of the issues that separate us.

One issue, for example, on which I do not see eye to eye with the President is the size of this year's budget. The administration's budget for 1958 is a call for Federal spending that, believe it or not, far outdoes Harry Truman in his wildest spending spree. A brief look at that budget will, in Secretary Humphrey's phrase, "curl your hair."

The President's 1958 budget figure is $71.8 billion, but this is only a part of the picture, for if we include, as we must, the amounts to be spent from so-called trust funds for various welfare measures and highway construction, the figure is $84 billion. This is the highest budget since World War II—even higher than during the Korean war years.

Now if, from this $84 billion, we deduct $45.8 billion which will be spent on national defense and our foreign-aid programs, and also $7.4 billion that have to be spent in interest payments on our national debt, we find that the administration is proposing to spend $30.9 billion on domestic measures alone. I ask you to compare that figure with the last and highest budget of Harry Truman, which allotted for domestic measures $19.7 billion. Therefore, incredible as it seems, the 1958 budget is $11 billion, or 56 percent higher than the last Truman budget—and this only in the domestic area.

The President sought to explain this amazing budget the other day by saying that the American people "desire" all this welfare spending. Well, you might desire a new car or a mink coat for your wife, but perhaps you can't afford it. Likewise, I believe this Nation cannot afford to go on spending beyond its means. I believe that what the American

people desire above all is relief from the crushing burden of high taxes, and they are well aware that the only way to get tax relief is to stop spending. I shall, therefore, do everything I can to cut down this year's budget.

Let me mention one further matter on which I have differed with the President, and then I will let you go in peace. Back in the summer of 1955, you will recall, I vigorously opposed the President's decision to meet with the Communist leaders at the so-called summit meeting at Geneva. I said that it was unwise to take Communist claims of peaceful intentions at face value, and that we should not talk with them unless they agreed to discuss freeing the satellite nations. I was roundly criticized for this stand on the grounds that I was trying to "tie the President's hands."

Well, you all know what happened. Every commentator, from Walter Lippmann to Fulton Lewis, Jr., maintains, now, that the President was mistaken to endorse the "spirit of Geneva," and that great harm followed from it. The President himself, in his address to Congress last month, said much the same thing. He conceded that the administration had indulged the hope that the Soviet pattern would change after Stalin's death, but that such hopes had proved illusory. I think it follows that if more Senators had spoken their minds on this issue at the time, instead of abjectly deferring to the judgment of the White House, we would be better off today.

So let us, my fellow Americans, put the highest premium on independent thought. Let us go forward fighting for the things we believe in, earnestly but without rancor. Only in this fashion will we prove worthy of the proud heritage left us by Abraham Lincoln.

Truman Cautions on Fallout Fear

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 28, 1957

Mr. JOHNSON of Texas. Mr. President, in an article distributed by the North American Newspaper Alliance, and appearing in the New York Times this morning, former President Harry S. Truman expresses his deep faith in the future of our country.

Mr. Truman—always a fighter—calls for positive efforts to solve the great problems of our times. He tells his fellow countrymen that "we must not be frightened by words and phrases."

Mr. President, I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRUMAN CAUTIONS ON FALLOUT FEAR—URGES UNITED STATES NOT TO WORRY, BUT TO MOVE POSITIVELY—COUNSELS ON INFLATION

(By Harry S. Truman)

I think it is about time we used some horse sense in our approach to two problems now uppermost in the minds of the people of the world.

These problems are the fear of contamination from nuclear fallout and the danger of growing inflation in the United States.

How the United States deals with these two critical issues will have a profound effect on the future of peace and the well-being of people everywhere.

There is an increasing anxiety about these matters, which, if allowed to continue, could lead us to a kind of panic, robbing us of the calm and courage that have been our tradition.

I am confident that with patience and fortitude we can resolve the serious challenge and danger of the nuclear age.

And I believe that if we apply wisely and boldly the knowledge we gained in overcoming the big depression of the nineteen thirties and make use of existing Government machinery, we can prevent runaway inflation.

To be panicked by fear at this stage would serve only the enemies of freedom and democracy and do us irreparable harm.

We may be getting to a point where there can be an even more dangerous fear than the fear of radioactive fallout, and that is the contamination of our will and spirit by another kind of fallout—the fallout of fear.

We must not be frightened by words and phrases. Take the word "inflation." It has become a crazy word, indiscriminately used, to worry those who have little understanding of or faith in the basic soundness of our economic strength and our institutions.

Nor should the awesome implications of the term "radioactive fallout" cause us to abandon ourselves to despair.

It is true that radioactive fallout could grow into a menace. But already it is being distorted by well-meaning people beyond the scope of its immediate threat, and, what is worse, it is being cynically exploited by our enemies in an effort to throw us off balance.

Many nations around the world, dependent upon our economy, are asking today what the chances are of serious inflation in the United States in the foreseeable future. The Communists, of course, who have been waiting for our economy to collapse, have been looking hopefully for signs of a runaway inflation.

I think it would be a serious mistake to confuse the kind of inflation we now have in this country with the catastrophic paper money inflation Germany experienced after World War I. Germany, at that time, issued astronomical amounts of paper money with nothing tangible to back it up, and with industry at a standstill and millions unemployed.

We have made sure that nothing like this type of inflation can happen in this country. Since our last big depression, we have enacted into law many protective measures to guard against any serious breakdown of our economy.

Any country that operates under a system of free competitive enterprise, such as ours, should always be administered in the interest of all the people. This applies especially to a country like ours, which is fundamentaly rich in natural resources and productive capacity.

We should have no fear for its future. Since the last depression we have achieved so vast a productive capacity that not only have we been able to meet our own demand for an ever-increasing high standard of living, but we have also been able to assist millions of people and many nations to be free and self-sustaining. History records no like performance by any other nation.

STEADY RISE IN COSTS

But we must face the fact that in the last 10 years there has been a steady rise in the cost of things our people and our Government buy. At the same time, the value of the dollar has been depreciating at a faster rate, particularly during the last 3 years. This is because the purchasing power of the people has been going up at a greater rate than the rate of production of goods and services.

I do not wish to minimize the serious consequences of the type of inflation we are now experiencing. It has already brought hardships to a large segment of our population, in the cities as well as on the farm, and especially to those who have to live on pensions and fixed incomes.

I would like to point out that the inflation spiral had its biggest increase during the period when the advocates of hard money took control of our finances. It is obvious that is no way to deal with inflation.

We have learned from the experience of several costly depressions in this country that there is only one sure way to sound economy and general prosperity. And that way is to encourage and foster a constantly expanding economy. When supply and demand are in balance in a free competitive economy, prices will stabilize and inflation will be held in check.

One of the great lessons some of our enlightened industrialists have learned from their mass production experience was the wisdom of reducing the costs of goods to the consumer, as they achieved greater productivity. They have learned to depend more on volume than on a high rate of profit.

URGES CURB ON PROFITS

Some appeal has been made to leaders of key industries voluntarily to curb a growing appetite for higher profits. So far the response has been feeble and discouraging. If industry continues to be unresponsive, it may well be in for some Government pressure to do what it ought to have the good sense to do voluntarily.

I know that labor leaders are giving serious thought to their role in this situation, and I am sure that in their negotiations with industry they will do what is best for the national interest as a whole.

Regardless of what temporary difficulties we may encounter in the corrective steps we must take to deal with inflation, let us remember that this country is on the way to an ever-growing general prosperity. We must not be deterred or hampered by gimmicks or devices that protect the few, at the expense of the whole people, such as hard money.

Our history has shown that after every crisis we took bold new steps to build and expand our economy within our own frontiers. And by a broader distribution of our natural wealth among all our people we attained general prosperity.

EXPANSION OF PROSPERITY

Today the United States, with all other friendly and cooperative nations, can look forward to a greater expansion of prosperity far beyond all our dreams. All we need to do is to undertake the proper development of vast areas and virtually unlimited resources in many parts of the world; to work together in the common interest of the common man everywhere.

The rehabilitation of Western Europe, and the development of Africa and the Middle East, with their great resources, as well as the development of the practically untouched resources of the Western Hemisphere, should provide mankind with opportunities for advancement for centuries to come.

Man has progressed as he mastered and harnessed the forces of nature, and the greatest of his strides have been made in the first half of this century. Man must now learn to live with the prodigious power of the atom that he has unlocked and that he must now master for peaceful purposes.

FEARS "FOOL ADVENTURER"

The future of civilization has never been more promising. But seldom has mankind been confronted with a greater risk, because there exists today the possibility that some fool adventurer in possession of nuclear weapons and bent on conquest will trigger

off another world war. No one knows how catastrophic a nuclear war would be to civilization, but everyone should do his utmost to prevent it.

We may, therefore, have to run some risk of an occasional radioactive fallout in order to conduct the experiments necessary to maintain our nuclear strength. I have felt from the very beginning that the only way we stand a chance of avoiding a nuclear war is by being strong enough to discourage any aggressor from being tempted into any such adventure.

KEEP FALLOUT TO MINIMUM

Let us keep our sense of proportion in the matter of radioactive fallout. Of course, we want to keep the fallout in our tests to the absolute minimum, and we are learning to do just that.

But the dangers that might occur from the fallout in our tests involve a small sacrifice when compared to the infinitely greater evil of the use of nuclear bombs in war.

We must not be panicked by the Soviet campaign of fear incitement either through threats of the use of the bomb or by their propaganda of the horrors of the fallout intended primarily to cripple the defense efforts of the West.

When the Soviet Union is prepared to join with the West in a genuine and foolproof program of control of nuclear energy for peaceful purposes, then the crushing burden of armaments will be lifted from civilization.

Until that day our only safe course is to remain strong, be patient, and continue to improve our knowledge of this great new source of energy.

Teacher of the Year

EXTENSION OF REMARKS
OF

HON. GEORGE H. CHRISTOPHER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1957

Mr. CHRISTOPHER. Mr. Speaker, I rise to pay tribute to Mrs. Mary Field Schwarz and Mr. Guy Bizzell, both of whom were selected to share the McCall's Teacher of the Year award. Mrs. Schwarz is a resident of Independence, Mo., located in my congressional district.

Mrs. Schwarz and Mr. Bizzell were selected from teachers nominated by State departments of education in all parts of the Nation at the invitation of Dr. Lawrence Derthick, United States Commissioner of Education, and Dr. Edgar Fuller, executive secretary of the Council of Chief State School Officers. Representatives approved by the Office of Education and McCall's studied and observed the nominees at work over a period of several months. From their recommendations, the editors selected Mrs. Schwarz and Mr. Bizzell, who, together, earn the sixth citation in McCall's annual project honoring teachers.

[From McCall's for June 1957]

McCALL'S TEACHER OF THE YEAR—A GRADE-SCHOOL TEACHER FROM MISSOURI AND A HIGH-SCHOOL SPEECH INSTRUCTOR FROM TEXAS SHARE EDUCATION'S HIGHEST HONOR

It is rare that the distinguished talents and achievements of two nominees for Teacher of the Year are held to be evenly enough matched to justify a tie for first place. It is therefore with special delight and pride that McCall's names both Mrs. Mary Field Schwarz, of Independence, Mo., and Mr. Guy Bizzell, of Austin, Tex., co-winners of the 1957 award.

Mary Field Schwarz regards the 37 boys and girls of the third-grade class she teaches as of an age at which they particularly want adult attention. And this, she feels, is what makes them her favorite age to teach. Mrs. Schwarz sees her job as helping her pupils develop a feeling of security and belonging. She promotes this feeling through devices which enable each youngster to check his progress against previous performances.

A housewife and the mother of a 15-year-old son, Mrs. Schwarz places importance on environment—that is, atmosphere conducive to learning in classrooms. Her own classroom is in a once-condemned church renovated to accommodate the overflow of pupils from Bristol School, located in Independence, Mo., but part of the Kansas City system. Cubbyhole classrooms open off a large central foom, formerly the Sunday-school assembly hall, but clever planning by Mrs. Schwarz has made all the tiny rooms a center of interest to third graders.

Each of these rooms is a center of interest for a different reason. In one cubicle an easel stands near a bright window, with a supply of paints, brushes, crayons and other art needs on a table nearby. Another is the reading room, identified by a display of book packets and books. A globe, atlas, morning paper and geography books on a table in another room challenge the young students to look up the often-changed questions posted in the room. ("Where on the earth could two men walking straight north bump into each other face to face?" a question may read.) The "science room" may one month sport a fishbowl with a sign announcing: "We enjoy our guppies. The female guppy bears living young which can feed and spawn. The male is spotted and streaked with colors." Another card asks: "Did you know gelatin from calves' heads is used as a stiffener for ice cream?"

Principal Newkirk says: "Mrs. Schwarz is a very informal teacher, but her children always rank well on standardized achievement tests. It is not unusual for her to have several pupils who can read on a 7th- or even 8th-grade level."

Parents like especially Mrs. Schwarz's way of imbuing their offspring with confidence and a sense of responsibility. As a teacher she expects courtesy ("We get along better if we take turns to talk," she tells them). She promotes self-confidence ("Karen wants the fun of finding out herself") and treats her pupils as equals ("Your way may be as good as mine").

Regarded by her colleagues as an attractive, versatile, and tastefully dressed woman of 38, Mary Field Schwarz is a native Missourian whose parents are associated with Central College, a 4-year liberal arts school in Payette and the alma mater of both Mary Field and her sister.

During her first year of teaching, Mary Field met Lieutenant Howard C. Schwarz, now an electrical engineer but then himself a teacher at Wentworth Military Academy in Lexington, Mo. Married to Howard in July 1940, Mary left teaching during the war to have a son. Her husband, by then a lieutenant colonel, was badly wounded in World War II, and upon his separation from the Army the Schwarzes made Independence, Mo., their home. Mrs. Schwarz had answered the call for more teachers by the time her son was in second grade.

Although her training was for high-school-level teaching, Mary Field found she liked elementary-school children so much that she began attending Saturday and evening classes at the University of Kansas City to qualify for an elementary-school teaching certificate. Four summers in addition were spent at Teachers College, Columbia University, New York City, for a master's degree in elementary education. Her widowed mother, retired from teaching, served as housekeeper for her daughter's son and husband back in Missouri.

Mr. Schwarz is fully aware that his wife will never give up studying and taking self-improvement courses. In addition to American history, government, physical education, German, water-coloring, public-speaking, interior decoration and French—all pursued by Mrs. Schwarz as a housewife—she studies voice and has sung with the chorus of the Kansas City Philharmonic Orchestra. Her husband and son frequently sit together in church while Mrs. Schwarz renders an alto solo from their church choir.

Guy Bizzell deliberately chose speech, its teaching and its practice, because he always considered himself to be shy and inarticulate. As a teacher of elocution and high-school English and as coach of the debating team at A. N. McCallum High School, Austin, Tex., this earlier assessment of himself perhaps explains the care and interest he invests in his students today.

Students have only high praise for Mr. Bizzel, looking upon him as both instructor and friend. "I have never experienced the feeling of not wanting to go to Mr. Bizzell's class," said one student, "I know from the first minute to the last he will have something worthwhile planned for us to do. We never have to do anything without his first explaining why we need to study it, so we do it in a sense of cooperation and often with zeal."

"It was in English literature class," a senior student adds, "that I first learned of Mr. Bizzell's devotion to the speaking, understanding, and teaching of poetry and literature. It was a joy to be in his class. There were many morning when I wished the class would last 2 hours."

An admiring Bizzell colleague said recently: "When you get high-school pupils to hurry to a class in Shakespeare so they won't miss a thing, as Bizzell can do, you have achieved the pinnacle."

A fundamentally shy person, as Mr. Bizzell believes himself to be, is often able where other teachers are not to exert the humor, sympathy and the respect for personality that builds the stature of a teacher in the watchful eyes of his students.

A family man, father of two children, 7 and 8, Bizzell lives in a small suburban home a mile from the high schol. Because of the repair and enlargement now necessary on their home and his modest salary of $5,125, the Bizzells do not own an automobile; Bizzell walks the mile to and from school each day. In fact, he frequently makes two round trips a day when debate practices and other evening meetings are scheduled.

Guy Bizzell is a native Texan. His father was a farmer and cotton-gin worker, his mother a teacher before her marriage. Higher education during the depression of the 1930's was a particularly difficult and costly proposition, and Guy's first year was spent commuting a considerable distance from his home to Lon Morris Junior College; his family could not afford his support at any school where he could not be a day student. His next 3 years were spent at the University of Texas; the financial benefit for State residents again made the choice irresistible. After 4 years in the Army, Bizzell entered Northwestern Universitys' School of Speech for the summer and returned to the high-school teaching job in Austin, Tex., which he had given up for the service.

The swelling population of children from wartime marriages soon necessitated dividing the Austin High School into three high schools, and Bizzell was a voluntary transfer to the new A. N. McCallum High School, which recently has been desegregated. Bizzell has a New student in two of his speech classes.)

Bizzell has taught his pupils the technique of "choral speaking"—several persons speaking poetry or prose in unison. Parents who often make up the audiences of these performances "don't see how he does it." His groups have appeared on radio and television as well as before teachers' associations and reading conferences at the University of Texas. Guy Bizzell himself writes much of the material for these programs.

His extracurricular attitude toward his students constantly amazes them. "I surely hope you are feeling better today," he will say with a smile as he signs an absence slip. Each student feels he is an individual in the eyes of Mr. Bizzell. Nor does Bizzell tolerate unkindness on the part of one student toward another. His classroom manner is informal—mild but controlled. He has been known to forego his lunch hour to give extra assistance to a student. "You never fail to receive some kind of greeting from Mr. Bizzell when you pass him in the halls," one of his pupils say. "He is never too busy to talk to you."

To Guy Bizzell the benefits flow in the opposite direction. "I like teaching because it keeps me in close contact with young people and with ideas," he explains. "I only hope that my students learn half as much from me as I learn from the experience of teaching them."

The Natural Gas Situation

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 28, 1957

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Cause and Effect," which was published in the Washington (Pa.) Reporter of May 25, 1957. The editorial refers to comments by the distinguished newspaperman, Arthur Krock, of the New York Times, on the subject of the natural-gas situation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CAUSE AND EFFECT

Arthur Krock of the New York Times is widely regarded as one of this country's most authoritative writers on national affairs. So something he said recently about the natural-gas situation is of unusual importance.

The price of natural gas which ultimately goes into interstate commerce, is now federally regulated at the wellhead—right where it comes out of the ground. This regulation came about as a result of a Supreme Court decision and a subsequent Presidential veto of a bill which would have freed the producers of these controls. The veto, incidentally, was used because of lobbying activities pursued by a few of the bill's advocates—and even in his veto message, the President strongly endorsed the bill's objectives.

Now Mr. Krock writes: "Fifty percent of the natural gas that is marketed in Texas is consumed inside the State. The other 50 percent provides heat and power for private and industrial consumption in other States. But there is a growing disposition among Texas gas finders to quit searching for gas and hold what they have found until 1 of 2 developments occurs. The first is the arrival of a State market for as much gas as Texas can yield. The second is the abolition of Federal control of prices for gas sold at the wellhead to the companies which put it into interstate commerce." If this trend continues, Mr. Krock adds, "* * * it is entirely possible that within a few years—maybe 10—the outside communities that are dependent for heat and power on natural gas will become hardship cases."

The proponents of regulation claim it is in the interest of gas consumers all over the country. Actually, it threatens to deprive those consumers of being able to get any gas at all. Here is an example of cause and effect with a vengeance.

Interest Rates

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Tuesday, May 28, 1957

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Interest Rates," which was published in the Washington Daily News of May 23.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INTEREST RATES

High interest rates on the public debt—now costing in excess of $7 billion a year—are chickens come home to roost.

Congress is about to question the Treasury on these increased rates which obviously swell the income of the bondholders.

But even at the high rates, the Treasury is having trouble selling bonds to provide money to redeem older bonds now falling due.

It is probable the Treasury will have to raise rates still further. It will have to pay the going price in competition with others who want to borrow money.

There is, of course, an alternative under which interest rates on the public debt can be cut to 2 percent, or 1 percent, or nothing.

Under this familiar method the Treasury simply sells bonds to the Federal Reserve which prints the money to pay for them. The Treasury might as well run its own printing presses. The process isn't quite that simple but that is, in effect, what the Federal Reserve did until it quit supporting the Federal bond market late in the Truman Administration.

But printing-press money, by whatever name, still is printing-press money. Print enough of it and you've got marks, or francs or lira or cigarette coupons. The effect of the printing press is inevitably inflationary. It was this system, used extensively during the New Deal, which watered down the dollar and ran up the grocery bill.

The inflation thus deliberately created is an important reason for our vast Federal budget including service of the debt, which is money spent on the easy-payment plan. Like all such expenditures it has to be paid back the hard way.

A good way to push the budget past the $100 billion mark would be to start the presses again. There would be an immediate saving in interest charges. But inflation in the cost of the things the Government buys could cost billions more than the savings.

And—a matter of intimate concern to everyone—the grocery bill and all other family expenses would go right on up with Government costs.

There's one sound way to reduce the cost of serving the debt. That is to reduce the debt itself.

Representative Fogarty and the President's Budget

EXTENSION OF REMARKS
OF
HON. THEODORE FRANCIS GREEN
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, May 28, 1957

Mr. GREEN. Mr. President, I request unanimous consent to have printed in the RECORD an editorial from the Providence Journal of April 9 entitled "Mr. FOGARTY Confounded the Republican Economizers."

After reading President Eisenhower's television address regarding his budget, I could not help but recall that his source of aid in saving one of the most important phases of his own budget in the House of Representatives came from a Rhode Island Representative, Hon. JOHN E. FOGARTY.

With this editorial I desire to have inserted in the RECORD a letter which was published in the Providence Journal of April 14, from Francis X. Kennedy of West Warwick, R. I. This letter, I know, will also be of interest to the Senate.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows:

[From the Providence (R. I.) Journal of April 9, 1957]

MR. FOGARTY CONFOUNDED THE REPUBLICAN ECONOMIZERS

When Mr. Eisenhower last fall was pleading for the election of a Republican Congress, he evidently did not realize how greatly he would need a Democrat like Representative JOHN E. FOGARTY. The President is indebted to him for successfully piloting the administration's annual appropriation bill for the Departments of Labor and of Health, Education, and Welfare through the House in a manner which retained about 96 percent of the funds requested by Mr. Eisenhower.

No President could ask for better legislative performance in behalf of administration policy. The fact, moreover, that only this small margin separates what the President requested from what the House granted suggests that the 4-cents-on-the-dollar gap will eventually be closed either by the Democratic Senate when it acts on the bill, or by supplementary appropriations during the new fiscal year.

Mr. FOGARTY demonstrated his political astuteness when he compelled House Republicans to show whether they were for or against their President in these particular matters. Earlier, many of them had established themselves as real budget trimmers when, by voice vote, they could slash Mr. Eisenhower's figures without being permanently identified.

But when the time arrived for either affirming or reversing by a rollcall vote the tentative cuts made, a lot of the Republicans shed their economy mindedness as the proverbial duck sheds water. And in the process, they gave Mr. Eisenhower, Mr. FOGARTY, and the majority of Democratic Members just about what the President, the Rhode

Islander, and his party colleagues wanted in respect to labor and welfare funds.

At the end of the performance, Mr. FOGARTY must be credited with practically a perfect score for legislative finesse in handling a major appropriation measure. The net result was to give the Republican President most of the money he wanted and the Democratic Congress most of the credit for the accomplishment. And it left a lot of professing Republican economizers rather groggy.

[From the Providence (R. I.) Journal of April 14, 1957]

PRAISE FOR MR. FOGARTY

I read with interest your editorial of April 9, entitled "Mr. FOGARTY Confounded the Republican Economizers." The recent performance of JOHN FOGARTY in Congress is not new. It is just another chapter to be added to the brilliant record of achievement that he has established as an outstanding legislator in our Nation's Capital. I have watched and read with admiration of the activities and devotion to duty JOHN FOGARTY has displayed over the years and utterly fail to understand how you can square your praise of Mr. FOGARTY now with the editorial published last fall urging his defeat at the hands of an unknown and untried person.

FRANCIS X. KENNEDY.

WEST WARWICK.

Camouflaged Foreign Aid

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 28, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Camouflaged Foreign Aid," from the May 11, 1957, issue of the Savannah (Ga.) Morning News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CAMOUFLAGED FOREIGN AID

Unfortunately, insofar as the capacity of the average citizen or even the average congressman to pass judgment is concerned, this question of foreign aid is a baffling one. The term itself is so all-inclusive as to be all but meaningless. Consequently, those economists and others who devote most of their time to study of the ramifications rampant under the broad and fuzzy general title can quite easily devise schemes to camouflage the ways and means by which our taxpayers' dollars are being channeled abroad. What appears to be just such a disguised plan has been evolved by the Federal administration.

According to advices from Washington via the Southern States Industrial Council, this scheme is briefly as follows:

1. More loans and fewer grants. However, the term loan is misleading. For while the advances would be in the form of loans, repayment would not be in dollars but in the currency of the borrowing country.

2. The establishment of a self-perpetuating economic development fund with sufficient capital to take care of economic aid for a number of years.

3. Transfer to the domestic defense budget of all military aid.

By this juggling of the budget and bookkeeping figures, it is hoped to accomplish three things:

1. Place economic aid on a permanent basis—something Congress has hitherto refused to do.

2. Imbed foreign military aid in the defense budget which, in the past, has been largely sacrosanct.

3. Reduce the amount of future requests for foreign economic aid.

But, disguised or not, the general picture remains the same. The administration is still proposing to send billions abroad without the least certainty or assurance that we won't continue as we have in the past to make an Uncle Sap out of Uncle Sam.

The Foreign Aid Issue: "How" as Well as "How Much"

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 28, 1957

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Foreign Aid Issue Is 'How' as Well as 'How Much'" published in the Tucson Daily Citizen of May 23, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOREIGN AID ISSUE IS "HOW" AS WELL AS "HOW MUCH"

In his latest pleas in behalf of his foreign aid budget, President Eisenhower has reduced the amount of his original estimate by $535 million. This is encouraging to the economy minded. He also said at the same time that $500 million in foreign aid spending originally anticipated for this fiscal year would have to be carried over to the fiscal year starting July 1.

If this apparent contradiction can be interpreted simply, it seems the real problem with the foreign aid program is "how" it shall be carried out, even more than "how much" shall be spent.

Presumably a half-billion dollars authorized during last year's congressional debate on the recurring issue isn't even being spent; it will be spent next year. That would indicate that a half-billion could have been trimmed from the foreign aid budget last year.

After 9 years of foreign aid as a cornerstone of America's international diplomacy—beginning with the substantial Marshall plan—the American people are pretty much accustomed to it as a fact. Specialists are arguing, however, that the importance of establishing it on a long-term basis has not yet been recognized and implemented.

If a family tried to handle its budget the way our foreign-aid spending is handled, it would be in a constant financial mess. For example, how could husband and wife decide to purchase a new car on 24-month payments if the budget allocation were subject to review at the end of 1 year?

By the same token, the Government finds itself unable with certainty to project any foreign-aid commitment beyond 1 year—Congress might have a change of heart a year later.

In 1956, when almost a third of Congress voted against foreign-aid funds, the President and congressional leaders alike agreed it was time to take a hard look at the whole program in long-range perspective. Distinguished private citizens, academic and business research teams were called in to study and advise.

Massachusetts Institute of Technology experts put the minimum term at 5 or 10 years and said that "if we are not prepared to make this kind of long-term commitment, we should probably not support development assistance programs at all."

Citizen advisory groups headed by such prominent individuals as industrialist Benjamin F. Fairless and Eric Johnston have recommended either 2- or 3-year programs and appropriations as the barest practical minimum.

This year's foreign-aid debate is affording too much of a political football, with too little conscientious consideration of the purposes and practical approach. From the public's viewpoint, it would be as easy to recognize long-term foreign-aid objectives and policies as it was to recognize the purpose and benefits of the 10-year multi-billion-dollar Federal highway program.

National Congress of Parent-Teacher Associations

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 28, 1957

Mr. WILEY. Mr. President, one of the great organizations of this land without which America would not be what it truly is—a government of, by, and for the people, a society run by the average man himself—is the parent-teacher association.

In every community in our land the PTA is the indispensable link between home and school in serving the interests of the 36 million youngsters in the Nation's educational institutions—the youngsters who are truly America's brighter tomorrow.

Recently there met in Cincinnati the 61st annual convention of the National Congress of Parents and Teachers. This organization has a membership of 10.6 million in 42,000 local units.

I send to the desk two articles which describe various features of the convention. One is from the May 21 issue of the New York Times. The other is from the preceding day's issue of the Milwaukee Journal. I ask unanimous consent that these two articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times of May 21, 1957]

WIDE ROLE URGED FOR PTA GROUP—NATIONAL CONGRESS IS TOLD IT SHOULD BECOME PRESSURE UNIT FOR WELFARE PLANS

(By Damon Stetson)

CINCINNATI, May 20.—The National Congress of Parents and Teachers was urged today to become an active pressure group for child and family welfare.

Dr. Arthur F. Corey, executive secretary of the California Teachers Association, asserted that organized power and pressure were necessary in today's modern industrial economy to maintain the vigor and integrity of the family. The Parent-Teacher Association, he declared, should face up to the task.

"It is now time for us to stop being satisfied with being an influential group," he said, "and determine to become a powerful one."

Dr. Corey spoke here before 500 delegates attending the 61st annual convention of the National Congress of Parents and Teachers. The organization claims a membership of 10,694,474 in 42,000 local units throughout the United States.

Among objectives for which Dr. Corey proposed that the parent-teacher group exert pressure were: Federal aid for education; improved health programs in the schools; better mental health service; more recreational facilities, and assistance for children robbed of their normal family environment through death or divorce.

A similar plea for firm action by parent-teacher groups was sounded later today by Dennis O'Harrow, executive director of the American Society of Planning Officials.

He described the parent-teacher movement as the "strongest civic movement in the Nation," and suggested that local groups confine their activity not simply to seeking a top-quality education system but also to seeking a top-quality community as well.

After Dr. Corey's address, Mrs. Rollin Brown, president of the PTA congress, commented that what he said would "echo and reecho because he said so succinctly what we have been trying to do and should do more of."

Two other top officers of the congress, James H. Snowden, treasurer, and Dr. Kenneth E. Oberholtzer, second vice president, also spoke favorably of his proposal.

Tonight Basil O'Connor, president of the National Foundation for Infantile Paralysis, presented a special award to the congress for its part in helping achieve acceptance of the Salk vaccine.

[From the Milwaukee Journal of May 20, 1957]

PTA HEAD DISCUSSES RELIGION, VANDALISM—PARENTS RESPONSIBLE FOR TEACHING FAITH, SCHOOLS FOR MORALS, SHE ASSERTS

(By Louise Cattoi)

CINCINNATI, OHIO.—Parental responsibility for religious education, Federal aid for school construction and the fallacy of assessing parents for children's vandalism were among topics discussed here Sunday by Mrs. Rollin Brown, Los Angeles, Calif., president of the National Congress of Parents and Teachers.

She was interviewed on the eve of the national convention, which will continue through Wednesday night. Delegates from all States, Alaska, Hawaii, and Japan are attending.

(Heading the Wisconsin delegation is Mrs. Robert Schumpert, Madison, State president, whose term expires June 1. Mrs. William Hastings, Madison, a past national congress president, is here in two capacities—as official past presidential guest and as chairman of the endowment fund trustees. Mrs. Woods Dreyfus, 3621 North 39th Street, Milwaukee, Sunday was elected president of the State presidents' club of the national congress, a social group made up of past and present State presidents.)

INTERESTED IN RELIGION

When Mrs. Brown was in Japan last fall visiting PTA units there, the question of what the PTA congress here did about moral education came up constantly, Mrs. Brown said.

"When we say that the PTA congress is a secular organization, that does not mean we are not interested in religious life," she said. "We believe strongly that parents have great responsibilities for the religious education of their children—to help the children identify themselves with a set of religious principles in their particular faiths.

"We also believe that teachers have a responsibility to develop a respect for the moral and ethical principles of the great religions, without getting into the field of sectarianism.

"I believe the schools will have to accept some responsibility because of the homes—not the majority—in which there is no ethical and moral training."

URGES FEDERAL AID

On the question of Federal aid in the building programs of the schools, Mrs. Brown wondered "how long members of both parties, in view of bipartisan stands, could 'continue to look their constituents in the eye' and not come through with action." It isn't just a question of catching up with enrollments, she said, but meeting the combined problems of obsolescence and overflow.

On vandalism, she questioned the value of holding parents responsible.

"Will that help make the parents more understanding of the child?" she asked. "Will it help in making the child better basically? There may be any number of reasons why the child indulges in vandalism. Perhaps his is a home of overstrict parents, and the child boils over into such acts.

"What is needed, it seems, is developing a better understanding on the part of the parents, and to help them follow the child through in all his needs."

PRESSURE IS ADVOCATED

Parent-teacher associations should stop being merely "influential groups" and become "pressure groups," Arthur Corey of San Francisco, executive secretary of the California Teachers' association, said at Monday morning's session of the convention.

"The play of group against group is the process of modern democracy," he said. "There is little use of decrying this condition. We must be interested in making it more effective for the common good. The only possible cure for the evils of organized pressure is more ad better organization among honest and intelligent men and women of good will."

He mentioned the area of adequate education for all children as one in which the PTA could well exert "pressure power."

He also mentioned Federal control of education, "which is not only not dangerous, but some of it eminently desirable."

There is nothing inherently dangerous about Federal subsidies, he said.

Utility Brainwashers

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, May 28, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Denver Post condemning the unfair practice of permitting private power utilities to deduct the cost of propaganda advertising from their tax returns, and thereby require the taxpayers to pay for their own brainwashing. This editorial deserves the careful attention of Senators and I hope it will receive wide circulation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Denver Post of April 18, 1957]

OUR MISCHIEVOUS BRAINWASHERS

Senator KEFAUVER, Democrat, of Tennessee, has taken hold of a livewire issue. We hope he hangs on until the country is shocked by the efforts of utility companies to pass on to taxpayers a large part of the cost incurred by the companies in lobbying for legislation which would enrich them at the expense of consumers.

An outfit known as the National Association of Electric Companies for several years has been running advertisements in slick-paper magazines based on the theme that public-power projects are socialistic and should be legislated out of existence.

"Much of this advertising," Senator KEFAUVER says, "is false and misleading." The advertisements we have seen bear out the Senator's appraisal.

However, Senator KEFAUVER's main point is not the counterfeit nature of the advertising but the impropriety of permitting the electric companies to charge off the cost of this advertising for income-tax purposes as a business expense.

If electric companies want to try to persuade the American public to stop Government-built power systems, the companies at least should be required to pay the cost of that kind of propaganda out of their own profits.

When these costs are charged as business expense, the effect is to put approximately half the cost of the utilities' brainwashing campaign on the United States Treasury—which means to the general taxpayers.

In other words, John Q. Public pays for lobbying which, if successful, would have the effect of raising John's monthly electric bill. This is like requiring a boy to go out and cut a stick so you can beat him with it.

The Internal Revenue Service is looking into Senator KEFAUVER's complaint and has assured him it is the general practice of the Service to disallow as business expense the costs of promoting political objectives or propaganda.

The electric company case has an exact parallel in the $2 million propaganda campaign carried on by oil companies in an effort to put the Harris-Fulbright natural-gas bill through Congress. The purpose of the bill was to raise gas prices to consumers.

According to Congressional Quarterly news service, internal-revenue officials have been prepared for some time to rule that the $2 million spent to promote the gas bill could not be charged as business expense. However, for some reason, no formal ruling has been made as yet.

We hope Senator KEFAUVER keeps this issue before the Senate and the public until it becomes established practice to require utilities to pay out of their own pockets for their own self-interest lobbying efforts.

The Rocky Mountain region is one of many in this country which have the right to be particularly incensed at efforts to hang the tag of "socialism" on public-power projects.

The Colorado-Big Thompson is a typical project. It provides water for 300,000 privately-owned acres of farmland, thereby guaranteeing the private owners against drought calamities. Is it socialism to promote private farm enterprise?

The Colorado-Big Thompson provides water for private industry in Boulder and other communities. Is that socialism? It has added to the electric power supply for farms and industry in a large section of the State and has thereby stimulated free enterprise. There isn't a retailer of electric appliances or a grocer or a drugstore owner in northeastern Colorado who hasn't benefited from the new business created by the water and electricity from Colorado-Big Thompson.

The project could not have been built if it had not provided electricity to help pay for the cost of water. It would not have been built in 100 years if we had waited for private enterprise to do the job.

If we listened to the private utility firms which stand around shouting "socialism," our farms and towns would languish for want

of water, industrial growth would be hampered by lack of power and our whole economy would suffer.

That's why this "socialism" propaganda doesn't make any sense to us or to the people of the Pacific Northwest, the people of the Tennessee Valley and the people in other public-power areas.

If it is "socialism" to build with public money the projects which are necessary to our economic destiny but which private industry cannot build, then what the utility companies call "socialism" is indispensable to national development and the utilities themselves should wake up and realize it instead of playing the part of mischief makers.

President Eisenhower and the Budget Fight

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, May 28, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanmous consent to have printed in the Appendix of the RECORD an article entitled "Crapehangers Are Premature," written by Gould Lincoln, and published in the Washington Evening Star of May 25, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CRAPEHANGERS ARE PREMATURE

(By Gould Lincoln)

The crapehangers, it now appears, have been a bit premature. They have predicted drastic defeat for President Eisenhower in the budget fight. They have again and again shed crocodile tears over his so-called diminishing leadership and probable defeat of his legislative program.

The President, however, is now reasserting a leadership he never relinquished. The Republicans and the Democrats in Congress who oppose him are beginning to realize that he remains the strongest figure in the United States today.

Another rather widespread effort to discredit the Eisenhower administration has been an attempt to show the Vice President, RICHARD M. NIXON, as a dodger seeking to eliminate himself as far as possible from the contest, presumably to curry favor with both sides. Nothing could be further from the fact. The Vice President has spoken out unequivocally in support of the President's budget—particularly in support of the national defense and foreign aid items. Four times has he gone to the front in this fight in the last 3 or 4 weeks, first when he addressed the United States Chamber of Commerce; second, when he delivered an address in Chicago April 30; third, in an address in Hartford, Conn., May 14; and finally, Thursday night in New York, where he spoke to the American Iron & Steel Institute. He was particularly strong in his New York speech in support of the national defense and foreign aid programs.

RIGHT IN STATEMENTS

He could not have been more correct when he told his listeners this is no time to reduce our national defense effort when we are seeking some arrangement with Soviet Russia for arms limitation. He was correct, too, when he pointed out that the foreign aid program is saving this country billions of dollars which it would otherwise have to expend to increase our own military forces and equipment.

Obviously he was right, too, when he pointed out that the Advisory Council of the Democratic Party is charging that the Eisenhower administration is probusiness, and on the other hand certain business groups have charged that this is a New Deal administration bent on spending the Nation into bankruptcy, and he said that obviously both these charges cannot be true. Indeed NIXON correctly declared, neither is true.

Much has been said about "modern republicanism," and what it may mean. There is just one yardstick—President Eisenhower's program and the Republican Party's 1956 platform on which that program is based. Those Republicans in Congress who are opposing the President—and unfortunately there are too many of them—accepted his renomination with gratitude last year. Some of them rode to victory because he headed the GOP ticket. They also accepted the Republican platform without choking in the slightest, but some of them object to being modern Republicans. They insist they want to be "just Republicans." For 20 years the Republicans struggled against "modernizing" their party, and where did it get them? And where will it get them if they take part in ditching Eisenhower's program?

THIRD TERM BAN PLEASES SOME

As for the Democrats, their greatest cause for joy is that Eisenhower cannot run for another term. Unlike the late President Franklin D. Roosevelt the President faces a constitutional provision limiting him to two terms in the White House. Some of the Democrats did not wish to be Roosevelt New Dealers, any more than some Republicans wish to be Eisenhower modern Republicans. They did not neglect, however, to ride to victory on F. D. R.'s coattails—not once, but four times.

Up to the present, the Eisenhower program has made slow progress in Congress. Indeed, the predictions have been that little will be accomplished at this session of Congress; that school aid legislation, civil rights legislation, labor legisation and other important parts of the program will fail of action. Whatever happens during the present session, which is expected to close in July or early August, it seems incredible that most of the President's program will fail to be enacted before the congressional election of 1958. The Democrats, in control of both Senate and House, can scarcely afford to go to the country as a do-nothing Congress. Nor can they afford to enter the campaign as opponents of the liberal and much-needed measures which have been declared essential for the welfare of Americans by President Eisenhower.

A favorite pastime of the Democrats in recent days has been to deride the Republican Party because of the split in the GOP, and the Republican critics of Eisenhower. It remained for Senator WAYNE MORSE, of Oregon, to drive the Republicans together in support of the President when he compared Eisenhower to Dave Beck—the man who invoked the fifth amendment to avoid testimony before a Senate committee. MORSE's statement hurt only one person—himself.

What Civil Rights?

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 28, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "What Civil Rights?" from the May 11, 1957, issue of the Albany (Ga.) Herald.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT CIVIL RIGHTS?

The civil-rights activity in Congress, which would attempt to legislate obliquely on racial problems, falls into the same pattern of the Supreme Court's antisegregation decision of May 1954. There is involved in both instances evasion as well as coercion, and if anything is clear about the complex racial issue, it is that it will not yield any satisfactory solution to such devious means. What is certain is that as long as compulsion is the rule of action in the matter of settling racial problems, tempers are going to boil over, politics will influence unduly suggested practices and demagogues, both pro and con, will dominate the situation.

All this goes beyond the one problem of racial strife. It raises the question whether in general it is politically or morally desirable to use a congressional majority to push through legislation which is strongly resented by large minorities of the people. There is too much easy assumption that if there is some evil the way to cure it is to pass a new Federal law. Our national experience with prohibition is a good proof that this assumption is often unsound. Excessive use of alcohol is often a personal tragedy. But the remedy does not lie in trying to forbid all use of alcohol. Prohibition not only failed to prohibit; it stimulated widespread disrespect for law and opened up a field for the operation of criminal gangs whose feuds swelled the homicide statistics.

A major fact is that there are practical limits to the power of legislative majorities. Laws that conflict with the habits and sentiments of large numbers of normally law-abiding citizens are almost certain to end in failure, so far as effective enforcement is concerned. There are special historical and emotional reasons why the South rallies against the imposition of legislation which would force sudden and drastic changes in the established southern social pattern. And these reasons can never be changed by legal compulsion. Force will only lead to deceits and subversions which, in the long run, will remove all tolerance and dignity from the situation. And, in the long run, too, those colored people will be hurt the most who need the most help.

What is involved here, too, is an excessive concentration of power in Washington which today represents a grave danger to the Federal form of Government established by our Constitutiton. There is no danger now that a State would assert the right to nullify a Federal law or to secede from the Union in protest of Federal law. But there is a danger that functions which properly belong to the separate States will pass into the hands of a centralizing bureaucracy at Washington. If prejudice and discrimination are the goals of the Federal Government in power in its attempt to deal with the complex racial issue, there can be no quarrel with the goals set, for both these points are foreign to the American belief that every human being should go just as far in this country as his character and ability may carry him. But these questions are pertinent, too, in meeting the immediate problem: Do we eliminate prejudice with other forms of prejudice? Do we get to the heart of the racial problem by dealing with it on a national basis in such a broad fashion as to ignore the specific problems and needs of different areas? And, further, do we really help one minority by awakening the hostility of another minority?

What is happening as regards this issue in Congress today is fair example of what would come about as a result of force legislation. Few men in Congress, outside the South, are

speaking frankly on the matter. All of them give it lipservice for the political hay that they thus can reap, but privately they reject the compulsion features in legislation that obviously cannot be enforced. The results are hot tempers and barren promises and a growing cynicism about the whole business.

Who gains in this situation? Only the worst political elements in all sections who will trade for votes at anybody and everybody's expense.

Activities of the Small Business Administration in Colorado

EXTENSION OF REMARKS
OF
HON. GORDON ALLOTT
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Tuesday, May 28, 1957

Mr. ALLOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Leonard "Buzz" Larson, of the Denver Post, on the activities of the small Business Administration in Colorado. This is one of many fine articles written by Mr. Larson in covering Federal activities in Colorado for the Denver Post. He points out that the Denver office of SBA headed by Harold R. Smethills, has assistated Colorado businessmen in securing a total of $2,500,000 in Government contracts since January 1. In addition, in the past 2½ years through the Small Business Administration nearly $7 million has been loaned to small-business men in the 4 State area of Colorado, Utah, New Mexico, and Wyoming. This outstanding record of service to the region's small-business men is the result of the able and aggressive job being done by Harold Smethills and those assisting him in the Denver office.

I recently had occasion to speak some words in praise of the initiative Mr. Smethills has shown in the administration of the regional office of the Small Business Administration in Colorado.

I am happy and proud to add this statement to the record of achievements which he and his fine staff have made, as well as the record of regional directors in the administration of the Small Business Administration in the West.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TWO MILLION FIVE THOUSAND DOLLARS IN UNITED STATES CONTRACTS AWARDED TO COLORADANS

(By Leonard Larsen)

A total of $2,500,000 in Government contracts have been awarded Colorado small-business men since January 1 through the Small Business Administration.

Harold R. Smethills, four-State regional director for the agency in Denver, said Saturday: "We're really getting started on that phase of our program."

The role of the SBA in steering small-business men to Government contracts is mushrooming, Smethills said. In addition to supplying small-business men with information on Government contracts throughout the Nation, the agency under the law is able to set aside certain contracts for bids by smaller concerns only.

In the last 2½ years nearly $7 million has been loaned to small-business men and disaster-struck individuals in Colorado, Wyoming, Utah, and New Mexico through the regional SBA office.

During the current Government fiscal year, Smethills said, loans will double any previous year of operations.

Launched in 1953 as an aid for businesses employing less than 500 persons, the Small Business Administration is "getting up steam" in Colorado, the four-State region and the Nation, Smethills said.

The regional officer—in on the initial planning of the agency—said top planners attempted to take the best features of the Reconstruction Finance Corporation and the Small Defense Plants Administration, weave them into the fabric of aid to small-business men and then set out with less people and less Government expense.

What kind of success has this new Government Agency met with?

MUST HAVE KNOW-HOW

"We know of no Congressman or Senator or businessman who is not happy with the program," Smethills said.

Loans authorized by the SBA are limited by the law to $250,000. In the four-State region headquartered in Denver, individual loans have averaged $37,676 in the past 2½ years, Smethills said.

The business loans phase of the agency was described by Smethills as a "program of self-help—we're not trying to bail out any hopeless firms or create a false economy."

Under the law, a business loan applicant must demonstrate a business know-how, produce collateral and show an earning record "with the ability to repay," Smethills explained.

In addition, the business loan applicant must show that he has been turned down on a loan by conventional private lending agencies.

Who, then, could qualify for a SBA business loan? Smethills drew this illustration:

A well-established businessman with a long record of good credit and ability needed $200,000 to expand his warehouse facilities. His local banker turned down a request for an 8-year note. The bank, in this era of tight money, was looking for a quicker return on its money.

But the SBA could advance the money on a 10-year agreement with every assurance that the proven businessman would repay the taxpayers' money at 6 percent.

Actually, Smethills said, banks are invited to participate in loans approved by the agency. The four-State region he heads, with banks participating in 81 percent of loans, leads the Nation in this respect, Smethills said.

MORE LIBERAL

Disaster loans to businessmen and homeowners of disaster-designated areas are even more liberal, Smethills said. The loans may be made on damaged residence property and businesses at 3 percent with up to 20 years to repay.

It usually takes from a week to 10 days for field agents to gather information on disaster loan applications, Smethills said. After that a determination on the loan is made in from 48 hours to a week.

Immediateley after designation of disasters—such as floods which in the past weeks have hit residents northeast of Denver—fieldmen for the SBA move in to help survey damage and process loans.

Smethills, who took a part in the first planning for the agency, said he is proudest of the counseling role the agency assumes in aiding not only individuals but entire communities.

He illustrated:

Two years ago the Air Force shut down their base at Deming, N. Mex. Many civilians were out of work. With SBA aid, townspeople converted the air base buildings for manufacture of ammunition, secured a healthy Navy contract through the SBA and delivered on schedule.

At Raton, N. Mex., coal mine shutdowns had idled many workers. A Chicago electronics manufacturer was induced to move his whole plant to Raton with advantages to him and the community.

At Alamosa, Colo., farmers were troubled with a potato surplus. A potato-flour manufacturer was encouraged to move in and install a plant.

The United States Information Agency

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, May 28, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Economy Ax Threatens USIA," written by David Lawrence, which appeared in the Washington Evening Star of May 27, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ECONOMY AX THREATENS USIA—SETBACKS IN COLD WAR ARE HELD LIKELY IF PROPOSED SLASHES ARE APPROVED

(By David Lawrence)

It is not too soon to appraise the place in history that the Democratic-controlled Congress of today may achieve if it pursues its present course. It could become known as the Congress of narrow vision, the Congress without a heart and without a spirit—the Congress that strained at a gnat and swallowed a camel.

For the biggest concern of the world today is war. To prevent war the American people are willing to make money sacrifices now to avoid human sacrifices later on. The way to prevent war is to reach the hearts and minds of the people behind the Iron Curtain and to be prepared on the military side. Armament costs us around $40 billion a year and is necessary to deter impulsive action by dictators. Yet propaganda to influence and persuade the peoples in eastern Europe, Asia, and Africa to withhold from dictators the power to make war is relatively inexpensive.

Soviet Russia today spends many billions a year on propaganda. America spends just a few millions. But the President's request for $144 million for the United States Information Agency, under proposals now pending in Congress, may be cut down to $90 million. The myopic reason given for this is that the latter sum is more than the average spent by USIA in the last few years. This is to say that the world has stood still, that the importance of reaching the hearts and minds of people behind the Iron Curtain and in the so-called uncommitted areas of the world can be averaged mathematically.

Actually, the situation in the Middle East, for example, has grown more, instead of less, complicated. Today the Soviet Government influences, if it doesn't completely control, the press and radio of Egypt and Syria. These trouble areas can increase in number overnight. The United States, by means of the Eisenhower doctrine, has built up its friendships and is making progress among some of the Arab States, but it costs money to carry on propaganda.

There are all sorts of self-appointed experts in America who have called attention to some examples of waste and inefficiency in the USIA. Certainly the American Government is a novice in the art of propaganda. Mistakes have been inevitable. But they are the price of experience in an unfamiliar field.

Judging by the statements made by the Democratic leaders in Congress, they have cut appropriations for USIA to some extent because of a fear that American news services might be deprived of opportunities to sell their wares abroad. This is understandable materialism, but at the same time it is short-sighted Americanism. For Soviet Russia doesn't permit the daily reports of the American news services to be printed behind the Iron Curtain.

Nor are there any radio broadcasting stations inside the United States that can reach behind the Iron Curtain without effective relays abroad. It takes a special kind of equipment and transmitters, located in strategic places around the world, to get the messages across to the peoples in vast areas of the globe where either the normal commercial channels are barred or media are unavailable through which to present news dispatches from outside the country.

The Soviets are spending billions—for documentary films, for participation in exhibits and fairs everywhere, for cultural exchanges. They send their ballet and other artistic groups to neutral lands but, when America tries to counter this with our jazz orchestras—which have recently won wide acclaim, especially in certain parts of Europe and in north Africa and in southeast Asia—the critics in Congress ridicule it all as a boondoggle. Thereupon the Democrats cut the USIA's budget to pieces, with the aid of an equally narrow-visioned segment of the Republican Party.

The speakers for the Democratic Party in the last campaign used to talk a lot about the need for challenging ideas abroad and kept hammering away at the mistakes of our foreign policy. But success cannot be achieved by the State Department through diplomacy alone if the ground is not cultivated among peoples abroad by effective information programs telling continually about America's disinterested purposes and her true concern for the freedom and independence of all those peoples now enslaved.

The United States Information Agency's budget should have been doubled instead of being cut by almost 40 percent. It is certainly a reversal of the trend when from the so-called humanitarians, the forward-looking, the broad-visioned Democrats comes the sabotage which has all but wrecked America's effort to expand her information programs to reach the hearts and minds of people abroad. It is a crushing blow to the broad concept of psychological warfare so necessary to prevent the warfare of death and destruction. It is a defeat for America in the cold war, inflicted not by Soviet Russia but by Members of the Congress of the United States.

Labor's Views on Right-To-Work Laws

EXTENSION OF REMARKS
OF
HON. VINCENT J. DELLAY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. DELLAY. Mr. Speaker, under unanimous consent I include herewith an article by George Meany, president, AFL–CIO, outlining his views on right-to-work laws. Mr. Meany has done an able job for his group, and I know of no one who is better qualified to speak for the workingman.

The article follows:

LABOR'S VIEW

(By George Meany, president, AFL–CIO)

The so-called right-to-work laws are a patent fraud and deception upon the American people.

These laws do not guarantee any right to work to any citizen of our land. The only country which has a real right-to-work law is Soviet Russia. There it has become not so much a right to work as a compulsion to work, or slave labor.

Actually, the true purpose and effect of the so-called right-to-work laws in this country are to prohibit employers and unions from entering into collective-bargaining contracts providing for union security.

Thus, when stripped of their phony camouflage, the right-to-work laws are exposed as compulsory non-union-shop laws.

Even the Taft-Hartley Act, which is heavily weighted on the side of management, permits the union shop. But it also contains a trick provision which allows States to outlaw the union shop or other forms of union security. That's how the right-to-work laws had their genesis.

In labor's opinion, the right-to-work laws, now in effect in 18 States, are economically unsound, undemocratic, and morally reprehensible. Our opinion is shared by many businessmen, by leaders of the Protestant, Catholic, and Jewish faiths, and by most unprejudiced persons who know the score in labor-management relations.

Union security is vital to good labor-management relations. It frees the union from fear of being undermined or destroyed by inimical employers and thus paves the way for broader labor-management cooperation.

The record shows that the fewest strikes take place in industries covered by union-shop agreements.

The argument is frequently made that the union shop denies the right to work to an individual who does not want to join the union. That is not true. Such individuals have a perfect right to obtain work in plants not covered by union-shop agreements.

If the majority of workers in a plant want the union shop and if the employer is willing to enter into such an agreement, certainly the will of the majority should prevail.

How about the right of union members to refuse to work beside those who are perfectly willing to accept benefits won by the union but refuse to participate in any way in the efforts of their fellow workers to secure such benefits?

It certainly seems significant that the major sponsors of right-to-work legislation are the National Association of Manufacturers and the Chamber of Commerce.

Who ever elected them to defend the rights of workers? What is there in their record to indicate that they have any sincere concern for the welfare of working men and women?

The trade union movement, on the other hand, is dedicated to upholding the interests of all workers—nonunion as well as union. All the legislation we have sponsored—and that business organizations have consistently fought—such as workmen's compensation, the minimum wage law and social security, have benefited all workers, nonunion as well as union.

It is equally true that nonunion workers have benefited, to an appreciable extent, from higher wages and improved working conditions won by union members.

If right-to-work laws spread to other States, or a Federal right-to-work law is adopted, the direct consequence will be impairment of the trade union movement's effectiveness in maintaining the high American standard of living, with ultimate damage not only to all workers, but to the farmers and business as well.

Murray Gives Key to Atom Survival

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an article in relation to Commissioner Thomas E. Murray, of the Atomic Energy Commission, written by Tom White, a member of the Washington bureau of the New York Journal-American, and appearing in the New York Journal-American on Sunday, May 26, 1957.

The article follows:

FIVE-POINT PROGRAM FOR WORLD'S GOOD: MURRAY GIVES KEY TO ATOM SURVIVAL

(By Tom White)

WASHINGTON.—Atomic Energy Commissioner Thomas E. Murray today spelled out the whys and wherefores of just what must be done if the United States and the world are to survive and prosper in the atomic age.

In an exclusive interview with the Hearst Newspapers, Murray, whose reappointment to the Commission is under consideration, first laid down five steps he feels must be taken for the good of the world and then detailed his reasons for them. The steps are:

1. A program of rational nuclear armament.

2. An accelerated peacetime power program.

3. International order in the field of atomic energy.

4. Education of world leaders concerning military and peacetime nuclear energy.

5. United States ratification of the treaty setting up the International Atomic Energy Agency.

In regard to the program of rational nuclear armament, Murray said:

"Unleasing the megatonnage that would inevitably be used in an all-out nuclear war would result in a catastrophe for the human race of unimaginable proportions.

"Thus a military strategy which overly relies on super H-bombs cannot be defended. However, we must maintain a stockpile of multimegaton bombs adequate to the requirements of deterrence-retaliation.

"We must recognize that in the future, as in the past, wars may occur; but it is becoming obvious that if the world is to survive, these wars must be kept limited in means and scope.

"Hence, in order to defend ourselves properly against the threat of aggressive communism, we must accelerate the production of small tactical nuclear weapons to fight these small, localized wars."

BALANCING TWO PROGRAMS

On the subject of an accelerated peacetime atomic power program, Muray has long maintained, there is an inseparable relation between the military uses of nuclear energy and its peaceful uses. He explained:

"What we accomplish in the fields of nuclear weapons and industrial nuclear power jointly affects our basic purpose—the furtherance of justice and peace.

"What we want to achieve is a balancing of the two programs in such a way that each of them individually and together will serve this purpose.

"This program will help create the economic conditions throughout the world which are a necessary support of a just and peaceful world order. Moreover, as the benefits of atomic power are more and more widely shared, we may hope that the world will be penetrated by the conviction that God has given us the secret of atomic energy for purposes of peace and human well-being, and not for war and destruction."

Murray turned next to the need for international order in the field of military uses of atomic energy. He declared:

"The nuclear menace today does not directly derive from the nuclear weapons themselves. It derives from the international anarchy represented by the ungoverned armaments race, as this anarchy is superimposed on other more basic anarchies prevailing on the international scene.

"An effort has to be made to establish the principle of international order in the development and use of atomic energy. There are firm grounds for hope that the principle of order, once established in the field of atoms for peace, will gradually make its way also into the presently lawless field of atoms for war."

HIS PET PROJECT

As to education of the world leaders, this is one of Murray's pet projects.

Two years ago in a speech at Fordham Law School he advocated taking thousands of the world's leaders to Eniwetok to watch the detonation of an H-bomb. Among the observers he wanted were people from Russia and Red China.

Murray feels that atomic energy has got to be fully understood by all peoples, and particularly their leaders, before the world can fully recognize its dangers and its benefits.

Lastly Murray strongly advocated the United States join the International Atomic Energy Agency because, as he sees it, the Agency represents the best hope of bringing about the control of nuclear energy so necessary to world peace.

Murray has been recognized as a man of vision.

Now he is looking for a thriving world, benefiting from the increased standards of living provided by the peacetime atom and free from the horrors of an all-out nuclear war.

International Chamber of Commerce Meeting in Naples, Italy

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, May 28, 1957

Mr. WILEY. Mr. President, I have followed with deep interest the press dispatches of the conference, which recently concluded in Naples, Italy, on the part of the International Chamber of Commerce.

From all over the world came 2,000 businessmen to discuss ways and means by which private enterprise might meet the problem of expanding world trade, investment, and prosperity.

In all of the reports made in connection with America's Mutual Security Program, there has constantly been emphasized the fact that it is free enterprise which must do the basic job of helping to uplift world living standards. The United States Government, as such, can not do it alone. It is the private businessman's investing his risk capital, the private businessman's importing or exporting, that must provide the real key to tomorrow's brighter economic future for mankind.

The International Chamber of Commerce faced many problems and challenges. There are problems in connection with the 6-country Common Market Treaty which must still, of course, be ratified by the respective parliaments.

There are very difficult problems in connection with tariffs, import quotas, and other trade problems. There are problems in mobilizing financial resources for the peaceful harnessing of the atom. And many other problems could be spelled out.

I congratulate the American delegation which contributed to this and to preceding such congresses, because I believe that it is these American businessmen who are in the forefront of the effort for free enterprise throughout the world.

I send to the desk two articles written by Mr. Walter Lucas, special correspondent of the Christian Science Monitor, and published in the May 9 and May 14 issues of that distinguished newspaper.

I ask unanimous consent that these two articles, which frankly point out some of the problems encountered, be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor of May 9, 1957]

INTERNATIONAL CHAMBER OF COMMERCE CHARTS WEST'S PATH

(By Walter Lucas)

NAPLES.—It would be difficult to name another international organization capable of mobilizing far from their home bases 2,000 prominent businessmen from 52 countries, most of them economic leaders in their countries. But the International Chamber of Commerce now meeting here has done it.

Even the rain-drenched windy Naples of the congress' opening day became impressed by the galaxy of delegates and produced sunny weather for the next few days. "No self-respecting chamber of commerce would permit such weather as on the opening day," cracked an American delegate. Behind each ICC congress, stand 2 years of hard work by a legion of business experts, involved in meetings, discussions, drafting resolutions, etc.

Few international chamber congresses were centered on a more intense search for methods of cooperation between substantial portions of business communities of practically every nation of the non-Communist world. The complicated international situation and the growing need of cooperation between American business with the rest of the free world became the theme of the congress, sloganed as "New Factors in Economic Progress."

PLANS SEEN VITAL

Much of the strength and the future success of the free world and western civilization depend on the success and wisdom of the plans these 2,000 business leaders are discussing in Naples. The principal new factor which, by the signing of the six-country common market treaty, has become a reality and not just economic theory is the economic integration of Europe.

Europe's cooperation with the United States and the rest of the free world is doubtlessly the most vital part of the discussions. The decision by Government agencies to create a common market and abolish or reduce tariff barriers is not enough in itself. It is the European businessmen represented here who will determine whether a common market will succeed or fail. Wise discussions have already brought forward new ideas of cooperation, innovation, and a gratifyingly wide determination to follow the example of the great tariff-free American market by becoming European businessmen and not just French, Italian, or German businessmen.

FREE-TRADE AREA

An imposing 60-man delegation of the United Kingdom, including a galaxy of prominent British economic leaders, makes no secret of its determination to push the idea of the free-trade area which would enlarge the six-country common market area to all European members of the western alliance contained in NATO.

Leader of these British businessmen, J. L. S. Steel, prominent in Britain's chemical industry, said to me: "Wide sections of British public opinion are now for the free-trade area and close cooperation with the European Continent. The reason is not only emotional but also practical. Free Europe became too small for tariff barriers, and competition fights between such groups as the common-market area and the rest of Europe and would harm both parties. The desire for cooperation with likewise free nations, coupled with fear of competition on both sides constitutes a strong, healthy incentive for agreement despite many difficulties which still remain. These difficulties principally consist in our Commonwealth obligations in the agricultural sector but are, however, not unsurmountable obstacles."

ISSUE OF COMPETITION

European business leaders in Naples, however, have to discuss with delegates from other parts of the world how either the common market or the larger free-trade area should develop in harmony with the world-wide system of trade and commerce without the danger of involving Europe in competition from North America and elsewhere.

The only safe method of avoiding such perils has already crystallized itself during the Congress in discussions of subcommittees dealing with problems of European-American business and trade cooperation in the form of a new liaison body between the General Agreement on Tariffs and Trade (Geneva) and the American Organization of Trade Cooperation.

Setting up OTC, however, is no easy matter, and resistance to the idea by the United States Congress will not easily be overcome. This makes the task of the American delegates here more difficult. Their recommendations appear to be lipservice in view of the tariff-minded American Congress opposition.

Other problems figuring prominently in discussions of the Naples congress include industrial uses of nuclear power and automation. Here again Europe appears to be leading the way as far as international cooperation is concerned: establishment of the Euratom treaty which accompanies the common market treaty and is scheduled to be

ratified shortly by the parliaments of the six European common-market countries.

BRITAIN HOLDS KEY

Here again all willingness of the United Kingdom to cooperate with Europe appears a decisive factor in view of the great progress Britain has achieved in industrial uses of atomic power. Italy's delegate, Vittorio Biasi, chairman of the Italian Edison concern, expressed what most delegates apparently thought on the subject when he said: "Only active international cooperation can make it possible for all the countries to benefit from this great new source of power."

A similar consent among delegates from all parts of the world was evident when Germany's Hans Boden stated that no serious difficulties for labor would be created by automation.

"If automation is called revolutionary it is certainly less revolutionary than was the introduction of electricity and steam in industry or the introduction of atomic energy on a large scale will be in the future. The upset will be slight and industry, trade, and labor will all profit."

Although not under the glare of publicity, numerous subcommittees are working on less spectacular, but equally important, problems under such headings as commercial and monetary policies, foreign investments and taxation, raw materials, advertising, banking, and many more.

Then again, 2 years will pass till the next Congress of the International Chamber of Commerce, but during those 2 years the effectiveness of the Naples congress will undoubtedly be tested.

[From the Christian Science Monitor of May 14, 1957]

EUROPE OPPORTUNITIES AIRED—CHAMBER OF COMMERCE TAKES WIDE VIEW

(By Walter Lucas)

NAPLES, ITALY.—Assessing the achievements of the 5-day congress of the International Chamber of Commerce is not an easy task. To single out problems is one thing; to find solutions is another and much more difficult one.

There is little doubt that the European common market and free-trade-area plans became the principal items of discussions. This was less for reasons of their constructiveness than because of concern felt by those outside that six countries and, if Britain allies itself with the free-trade area, 15 European countries—would entrench behind new and even wider tariff barriers to the detriment of competitors outside it.

The retiring president, Warren Lee Pierson, quoted Plato as saying that no one deliberately injures one's best interest. Sometimes, however, one fails to see where one's own true interests lie. Mr. Pierson alluded, no doubt, to the futile ambition of those countries trying to isolate themselves from the world economy, hoping for more independence and prosperity out of such.

LONG-TERM VIEW

If this congress, with 2,000 prominent businessmen from all over the world participating, has not produced anything palpable, at least it has opened many eyes to the broader long-term views. Views were expressed from all corners of the world with vigor and candor. On many occasions, statements from the floor or from the platform contained home truths addressed not only to impersonal governments or organizations but to the representatives present.

Heavy demands for economic adjustments following new techniques deriving from such new economic factors as the European common market, Euratom assistance to undeveloped areas, automation, and the coming revolution of new nuclear-power supplies will have to be faced. The congress gave all instructive foretaste of the reception of these problems by the east, west, south, and north.

While the work of the public part of the congress ended May 10, working groups set up to tackle single problems went on debating behind closed doors the best ways and means for finding solutions.

Perhaps the clearest summation would be in quoting the words of Edmond Giscard Destaing, the new president of ICC, to whom Mr. Pierson handed over his gavel, in describing the work ahead:

EXPLOSION OF NATIONALISM

"We are witnessing a veritable explosion of nationalism in the great areas of the world. This event arising from natural political philosophy is not astonishing. The International Chamber of Commerce absolutely refuses to intervene in political affairs but intervention is called for where new economic conditions are concerned, arising with the appearance of young sovereign states—all the more as these states, because of their recent formation, are especially susceptible and in addition confront grave economic problems."

The new president is head of a financial group known as Société Financière pour la France et les Pays d'Outre-Mer and a pioneer of unified Europe. He said it is surprising how far behind our legal notions are compared with the evolution of techniques. Under the old law of government, the possession of the soil did not provide rules for possession of what is below the soil.

He also forecast that changes in international law will have to adapt themselves to new factors of economics. But he agreed that the problem most acutely confronting businessmen in international trade is the adoption of general economic policies permitting safe circulation of goods.

"It would be false to divide the world into highly and underdeveloped countries," said Mr. Destaing. "Even the highest countries have underdeveloped areas." His conclusion that a thing yields wealth only when it is exploited drew stormy applause. Without gasoline there is no industry, but in the absence of industry, there is no use for gasoline, said Mr. Destaing.

No statement during the congress was met, however, with more approval than the following farewell words of the departing president: "We could have talked a little more about the apparent turning of the tide in many countries away from the idea that their national interest was best served by treating business as a somewhat suspicious activity."

It would be an omission not to put on record the interest in the ICC shown by the countries whose economic systems are basically totalitarian. Despite their leaders boasts that their system works better, it is noteworthy that Communist countries seem to be losing faith in a rigid centralized economy once advertised as the answer to economic ills. The presence of Soviet, Czech, Polish, and Yugoslav observers here was a clear indication.

Injustice to "Billy" Mitchell

EXTENSION OF REMARKS

OF

HON. VINCENT J. DELLAY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1957

Mr. DELLAY. Mr. Speaker, I would like to include in the RECORD an editorial by Mr. John Mitchell, editor of the Hudson Dispatch, Hudson County, N. J., which appeared in the Dispatch on Saturday, May 25. I have a very high regard for Mr. Mitchell's editorial comment and feel that once again he has done a magnificent job. It is with sincere pride that I submit his editorial calling attention to the terrible wrong done to the late Brig. Gen. William L. "Billy" Mitchell.

The editorial follows:

CORRECT INJUSTICE DONE TO "BILLY" MITCHELL

Thirty-one years after one of the greatest airmen this country has produced was "cashiered" out of service in 1926 because of his vigorous fight in support of his contention that airpower should be America's first line of defense, the Air Force has agreed to reopen the case of the late Brig. Gen. William L. "Billy" Mitchell.

It is sincerely to be hoped that the proceedings which are before Air Force Corrections and Review Board will result in undoing what we think was a gross injustice to a devoted military-career man, who was far ahead of his generation in his foresight into the coming air age, and who was court-martialed and degraded because he had the courage to pronounce his revolutionary views when the then reigning brass of the Army and Navy in Washington disagreed with him and crucified him because of their own shortsightedness.

There have been other instances of such instances meted out to men in the Armed Forces, because their prescience embarrassed less gifted superiors, but we don't know of a more glaring case of a prophet crying in the wilderness being pilloried, as was "Billy" Mitchell.

Why it has taken this country 31 years to reright the terrible wrong that was done to this foresighted airman, we will never understand. World War II proved beyond all question of doubt how right he had been a decade and a half previously, but to our great shame this Nation now has done nothing whatever to undo the unspeakable injustice to which General Mitchell had to submit.

The vindictive court-martial in 1926 conducted by a board of nine Army generals found him guilty of insubordination after he accused the Army of incompetency and inefficiency while he was urging creation of a separate air arm, and suspended "Billy" Mitchell from his permanent rank of colonel, deprived him of his command and duty and of his pay and allowances. The only mitigating action in those benighted days was that of President Calvin Coolidge, who modified the sentence so that General Mitchell was allowed half pay.

Many of the Mitchell views that were mistakenly regarded as visionary in the midtwenties later turned out to be correct countless times over. He had been one of the first to contend that battleships could be bombed and sunk by aircraft, and he steadfastly maintained that future wars would be decided in the air. Witness Pearl Harbor and all of the subsequent developments of air power in World War II. Had the brass of 1925–26 listened to Billy Mitchell, it is certain that fatal losses we suffered in manpower and aircraft in that war might have been avoided, if the advances we failed to make had not prevented the conflict entirely.

On October 29, 1955, the 30th anniversary of the court-martial of "Billy" Mitchell, we said in these columns that "A prophet is not without honor, save in his own country, and in his own house." This passage from Matthew 13:57, we quoted to support our argument that General Mitchell's prophecies had lived to plague those who disbelieved and prosecuted him.

We said then, and now repeat, that this man, one of the earliest and most outspoken advocates of airpower, an ace pilot of World War I, and an especially prescient officer of the Army Air Force, was virtually cashiered from the service he loved and gave his career to. We also said that while, unfortunately, he didn't live to learn that this Nation finally

came to realize the wisdom of his views and that his martyrdom in the end served its purpose well.

For "Billy" Mitchell's court-martial, with the vast amount of publicity given his opinions as a result of the bitter controversy the trial aroused, sowed the seeds of comprehension in the minds of our people that the United States Air Force eventually would become equally potent as an offensive and defensive weapon as our Army and our Navy.

When the treacherous Japanese struck us from the air at Pearl Harbor on December 7, 1941, and by that perfidious attack destroyed or crippled a major segment of our great Pacific fleet, and wiped out our "sitting duck" aircraft at Hickam Field, "Billy" Mitchell's great fight truly was vindicated. Sadly, he never learned of this vindication for he had died February 20, 1936, of a heart attack, while still a vigorous critic of the Nation's air policies.

In 1942 a grateful but belated gesture was made by his Nation to posthumously but only partially undo the great wrong that the 1926 court-martial had inflicted upon him. The rank which had been stripped from him was restored and he was even promoted to major general.

Now another 15 years later, the Air Force is engaged in reviewing his case. There can be no question as to what the result of this review should be. His name should be cleared once and for all time of the stigma which small-minded men placed upon it, and he should be accorded the highest honors possible.

Integration of the Public Schools—A New York Times Survey

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, May 28, 1957

Mr. JAVITS. Mr. President, the distinguished education editor of the New York Times, Dr. Benjamin Fine, has recently completed a survey, bearing very importantly on the debate which has taken place today in the Senate, which was published by the New York Times in five parts, on the results of the integration of Negro and white students and teachers in compliance with the historic Supreme Court ruling of May 17, 1954.

This series of articles would appear effectively to lay to rest the unfounded fears of many that integration in our public school system, in compliance with the Supreme Court's decree, is impossible and will disrupt the public-school system and endanger our youth. On the contrary, experience in schools in Delaware, West Virginia, Kentucky, Missouri, Oklahoma, and Texas shows this is not so.

The series of articles to which I have referred is recommended to all who would view the issue involved with rational eyes.

Mr. President, I ask unanimous consent that the articles be printed in the RECORD. I have been informed by the Public Printer that the articles are estimated to make approximately six pages of the RECORD, at a cost of $462. Notwithstanding the cost, I ask unanimous consent that the articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times of May 13, 1957]

WILMINGTON SEES INTEGRATION GAIN—SUCCESS OF RACIALLY MIXED CLASSES SURPASSES HOPE IN DELAWARE CITY

(This is the first of several articles on the integration of Negro and white students and teachers in accordance with the Supreme Court's decision.)

(By Benjamin Fine)

WILMINGTON, Del., May 7.—The first-grade pupils, like 6-year-olds anywhere, were restless toward the end of a long school day. Spring was in the air.

"Let's play with the bells," their teacher, Mrs. Rosalia Shore, proposed. A shout came from the 30 youngsters, 20 of them white and 10 Negro.

The bells were quickly distributed. "Twinkle, Twinkle, Little Star," echoed through the room. A hand waved.

"Oh, Mrs. Shore, please," a little girl with pigtails begged, "Willy doesn't got a bell."

"You mean," the teacher said, "Willy doesn't have a bell. We'll give him one."

Soon Ella and Willy, sitting side by side, led the class in bellringing. About 15 minutes later, at dismissal time, they walked out, hand-in-hand.

This scene could not have taken place here 3 years ago. For Ella is Negro and Willy is white.

Integration began in Wilmington on the elementary school level in the fall of 1954, following the Supreme Court's decision outlawing "separate but equal" facilities. Two years ago it was extended to the junior high schools. Last September, the senior high schools were opened to all students, regardless of race.

Negro teachers are now assigned to classes on the same basis as white. Mixed classes are common. It is not unusual to find Negro teachers in predominantly white schools.

The community has accepted integration. No opposition is visible or vocal.

"Integration has succeeded beyond our fondest hopes," Dr. Ward I. Miller, superintendent of schools, said.

Much preparation went into the preliminary stages. The parents and citizens generally were kept informed of every move. When, in the fall of 1954, a Negro teacher was assigned to teach white children, the superintendent took many precautions to see that the arrangement would work.

VISITED EACH HOME

The Negro teacher, together with her principal, visited the homes of each of the children assigned to her. In this way the parents became acquainted with the teacher. They also received permission to transfer their children to a class presided over by a white teacher if they wished. Few took up the offer.

Although parents have the privilege of having their children transferred to nonintegrated classes, only 20 in the entire city were transferred this year.

"Not long ago," Dr. Miller said, "a group of parents came to see me. Their children had a Negro teacher. They wanted me to assign the teacher to the second grade, so that their youngsters could be with her for another year.

" 'At first,' one parent said, 'we didn't like the idea of having a colored teacher. But she's wonderful. Our children are crazy about her.'

" 'We'd rather have a good Negro teacher than a poor white one,' another mother said."

CHILDREN PRACTICE INTEGRATION

What about the children? In the early grades they accept integration without question. They do not know the meaning of the word, but they certainly practice it.

The Negro and white pupils romp in the playground together. They take turns swinging the jump rope; it is not unusual to find a Negro child at one end, a white at the other. They share each other's sandwiches and cookies.

Mrs. Sherwood Closson, a second-grade teacher, has a class of 9 Negro and 23 white pupils. A teacher for 20 years, Mrs. Closson was worried when she was assigned to a mixed class a year ago. She was one of the first Negro teachers to go to a formerly all-white elementary school.

Now her worries are over. Her color no longer disturbs the white parents. And it certainly does not upset her pupils.

"We love Mrs. Closson," an 8-year-old white boy said. "I want to be a teacher, just like Mrs. Closson," a blue-eyed blond asserted.

LOANS FLUTE

Six children, four of them white, two Negro, presented a musical program.

"I forgot my flute," one of the boys whispered to his companion.

"Here, take mine," came the quick response.

One of the children was white, the other a Negro.

"I see children as a whole," Mrs. Closson commented. "I don't see them as white or colored. I just love all children."

Integration starts in kindergarten. Mrs. Hester Petty, a native of Rockville Centre, Long Island, was the first Negro kindergarten teacher appointed. At first, this upset some of the white parents. But this did not last long.

"They are most cooperative now," she said with pride. "I'm trying to do a good job with the children."

During the resting period in kindergarten, the children stretched out on blankets on the floor with no attempt at segregation.

They also played games together. "Candy, you and me are the mommies," a white child said to her Negro friend as they strutted uncertainly across the room in borrowed high-heeled shoes.

PROBLEMS STILL EXIST

As far as the children, the teachers, and the parents are concerned, integration is working smoothly. But the administration recognizes that there are problems. Serious adjustments must still be made.

Prior to the Supreme Court ruling, the State's public schools had been segregated. Of the 65,315 pupils in the State, 17.5 percent are Negroes. Of the 3,353 teachers, 458 are Negroes.

In Wilmington, 32 percent of the 12,812 students are Negroes. The lifelong attitude of the community had to be changed. Dr. Miller brought the community leaders together. He received support from the teachers. He got the parents to go along with him.

In less than 3 years a new way of life has taken hold in the city's public schools.

"I'm amazed and gratified at what has happened," James M. Rosbrow, president of the Delaware Congress of Parents and Teachers, stated. "We still have a long way to go, of course. But we are moving at more than deliberate speed."

Two major problems confront the schools: academic and social.

LOWER NEGRO I. Q.'S

The average intelligence quotient (I. Q.) for the white pupils ranges from 105 to 108, for Negroes from 95 to 98.

This means, Dr. Miller explained, that the Negroes are about one grade below the whites.

How does a teacher compensate for this difference? In most classes the three-track teaching method is used. Children are divided into superior, average, and low academic groups. In most of the early grades,

the greatest proportion of Negro pupils is found in the two lower categories.

But, teachers hasten to add, academic standards in the classroom have not been lowered. In the first and second grades, many children get remedial instruction to keep up with their class.

"It won't take long for the Negro child to catch up with the white one," Dr. Miller prodicted. "We don't think it's a racial difference. Rather, the Negro children have had a different economic and cultural background."

Educators estimate that by the time that Negro children reach junior high, the educational differecnes will be narrowed, if not eliminated.

EXTRACURRICULAR GROUPS

Extracurricular activities are open to all. Negroes are members of the athletic teams. They are on the student council. They are in the dramatic clubs and choral groups.

Crystal Burris, 10 years old, is vice president of the Leaders Council at the Gray Elementary School, where a majority of the 800 pupils are white.

Michael Jenkins, 17, a high school senior, is president of the senior council, the top student governing body. He defeated the 3 other candidates, 2 girls and a boy, even though he was the only Negro among the 4 candidates. His school has 61 Negroes out of an enrollment of about 1,100.

"I voted for Michael," a white girl explained, "because I thought he was the best person for the job."

A distinction creeps into their lives on the social level. Few Negroes attend the high school dances. Ann Tate, a senior, explained her reactions about going to the school dances:

"I just don't feel comfortable on the dance floor."

The Negro children are less aware of social differences in the elementary or the junior grades.

"My son has attended several of the junior high dances," said Harry L. Gardner, president of a parent-teacher association, who is a Negro.

"He says he has a wonderful time. He doesn't dance with white girls, though."

SOCIAL INTEGRATION FEARED

But many parents express fear at social integration.

"I don't want my boy to come away from school with a colored bride," a father said.

When do the children themselves discover color differences? Sometimes it is in the 5th or 6th grade. Or it might be a junior high school. By the time they get to senior high, the social separation appears complete.

Eleven-year-old Viola became friendly with her white classmate, Janet. Everything went well until Janet wanted Viola to come for dinner.

"Sorry," Janet's mother said. "I'd love to have Viola visit with you. But what would our neighbors say?"

Sometimes the drift apart begins at an even earlier age.

Nine-year-old Larry became a close friend of Kenney, son of a prominent Negro. They went fishing and hiking together. Larry approached his father:

"Dad, Kenney is in the Cub Scouts, I want to join his pack."

The father answered swiftly and sternly:

"No, Larry, you can't. I don't want you to join a club with Negroes in it."

Larry cried. He refused to join the Scouts in another part of the city. He stopped seeing Kenney. Larry has now become a problem child. He has been in several scrapes in the last month. His teachers are afraid he is on the way to delinquency.

"What has happened to my boy?" Larry's father asked. "He used to be such a nice boy. Now look at him. I just can't understand it at all."

SUMMARY OF INTEGRATION IN THE DELAWARE SCHOOLS

(Following is a statistical summary of integration in Delaware, taken from figures of the Southern Education Reporting Service:)

Enrollment in public schools	65,315
White	53,904
Negro	11,411
Enrollment in mixed public schools	21,018
White	17,770
Negro	3,248
Number of teachers	3,353
White	2,895
Negro	458

SCHOOL BIAS ENDS IN A BORDER CITY—CHARLESTON, W. VA., ADJUSTING WELL, ALTHOUGH PREJUDICE REMAINS IN HOMES

(This is the second of several articles on the integration of Negro and white students and teachers in public schools in accordance with the Supreme Court's decision.)

(By Benjamin Fine)

CHARLESTON, W. VA., May 9.—The mother of a fourth grade pupil at Mercer elementary school stormed into the principal's office on the opening day of school last fall.

What is this I hear about a Negro going to teach my boy?" she demanded.

Mrs. Bessie H. Stewart, the principal, explained that by order of the Board of Education, integration was now the school policy.

"I can't take it," the woman shouted. "I'm from Mississippi. My husband was born in Tennessee. If my child has a Negro teacher I'll take him out and send him to a private school.'

"Please," the principal asked, "try the new teacher. Give her a chance."

A week later, the Mississippi-born woman came to Mrs. Stewart and said quietly:

"Mrs. Stewart I was wrong. Jimmie loves his teacher. I guess I'll let him remain at Mercer for the rest of the year."

INTEGRATION IN EFFECT

When integration was put into effect in Kanawha County last fall, the school officials and community leaders had their fingers crossed. In the fall of 1955, mixed classes were ordered for the first, second and seventh grades. Last September, the entire school system from kindergarten through high school became integrated.

At first there were grumblings, such as that expressed by the mother from Mississippi. The superintendent, Dr. L. K. Lovenstein, had several anonymous telephone calls, threatening violence. The police were alterted but they were not needed.

Charleston, the State capital, is part of Kanawha County, in the heart of the West Virginia mountains. About 57,000 pupils, 3,000 of them Negroes, are enrolled. Only 129 of the 1,961 teachers are Negro.

Charleston and the entire county had always had a segregated system of education. When the decision to integrate was taken, Dr. Lovenstein and the board members called upon the parent-teachers associations, the citizen groups, and the press to help smooth the way.

"We couldn't have received better cooperation," said Herbert M. Beddow, president of the board of education. "Everyone agreed that integration must be made to succeed without violence."

It has Negro and white children in every part of the county. Negro teachers have been assigned to all-white schools, even to communities where Negroes are not permitted to live. Eighteen all-Negro schools have been abandoned. Three were merged with white ones. The district lines of eight schools were changed to permit Negroes to attend.

SYSTEM SAVES $250,000

School officials estimate that the immediate saving this year will be $250,000 out of a budget of $11 million. The economies will become even greater in the years ahead, they predict.

There is no indication that the educational standards have been lowered. Dr. Lovenstein points to the high standards of Negro instruction—the small pupil-teacher ratio and the corps of adequately trained Negro teachers—as reasons why the Negro children kept pace with the academic achievements of their white classmates while they were in a segregated system.

To some parents, acceptance of Negro teachers in mixed classes came hard. While visiting a friend, Mr. Beddow was taken to task for assigning a Negro teacher to the fourth grade. The father spoke harshly against Negro teachers in general and this one in particular.

His 10-year-old daughter, overhearing the conversation, broke into the the room.

"You're talking about my teacher," she said to her father indignantly. "She's the best teacher I've ever had."

"The father hushed up fast," Mr. Beddows said. "He's for integration now."

OPERATING SMOOTHLY

As the first full year of an integrated program draws to a close, the pupils and teachers agree that the program has operated smoothly.

"I'd like to have my teacher again next year," Billy, 9, said of his Negro instructor.

"I like being here with my white friends," Tom, 10, who was in an all-Negro class a year ago, added happily. "My teacher is real nice."

He doesn't even refer to the fact that she is white—the first white teacher he has ever had.

On the elementary level, almost without exception, Negro children and white ones play and study together. As was found in Wilmington, Del., the youngsters here are color-blind. They make no distinction between races in the classroom or on the play yards.

A fourth-grade teacher, Mrs. Maude Bennett, has 18 white and 10 Negro pupils in her class. She has been a teacher for 32 years, and this is the first time she has taught an integrated class.

"I can't see any difference at all," Mrs. Bennett said. "The colored and white children do just about the same work. In the spelling bees, sometimes a white child will come out ahead, sometimes a Negro."

The class officers were called to order by Mrs. Bennett. They gathered around her desk to decide how best to keep the room clean.

The president, James Randall, who wants to be a pilot, is a Negro, as is the assistant secretary, Jane Clayton, a future teacher. The vice president, Linda Stillwell, and the secretary of the class, Margaret Moses, are white.

CHOSEN FOR ABILITY

This situation is common throughout the school system. Negroes are elected to student offices, they are on the athletic teams, they work for the student newspapers and join the dramatic clubs. But, the students are quick to say, the Negro pupils are chosen on the basis of ability, not color.

"We love Jimmy Randall," his classmates said. "He's a good president."

The townspeople have come to accept this school integration. Recently about 100 elementary children marched through the streets to attend a concert in the center of the city. Quite by accident, the informal procession was led by a third-grade Negro boy and a third-grade white girl. Hand in hand they marched down the street at the head of the procession.

"I wondered what the people were staring at," a school official said. "Then suddenly

I realized. We are so used to seeing Negro and white children playing together in schools that we just don't notice it anymore. For the citizens, however, it must have been a novelty."

MOST TEACHERS WHITE

Because the great majority of teachers and pupils are white, most of the youngsters are taught by white teachers. For the first time, these teachers find Negro children in their classrooms.

Jean Ferguson, a third-grade teacher with 35 years' experience, is typical of many. Until this year she had taught all-white classes. Now she has a class of 13 Negroes and 13 whites.

"It was difficult to get used to it at first," she said, "It's made my work more difficult and more challenging.

"But I haven't found any real difference in intelligence between the two races. There are slow and fast readers among both the Negroes and the white children."

The Negro parents come to the PTA meetings, Miss Ferguson said, in the same proportion as the white parents. They cooperate with her whenever special problems arise, she said.

"I don't mind teaching a mixed class now," she added. I'll probably get another one next fall. I certainly won't ask for an all-white class."

TRANSFERS POSSIBLE

Parents who do not want their children to attend mixed classes or who object to Negro teachers may ask for a transfer. However, if the class to which they wish their child transferred has more than 30 pupils, the child will not be admitted. Also, they have to pay transportation costs of $4 a month on the elementary level, $12 on the high school.

"We have had mighty few requests for transfers," Dr. Lovenstein said. "Our parents seem to accept things as they are."

NEGRO TEACHER ASSIGNED

Sometimes a Negro teacher is placed in an all-white school. Mrs. Stella Meiner at Chandler School is an example. She has 41 4th-grade pupils, and they are "crazy" about her, in their own words. "She's a good teacher," the children said.

"My mother says," a long-haired girl of 9 remarked, "that Mrs. Meiner is the nicest teach she ever met."

Mrs. Meiner always had taught Negro children. Now she teaches only white children. The educational standards are similar, however, she said.

"I don't find any differences at all," she said. "They are all such lovely children."

Dr. Lovenstein explained her appointment:

"There was a vacancy at the school and Mrs. Meiner had the necessary qualifications, so we gave her the job."

ANOTHER IS APPOINTED

A similar situation exists at the Clendenin Junior High School, 20 miles from Charleston. No Negro had ever taught in this school of 864 children and 27 teachers. Moreover no Negro had ever lived in Clendenin, a mining and farming community.

A Negro teacher, Arned Brown, was brought in last September to teach art and history. He is accepted by the community, students, and teachers. For the first time in Clendenin, 7 students have won art prizes in national competitions.

The students sing the praises of Mr. Brown.

"He is the best teacher I've ever had," is the typical comment of the 254 students whom he teaches.

"We have forgotten that he's colored," Debbie Karr, the senior class president, said. "When he first came here, I was prejudiced. I didn't like Negroes. Well, I've certainly changed my mind now. I think they're as good as we are."

BIAS BEGINS OUTSIDE

However, integration stops in the classroom or on the athletic field; it is not carried over into the home. When a colored student at the Thomas Jefferson High School came to a party given by one of his classmates, he was asked to leave.

"Please don't take this as a personal affront," the mother of the boy giving the party said. "We just aren't used to having Negroes at our parties. Maybe when integration is farther along we'll be able to invite you."

"I got a phone call from a boy in my class," said Mary Bowditch, 14, a high-school freshman. "Mother didn't like it when she learned he was colored. When he called again she wouldn't let me talk to him. But really he only wanted to carry on a pleasant conversation."

At the school dances the Negro and white pupils are not allowed to exchange dances.

"The community is not ready to go that far," said the dean of girls at the Stonewall Jackson High School.

"We'll have to take integration step by step," said Mrs. John C. Norman, a Negro teacher active in community affairs. "You can't hold the dawn back indefinitely."

[From the New York Times of May 17, 1957]

LEXINGTON CALM OVER INTEGRATION—SCHOOL MIXING STARTS SLOWLY—FASTER GAINS EXPECTED

(This is the third of several articles on the integration of Negro and white students and teachers in accordance with the Supreme Court's decision.)

(By Benjamin Fine)

LEXINGTON, Ky., May 11.—Integration has been introduced in this southern city on a limited scale. It can best be described as a "token" step toward desegregation.

Of the 8,200 students in the public school system, 2,800 are Negroes. But only 35 Negroes are found in mixed classrooms. Twenty of these are in a junior high school, four in a senior high, and the rest in two elementary schools.

About one-third of the 340 teachers are Negroes. So far not one Negro teacher has been assigned to a school with white children.

There is little intermingling of the races in the parent and teacher groups. The Parent Teachers Associations are kept separate with the Negro groups belonging to one central council, the white to another. The teachers have their own citywide associations, but amalgamation has taken place in the Statewide organizations.

However, despite the apparent lag from integration, action has been taken by the board of education to comply with the Supreme Court's ruling of May 17, 1954. In the fall of 1955, the board voted to open all schools to Negro and white children alike. It stipulated only that the children should go to schools in their own neighborhoods.

Following the board's action, 25 Negroes entered the formerly all-white schools. This dent in the wall of segregation did not create any incident.

This fall another slow step toward integration took place. Thirty-five Negro children enrolled in the white schools. Now, at the end of the academic year, the community apparently has accepted calmly this further breaching of the color line.

Officials here still feel that they are skating on thin ice. A day after the Supreme Court's desegregation decision, a fiery cross was burned on the lawn of Dr. John M. Ridgway, superintendent of schools, and damaged his house. However, the police acted quickly to stem further violence. None occurred.

"I get an anonymous call now and then, but that is all," Dr. Ridgway observed. "That doesn't intimidate me any."

What is the outlook for full-scale integration in this horse racing, society-conscious center of Kentucky? Dr. Ridgway does not believe that large numbers of Negro students will apply to the white schools. He bases this view on two assumptions:

First, that the Negro schools are as good, and in some cases even better, than the schools for white children.

Second, that the Negroes live in a homogeneous housing pattern, which will keep most of them in schools within their own neighborhoods.

But what if the Negroes do want to attend the white schools?

WON'T TURN ANY AWAY

"We won't turn any of them away," Dr. Ridgway answers, but "substantial numbers of colored children in the all-white schools may cause considerable community resentment."

The president of the board of education, Dr. Francis Massie, is not as sure as the superintendent that the token integration will be continued indefinitely.

"The real trouble is ahead of us," he believes. "I would guess that within 10 to 15 years we will see large numbers of Negroes in mixed schools. When that happens, we may find community opposition."

But, he insists, the school board plans to stand firm.

"We will not turn back," he maintains. "We intend to obey the law of the land."

There is a noticeable trend toward increasing the patterns of integration. Policy conferences between the associations of Negro teachers and white teachers have envisioned toward amalgamation. Spokesmen for both groups expect the merger to take place within a year or two.

Similarly, a move is underway to consolidate the parent-teacher associations.

ACCEPTANCE GROWING

The limited integration is operating smoothly. The Negro children are accepted both in the classroom and in the extra-curricular activities. They are on the athletic teams. A Negro boy had the leading role in a school play. Several Negroes are in the glee club and band. Recently white and Negro cheerleaders locked arms as they encouraged their basketball team—the city's first integrated team.

"It was a moving sight," a school official said. "I woldn't have believed it possible to see white and colored girls holding hands, leading the student body in songs and cheers."

In the Johnson Elementary School, the fifth graders were preparing a report on local history when this reporter entered.

"Let's make Ayon our chairman," someone proposed. "She's nice and smart."

"That's a good idea," the children agreed. "She'll know how to be a good leader."

So 10-year-old Ayon Embry was chosen as class chairman. Her eyes flashed happily as she came to the head of the class. Plainly, she was the class' favorite.

Ayon, who has not decided whether to be an actress or a teacher, came here in January from Biloxi, Miss. As the only Negro in a class of 38 white pupils she had to make a sharp adjustment. Similarly her white classmates have had to adjust to the experience of going to school with a Negro child.

WE PLAY TOGETHER

"I like school very much," Ayon confided. "We play in the yard together. Everyone is nice to me. Gaile is my best friend."

Blond-haired Gaile Ginn, 10, who also wants to be a teacher, nodded in assent.

"Ayon is my best friend too," she said. "We always play together during recess."

The difference in color seems to be forgotten. Nor does it influence their teacher, Mrs. Cleone M. Watts. She has taught for 28 years, but never before with a mixed class.

"I don't mind it at all," she said. "Really, I never think of Ayon as colored. She's just a lovely child, one of the nicest and most popular in our class."

Not a ripple of excitement has taken place at the Lexington Junior High School, formerly all white, which now has the largest number of Negro students. Although there are only 20 Negroes among the 582 students they are evident in the classroooms, during lunch periods and at the after-school activities.

In a civics class, two girls gave a report on citizenship. One was a Negro, the other white.

"We found," began Gwendolin Emerson, 14, who is attending a white school for the first time, that people are different. Not only physically, but mentally and emotionally too.

Her partner, Betty Brandenburg, 14, who never before had sat in a classroom with a Negro, continued the joint report:

"In a democracy we find all kinds of people. We have to learn to be good citizens." Gwendolin, 1 of 4 Negroes in the class of 22, likes her new school. She came here this year from the all-Negro junior high.

"I was nervous at first, but that soon wore off," she said. "When I first came here some of the girls called me names. But everyone is real nice to me now."

"I've been in a Christmas play and a concert," said Limmie Farris, 15, who also came from the all-Negro school. "The studies seem harder here than in the other school. But I plan to come back this fall."

"The teachers treat us the same as anyone else," said Eleanor Jones, 13, another Negro pupil. "I asked my teacher if my color bothered her. She said she never gave it a thought."

TEACHER ADAPTING

The civics teacher, Miss Pearl Davis, has accepted her mixed class, but concedes it was not at first. She pointed out that she had been a teacher for 34 years, and it had taken time to break lifelong habits.

"Frankly, at first I resented having Negroes in my class," she said. "I thought I'd have discipline problems. I soon found out I was wrong. I'm not conscious of color any more."

The white children in the elementary schools accept their Negro classmates much more readily than do the white students in junior high school. The younger children play ball together in the school yard and walk off arm-in-arm to the classroom when recess ends.

Are Negroes able to keep up with their classmates intellectually?

[From the New York Times of May 20, 1957]

KANSAS CITY MAKES BIG STRIDES IN INTEGRATION DESPITE TENSIONS

(This is the fourth of several articles on the integration of Negro and white students and teachers in the public schools in accordance with the Supreme Court's decision.)

(By Benjamin Fine)

KANSAS CITY, MO., May 15.—The caller sang our "Swing your partners" and the square dance was on.

The boys and girls at West Junior High School pranced happily on the stage of the school auditorium while their classmates applauded.

No one seemed to notice that Negro as well as white pupils were in the dance. And that they "swung their partners" regardless of color.

Of the 633 students at West Junior High School, 114 are Negro. Negro youngsters participate in every type of activity. They are on the swimming and basketball teams. They are on the 25 social and school clubs, from needlework to photography. They attend the monthly dances.

"When we first enrolled Negroes here a year ago," Roscoe V. Cramer, the principal, said, "we had some doubts about mixed dancing. But I knew that the boys and girls would solve the problem in their own way. They did. Negro boys dance with Negro girls, white boys with white girls."

Dr. Cramer looked up at the auditorium stage. "This is probably the first time in this city," he said, "that mixed dancing has been seen in our schools."

He paused before adding: "But this is not ballroom dancing. In square dancing, you see, the white and colored children only hold hands."

Integration has made rapid strides here. But, serious problems still exist. Many junior and high school students say that while they accept mixed classes they do not like them. An undercurrent of uneasiness, bordering on tension exists in several of the integrated schools. In some schools Negro students are not permitted to join some of the extracurricular club activities. But school officials minimize this condition. They blame adults.

TWENTY-TWO PERCENT NEGRO

In this city of 500,000 the Negro school population is large; 22 percent, or 14,000, of the school enrollment of 62,742 are Negro. Of 2,485 teachers, 394 are Negro.

This fall, for the first time, the system began to integrate the faculty. One hundred and seventy-one teachers are working on mixed faculties. Of these, 115 are white, 56 are Negro. One formerly all-white elementary school has a Negro principal. A high school has a Negro vice principal.

"We still have a long way to go before we get complete faculty integration," Dr. James A. Hazlett, superintendent of schools, said. "We have made a start, and that is important. We can't step out too far ahead of the community on the integration issue."

Pupil integration, though, is virtually complete. Mixed classes are found on every level from kindergarten through junior college. In the fall of 1955 the board of education put revised district lines into effect, abolishing all differences between Negro and white school lines. Regardless of color, children attend school in their own districts.

TRANSFER RATE LOW

However, they can ask for a transfer to another school. Few students take this way out. In the preintegration year of 1954–55, 2,572 students asked for transfers for one reason or another. That was considered normal. When integration became effective in 1955–56, 2,998 sought transfers, an increase of about 400. This year about the same number asked to change schools.

"Of course, we know that a small percentage of the students want to get out of a mixed school," Dr. Hazlett said. "But frankly we were surprised at the insignificant number who actually took advantage of this opening. We are even more pleased to see that the number seeking transfers is not growing."

The schools in Kansas City are almost an island of integration in a community that is still largely segregated. The churches, for the most part, are not mixed. The city hospitals are kept separate on the basis of color. The downtown restaurants do not serve Negroes. Many movie houses have a segregated policy.

"Considering the rest of the community activity, the schools have made remarkable progress," Dr. Hazlett said. "We have not had any serious flareups."

On the elementary level, Negro and white students accept each other easily. They play together regardless of color. At Linwood Elementary School, where the 850 children are almost equally divided between whites and Negroes, the atmosphere is calm and friendly. The boys and girls do not give any sign of prejudice.

TENSION IN JUNIOR HIGH

This is not true on the junior high school level. Tension is apparent at Central Junior High School, where 42 percent of the 1,450 pupils are Negroes. Within recent months, fist fights between white and Negro boys have been reported. A Negro boy broke the jaw of a white boy in an unprovoked attack. The police have been called to curb a growing protection racket, in which Negro boys demand money from white pupils.

The principal, Rae Haley, is quite aware of what is happening. To try to ease the tension, six Negro teachers and a Negro counselor have been added to the staff.

It is a community, not just a school problem, school officials say. Central School is in a section where the Negro population is growing. Many whites are moving out. Last Monday the Central Linwood Community Council, consisting of representatives of the churches, schools, welfare groups, and other civic-minded organizations, met to consider how to bring about better relations between whites and Negroes.

"The churches and other community groups must cooperate with the schools if we are to have integration," the council insisted.

You can hear the views of their elders parroted by the seventh, eighth, and ninth graders.

CAN'T TRUST THE NEGROES

"You can't trust the Negroes," according to Russell Funk, 15 years old, a ninth-grade student. "When you walk down the hall they try to trip you or swing at you with their fists."

"I'm shocked at the language of the colored girls," Carol Harmon, 15, said. "Some of the girls are nice, but most of them use a lot of profanity."

"This is my first year with colored children," observed 13-year-old Bobbette Roberts, a seventh-grader who wants to be a nurse. "I accidentally knocked a basket off the bench of a colored girl in gym today and she hit me. A lot of times the colored girls put their arms around you. I don't want to seem mean, but I just don't like them hovering about me in that way."

She continued: "If we go to school with Negroes, it's going to mean intermarriage. You just can't help it. I think it's terrible to see a white boy go down the hall next to a colored girl."

For the most part, the Negroes expressed a wish to be friendly.

"LOADS OF WHITE FRIENDS

"We want to show our white friends that we are not an inferior group," said Maisie Dixon, 14, a ninth-grade student. "I have loads of white friends. They don't mind my color. But it's the grownups that influence them and tell them not to play with us."

"We don't want to grow up hating each other," asserted Marva Welch, 15, who hopes to be a laboratory technician someday. "We don't have any grudge against the whites. But we feel that we are just as good as they are."

Another quietly insisted: "There is really no difference between us. It's just a matter of color."

Despite the difficulties and the tension, much headway has been made. Mr. Haley estimates that less than 10 percent of the students in his school are "troublemakers." The rest, he believes, accept mixed classes.

Negro students have been elected to various class offices. It is not uncommon to find a Negro on the student council or president of a class.

"My best friend is a Negro girl," volunteered Pauline Walker, president of the West Junior High School student council. "My mother was dismayed when she heard that

I had a Negro friend. It doesn't bother her now, though."

John Robins, a Negro, is treasurer of the council.

"Some of the white pupils were a little skeptical about me at first," William M. White, one of the six Negro teachers at Central Junior High, observed. "They weren't sure whether or not they would like me. I'm sure they like me now, though."

"I find it's harder to make the same grades at Central," said Opal Jackson, 13, who came from an all-Negro school. "I have to study much harder."

Eclophia Smith, a seventh grader, came to Kansas City last January from Summers, Miss. The junior-high work here is pretty rough on him, but he is struggling hard to keep his head above water.

"I felt scared and ashamed when I first came here," Eclophia continued. "You see, I never went to a school with white children before. I'm not scared any more. They all treat me very nice."

The white children accept their Negro teachers without resentment.

SHE WANTS TO LEARN

"I came here to learn," points out Judy Dunn, 13, who wants to be a nurse, "and I don't care whether my teacher is white or black."

"We are very happy at this acceptance of Negro teachers by the white children," Dr. Hazlett said. "Frankly we were worried at first about putting Negro teachers in with white children."

Other problems have developed. Some teachers say mixed classes have brought about relaxed discipline and lower educational standards.

"The Negro children are just a little slower in getting to school," according to Miss Ann Kayser, a fourth-grade teacher, who is president of the Teachers Cooperative Council.

"I've had a 30-percent increase in tardiness in my class. Quite often I'll have 3 or 4 Negro children come in 10 minutes late."

"They're noisier and less inhibited," declared Ed C. Lockridge, a math teacher for the last 30 years. "I have 3 or 4 Negroes who are top students, but most of them are not that way. What alarms me is that the white students are doing less work. Instead of getting the Negroes to come up to their standards, they are lowering their own."

It is obvious that the easygoing relationships among teachers and students on the elementary level does not exist in junior high school. Many might say that junior high age is difficult under any circumstances. It is made more so through integration, some of the teachers believe.

SOME SEGREGATION REMAINS

Segregation has not been entirely abolished, Paul M. Marshall, principal of senior high school, notes. The Negroes have not been invited to join the literary club at his school.

"Several Negro students came to me," Mr. Marshall said, "and wanted to form a literary club of their own. I gave them permission to do so."

"I think that kind of segregation should be discouraged," declared William Gremley, executive secretary of the City Commission on Human Relations. "That's retrogression."

However, Mr. Gremley, whose city commission of 15 works closely with the school board, said that integration had made an excellent record. Desegregation has taken place with a minimum of violence.

"Some of us feel that integration should be speeded up," he said, "especially in mixing teaching staffs more. But on the whole Kansas City has done a remarkable job."

Here, as in other southern communities visited by this reporter, integration ends the moment the pupils leave the school yard. A white boy, standing in front of Central High, waved to his Negro friend as they stepped outside the school yard.

"So long, Jim," he said, quietly, "see you tomorrow."

They both walked in the same direction, the Negro boy joining several Negroes, the white boy a group of whites. It was 3 p. m. Integration had ended for the day.

[From the New York Times of May 22, 1957]

INTEGRATION GAIN IS FOUND IN TULSA—SCHOOL-SPONSORED ACTIVITIES INCLUDE NEGROES, BUT LAG IS SEEN AFTER CLASSES

(This is the fifth of several articles on the integration of Negro and white students and teachers in the public schools in accordance with the Supreme Court's decision.)

(By Benjamin Fine)

TULSA, OKLA., May 17.—A teacher at the Daniel Webster High School here took several members of her class, Negroes and whites, to a nearby lunchroom.

"Sorry," the waiter said, "we don't serve Negroes here."

"In that case," a white student retorted, "we won't eat here either."

They all marched out. For a moment the teacher's spirits drooped. Suddenly she brightened and said:

"Let's all go to my house for lunch. We'll be able to put something together."

They did. And had a grand time doing it.

More recently, 11 high-school girls spent a pleasant Saturday morning together at Tulsa University. They had been guests of the journalism department.

TEN OF ELEVEN PASSES HONORED

Upon departing, each of the girls received a pass for a downtown movie house. When they presented their passes at the theater, 10 of the 11 students received tickets. The 11th was rebuffed:

"Sorry, we don't admit Negroes here."

The 10 white girls returned their tickets to the manager.

"If Juanita can't go in, we won't go, either," they said.

"We couldn't walk out on our friend," the girls explained later.

These incidents would not have taken place 3 years ago. At that time the schools were entirely segregated. But a new day has come to the Tulsa school system. It may not be too bright, measured in terms of what still remains to be done. But compared with many other communities in the Southeast, it is a giant step forward.

Integration, begun here less than 2 years ago, has been quiet. No violence has followed the step taken by the Board of Education in the fall of 1955.

Negro and white children ride school buses together, they sit side by side in the classroom, and they play together on the football and baseball teams. Negroes have been elected to prominent positions of leadership.

FEW NEGRO STUDENTS

But there is another side to the picture, school authorities say. Thus far the numbers involved are relatively small. Only 112 Negroes attend formerly all-white schools. They are in 3 high schools, a junior high, and 4 elementary schools. This may not be too many in a system of 56,000 of which 4,500 are Negroes. But it is a tremendous step forward in this southern community of 250,000 persons of whom about 10 percent are Negro.

More Negro students are expected in the schools this fall. After all, it is explained, this is only the second year of integration. About 80 students entered the first year.

Dr. Charles C. Mason, superintendent of schools, says that there always will be a considerable amount of de facto segregation here. The Negro population is concentrated in the north and northeast sections of the city.

For the most part, the Negroes in these areas will go to school in their own neighborhoods. This is comparable to the situation in Harlem or the Bedford-Stuyvesant section of Brooklyn. However, as the housing patterns change, more Negroes can be expected to attend mixed schools.

Integration has not taken place on the faculty level. There are no Negro teachers in the white or mixed schools. The Urban League is seeking ways to bridge this gap. At a special meeting yesterday the league voted to appoint an education committee to work on the issue.

"I believe that teacher integration would be accepted in Tulsa," Louis Taubman, vice president of the league, said. "Parents want good teachers for their children, regardless of color."

The superintendent is not quite as sanguine. "The community is not ready for it," Dr. Mason said. "We have to take one step at a time."

FIRST STEP CALLED SUCCESS

The first step has succeeded, from all indications. Negro students are accepted in the classroom and on the playing field. This is a "first" for both whites and Negroes—the first time that Negroes are in mixed classes, and the first time that white students are in academic competition with Negroes.

Are the Negroes able to keep up with their white classmates? It is too early to tell, the teachers say. Besides, the numbers are not large enough to have scientific validity. Some students are failing, while others head the honor roll. However, in the main, the Negro students generally are among the poorest in their classes.

"I'm working much harder now than I did when I went to the all-Negro school," a ninth-grade girl said. "Before I just played around. My grades have improved here. I want to show my white friends that I can do work as well as they can."

"I never dreamed of going to college when I attended Carver [an all-Negro school]," another student said. "I certainly plan to go now. My work is more stimulating here. I hope to become a home economics teacher some day."

"She's one of my brightest students, and she will make a good teacher," her instructor said. "Everyone in class likes Georgianna."

At the Daniel Webster High School, where 26 of the 800 students are Negroes, mixed classes are now accepted as a matter of course. The dire predictions of some that integration would never work simply have not come to pass.

Nor is it solely a question of numbers. It would not matter, Dr. Carl A. Ransbarger, the Webster principal said, just how many Negroes came here eventually. The old-time tradition of separation of the races has been breached, and that is the important thing, he added.

"Whether we have 20 or 200, the situation will be the same," Dr. Ransberger declared. "White and Negro students accept each other in the classrooms."

Negroes participate in various extra-curricular activities. They go to the school dances together. However, here, as in the other border cities, the Negroes and whites while attending the same dances dance with their own race. There is no mixed dancing. Three Negroes are on the school band.

"We've had no trouble whatsoever," said Dennis Kelliher, the band leader. "They go with us on trips when we visit other cities. We only eat where both colored and whites are served."

One of the three-letter men in the school, Kenneth Lewis, a football, basketball, and track star, is a senior at Webster.

"No one looks at my color when I shoot a basket," he observes. "If I get a good shot, they cheer. If I pull a boner, they jeer."

However, it is not easy to overcome the mores of a lifetime. It will take more than law to make school integration acceptable to all. The school's music teacher, Louis W. Ballard, says that prejudices sometime are found in unexpected places.

"I have a chorus of 50 boys and girls," he said. "Ten are Negroes. At first I placed them the way I thought they should go, based solely on their voices. The white students objected to being placed next to Negroes. Now the whites are in one section, the Negroes in another."

High-school students, it seems, are more prejudiced than the elementary grade children. In the lower grades, the white and Negro boys and girls play and study together. They appear to be totally colorblind.

For example at Emerson School, where there are 34 Negroes in about 400 children, the youngsters were playing fairyland games common to children the country over.

They put on Peter, Peter Pumpkin Eater—remember, that's the story of Peter who had a wife and couldn't keep her, so he put her in a pumpkin shell, where he kept her very well.

A 7-year-old Negro lad, Jimmy, when his turn came to be Peter, chose as his mate a blue-eyed white girl, Suzy, who had become his best friend. He pushed his white wife into the papier-mache pumpkin shell, and the game went on merrily.

"No one even said boo," the teacher remarked, smiling. "At this age color just does not exist."

At the beginning of junior high school, as was found in Kansas City, Mo., attitudes begin to change. And by senior high, if Tulsa is typical, prejudices are in full bloom.

You can recognize the clichés and stereotypes concerning the Negro race. The Webster High School students are not too happy that they have become interracial.

"I believe in equal rights for Negroes," a senior declared, "but I also feel that they should go to their own schools."

"If you let Negroes come to school it won't be long before they marry white girls," a 14-year-old girl said.

"They're dirty. They take a bath once a year," still another insisted.

"I'd hate to see our school overrun with Negroes," a sophomore said, "they certainly would pull our standards down."

None of the students seemingly objected to any individual Negro. They would cheer a Negro if he made a touchdown with the same gusto that they cheered a white student. And they would object to a restaurant turning a Negro away, if he were in their group.

"It's the principle of the thing we oppose," the white students said. "We want to keep the races separated."

The students would frequently begin their comments with: "My daddy says" or "My mother feels" and then go on to repeat the prejudices they hear at home.

"It's the adults," one of the officials said. "If you leave the students alone, they'll come out all right. They have the proper democratic instincts."

Do Negro students want to attend integrated schools? Many of those now at Booker T. Washington High School, the all-Negro school at Tulsa, said that they did.

"I'd like to go to a mixed school," said Elizabeth Humphrey, a senior. "It would be a challenge to work with white students and teachers."

The Negro students accept stoically the limitations of integration. They know that there are certain taboos that they cannot break.

Richard Tiger, one of the most intelligent and popular students at Booker T. Washington, is president of the student council. Each of the five high schools—the one Negro and the four white—has its own student council. The officers of the five councils are planning a joint citywide picnic, to take place May 29. The other four presidents are white. One of the presidents, a girl, invited the other four to meet at her house for an evening business session. Picnic plans were to be considered. The day before the meeting she phoned Richard.

"I'm sorry," she apologized. "We can't meet at my house. Daddy has invited some friends over for a meeting of his own."

"I rather expected to get that call," 18-year-old Richard said. Then he added: "We just can't let things like that upset us too much. After all, we are doing things that our parents would not have believed would happen in their lifetime."

That is evidently true. The Tulso high schools cooperate together regardless of race. The high school teams play against each other. When the all-Negro Washington team plays the all-white Roosevelt or Edison teams, racial cheering is kept to a minimum. Negro and white students sit together on a first-come, first-served basis. Negro and white referees—one Negro, one white—have been used to officiate the intramural interracial games.

Both Negro and white referees are booed or cheered on the basis of their decisions, not their color.

The high schools have joined to issue one newspaper for all. The editors, Negro and white, meet together to determine policy. The schools sponsor an all-boys chorus and an all-city orchestra. The teachers are fair and unbiased, the Negro students say. "I'd just love to buy all the teachers vacation presents, my child is so happy," one of the mothers whose daughter attends Daniel Webster said.

Here, as in the other cities visited in this survey, integration ends with the end of the school day. Or with the end of the school-sponsored activity. There is a subtle distinction. White children will go to a restaurant or a dance with Negro classmates if the event is connected with their school program. Otherwise the separation of the races is complete.

[From the New York Times of May 24, 1957]

SAN ANTONIO CALM OVER INTEGRATION—MANY TEACHERS COMPLAIN OF HARDER WORK BUT CHANGE IS GOING AHEAD SMOOTHLY

(This is the sixth and last article on the integration of Negro and white students and teachers in the public schools in accordance with the Supreme Court's decision.)

(By Benjamin Fine)

SAN ANTONIO, May 20.—One of the serious obstacles to school integration here is the opposition of teachers.

Many teachers find it difficult to adapt to mixed classes. They complain that their work is much harder, and that they have to set up 2 levels of instruction, 1 for whites, the other for Negroes.

"I'm Texas-born," an elementary teacher said, proudly. "It is not easy for me to teach colored children."

The teachers' opposition is sharpest in the schools with the largest numbers of Negroes. The proportion ranges from less than 1 percent to nearly 50 percent.

San Antonio, the third largest city in Texas, with a population of 550,000, has adopted a policy of gradualism. Two years ago Negroes were admitted to one-third of the school system. They could enter grades 1 and 2 of the elementary school, grade 7 in junior high and grade 10 in senior high.

PROGRAM EXPANDING

Last fall the program was expanded, with another third of the classes thrown open. This September, Negroes are expected to enter the remaining third of the classes.

In a system of 61,000 students, 5,400 are Negroes. The system employs 2,250 white teachers and 165 Negroes. At present 475 Negroes attend classes with white children in 29 schools. A substantial increase is expected next year.

In all of Texas, only 3,400 Negroes are in mixed classes.

The faculties have not been integrated. The Negro and white teachers retain their own associations.

It seems evident to this reporter, after talking to scores of teachers, that many are not ready for mixed classes. The white teachers who have more than a token number of Negroes in their classes are unhappy, even resentful. They maintain that Negro children have a lower intelligence.

Two elementary schools have a high proportion of Negro students. Tynan has 93 out of an enrollment of 196 and Fanin has 74 out of 210. The teachers at both Tynan and Fanin are displeased at this pupil ratio. All seven teachers at Tynan have asked to be transferred.

COMPLAIN OF HARDER WORK

"We just can't take it any longer," several said.

"Our work is much harder," one said. "The Negroes can't keep up with the whites."

"We don't think it's fair to the white children," a teacher said. "They are the ones I really feel sorry for."

"I don't object to 1 or 2 Negroes in my class, but when the majority are colored, that's too much of any Texan to take," an elementary teacher complained.

At one of the junior high schools, a teacher said she didn't mind having Negroes in her class, so long as they were limited to a mere handful.

On the other hand, many teachers accept the policy of integration, even though not personally approving it.

"I hardly know I have any colored children here," a high-school teacher observed.

"I think any teacher who values her profession will treat all pupils alike," she went on.

GETTING ALONG FINE

"I get along fine with the Negro students," remarked Mrs. Janie Seibrecht, guidance counselor at the Edgar Allan Poe Junior High School. "I took my graduate work at Teachers College, Columbia University. Negroes lived in the same dormitory with me. We attended classes together. That certainly changed my attitude.'"

Despite the complaints from teachers, integration has made significant strides here. Dr. Thomas B. Portwood, superintendent of schools, said that a number of teachers accept integration as a challenge.

"Of course, I know that opposition exists," Dr. Portwood said. "But many teachers are ready to take integrated classes. I'll transfer those who can't take it."

"I haven't had many complaints from the teachers," asserted Arthur E. Turbeville, president of the San Ontonio Teachers Council. "Integration has made rapid strides. The teachers are cooperating nicely."

Integration has been adopted here without any of the fuss or violence that flared at Mansfield and other Texas towns. School officials want to keep it that way.

"We don't want to blow our horn, but we think that integration is working smoothly," says Dr. Portwood.

BETTER THAN EXPECTED

E. W. Robinson, president of the board of education, agrees. "Integration is succeeding better than many of us would have thought possible," he says.

The students accept mixed classes without complaint. The Negro students have become integrated in the curricular and extracurricular life of the schools.

Next Thursday—which is not Memorial Day as a holiday here—Longfellow Junior High School will hold its graduation exercises. The class president, Robert Samuel

Hasson, 14 years old, and his 6 fellow officers put on a dress rehearsal this morning in the school auditorium. They wanted to be letter perfect when their parents see the diplomas given out.

Robert stepped to the center of the stage. "Teachers, parents, and friends," he began, clearing his throat, "we want to welcome all of you."

"Not so fast, calm down, please," admonished the teacher supervising the rehearsal. "Remember, there'll be hundreds of parents listening to you.".

The graduation exercises at Longfellow for which he was rehearisng will be different from any other ever seen in San Antonio. For Robert, who will serve as chairman, is a Negro.

NEGRO CLASS PRESIDENT

There are only 4 Negroes in this school of 810, but Robert, who plans to be a clergyman, was elected class president by an overwhelming majority. This is the highest office held by a Negro in a white school since integration began here. Longfellow is in the finest residential section of the city.

Will the white people attending the graduation exercises be upset at seeing a Negro head the students' procession? The officials believe the parents will take it calmly.

Robert's classmates have a ready explanation for his lopsided victory over the white candidates.

"He's a real nice boy," says Tommy Adams, 15, who wants to be a commercial artist. "I voted for him because I thought he was better than the others, that's all."

Even though they are greatly outnumbered, Negroes have been elected to other high positions.

They are on the football and basketball teams. They play in the bands, sing in the glee clubs. Thomas Jefferson High School has 16 Negro students in an enrollment of 1,750. A Negro, Charles Brown—a varsity football player—has just been chosen to the student council.

Only 2 Negroes are at Travis Elementary School, with an enrollment of 400. They appear happy. They have many white friends among the young students.

STORY WITH TWO SIDES

There is another side to the story, however.

"I feel sorry for these two little Negro children," a teacher said. "They are never invited to birthday parties that white youngsters have in their homes."

Some of the teachers go out of their way to help their Negro students. They do it, they explain, because they feel that a good teacher should be interested in all the pupils.

For 2 weeks Miss Hope Foster, an English teacher at Emerson Junior High, came to school at 7:50 each morning, although she was not due until 8:30.

And each morning 12-year-old Monica Elizabeth Adams, an eighth-grade student, who wants to be a singer when she grows up, came to school 40 minutes early, too.

If you had visited Emerson you would have seen why Miss Foster met with Monica each morning. They went over long lists of words, practicing, studying, worrying together.

Monica, 1 of 20 Negroes out of Emerson's 600 pupils, had entered a national spelling contest. Miss Foster, Texas-born, has been a teacher for 35 years.

The teacher never had had Negroes in a class before, but she said Monica's color meant nothing to her.

"She's the same as any other child, isn't she?" Miss Foster said, questioningly. "It's a pleasure to work with her."

As for the spelling contest, Monica won first prize at Emerson.

Her winning word was "independence."

The Murphy Army Hospital, Waltham, Mass.

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1957

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

NATIONAL FEDERAL EMPLOYEES
VETERANS ASSOCIATION, INC.,
Watertown, Mass., May 24, 1957.

Hon. EDITH NOURSE ROGERS,
House of Representatives,
Washington, D. C.

DEAR CONGRESSWOMAN ROGERS: Enclosed is a brief that has been prepared by the Federal Employees Veterans Association concerning the Murphy Army Hospital in Waltham, Mass. The retention of this hospital is most important to our State and our national defense.

The enclosure is factual and has been thoroughly checked by various Army supporters, who are aware of the fact that to close the Murphy Army hospital would mean a serious handicap to thousands of military personnel and their dependents.

I would appreciate it if you would make our views known to other Congressmen, as the Army and the Defense Department's arguments for the closing of this famous facility are absurd and misleading.

With kind regards, I am,

Very sincerely yours,

KENNETH T. LYONS,
National Commander.

THE MURPHY ARMY HOSPITAL—FACTS SUPPORTING RETENTION OF THIS MEDICAL FACILITY

The Department of the Army has attempted to show reasons to support the Defense Department's annual drive to close the Murphy Army Hospital at Waltham, Mass. The reasons offered by the Army for the closing of the hospital are not in conformity with the facts. If New England's only Army General Hospital is closed; it will without doubt cause tremendous and unnecessary hardships for military personnel and their dependents in New England. Certainly this is not justifiable economy.

Here are the facts:

MURPHY ARMY HOSPITAL

Murphy Army Hospital was built in 1944 at a cost of $5 million. It has a total area of 99 acres. It is located in the northeastern section of Waltham, Mass., about 12 miles west of Boston. Its red brick structures are of Georgian design and are connected by enclosed corridors. All of the buildings are of one story with the exception of the nurses' quarters and the administration building. The structure of the buildings is in accordance with the latest military regulations affording maximum protection for patients in the event of air attack or bombing. It has the latest of fire-fighting services and is practically fire-proof. To duplicate this hospital today would cost approximately $20 million.

HOSPITAL EQUIPMENT

The Murphy Army Hospital has a 500-bed capacity, X-ray laboratory, modern operating rooms, fully equipped pharmacy, physical-therapy section, dental laboratory and dental operating rooms, occupational therapy section, physical reconditioning section, and modern laboratory.

PATIENT SERVICES

The Murphy Army Hospital has a modern theater, library, reconditioning salon, gymnasium, an ultra-modern PX and lunchroom. It also has exceptional grounds comparable with that of any hospital in the country. Its location and setting in the country is particularly suitable for the convalescing patient.

SITUATION GEOGRAPHICALLY

The hospital is situated close to the foremost medical schools and hospitals. Consequently, the Murphy Army Hospital has access to a group of consultants who are considered the most eminent men in their particular fields of medical and surgical endeavor. To name a few of the famous consultants who are available to Murphy Hospital and yet would not be able to advise or render services to outlying small-base dispensaries are: Drs. Smithwick, Dameshek, Meigs, Allen, Badger, Zonderman, Cannon, and Aufranc, to mention but a few. They represent the finest hospitals such as the Massachusetts General Hospital, Boston City Hospital, Massachusetts Memorial Hospital, Children's Medical Center, Lahey Clinic, and New England's famous Medical Center which include the renowned Pratt Diagnostic Hospital. The Harvard and Tufts Medical Schools as well as the School of Medicine at Boston University are also nearby.

ARMY, NAVY, AND AIR FORCE STATIONS MURPHY CARES FOR

Murphy Hospital cares for military personnel and their dependents for Massachusetts, Rhode Island, Connecticut, Vermont, New Hampshire, Maine, and parts of New York and New Jersey. It cares for military personnel from the Boston Army Base, Watertown Arsenal, Nike stations in New England, Bedford Air Force Base, bomber base at Limestone, Maine, and Westover Air Force Base to name but a very few.

MURPHY HOSPITAL WAS CLOSED IN 1950

The Murphy Army Hospital was closed in 1950 for economy reasons. It was closed for but 3 months when the United States Army ordered it reopened due to the Korean conflict. It cost almost $1 million to reopen Murphy and considerable confusion resulted in lack of bed spaces for wounded military patients due to time spent in reopening the hospital. We may not get advance warning in the future.

CONGRESS AUTHORIZED MURPHY ARMY HOSPITAL FOR A 150-BED HOSPITAL

In 1956 Congress authorized the Murphy Army Hospital to remain open as a 150-bed hospital. The hospital operated with about 110 to 135 patients from June 1956 to the present date. It can be disclosed, however, that the Army in order to prove its case against the hospital, has been sending military patients of New England to hospitals outside of the New England area thus reducing the number of bed patients. It might prove interesting that the famous medical facility at Murphy and the Army has agreed with these figures, that the following average workload per month is typical at the present time:

Outpatients	2,800
Admissions, bed patients	249
Laboratory tests	4,000
Prescriptions filled	5,200
X-rays	1,700

WHY CONGRESS SHOULD AUTHORIZE THE CONTINUED OPERATION OF THE MURPHY ARMY HOSPITAL

Congress should not allow the Defense Defense Department to close the only modern and the only Army General Hospital in New England as it most certainly will mean that serious cases of the sick and injured will be

transferred outside of the New England area at an additional expense to the taxpayers as well as preventing visitations by his family. We all know that doctors have all agreed that one of the best medicines for the sick and wounded is constant visitation by members of his family and friends. It should also be pointed out that one of the most important fringe benefits for servicemen is medical care for himself and his dependents. (The morale factor is most important for reenlistment purposes.)

The Army's purpose for wanting to close the hospital is not for economy reasons but is for the principal purpose of converting the beautiful hospital into a factory for the New England Division of Engineers. While it is true that such a transfer would create more jobs and effect a better economy for the city of Waltham, we must ever be mindful of the needs of the men who are devoting themselves to the defense of the United States. If this hospital is converted to a factory, it can never be practically converted back to a hospital in the event of mobilization.

The Army admits that they will convert the hospital to a factory for the engineers and yet they have more than adequate space to transfer the function of the engineers to the Boston Army Base which is located in the Boston waterfront industrial area. The main reason the Army will not use this space is due to the fact that they do not like to have more than one command at the same base. Ridiculous as this may seem, it is, however, true.

It has been said that the hospital is not needed now because the Congress passed the medical care bill. The medical care bill was not a cure-all. Due to redtape and the fact that the bill does not include the hospitalization of military personnel or retired military personnel, the Murphy Army Hospital, as well as all other military hospitals, have shown a marked increase in hospitalizations since its passage. Dependents must also use the military hospitals due to the fact that the medicare bill does not allow for outpatient services and it creates certain hardships on enlisted men's dependents who must pay certain fees for private hospitalization.

To say that we can use other military base dispensaries for the care of military personnel is ridiculous. A thorough check has been made and the Army agrees that none of the other station-type dispensaries can properly care for serious cases such as general operations and certain types of diseases. The Chelsea Naval Hospital which is located but a few miles from Boston could be recommended as the answer to future care for military personnel. However, this hospital which is over 120 years old, located in the midst of a heavy industrial area which includes a surrounding of chemical plants, coal plants, oil storages, junk yards, and incinerators, has been having troubles of its own with a reduced budget and a full patient load, that it could not possibly handle all of the other military services here in New England. It might be pointed out that this hospital might in the future combine with the Army and build additional space at Waltham and then have a combined Army and Navy hospital that can adequately take care of the needs of the New England military area.

In summation to use a trite but nevertheless true phrase, the closing of this military general hospital would be "false economy" that may backfire against us. Should we at a time when we are going to pass one of the largest peacetime defense budgets pinch pennies on an institution that can save American lives and possibly save many civilian lives in the future undated atomic warfare?

IMPORTANT NOTE

Of primary concern is the fact that the Murphy Army Hospital is outside the main target area of military installations in the Boston area. The Chelsea Naval Hospital is in this target area as well as all other major hospitals (civilian). In the event of enemy attack, it might very well be, that the Murphy Army Hospital will be the only general hospital capable of taking care of wounded military and civilians. This one fact alone is more than sufficient to require the continued operation of the Murphy Army Hospital.

Hells Canyon Dam

EXTENSION OF REMARKS
OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, May 28, 1957

Mr. JACKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent letter I have received from Mr. Lars Nelson, master of the Washington State Grange.

Mr. Nelson is to be righly complimented for his logical and concise presentation of the argument for a high, multipurpose dam at Hells Canyon. I am sure my colleagues will be interested in seeing this expression of the case for the high dam.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MAY 22, 1957.

The Honorable HENRY M. JACKSON,
Senate Office Building,
Washington, D. C.

DEAR SENATOR JACKSON: For some time the grangers of Washington and Oregon have been supporting full and comprehensive development of the water resources of the Columbia River system and of the region. This objective involves multipurpose dam installations such as high Hells Canyon on the Snake River, the largest tributary of the Columbia.

The Columbia River is the second largest river in the Nation. Its annual delivered flow into the Pacific Ocean is 5 times the annual flow of the Missouri and 9 times the annual flow of the Colorado. Unlike the other rivers of our Nation, the Columbia flows 73 percent of its total volume during the summer and 27 percent during the winter. This characteristic of the river emphasizes the opportunity and need for multipurpose large-storage dams.

There is—if completely developed—in our region a potential of 47 million acre-feet of storage and exclusive of Canada a power potential of 33 million kilowatts, of which 7 million are now on the line and more building. Where coal, iron, and oil are the great national resources of other areas, replenishable flowing water is our greatest single resource in the Pacific Northwest.

We have heeded closely the prophetic words of warning by President Theodore Roosevelt in, 1909: "The great corporations are acting with foresight, singleness of purpose, and vigor to control the water power of the country. * * * I esteem it my duty to use every endeavor to prevent this fast-growing monopoly, the most threatening which has ever appeared, from being fastened upon the people of this Nation." Today we must be alert and no less vigilant in the protection of our water resources. The generative capacity of the Nation is 85 percent private and 15 percent public.

We have joined other resource groups to keep private monopoly from partial wasteful development of one of our last large multipurpose dam sites on our continent. The high dam means the equivalent of 70,000 jobs for our region. We have faced misrepresentation and overwhelming odds. It means 3-mill Federal power as compared with 7-mill private. The economics of the situation are compelling. Frankly, in seeking Federal authorization we are asking a loan to the region which will be repaid with interest. Our BPA is now $77 million ahead of payoff schedules. The past year from power sales BPA paid into the Treasury $60,992,623, of which $5,949,412 was profit. From its inception to June 30, 1956, BPA received $462,800,000 in revenues, which are accounted for as follows:

Operation and maintenance	$123,500,000
Depreciation	101,300,000
Interest	137,700,000
Miscellaneous	1,500,000
Net profit	98,700,000

The net income $98,700,000 and depreciation $101,300,000 have been applied to repay Federal investment in the amount of $200 million, thus reducing overall cost in power investment operating dams and transmission lines from $1,288,700,000 to $1,086,500,000. This shows the fiscal picture. It does not show the thousands of free enterprise, small and large business units and farms established as a result or the millions paid to State and Federal Governments by creation of new and expanded tax bases for all tax purposes.

When we began the fight in our State in the 1920's, electricity had limited usage and sold at 16 cents a kilowatt-hour; now it has unlimited usage and sells for 1 cent per kilowatt-hour in many of our county and city municipals. Private power, too, has benefited with low-cost power available and plenty of competition. As a result, they have the lowest rates in the Nation here. When we launched our power efforts, agriculture had no power on our farms—today, thanks to our county municipals (PUD's) and REA's, preference customers of BPA (federally generated power), our farms are 100 percent electrified with power and service at cost.

Senate bill 555, providing Federal authorization of high Hells Canyon Dam is before the Senate for action this May. You may raise the question, "What about flooding out the low or three dam sites and consequent loss?" Well, alternate proposals pushed by both P. N. P. C. (Pacific Northwest Power Combine), and Department of the Interior provide for such flooding. Far better to take a small loss initially than to sustain an irreparable loss from here on out. A few years' additional earnings from sale of power generated from the high dam would offset compensation paid to Idaho Power Co. for present investment loss. The high dam by proper release of water in the low-flow season will firm up power on downriver installations to the extent of 435,000 kilowatts or a Bonneville dam without building it.

Our interest at the moment is to enlist your support to prevail upon your Senators to vote for the high dam when it comes to a vote—possibly this May, perhaps later. Time is the essence—may your assistance be soon.

In conclusion:

1. Courts do not build dams—only Congress possesses enabling authority.

2. The Corps of Engineers and Bureau of Reclamation have both issued project reports urging construction of high Hells Canyon Dam.

3. The Federal Power Commisison examiner found high Hells Canyon a better project than the three low dams.

4. Flood control requires construction of the high dam.

5. Failure to develop our own storage will eventually compel us to deal with Canada at a stiff price for upstream storage.

We believe that public interest, the greatest good for the greatest number of people for the longest time, requires enactment of high Hells Canyon Dam legislation. We therefore ask your assistance and will deeply appreciate your efforts.

Kindest regards.

Fraternally,

A. LARS NELSON,
Master, Washington State Grange.

Virginia Counties Approaching Debt Saturation

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. BAILEY. Mr. Speaker, one of the most cogent arguments in favor of enactment of legislation authorizing Federal assistance to the States for school-facility construction is contained in an analysis of the debt situation of Virginia counties and independent cities made by Virginia State Auditor J. Gordon Bennett.

According to an Associated Press dispatch, published in the Washington Post and Times Herald for May 8, 1957, Mr. Bennett has reported that Virginia's counties are deeper in debt than ever before, and the accelerated school-building program is cited as the greatest factor influencing indebtedness.

Mr. Speaker, the remarks attributed to Mr. Bennett serve to point up the findings of the Committee on Education and Labor, which has reported H. R. 1: We have found, first, that States and local school agencies have been making a tremendous effort to build classrooms; second, that a great deal more remains to be accomplished to catch up with the backlog; and third, that many areas have exhausted, or nearly so, their resources to build classrooms.

The news item, which is based upon a study published in the University of Virginia News Letter, follows. I recommend it to my colleagues:

VIRGINIA COUNTIES OWE RECORD DEBTS

CHARLOTTESVILLE, VA., May 7.—Virginia's counties are deeper in debt than ever and a State finance official points to the accelerated school-building program as "the greatest factor" influencing the indebtedness.

State Auditor J. Gordon Bennett revealed that the counties owe $165,571,000, a whopping rise from the $20,190,000 county debt just 10 years ago.

Six urban counties owe $102,889,000, or 62 percent. Fairfax County alone owed $43,610,000 on June 30, 1956, more than double the total debt of $20,190,000 of all Virginia counties 10 years ago. Arlington owed $32,249,000; Henrico $12,957,000; Chesterfield $4,745,000; Norfolk $5,030,000; and Princess Anne $4,295,000.

Bennett said, in an analysis published in the University of Virginia News Letter, that "the greatest factor contributing to this increase has been the accelerated school-building program."

During and immediately after World War II, he pointed out, capital improvements were postponed because necessary building materials were not available. By the time materials could be obtained, needs had pyramided, the dollar had depreciated, and a steadily mounting debt total was the result.

The counties expended $307,921,000, Bennett said, during the 10-year period from July 1, 1946, to June 30, 1956, for capital outlays. Of that amount, $241,612,000 was for schools.

The Measure of Service

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. BROWN of Missouri. Mr. Speaker, in these days of troublesome costs on everything, it is high time that someone take cognizance of some free services that have been extended to the Nation by radio and television.

Prior to coming to the Congress, I was closely associated with radio and television people; and I have seen at close range their invaluable contribution to public-service projects, both local and national. No community ever began a charity drive or a civic project campaign that it did not summon the radio and television people. Always they have responded generously with free time and labor. Too often we accept this public service as a public right and give too little thanks to the public-spirited individuals who make it possible. For that reason, I call the attention of the House to an editorial in Television Age, April 8, 1957, which attempts to measure the immeasurable: The public service of one of civilization's great achievements—television.

The editorial follows:

THE MEASURE OF SERVICE

In its second annual survey of public-service broadcasting scheduled by television stations and networks, this journal has learned that the industry continues to rate very high in this category of programming and advertising.

Again during 1956, as in 1955, about 18 percent of the total net time revenue has been devoted to public service. We hasten to acknowledge that a dollar bill is not a very good measuring stick for this kind of research, but it is the one currently in vogue among those public-welfare organizations employing television for such purpose.

The real measure, of course, is found in results—and television may claim properly its share of glory along with the other media and with the many magnificent agencies which are carrying forward this work.

It is foreseeable, now, that infantile paralysis may be stamped out.

Recent news stories have indicated 1957 as the turning point year in the fight against cancer.

Tremendous advances have been made in dealing with heart disease, both in its treatment and its prevention.

Multiple sclerosis. Arthritis. Mental illness.

All of these are giving way to the pressure of public awareness and medical research.

The media, television prominent among them, through the collection of funds and the indoctrination of the citizens at large, are helping in the age-old search for the hidden enemy, and contributing to its vanquishment.

But what of the enemy now seen? The lad who commands his car to kill? The fuzzy-cheeked boy who wanders with the wolf-pack in shadowed streets, a switchblade his sceptre of defiance? What of these whose name is Cain?

It is eminently evident that television cannot take the place of parents, although it has been accused variously of neglecting that responsibility.

Television, at this stage of the art's development, cannot have babies nor, for that matter, rear them to manhood. But perhaps there is an assignment here for the medium which has contributed so richly to getting out the vote (a record breaker in 1956, which was supposed to be the year of apathy), fighting disease, helping in disaster, extracting blood from the general public, recruiting young men and women for the armed forces, selling bonds, and buying college scholarships for worthy young people.

Possibly the great hope for tomorrow may reside more surely than we know in the disposition that is to be made of the young people who would now appear to be unworthy and that here, more than in any other single prospect of public service, lies the greatest challenge to the greatest medium.

Television has lent its powerful persuasion in the battle to make the heart beat longer, the crippled to walk, and in urging the faithless toward faith.

Can it, with professional assistance, slow the comets on our highways? Can it put a football or a baseball in the hand that holds a hidden weapon? Can it help the parents-who-are help the parents-who-will-be?

Television Age, having examined the record, believes it can—and has not seen the dollar that could measure the worth of that humanitarian service.

Church Group Favors Foreign Aid As Vital to World Peace

EXTENSION OF REMARKS
OF
HON. EDMUND P. RADWAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. RADWAN. Mr. Speaker, under leave to extend my remarks, I submit herewith a letter and supporting resolution adopted by the program board of the Council of Churches of Buffalo and Erie County, Buffalo, N. Y.:

COUNCIL OF CHURCHES OF
BUFFALO AND ERIE COUNTY,
Buffalo, N. Y., May 23, 1957.

The Honorable EDMUND P. RADWAN,
House of Representatives,
Washington, D. C.

DEAR SIR: In the light of the particular congressional situation, I am glad to reiterate the position of the program board of the Council of Churches of Buffalo and Erie County concerning an action which has already been communicated to you:

"Since we are in accord with the spirit of the President's second inaugural address in

bonding capacity of less than one-half this

ciples vital to the future existence of the

of these stated propositions is of such impor-

which he took the unusual course of dealing mainly with world affairs and set forth the responsibility of our Nation to the rest of the world in economic, technical, and other assistance and since we believe that our country in its abundance has a Christian responsibility in granting to nations in need technical and economic aid and hoping that such economic assistance programs would be related primarily to economic and social need and opportunity rather than to political security considerations and to be administered separately from military assistance programs;

"*Resolved*, That we, the program board of the Council of Churches of Buffalo and Erie County, support the President in his constructive foreign economic aid program and urge that the full amount needed for foreign economic aid remain in the United States budget, believing that any curtailment is detrimental to world peace.

"We, also, urge that in the interest of strengthening world community, long-range basic economic development programs be assured through the use of international agencies, especially the United Nations."

Sincerely yours,

HARLAN M. FROST,
Executive Secretary.

Rural Areas Need Assistance on Education

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1957

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to point out to my colleagues that the farm people of the Nation are in need of assistance in the field of need for classroom construction.

I wish to submit for inclusion in the RECORD an editorial from the May issue of the Missouri Farmer that reaches 150,000 farm families, and sets forth many specific instances where Missouri school districts are unable to finance their school building needs from their limited assessments, bond limitations, and levies.

The editorial follows:

RURAL AREAS NEED ASSISTANCE ON EDUCATION

Why be so finicky about Federal aid to education?

What is new about Federal assistance to local communities for educational purposes? It has been going on a long time—it is older than the Constitution.

The Northwest Ordinance passed back in 1785 provided that every 16th section of land would go for maintenance of public schools.

Hundreds of schools were built in Missouri with WPA funds during the depression and the Federal Government has not interfered with the curriculum.

The county extension agent is a teacher. He gets the majority of his salary from the Federal Government and is not dominated from Washington.

Like the county agent, the vocational agricultural departments receive Federal aid—though to a smaller degree. Vo-Ag instructors with many years of service maintain they've never had the Federal Government interfere with their teaching program.

A review of the tax structure of three major agencies of government might explain the opposition to Federal aid to education—what the United States Chamber of Commerce calls Federal intervention into education.

Local governments rely on the property tax for the majority of their income. This hits farmers hardest. The assessor is more apt to overlook a bond than he is a tractor.

Now let us take the case of the man who pays 25 percent down on a farm. He pays the property tax but does he own the farm—or does the bank? In 1955 the total farm indebtedness amounted to $18 billion—a debt on which farmers were paying the property tax.

State governments, for the most part, depend on the sales tax for the majority of their income. An old-age pensioner in Missouri, with no other income, might live on $49.70 a month but when he buys a loaf of bread he pays as much sales tax on that loaf of bread as the richest man in town.

The Federal Government receives the bulk of its tax dollar from income taxes. Income taxes are based on the ability to pay. In the past few years farmers have not been hit very hard by the income tax—because their income has been very meager.

Could it be that the United States Chamber of Commerce and the stooge organizations that front for them in other areas have a selfish interest?

Many business leaders do not share the opinion of the United States chamber. Eric Johnson, a former president of the chamber, for examples favors Federal aid to the schools. He, like many other enlightened businessmen, is not trying to shoulder the people least able to pay with the entire burden of educating the Nation's youth.

Thomas Jefferson said, "If a nation expects to be ignorant and free in a state of civilization it expects what never was and never will be."

The late Senator Robert A. Taft remarked: "Abraham Lincoln said that this Nation was dedicated to the proposition that all men are created equal. If we wish to assure equality of opportunity to all the children born in the United States, we cannot question the policy of Federal aid to education."

C. L. Burger, superintendent of schools at Washington, Mo., wrote in National Educational Journal of April 1948 about returning to Huntsville for the 20th anniversary of the high school class of 1927. "It was revealing to see how many of these graduates have moved away from the school district in which they received their education," Berger explained.

"Thirteen of the 37 graduates, or 35 percent, are now living in the 10 States of Michigan, Kansas, Arizona, Illinois, Washington, California, Tennessee, Wisconsin, Pennsylvania and Kentucky. Nineteen others, or 51 percent, have moved to other Missouri towns. Only 5, or less than 14 percent, now live in their home district," Burger continued.

"A check made in 1946 of the present place of residence of the members of the class of 1940 of the Washington, Mo., High School revealed that after 6 years only 25 percent of the graduates are living in the district," Burger pointed out.

Does this migration of graduates suggest that education is a national problem? Ignorance is no respecter of State lines. Kansas expects the Missouri farm boy, who moves to Wichita to work in an aircraft factory, to be educated.

One teacher said, "the smarter they are the quicker they leave home and the farther away they go." Is rural America subsidizing the cities by educating the boys and girls only to have the cities reap the advantages of their education?

Where do Missouri graduates go? The No. 2 man in the Ford Motor Co. is Earnest Breech of Lebanon. The chairman of the board of the American Telephone & Telegraph Co. is Cleo F. Craig of Rich Hill. From Princeton came Mervin J. Kelly, president of Bell Laboratories. In the field of medicine there is Howard A. Rusk—a Brookfield boy. Does not the Federal Government have a responsibility to see that this source of national leadership is not dried up?

In each high school there are found teachers that take pride in following the careers of "their boys and girls." Some of these beloved teachers were contacted to find out what has happened to the class of 1946—a class graduated long enough to have their roots firmly established.

Cassville had 63 graduates in the 1946 class. Only 19 are now located in the vicinity of Cassville.

Of the 52 graduates of Lexington High School only 17 are living in Lexington. Nine out of a class of 35 are living in Slater. El Dorado Springs graduated 27 girls and 15 boys in the class of 1946—a total of 42. Four boys and 11 girls are still in the community. Eight of the 27 graduates of Gallatin High School are living in the community.

The 55 graduates of the class of 1946 at Boonville are scattered all over the world. Only 16 are living around Boonville. The farthest away is a merchant on Okinawa. Six are in the armed services, one at least is a career aviator.

The Missouri Constitution was amended in 1952 to increase the bonding capacity of school districts from 5 to 10 percent of assessed valuation. While this is relatively high among the States, many districts are yet unable to properly house their schoolchildren.

A complete new high school plant would provide the Louisiana School District, for instance, with sufficient housing facilities to take care of its immediate needs. But, such a plant would cost approximately $600,000 while the free bonding capacity of the district is only slightly over $200,000.

Salem needs to spend between $650,000 and $700,000 on high school and elementary facilities. By voting bonds in the maximum amount, only $300,000 can be obtained. Salem is now holding some classes in business buildings down town—one, an old produce house, has been named the chicken coop by students.

The vocational agriculture classes at Doniphan are held in the basement of the armory. The school district has recently voted bonds to the maximum extent of its capacity. Money will be used for constructing elementary school facilities and a vocational agriculture shop. The district is badly in need of a completely new high school building large enough to accommodate 600 pupils. Such a building would cost $600,000, but it is not possible for the district to now raise any money from bonds. The freshman high school class next year will number 170 as compared with 110 this year.

Poplar Bluff is using basements of store buildings with no natural light for classrooms. In January 1956 it was estimated Poplar Bluff needed $2,550,000 to build and equip needed school facilities. The district had at that time a free bonding capacity of less than $100,000. The present high school was erected in 1898 with an addition built in 1902.

At Sikeston more than 800 elementary pupils are attending classes in 24 rooms converted from frame barracks buildings acquired from an Air Force training base. They need a new senior high school building that would cost from $1,200,000 to $2,500,000. The free bonding capacity of the district is now considerably less than a third of this amount.

At Ava it is estimated that not less than $600,000 should be spent by the district to bring the school plant facilities up to an acceptable standard. The district has free

bonding capacity of less than one-half this amount.

A complete study of the school-building needs of Missouri was prepared in 1955 for the Missouri White House Conference on Education. The most important conclusions of the study are as follows:

"It appears from the survey that approximately 8,000 additional classrooms will be needed by 1960 to replace obsolete facilities and to provide for increased enrollments requiring a capital outlay expenditure of about $185 million. Can the school districts of Missouri meet these needs? Many can, but some cannot. Of the 584 districts reporting, 213, or 36.5 percent indicated that they do not and would not, under present limitations, have sufficient bonding capacity to provide satisfactory housing for the children who will be in their schools in 1960."

Federal Aid to Education

EXTENSION OF REMARKS
OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1957

Mr. BURDICK. Mr. Speaker, with the question of Federal aid to education being pressured for favorable action by the Congress, I wish to insert in the RECORD a part of a release sent to me by the Minnesota Coalition of Patriotic Societies, Inc., a nonprofit organization dedicated to the preservation of Americanism. I believe this article states facts which should be brought to the attention not only of every Member of the Congress, but of everyone interested in preserving the freedoms of our school system and in keeping the control of education in the hands of local communities and the States.

The children of today are the citizens of tomorrow and they are the ones who will direct the course of our Nation. I believe it is vitally necessary to the survival of our free way of life that their minds not be placed under the supervision and control of the Federal Government, and Government aid always means Federal control. Some of the dangers inherent in such a step are set forth in this article, and I don't think anyone wants to set up such an unnecessary program, once the facts are known. The article follows:

FEDERAL AID TO EDUCATION

To the Peoples' Representatives in Congress:

Now, again, and even more grave than any heretofore, there exists and is pending in the very Halls of the Congress, the place of the daily workshop of the elected Representatives of our people, a grave threat to the existence of our liberties and freedoms established by the founders of this Republic. This is a new but insidious danger which has emerged from the movement called Federal aid to education, which, until lately, had not appeared possible. As have other recent insidious socialistic movements, this appears under the false guise of the advancement of the equalization of educational opportunity, whereas in truth and fact it can—will or would—lead and doubtless is intended to lead to nothing less than Federal control of the educational processes of our young, a result that would certainly lead to the destruction of principles vital to the future existence of the American way of life.

Hence, this organization and all of its members, jointly, and wholly created for and devoted to nonpartisan efforts to advance and preserve Americanism and the promulgation and maintenance of the essential principles of constitutional Government, after and upon mature and unbiased consideration, are compelled to definitely object to and oppose any action by our Representatives in Congress granting or authorizing any so-called Federal aid to education, whether as proposed in any bill now or hereafter brought before the Congress. Some of the fundamental reasons for our position and objection are the following:

1. Such Federal aid is not necessary.
2. Such Federal aid is not desirable.
3. There is not a single State in the Union that is not financially better off than the United States.
4. There is not a single State that is not better able to pay the expense of the education of its youth than is the Federal Government.
5. Such Federal aid is unlawful because not authorized by but contrary to the Constitution of the United States.
6. The so-called Federal aid is, in fact, no aid at all.
7. No such aid has been requested by any State or the citizens of any State.
8. No State has shown or claimed its inability to provide for its own educational facilities and activities.
9. No taxpayer group, chamber of commerce, or board of education from any State, county, town, or city has appeared to request such Federal aid.
10. The several States, individually or collectively, are, of their own accord and unaided, already providing greater educational facilities, and at less expense, than would result from the or any such Federal aid program now proposed.
11. A majority of State governors, in recent conference, expressed fear that the Federal Government would encroach upon the State's handling of their schools; they also opposed "any plan not first referred to the State's officials or representatives, of their need and of the States' incapacity to meet their needs." They also held that "if any field of government is directly within the province of the State and locality, it is that of education; that local government is doomed if it surrenders this responsibility."
12. The unequaled and unprecedented progress of this Nation is a result of the combined strength, powers, and efforts of the limited powers of the Federal Government combined with the sovereign powers of the 48 individual States. Therefore, the invasion by the Federal Government of any of the public prerogatives, powers or privileges granted to or possessed by the several States constitutes a weakening of the fabric of our systems of constitutional government.
13. The invasion by the Federal Government into the field of education is bound to level down and reduce the field to a general routine, thereby destroying the individual element of competition among the several States in their scholastic systems.
14. The history of the educational, social and economic trends, as recorded and emblazoned upon the minds of the people during the last 25 years, not only does not justify but actually forbids the placing of the educational training of our future citizens under the control and guidance of a Federal bureaucracy, away from local environment, which such action would accomplish.

We respectfully submit that it should not be necessary to either substantiate or stress the persuasive importance of the foregoing stated propositions, especially to the Members of an enlightened Congress. We likewise submit that the combined significance of these stated propositions is of such importance to the combined constituencies of the Members of Congress as to warrant, even command, attention commensurate with the gravity and significance of the entire project and to warrant, if need be, a searching investigation in the public interest of all the aspects of the subject matter before any Member of Congress subscribes to any such project, for the purpose of which investigation your body is thoroughly equipped. And that such an investigation is required has clearly been made apparent by competent testimony of the former Secretary of the Department of Health, Education, and Welfare, Mrs. Hobby, on April 30, 1954, and March 29, 1955. Also, by the incompetent and erroneous report of Secretary Folsom who, in February 1957, has projected himself into the matter on behalf of the promoters of the project of Federal aid. These, with the admitted incompetence of the school facilities survey conducted under Public Law 815, beginning in 1950 and ending in 1954, which cost the taxpayers $1,800,262.28 and the States $2,187,801.26, serve as additional evidence of what may be expected when a Federal bureaucracy takes over.

There is, however, available competent and persuasive proof for the above-quoted objections to the proposition of Federal aid to schools bill, a portion of which is here cited for ready reference, without regard to the order in which presented:

Roger A. Freeman, who was appointed to serve on two presidential commissions to study the fiscal capacities of the States to meet their school needs, made this statement about the current Federal aid to schools bill which will come up soon in the 85th Congress:

"What we are faced with is not a Federal school construction aid program, but the first and fateful step in the nationalization of the public schools.

* * * * *

" 'To few people realize the effect which the entry of the National Government into the educational system would have, not only upon our schools, but upon the continued existence of the Federal system.

" 'Our schools are the last great bulwark of State and local autonomy. They should so remain. If the schools fall to Federal influence, they will set the pattern for more and more powers to go to Washington until our States are left empty shells and reminders of what was once a great Federal union of sovereign States.'

"Beyond a shadow of doubt, the Founding Fathers held edcuation to be a responsibility of the States, the communities, and the parents. This belief is firmly embedded in American tradition and has hardly been questioned in more than a century and a half."

Roger Freeman directed the research for the Education Committee of the President's Commission on Inter-Governmental Relations, which made an exhaustive survey and then reported:

"We have not been able to find a State which is economically unable to support an adequate school system * * * Federal aid is not necessary, either for current operating expenses for public schools or for capital expenditures for new school facilities.

"From 1900 to 1955 public school enrollment doubled—but school operating costs multiplied 43 times.

"School funds have increased faster than enrollment, faster than prices and other public services.

"In 1900 school funds equaled 1½ percent of national income—in 1955, they equaled 4 percent.

"The number of teachers has risen faster in the United States than the number of pupils—here's national average: In 1900, there was 1 teacher to 37 pupils; in 1955, there was 1 teacher to 27 pupils."

The following is quoted from the Fact Finder of January 1957: "Over a year ago the president of the American Bar Association, E. Smythe Gambrell, declared his belief that 'Federal aid' to the public schools would ultimately bring the destruction of freedom to this country—that it would be nothing short of a national calamity for the public schools to become dependent upon Federal aid. The president of the Conference of Chiefs Justices of the States, Justice William Duckworth, also expressed his fear that the expansion of Federal powers in social and economic fields through grants in aid threaten our constitutional form of government."

In his Foreword to Federal Aid to Education, by Roger A. Freeman, Luther A. Weigle, dean emeritus of Yale University Divinity School, on November 1, 1955, stated: "Federal control of education, at any level, would be calamitous. The local control of education is not only in accord with out Constitution and our established policy; it is fundamental to the American type of democracy. 'More than any other activity,' said the president of one of our great State universities, 'education calls for adaptation to local needs, and a sense of local responsibility, for its successful prosecution.' "

Nicholas Murray Butler states this on the subject:

"There is not enough money in the United States, even if every dollar of it were expended upon education, to produce, through Federal authority, or through what is naively called cooperation between the Federal Government and the several States, educational results that would be at all comparable with those that have been already reached under the free and natural system that has grown up among us.

"A school system that grows naturally in response to the needs and ambitions of a hundred thousand different communities will be a better school system than any which can be imposed upon those localities by the aid of grants of public money from the Federay Treasury, accompanied by Federal regulations, Federal inspections, Federal reports, and Federal uniformities."

Permanent United Nations Force

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1957

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include an article by Thomas J. Hamilton in the New York Times of May 26, 1957, entitled "UNEF Revives Talk of a Permanent Force":

UNEF REVIVES TALK OF A PERMANENT FORCE—ITS LIMITED SUCCESS IN MAINTAINING QUIET ON EGYPTIAN-ISRAELI BORDER PROMPTS CALL FOR MORE STUDY—PAST EFFORTS ARE REVIVED

(By Thomas J. Hamilton)

The United Nations Security Council, for the second time in less than a month, has complained, and ended up by doing nothing, about the document under which Colonel Nasser says that he will operate the Suez Canal. Egyptian ownership and control have thus been confirmed beyond any doubt.

Except for the presence of the United Nations emergency force on the soil of Egypt, the status quo ante bellum has in fact been completely restored. Thus far, however, the emergency force is providing a useful factor in keeping things quiet. As long as it is at the mouth of the Gulf of Aqaba, Colonel Nasser does not have the physical means to reimpose his blockade against Israeli shipping in the gulf—whatever he does in the Suez Canal.

And although Dag Hammarskjold promptly handed over the administration of the Gaza strip to Egypt, the very presence of the United Nations contingent is a stabilizing influence. Certainly it deserves part of the credit for the fact that Egypt has not started up the raids on Israel again.

RELATIVE SUCCESS

This success, although still highly relative, is a bright contrast to the United Nations record on Hungary. It has led some champions of the United Nations to insist that the emergency force should be made permanent.

With one notable exception, previous efforts to endow the United Nations organization with the means of backing up its resolutions have failed. The possibility of a permanent force of 5,000 or 6,000 soldiers, already organized under a single commander, is very tempting.

The attempt to place military forces at the disposal of the Security Council, as provided in the charter, ended in failure 10 years ago. The uniting-for-peace resolution program, under which such forces could have been employed by the General Assembly, if the veto prevented the Security Council from acting, became a dead letter in 1954.

Nevertheless, military force was used by the United Nations, for the first time in the history of the international organization, to repel the Communist aggression against South Korea. However, the United States was in charge, whereas the Secretary General, subject to the ambiguous resolutions of the Assembly, commands the emergency force sent to Egypt.

MAKEUP OF FORCES

A more fundamental difference in the objectives of the two United Nations armies is discernible from the contrast in their membership.

The bronze plaque at United Nations headquarters which pays tribute to the 16 nations that defends South Korea lists the following:

Australia, Belgium, Canada, Colombia, Ethiopia, France, Greece, Luxembourg, the Netherlands, New Zealand, the Philippines, Thailand, Turkey, South Africa, the United Kingdom, and the United States.

In contrast, the 10 countries that have been allowed to supply contingents for the emergency force in the Middle East are: Brazil, Colombia, Canada, Denmark, Finland, India, Indonesia, Norway, Sweden, and Yugoslavia. Other Asian countries, such as Pakistan, which in Colonel Nasser's view were identified with the West, were rejected on the ground that they did not have the right kind of troops.

As the first list shows, the Korean war was fought by a coalition consisting basically of the United States and its principal allies in Europe, in the British Commonwealth and the Far East. Colombia was the only one of the Latin American countries that finally heeded Washington's appeals and sent troops.

The great powers were wisely excluded from the emergency force in the Middle East. Britain and France had attacked Egypt, and inclusion of the United States would have made it difficult to exclude the Soviet Union.

Canada and Colombia are the only members of the United Nations who sent troops to both Korea and Egypt, and the Canadian troops in the emergency force—thanks to Colonel Nasser's objections—have been confined almost entirely to administrative duties in Egypt. Otherwise the emergency force is made up of Asian neutralists and the more pronounced anti-colonial countries of Western Europe.

NO FIGHTING INTENDED

The emergency force, for that matter, was never supposed to do any fighting and was merely intended to take over after the fighting had been stopped.

Apart from the difference in function, the motives of the governments contributing to the two forces was similar. In each case there was a desire to help bring about a cease-fire in accordance with the charter.

But it would be idle to ignore the fact that some of the contingents in the Middle East seem to reflect their governments' dislike of the colonial powers more than their dislike of aggression as such.

Lester B. Pearson, of Canada, author of the resolution under which Mr. Hammarskjold organized the emergency force, examines the problem in the current issue of the quarterly Foreign Affairs.

Mr. Pearson pays tribute to the devotion, energy and intelligence of the Secretary General and his assistants. He believes that plans should be started now for the possible creation of another force, not to fight, but to insure that fighting would not be resumed.

To that end, Mr. Pearson would ask all member governments, still excluding the great powers, if they would be willing to provide contigents in the future. He would provide Mr. Hammarskjold with a permanent military adviser and a small staff.

PEARSON SUGGESTION

Mr. Pearson offers the practicularly valuable suggestion that Mr. Hammarskjold now draw up model agreements on the financial, administrative and legal procedures that would govern the operations of any future peace supervision force.

The absence of such agreement is responsible for the uncertainty, more than 6 months after its taking up its duties, about the functioning of the Emergency Force in Egypt.

No one knows to this day whether Mr. Pearson was right in his original statement last fall about the operations of the force. It was his view at that time that, once Egypt gave her consent to the stationing of the force on Egyptian territory, the United Nations alone should decide what the force would do.

The possibility of creating another such force will depend upon the success of the present experiment, and in particular upon whether Egypt allows it to remain until some approach to stability in the Middle East is obtained.

Progress of Maine Agriculture

EXTENSION OF REMARKS

OF

HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1957

Mr. McINTIRE. Mr. Speaker, under leave to extend my remarks, I insert in the RECORD excerpts from a speech made by my twin brother, Smith McIntire, of Perham, Maine, before a recent session of the New Hampshire Potato Association, in Concord in that State:

PROGRESS OF MAINE AGRICULTURE

Progress in agriculture, as in industry, comes through the continuous sifting and refining of answers to problems that, at the time, seemed insurmountable to most individuals involved. The Maine potato industry, like that of many other States, is making progress and there is much more in sight.

Not all growers have been able to stand the pace; this is a price that is often paid.

In Maine we have decided that no individual has the right to market culls and small seed potatoes and damage the reputation of our industry. So we have adopted a marketing order to require a small minority to conform to the wishes of the majority with respect to the quality of potatoes shipped. We think that consumers want potatoes of good quality and that they don't want minimum sizes below 2½ inches.

We have done something about it. That is progress.

We are moving, or being pushed, into fewer and more modern packing facilities. There is one farmer group that has developed its own packing facility and markets its pack steadily throughout the season. Growers participate in a monthly pool involving one seventh of their crop each month.

Maine growers are changing their thinking regarding the potato seed business. Once it was enough to produce good certified seed and nearly all sizes went into the bag. We now have our State seed farm and Florida test programs to help those growers who want to keep their lots not just good, but nearly perfect.

We are rapidly moving into a strip deal in which only sizes below 2½ inches go for seed while the larger sizes go for table stock. This is progress—the seedman getting the small stock that he has always wanted; the housewife getting the larger sizes she prefers.

I believe that Maine's marketing pattern will tend toward a two-way stretch deal. We will attempt to market some of our crop early and late. In years of heavy supply we will more systematically move into the November and December market and we will market more in late May, June, and perhaps July. Our experience has been that when we work hard to clear up a bad supply situation early, our southern friends reap the reward and increase their acreage. In this situation, progress for Maine appears to suggest the need for always having a portion of its best potatoes for the June market.

Before I leave the marketing aspects of this industry, let me comment regarding futures trading in potatoes. We have had futures trading in potatoes for many years, but only recently has it become significant. It has grown up rapidly and, like the young town bully, it has needed a working over to instill into this program some appreciation of the facts of life.

I have sat with the higher administrative and supervisory brass involved in this trading program and have gained the impression that they have had the same disregard for the welfare of the community and the individual that is characteristic of most gambling-house operators.

We have made some progress by using public pressure, in improving this situation. Putting this program in the spotlight has made it possible for Government enforcement agencies to see some things that were not clear before. The result has been some convictions, and the operators now know that the house must be kept orderly enough to avoid public scorn.

Let me touch upon the general agricultural economy by saying that in this friendly business of competing with each other we are making an industry that, with a continually decreasing labor force and with decreasing acres, is feeding our Nation's rapidly increasing population better. We are not enjoying financial reward for the job we are doing.

There is no area of our economy that has so much moral right to a fair share of the Nation's prosperity as have farmers because good and abundant food is the first need of a healthy and happy people and nation. Our population is growing rapidly while our farm numbers are decreasing so the dependence of this essential item is resting upon fewer people.

Our position is strong basically because we, as growers, have this item—food—that others cannot get along without. Normally our trading position should be excellent because we have what they must buy.

There are two basic weaknesses in our trading position and we have permitted their influence to predominate. First, we are at the end of the line. Whether it is the front or the tail end can be argued. Nevertheless, having failed by producing and talking surplus, the farmer now accepts what there is left, which to me is the tail end.

The trade starts at the consuming end, with the retailers, the laborers, the transporters, the brokers, the container manufacturers, and others all taking their costs plus a profit. The balance the grower receives more as a donation from society than as a price for his labor and an earning on his investment. In no way does he reflect his increased costs, but accepts what others give him and perhaps asks his Government to add a little now and then. He does not demand a 7, then a 15-percent increase in prices as the railroads have recently done, or a minimum hourly wage. He pays for these increases because he is at the whip end of the line, and when there is an adequate food supply these costs are deducted from farm prices.

The second basic weakness is that farm people have a love of individual freedom and initiative, a respect for the rights of others, and an abhorrence of violence that prevents them from using the mass pressure tactics, that labor and other segments of our economy have so effectively used to gain their present preferred place in the economic sun.

In conclusion let me say that we are making progress in the Maine potato industry. It is all we know and we look to the day when we can again have the income to make other improvements that we believe are good. We are trying, within our concept of right, to learn ways in which we too can have a recognized place in the economy of this wonderful country of ours, and the degree of financial security that society considers essential for other groups.

Memorial Day, 1957

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. KEATING. Mr. Speaker, as Memorial Day approaches, it is well for us to pause and reflect on just what this day means. Of course, Memorial Day means parades, displays of the flag, and patriotic speeches. But its real significance—that of pausing to pay homage to those who gave so much to preserve our way of life in America's hours of greatest peril—must not be overlooked.

A fine editorial concerning the broader meaning of Memorial Day has been written by Andrew D. Wolfe, able editor of the Brighton-Pittsford Post, East Rochester Herald, and Penfield Republican, weekly newspapers in my district. In particular, Mr. Wolfe points out how important it is that we not lose sight of the lessons of that most tragic of all wars, the Civil War. Under leave previously granted, I insert this editorial at this point in the RECORD:

MEMORIAL DAY, 1957

A few months ago, Life magazine ran an article on the revival of interest in the Civil War, citing the tremendous number of historical and fictional accounts of the war which now are appearing.

We are told that each year at least 100 major works on Civil War subjects are appearing, and that the pace is expected to be stepped up as the centennial years in the early 1960's approach.

And last week when President Eisenhower and General Montgomery toured the battlefield at Gettysburg, newspapers all over the world carried their comments on the generalship of Lee and Meade.

All this interest is to the good, we think, as long as people don't start thinking of the war exclusively as an historical pageant, or a military drama.

No other event in American history has the dramatic fascination of the Civil War. No one has quite put their finger on the reasons for this, although it must be due in part to the role the war played in welding the seaboard colonies of 1775 into the Continental Nation of 1875. It is sufficient to say that the war has become the Nation's great folk saga.

This is fine, we think, so long as we don't lose sight of the fact that this drama was played out by flesh-and-blood individuals, that the Union and Confederate soldiers, and their families were very real individuals, who faced up to a situation demanding extraordinary fortitude.

Meade and Lee at Gettysburg, or Stonewall Jackson's bitterly ironical death after Chancellorsville, or the sordid drama of Andersonville, or Grant plunging unflinchingly for Richmond in 1864, you can name a thousand dramatic incidents and still be just starting.

But we think that on Memorial Day as one watches the little flags wave over the now-old graves, one should think of the individuals who went out from Monroe County, of the decisions they made, and how their families lived with the results of those decisions, sometimes for a generation or more.

There is a lesson of courage and determination and patriotism in these unsung lives that is the most important legacy of the war, and one we should keep close to the surface of our minds as we watch the flags go by on Memorial Day.

Armenian Independence Day

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. BOLAND. Mr. Speaker, Armenians are one of the oldest people in known history. They can trace their national origin to some 3,000 years. In their ancient mountainland, the traditional Garden of Eden nestled under the towering Mount Ararat, they maintained their independence for centuries before the discovery of America. And when Asiatic invaders put an end to their national independence, they managed to maintain their communal and spiritual independence wherever they happened to be. Armenia was ravaged and ruined and divided among its conquerors, and during all that time Armenians lived with the hope of regaining their ancient homeland. In the course of centuries they endured all kinds of hardships and suffered much. Early in World War I wholesale massacres carried out by the Turks came perilously close to extermi-

nating them. At the end of that war, however, the surviving Armenians proclaimed their national independence.

This was on May 28, 1918. It signified the rebirth of a nation which had lost its national independence more than 500 years before. The event was welcomed by freedom-loving people everywhere, and the President of the United States, Woodrow Wilson, undertook to draw the boundaries of the new Republic. But neither his official acts nor all the good wishes of the world could save the new state from its enemies. Late in 1920 it was attacked by Turkish nationalists and Russian Communists, and its fate was sealed early in December of that year.

Since then Armenia has become part of the Soviet Union, and the Armenians there have been lost in that prison of nationalities. Today in celebrating the 39th anniversary of the Armenian independence, we all hope that Armenians will regain their independence once more and celebrate it freely in their ancient homeland.

Public Health Endangered by Harmful Food Additives

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. BURDICK. Mr. Speaker, the pure-food law is in serious need of amendment, but it seems impossible to get Congress to do anything. The Delaney committee investigated poisoned food for several years and made some ominous findings; and that there are poisons used in foods there is no room for doubt, but the theory of the law is that those who use additives and other poisonous substances in food can go right ahead dispensing their products and the burden of proof is on the users of this food to show that the substances are deleterious.

This situation should be reversed, and those who use additives in food should by scientific investigation, prove to the Public Health Department that none of the ingredients used in the preparation of food are dangerous, deleterious, or poisonous. When the Public Health Department has this proof before the products can be sold, it will clear up this situation. To leave the law as it now is will leave the public completely unprotected. It has been proved here in the investigations carried on by the Delaney committee that certain bills injected into a slit in the necks of chickens have the effect of producing cancer in those who eat chicken thus treated.

Should not the law demand that the effects of this pill be proved harmless before it is used and the contaminated food resulting therefrom is offered to the public? There are literally hundreds of additives and concoctions used in foods today that have not been analyzed at all, and these foods are going out to the consumers, most of whom think they are protected by the Public Health Department, while the same Public Health Department does not know the nature of the additives used, nor their effect upon the health of the people who eat them.

If these additives can be used lawfully, before they are analyzed and the public fed upon food containing them without the Public Health Department knowing anything about their poisonous and disease-producing effect on human life, then I say the present public health laws do not, as a matter of fact, enable the Department to stop the use of these additives until after the foods have been eaten. The examination should be made before the foods are used—not afterwards.

I do not know what forces are at work to prevent the passage of these needed amendments, but whatever it is, it is a strong force of which many Congressmen are afraid. I am sure the average Congressman wants to protect the public health, but too many either do not believe that there are poisonous additives used in foods, or the influence of the manufacturers of food in which they are used are too strong politically, and Members shy away from raising any protest that might stop the sale of this kind of food.

So far as I am concerned, and as far as I can go, the public is going to find out what they are daily eating if it breaks every food processor in the United States. If these manufacturers and producers were required to submit for scientific investigation any proposed additive before it found its way into food, many illnesses would be averted, many lives saved, and the turmoil about poisoned foods would end. Why do the manufacturers, processors, and producers fight against an investigation? Your guess is as good as mine.

Protecting Labor Funds

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks I am including herewith two editorials, one from the New York Times of May 24 entitled "Code for Union Finance" and the other, entitled "Protecting Labor Funds" from the Newark Evening News of the same day.

This decision of the executive committee of the AFL-CIO is to be commended. By coincidence it comes just as the chairman of the House Education and Labor Committee has announced the start, on May 29, of hearings on this important subject.

The editorials follow:

[From the New York Times of May 24, 1957]

CODE FOR UNION FINANCE

The AFL-CIO code on financial practices is a notable benchmark in the federation's drive for honest, democratic unionism. It furnishes a measure of progress already made and a sound base for progress to come.

Most important—especially in the light of teamster derelictions—is the code's first principle: a labor union is a trustee for the welfare of its members, "not a business enterprise, or an investment company." Applied to practice this means that operating funds must be administered according to the highest fiduciary standard, with full accounting to the members whose dues they represent. Union treasuries should never be used for the personal profit or advantage of union officers nor should unions enter into contracts or other arrangements which have the same result. The code also rules out the investment of a union's funds in or loans to, "any business with which it bargains collectively"—except the purchase of relatively small amounts of stock in sound companies whose securities are widely held.

So far, so good. These policies are well conceived, from the point of view of both labor and the public. But what of their enforcement? The federation has no such power—at least directly. All it can do is to recommend to its affiliates that they obey the rules. Transgressing unions can be suspended or expelled from the federation. But this punishment is cumbersome and often ineffective—witness the ILA.

Self-control, for which the federation's code provided an excellent pattern, is by far the best answer. However, things may have already come to such a pass that Government regulation is required. Certainly an adequate full disclosure law should be promptly passed by Congress. Not only would such publicity make wrongdoing hazardous, but it would also furnish the factual basis for sound regulation—if that should have to come.

[From the Newark Evening News of May 24, 1957]

PROTECTING LABOR FUNDS

As further proof of the integrity of its effort to clean house, the AFL-CIO Executive Council adopts a stringent code to safeguard labor union funds from misuse. The action follows promptly the council's summary ousting of discredited Dave Beck as an AFL-CIO vice president.

Inclusive as to the entire AFL-CIO setup, the code bans the lending or investment of union funds that would be to the profit of any union officer or member. Covered also are other objectionable practices.

In this instance, as in others, labor's top leaders are to be commended for the way in which they have reacted to the disclosures at hearings of the Senate investigating committee. It can be said, of course, that the corrective steps they have taken were long overdue, but an extenuating factor, it may be argued, is that until comparatively recently labor lacked a united front.

Labor's cause will be immeasurably advanced and accepted if these labor leaders will now be equally cooperative in framing legislation to implement fully what they have done. Such legislation is necessary. Expulsion is the only penalty available to the AFL-CIO for violation of its various codes. Besides, there are many independent unions.

The Highway Program: Fact and Fiction

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks, I wish to

include a statement in the RECORD by George D. Riley, legislative representative of the AFL–CIO, entitled "The Highway Program: Fact and Fiction," which appeared in the AFL–CIO American Federationist recently.

In every business, there are those employers who want to get labor as cheap as they possibly can so that they can gain an advantage over their competitors. They are the contractors whose business slogans are: "Do a job as cheap as you can" and not "as good as you can." These people are a curse to the industry. They are the ones who are crying at all times about increased labor costs.

I believe that the article by Mr. Riley is very timely, a perfect answer to those contractors in the United States who, if they were permitted, would use slave labor.

The article follows:

THE HIGHWAY PROGRAM: FACT AND FICTION

(By George D. Riley)

The Federal highway program was announced originally as a $101 billion undertaking. When it appeared that many citizens were having difficulty in thinking in such vast terms, a $50 billion figure started circulation, and the States went thoroughly conservative in their estimates of costs for highway construction to be done within their boundaries.

The $50 billion tag took hold. Congress passed the legislation. Money began to pour into the trust fund. Mentally, the Nation's motorists started riding on the new limited-access roads.

Now there are signs that the original $101 billion figure may be nearer the real amount for the same mileage contemplated in the $50 billion which Congress envisaged when it wrapped up the highway legislation last year.

State-by-State estimates of construction costs were compiled for the information of Congress in 1954. Now, according to Engineering News-Record, "highway officials are shocked over skyrocketing costs of the new Federal highway building program."

And an attempt is made to pin the blame on labor costs.

But last February the United States Department of Commerce pointed out that wage costs in highway construction are vastly on the decline while contract bid figures are on a steep incline.

"Road construction volume in 1955," the Department of Commerce said, "was 9 times that for 1944, while labor usage in 1955 was only 5 times that for 1944."

As the machines used in road construction mount in size and increase in efficiency, the labor cost factor diminishes, thus providing a rebuttal to Engineering News-Record, to the Carolinas branch of the Associated General Contractors and to all others who are engaged in spreading the "increased labor costs" fallacy.

The position of the low-wage regional branch of the Associated General Contractors has been summed up as follows:

"Carolinas Branch, AGC, staged an all-out fight last year to defeat the Davis-Bacon section of the highway bill, branding it as unnecessary, expensive, and a tool of union officials."

And so the Carolinas branch carries on for the lowest wages possible—or at least against a law which requires that the wage rates shall be the same as those paid for similar work in the community.

Secretary of Commerce Sinclair Weeks, no dear friend to the Davis-Bacon Act, has done the cause of the Carolinas branch no good by coming up with the actual facts and figures regarding highway construction wages and their relation to total costs as reflected in the bid figures. He has told the Carolinas branch that with each passing year the cost of labor will be less and less. One reason is improved equipment—machines, for example, which lay bituminous topping at the rate of 84 feet a minute.

But as steadily as highway contract bid figures rose between 1944 and 1955, it is evident that more recently they have climbed even higher.

John H. Lyons, Jr., general organizer of the ironworkers, called attention to some interesting points at the recent national legislative conference of the building and construction trades department.

He explained that equalizing of wage rates, benefits, and working conditions through legislation opens the door to more competitive bidding and more efficient construction. He cited recently awarded highway contracts which were an average of 75 percent greater than estimates that had been prepared only 3 months earlier.

In the same period building construction costs rose only 12 percent. Those contractors involved in the 12-percent rise are those who pay benefits and operate under conditions which the building trades endeavor to make apply to all Government construction, where as the highway contractors do not so operate.

It is interesting to take a look at cost studies concerning all types of highway construction during 1956. In New York State labor costs were about 29.5 percent of all costs. In California, another high-wage State, labor costs averaged 28.3 percent. In Florida, a low-wage State, the average labor cost was 21.9 percent.

Statistics on labor costs by themselves do not present the full picture. To assess the part which labor costs play in relation to overall construction costs, it is necessary to consider the sharp decline in the amount of labor employed in highway construction as a result of the use of new methods and new machinery.

The Bureau of Public Roads, United States Department of Commerce, recently completed a study which showed very clearly how the man-hours of direct labor in highway construction had decreased between 1944 and 1955. The findings were published in the February issue of Public Roads, the Bureau's magazine.

The Bureau of Public Roads, on the basis of data on the use of labor collected by it since 1944, found a pronounced decrease in the number of man-hours of direct labor required for a given physical volume of highway construction. Direct labor was defined as "labor employed by the contractor at or near the site of the project."

For the most part, these are the workers who are covered by the prevailing wage requirements of the Highway Act.

In its study the Bureau of Public Roads learned that between 1944 and 1955 there was a reduction in labor usage factors of 43 percent. Such a reduction naturally meant a tremendous drop in contractors' labor costs. This great decrease in the number of hours of labor required, the Bureau found, was basically due to increased productivity of the labor-equipment combination resulting from great strides that have been made by manufacturers in developing more efficient construction equipment.

In plain words, automation has come to the highway construction field, and the road contractor today uses something like a half of the workers he did in 1944.

The Bureau of Public Roads gave due regard to the changes in price levels which occurred between 1944 and 1955 and made the necessary adjustments, using the Bureau's highway construction price index. The Bureau's figures are as accurate as humanly possible. No one can honestly argue that the findings reported are not authentic.

The Bureau of Public Roads has also projected its study to cover the whole period of the Federal highway program up to 1970. After showing that from a value of approximately 217,700 man-hours per million dollars of construction costs in 1944 the man-hours fell off to about 123,000 in 1955, the study indicates the drop in 1960 will be to 104,000 man-hours and for 1970 it will be down to 80,000 man-hours.

As noted earlier in this article, it was found that road construction volume in 1955 was nearly 9 times that for 1944, while the amount of labor used in 1955 was only 5 times that for 1944.

This study by the Bureau of Public Roads of the United States Department of Commerce should lay to rest the "increased labor costs" bugaboo so dear to the hearts of low-wage road contractors.

It is evident that labor costs in highway construction are diminishing. Therefore, labor costs cannot possibly be blamed for any increases in expenditures for the new roads. The facts are plain. Now it will be interesting to see whether the foes of labor will stop or continue their false allegations about "increased labor costs."

The Status of Forces Treaty: What it Means to American Servicemen Stationed in Foreign Countries

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. BOSCH. Mr. Speaker, recent demonstrations in Formosa and Japan have brought forcefully to the attention of the American public the Status of Forces Treaty and what it means to our American servicemen stationed in foreign countries. I feel sure my colleagues are aware of the fact that I am one of the cosponsors of a House joint resolution providing for the revision of the Status of Forces Agreement and certain other treaties and international agreements, or the withdrawal of the United States from such treaties and agreements, so that foreign countries will not have criminal jurisdiction over American Armed Forces personnel stationed within their boundaries. The case involving Sgt. William S. Girard points up the need for immediate consideration of this resolution.

Under leave to extend my remarks, I include the May 27, 1957, column of John O'Donnell:

CAPITOL STUFF

(By John O'Donnell)

WASHINGTON, May 27.—The anti-American riots in Formosa and Tokyo and the smoldering ill-feeling in the Philippines have undoubtedly been sparked by Commies. But Americans have handed the Commie propa-

ganda experts the weapon to use against us—which they are using enthusiastically and effectively. And we never would have handed over the weapon if President Eisenhower had not signed the so-called status of forces pseudo-treaty.

This is the diplomatic agreement by which Americans in uniform in foreign nations are turned over to foreign police and foreign courts for trial and punishment under alien laws and judicial procedure. In all cases they are stripped of the protection guaranteed to American citizens under the Constitution.

Like all weapons of evil conception, it cuts both ways and injures the possessor as cruelly as his opponent. We have anti-American riots in Formosa because they don't have the Status of Forces Agreement. Such a treaty would have permitted a Formosan to sit in judgment on American Sgt. Robert Reynolds, who was freed by a United States military court after he had killed a native Peeping Tom who attacked him.

The present Japanese anti-American demonstrations are whipped up because the Status of Forces Agreement does operate in their kingdom, but not in situations where Americans in uniform, are carrying out orders. In the present episode, United States Sgt. William S. Girard, on duty at a firing range, was accused of involuntary manslaughter when an empty shell case fired by him struck a Japanese woman illegally trespassing on the range and caused her death. The Japanese want the sergeant turned over to them and placed on trial before a Japanese court.

Commonsense could have avoided all these self-created perils which our Commie opponents are now so enthusiastically exploiting.

In the first case, the status-of-forces agreements should never have been passed. They could never be put in force if the proposed Bricker amendment were on the books. But even more importantly, today they would be kicked out by the Supreme Court as unconstitutional if that august body still follows legal precedent.

JOHN MARSHALL'S RULING STILL STANDS

Every effort in recent years to get the issue to the high bench has been blocked, and for good reason. Those who dreamed it up know that the opinion which the great Chief Justice John Marshall (1755–1835) handed down still stands. This is the clear-cut ruling that service in the Armed Forces of the Republic of the United States shall not abrogate or nullify the constitutional rights of an American citizen.

Since the birth of the Republic, we have had many millions of Americans in uniform serving in foreign lands. But never, until the status-of-forces agreement was pinned onto the NATO agreement, have we turned over American soldiers to the judicial mercies of foreigners.

Millions of Americans—and there were certainly some thousands of bad boys among them—were overseas in World Wars I, II and Truman's Korean police action, and remained there months after the actual shooting stopped.

WE USED TO DO IT THE RIGHT WAY

But to our credit, we never once permitted foreigners to impose their criminal procedure on Americans in uniform.

Hitherto, the procedure had been simple and honest. If one of our bad boys in uniform got in trouble in a foreign land, he was turned over to his American superiors for punishment.

We reciprocated. During World War II, if British sailors or French marines were picked up in a Brooklyn or Manhattan brawl, stickup or rape, we hauled them off to the nearest stationhouse, called their respective MP's or shore patrols and forgot about it, after the American victim had been recompensed and report of subsequent punishment received. That's the correct way to run the show.

Since ancient Greece, there has been a simple rule of thumb which governs the rights of immunity of foreigners accused of violating the law of the alien land where their crimes or misdeeds are committed.

IMMUNITY DOES NOT EXTEND TO JOE DOAKES

The person of accredited diplomats cannot be touched. Envoys are exempt from all criminal and civil proceedings. So is the personnel of their immediate official households. They are also exempt from taxation, etc. All this worked out very well until some of the highbinders in the U. N. headquarters in New York got out of hand, but according to law they can still get away with murder if their bosses back home want to back them up on the diplomatic immunity plea. So it has gone until the status-of-forces agreement involving our military forces invited in to help protect a nation in peacetime. Actually, our military forces are official guests of these governments.

American tourists and businessmen in foreign countries and foreign tourists and businessmen in the United States enjoy no immunity. This is as it should be. And, according to Prof. Hershey's basic study of Essentials of International Public Law, neither do mere visitors and hangers-on of the embassy. Diplomatic privileges and immunities, says the learned professor, "extend to consuls as such, public or secret political agents * * * etc."

But, under recognized military law as laid down by the United States Supreme Court, such immunities do extend, so far as constitutional rights are concerned, to every American wearing a uniform on foreign soil.

Let Us Cut the Budget but Not at the Peril of Our Children and Our Future

---

EXTENSION OF REMARKS

OF

HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1957

Mr. CRAMER. Mr. Speaker, I submit for the RECORD two editorials in the Tampa Morning Tribune of May 23 and May 25 on the subject of the President's budget for defense and mutual security, which I believe worthy of the consideration of the Congress.

The editorials follow:

[From the Tampa Morning Tribune of May 23, 1957]

AID ON THE AID BILL

Mr. Eisenhower made it quite plain, both in his address to the people Tuesday night and during his press conference yesterday, that he intends to stand up for his administration's fundamental dedication to the principles of foreign economic and military aid as essential elements of mutual security.

His decision to fight hard for his revised and slimmer foreign-aid program may not please his more persistent critics in Congress. But it will be welcomed by the many Americans in and out of the National Legislature who agree with the President that it would be supreme folly for this country to cripple its allies against communism through an overweaning zeal to scrimp.

This is not to say that the new program, which calls for the separation of military assistance from economic aid and for emphasis on loans rather than grants in helping underdeveloped countries get on their feet economically, will have clear sailing at this session.

Nor do we in any way suggest that the President's request for $3.8 billion in foreign aid funds cannot be cut at all. To say that would be foolish.

Yet it would be even more foolish to urge that the request be meat-axed. Granted that some foreign aid funds have not been wisely spent, granted that there have been blunders in the administration of economic assistance, the fact remains that foreign aid has since the end of World War II become an essential tool of this country's foreign policy. It remains an essential tool. That is clearly brought out by the several special congressional committees and independent agencies, including the United States Chamber of Commerce, which studied and reported on the program in recent months.

Foreign aid funds are not giveaways. They are employed for specific programs within an overall policy of keeping the free world free. Sometimes, as in Europe after World War II, they helped put established but battered economies back on their feet. And sometimes, as now in Asia, the Middle East, and in South America, they have helped young or struggling democracies toward stability.

President Eisenhower has presented a significant challenge to Congress. It is up to the Senators and Representatives to show they understand that the independence of Asian and Middle Eastern nations is more important in the long run than dotted-line agreements now with the United States.

As the President said in effect, and rightly so, it would be little consolation later to investigate "who lost Asia and the Middle East to communism?" The time to help save these strategic areas is now.

[From the Tampa Morning Tribune of May 25, 1957]

REMEMBER THE TAXICAB ARMY

The Nation has before it the blunt words of Secretary of Defense Wilson that defense fund slashes proposed by some Members of Congress would interfere with the purchase of ships, planes, and missiles of war.

Wilson, an earthy man whose outspoken words sometimes get him in trouble, told the Senate Appropriations Committee that proposed defense fund cuts would snatch away the cards and chips President Eisenhower has to hold in the international poker game of disarmament.

He was backed by Admiral Radford, Chairman of the Joint Chiefs of Staff, who said big cuts in the military budget "would risk the security of the nations of the free world."

And he had the backing, too, of Senate Republican Leader KNOWLAND, one of the men calling loudest for a sizable cut in the Eisenhower $71 billion budget, who warned against cutting appropriations for defense.

We are inclined to go along with these men. Let's keep our guns loaded, our ships and planes and missiles on the alert. Let us be very sure we know the mind of perfidious Russia before we turn off the alarm clock and go to sleep.

Of course there is need of economy, and of course there is inefficiency and waste in our preparations for defense and in foreign aid. Where economy can be effected, let us be economical, and let us ruthlessly correct inefficiency. Let us cut the budget, but not at the peril of our children and our future.

One does not have to be much of a newspaper reader to detect the note of alarm by those schooled to watch the Washington

scene at what appears to be a nationwide drift toward complacency.

We do not need to go beyond the newsletters from Washington carried on this page.

In the last week or so Eisenhower has gone to the people with an appeal for support of his budget, and particularly of his defense program.

"The plain truth is that the price of peace is high," he said in his television appeal of May 15, and in his second national network talk Tuesday he stressed the need of foreign aid.

Eisenhower pictured foreign aid, already sliced from $4.4 to $3.8 billion, as a concrete and practical way to bolster American defense. For this country to try to go it alone, would be dangerous strategy, he said.

But America is peaceful, prosperous, and complacent, and Senators and Congressmen who have had their ears to home soil have been hearing demands for easier taxes. They have been encouraged to spend money at home, not in foreign lands.

We have pretty well forgotten Foch's taxicab army and the British Contemptibles of World War I that held back the Kaiser's legions while we got ready to fight.

Even the Battle of Britain of World War II and American unpreparedness for that conflict grow dim.

But countries that were strong—and our good friends—in those days are weak today. Britain has lost an empire, and France has sunk into political confusion.

Only Russia is strong and growing stronger, and spending tremendous sums on arms and propaganda.

Let us heed Brother Wilson and not sink into complacency and again be caught unprepared.

Why Treat Our New Americans Like Made-Over Aliens?

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post of June 1, 1957:

WHY TREAT OUR NEW AMERICANS LIKE MADE-OVER ALIENS?

It was natural enough for Chairman Paul Butler, of the Democratic National Committee, to invite Representative FRANCIS WALTER, of Pennsylvania, to serve on the executive committee of the nationalities division of his party's national committee. Mr. WALTER is chairman of the House Immigration Subcommittee and has a powerful voice in the policies established by Congress to govern the admission to this country of refugees and other foreigners.

Perhaps, however, a little further deliberation on the subject might have prevented Mr. Butler from writing to Mr. WALTER at all. At any rate, Mr. WALTER'S reply to the invitation to join a nationalities division stands as a pretty solid statement on what should be the relation of new citizens to their adopted country—and, perhaps even more importantly, the duty of older citizens to recent arrivals.

"I have long opposed the concept of minority or nationality groups as entities somehow distinct from the American people as a whole," wrote Mr. WALTER. "From this concept arises the nation that the interests of these different groups of Americans are at variance with the interests of the rest of the Nation."

To support this view, the Congressman quoted from a letter by the late Representative Antonio M. Fernandez, of New Mexico, who had also refused to serve on the nationalities division. "In my State," wrote Mr. Fernandez, "political organization and political pressure along racial lines are frowned upon by those of us who are not of English descent as well as by those who are." The New Mexico Representative doubtless understood instinctively that, as Mr. WALTER put it in his letter to Mr. Butler, "in perpetuating the idea of nationalities and minorities you are at the same time perpetuating an instrument of division among people whose greatest pride lies in becoming a part of our great Republic."

Of course, few politicians are able to exercise the restraint which would be required by strict adherence to the ideal set up by Mr. WALTER and Mr. Fernandez. The Negro vote, the Jewish vote, the Italian or Polish vote—whether it really exists or not—is very much on the mind of the average politician.

Wouldn't it be wonderful, though, if political leaders and aspiring ward heelers could unite on the principle that the welfare and interest of this country are the primary concern of all Americans of whatever origin, regardless of prejudices and antagonisms inherited from the Old World?

Kill Off the Soil Bank

EXTENSION OF REMARKS
OF
HON. J. VAUGHAN GARY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial published on May 24, 1957, in the Richmond News Leader, entitled "Kill Off the Soil Bank," which should be of great interest to the Members of this House, who recently voted, most wisely, I think, to eliminate funds for the so-called soil bank after this year.

The editorial follows:

KILL OFF THE SOIL BANK

The best day's work the House of Representatives has done on the budget this year was done last week, when the House, led by Virginia's own BURR P. HARRISON, voted 192–187 to kill the acreage reserve program of the so-called soil bank after the present crop year.

Mr. HARRISON termed this program a national scandal, and that is precisely what it has proved to be. It is a something-for-nothing scheme, conceived in a moment of political desperation prior to last fall's elections. It has resulted in a fantastic—and utterly ineffectual—dissipation of public funds, to the benefit of a relative handful of farmers at the expense of everybody else.

If the soil bank actually had succeeded in reducing agricultural production, some case might be made in behalf of the program. This was not the story. Time after time, the House Appropriations Committee discovered, farmers accepted payment for withdrawing land from cultivation and then concentrated with redoubled energy upon producing vastly higher yields from remaining acreage. Further, said the committee, "much of the land placed in the acreage reserve was drought land which would not have produced a good crop in any event."

The House group cited one interesting example of how the soil bank worked in McLean County, Ill. There a farmer with a 2,019-acre farm had a corn allotment of 671 acres. He had 14 acres planted to alfalfa and 155 acres in clover. When the soil-bank program came along, he pointed out that his clover and alfalfa land was suitable for growing corn; and though he had planted no corn on it, and did not propose to plant corn on it, by his sole act of not planting corn on land suitable for corn, he qualified for compensation. His payments were based on a hypothetical yield of 70 bushels of corn per acre at a rate of 92 cents a bushel. The total payment to this farmer came to $10,903.

In another instance, a Kentucky farmer proposed to put a tract of scrub trees and underbrush into the soil bank. Some of the brush had grown to about 6 feet in height. It was agreed, said the committee, that if the farmer would remove the brush and shrubbery, he would be paid for not planting corn on this piece of land.

The wheat program developed a ludicrous situation in which the Department of Agriculture met itself coming and going. One governmental program, designed to increase production of a variety known as durum wheat, ran head on into the soil-bank program, designed to decrease the production of all wheat. In the confusion, a farmer at Gilby, N. Dak., with an allotment of 761 acres for ordinary wheat, took advantage of a bonus clause in the Durum Act to obtain a total allotment of 1,286 acres of durum and 43 acres of spring wheat. Because he had not planted more spring wheat, he was found to have complied with the Soil Bank Act, and though he destroyed no wheat at all, he was paid $10,366.

Such handouts, running into thousands of dollars, were not at all unusual. The Garvey Farms, operating in Colorado and Kansas, drew total payments of $61,354; Adams Bros. & Co., in Iowa, drew $49,248; three Texas farmers average nearly $40,000 each. In widely scattered areas, city folks with a shrewd eye for a fast buck, went out and rented land, put the land in the soil bank, destroyed no crops and planted no crops, and were paid more than their rent simply for leasing land they did nothing with.

This nonsense cost the American taxpayers some $260 million last year. An appropriation of $500 million had been asked for the coming year. It was this item that Mr. HARRISON'S amendment struck from the agricultural appropriations bill last week. If the Senate goes along with the House—and it will be a close proposition—the public will have been saved half a billion dollars next year alone, and some opportunity will have been provided for a fresh approach to farm policy.

Sooner or later, perhaps the Congress will conclude, as Secretary Benson asserted, that "we cannot legislate scarcity." An answer to the farmers' undoubted hardships will have to be found in some recognition of abundance; and a solution will have to rest upon the farmer's earning a fair price in the market place for his labors, not upon his drawing Government checks for not laboring.

Senator Morse's Blast

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. BEAMER. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following editorial from the Sunday Journal and Sentinel of Winston-Salem, N. C., of May 26, 1957:

SENATOR MORSE'S BLAST

Senator WAYNE MORSE, who walked out on the Republican Party during the 1952 presidential campaign, now finds that President Eisenhower and Dave Beck are "the same kind of immoralists." Senator MORSE's remarks have not gone unnoticed, and even those GOP Senators who have a hard time trying to agree with the President, have denounced the Oregonian's remarks as ranging from "unfair" to "shocking."

Criticism, of course, is something everyone ought to be able to take, especially politicians. But it is doubtful if Senator MORSE's linking of the President and Dave Beck comes under the heading of legitimate criticism. It is, in fact, a very low blow. And, moreover, it is based on utterly false assumptions.

It is generally agreed that Hell's Canyon is behind Senator MORSE's attack on the President. The Senator thinks the Government should have spent several hundred million dollars developing power-generating facilities in Hells Canyon. Mr. Eisenhower and his administration disagree. They feel that where a private company is willing to do the job, it should have the chance. So the Idaho Power Co. was given permission to build the dams and the generators. (The Supreme Court, moreover, has upheld this.) Senator MORSE doesn't like the idea.

Then, the Idaho Power Co., under a law that has been in effect since 1950, was granted the privilege of depreciating part of the cost of the dams and power facilities over a period of 5 years, rather than the normal 20 or more years. This law was approved to encourage the building—by private enterprise again—of those facilities which would increase this Nation's industrial capacity to weather emergencies and wars.

Thus, for actions by his administration that were not only legal, but undoubtedly beneficial to the welfare of this Nation, President Eisenhower has been likened to the discredited Dave Beck. The least Senator MORSE could do is apologize. Judging from his past actions, it is hardly likely that he will.

An Appeal to the Churches

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. HUDDLESTON. Mr. Speaker, as you know, a subcommittee of the other body, investigating juvenile delinquency, has just completed its hearings and submitted its report. Among its worthwhile recommendations it has made an urgent appeal to the churches of America "to play a more active role in combating youthful lawbreaking." Dr. Leon Macon, editor of the Alabama Baptist, a splendid weekly newspaper published by the members of the Baptist denomination in Alabama, has commented editorially on the results of the investigation and the report.

Under leave heretofore granted, it is my privilege to insert Dr. Macon's editorial in the Appendix to the CONGRESSIONAL RECORD.

The editorial follows:

AN APPEAL TO THE CHURCHES

A Senate subcommittee investigating juvenile delinquency has made an urgent appeal to the churches of America "to play a more active role in combating youthful lawbreaking." This committee, through its investigation during 1955–56, found some appalling conditions among our youth. It states that 550,000 children were brought into our courts during 1956 and that over 100,000 of these were committed to some detention home. The committee said if these trends continue there will be a million children a year brought before our juvenile courts.

Again we find men in high leadership in our country calling upon the churches to do their duty. We realize the church has done very little about ministering to the moral needs of all of our people because so many social and civic organizations have sought to promote this feature among our young people. We applaud any effort to bring about better morality among our youth and all of our people; however, morality cannot be sustained solely by organizational efforts detached from the church. The church must take an active role in leading all of our people to a better understanding of morality which must be reinforced by the spiritual ministries of Christ to the individuals.

The committee suggested many ways by which the church could help solve the child delinquency problem. Among some of the suggestions made by this subcommittee were, that the churches have more weekday activities for the youth, form discussion groups to deal with parents and children and the child himself, establish information clinics and promote more specific guidance for teenagers. Other suggestions were that the churches take more interest in the legislation dealing with juvenile delinquency and take a more active part in sponsoring juveniles detained in institutions. Many other suggestions were made, but undergirding all of this the church must seek to get the child while he is young and mold his character in the life of Christ. Social and moral services to our youth alone will not result in permanent values. They must be won to Christ and given incentive through this relationship with God to do right.

Again we find the leadership of our country calling on our churches to do more to solve the delinquent problem among our youth, as well as among our adults. We would urge our churches to move into this need and meet it with the ministry of Christ.

Results of Questionnaire Mailed to Second Congressional District of California

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. ENGLE. Mr. Speaker, I recently mailed approximately 78,000 questionnaires to residents of the Second Congressional District. As in the past, the percentage of returns has been excellent. It is gratifying to know of the interest of my constituents in national and international affairs. Almost 50 percent of those answering added additional comments on the various questions. Their responses are certainly appreciated and will be of interest to my colleagues:

1. Please check 6 of the following 12 issues you think most important today: (a) Government spending, 70 percent; (b) balancing the budget, 45 percent; (c) reduction of debt of Federal Government, 48 percent; (d) taxation, 62 percent; (e) farm prices and policies, 42 percent; (f) United States foreign trade polices, 39 percent; (g) control of communism in America, 55 percent; (h) labor policies, 45 percent; (i) defense and war preparedness, 50 percent; (j) maintaining peace, 43 percent; (k) American foreign policy, 46 percent; (l) civil rights, 36 percent.

2. Please check 3 of the following 6 items you think should be cut in Federal spending: (1) Number of Federal employees, 75 percent; (2) construction of Federal public works (dams, airports, buildings, interstate roads, etc.), 25 percent; (3) Federal aid to States, municipalities, school districts, and local public agencies, 50 percent; (4) foreign aid, 76 percent; (5) national defense, 19 percent; (6) Federal aid to agriculture and small business, 27 percent.

3. Do you favor Federal aid to education, specifically for school construction to meet class-room shortages? Yes, 62 percent; no, 33 percent; no opinion, 5 percent.

4. Would you vote to increase first-class postal rates (on 3-cent letters), even though that class of mail is earning its own way, in order to meet the deficit caused by second-, third-, and fourth-class mail? Yes, 16 percent; no, 82 percent; no opinion, 2 percent.

5. Do you approve the President's handling of the Middle East crisis? Yes, 49 percent; no, 38 percent; no opinion, 13 percent.

6. Would you favor special tax relief for small business? Yes, 62 percent; no, 28 percent; no opinion, 10 percent.

7. Would you support the President's request for more authority to admit refugees from Communist countries? Yes, 20 percent; no, 70 percent; no opinion, 10 percent.

8. Do you think Congress should take further action to safeguard the civil rights of Negroes and other minority groups? Yes, 55 percent; no, 35 percent; no opinion, 10 percent.

9. Do you believe the P. G. & E. Co. should be permitted to take over the power development on the Trinity River project, now under construction by the Federal Government as part of the Central Valley project? Yes, 34.6 percent; no, 58.9 percent; no opinion, 6.5 percent.

10. Do you favor the tight-money policy of this administration? Yes, 43 percent; no, 44 percent; no opinion, 13 percent.

11. Do you approve the present farm program? Yes, 25 percent; no, 57 percent; no opinion, 18 percent.

12. Would you favor limiting debate in the United States Senate? Yes, 60 percent; no, 26 percent; no opinion, 14 percent.

13. Would you vote to continue domestic mining of strategic and critical minerals and metals if a Federal subsidy is necessary to do so? Yes, 56 percent; no, 31 percent; no opinion, 13 percent.

14. Do you believe that the price of gold should be raised? Yes, 59 percent; no, 26 percent; no opinion, 15 percent.

15. If Congress cuts the budget by two or four billion dollars would you reduce taxes (42 percent, yes) in that amount or apply that money on the national debt (57 percent, yes)? No opinion, 1 percent.

16. Do you believe the Forest Service does a good job of forest management? Yes, 53 percent; no, 34 percent; no opinion, 13 percent.

17. Do you favor the so-called right to work legislation? Yes, 67 percent; no, 21 percent; no opinion, 12 percent.

If your answer is "yes," has your opinion been affected by the recent hearings involving the teamsters? Yes, 23 percent; no, 49 percent.

America, My Beloved

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. GROSS. Mr. Speaker, I call to the attention of my colleagues the following address by Alvin Mansfield Owsley, of Texas, a founder and past national commander of the American Legion, delivered on May 2, 1957, at a meeting in Indianapolis, Ind., of the Legion's National Executive Committee:

Mr. National Commander, distinguished guests, my fellow Legionnaires, it is a delightful pleasure and esteemed honor to address you. This privilege gladdens the heart of one of your earliest National Commanders, and a founder of the Legion. I accept in the name of my beloved Department of Texas and all who love our Legion.

Today, allow me to speak with much foreboding concerning the policy of the American Legion with the United Nations. All must recognize the importance of the United Nations to the security and destiny of this Republic. No one can afford to remain silent. "To sin by silence when we should protest makes cowards of men," spoke the immortal Lincoln.

It is a rule of history that people never give up their liberty except under a delusion.

We must find the source of our power and dedicate that power to the preservation and security of our country; not to the delusion—the United Nations.

Let me ask the frank question: What does the United Nations contribute in the way of security or to improve the general welfare of the United States? It is to be assumed that thoses who got us into the United Nations had an idea that it would be beneficial to the United States and to the world. How did the United Nations ever get fastened to our fair land? Here is the answer.

The United Nations Charter was the work of Alger Hiss and his Communist, Socialist workers beginning at Dumbarton Oaks; rewritten at Moscow, Russia (of all places) and signed at San Francisco.

In 1946 the General Assembly of the United Nations accepted the offer of John D. Rockefeller, Jr. of a gift of $8,500,000 to purchase the required land in New York City for the permanent headquarters. The United States loaned $65 million, without interest, to build the Headquarters Building. The area now extends from 42d Street to 48th Street between First Avenue and East River in New York City. Here stands the glass house with thousands of covetous eyes spying upon us. A vast monument to a bad judgment.

On June 26, 1947, the Secretary of State of the United States signed a special agreement with the Secretary General of the United Nations by which it was agreed that the United Nations would have authority to make rules and regulations governing the headquarters district.

This treaty provides that any of the rules of the United Nations that may be inaugurated that may be in conflict with any local law, shall prevail. The General Assembly of the United Nations promptly delegated the rulemaking power to one man, the Secretary General, a foreigner. Now this six-block area in the heart of Greater New York becomes extraterritorial. It is an "island preserve" concerning which one man can make rules and regulations that supersede the ordinances of the city and State of New York, or any act passed by the Congress of the United States. The United Nations treaties are superior and may supersede the Constitution of the United States, or our Bill of Rights.

Our American courts are citing the United Nations Charter, and treaties as authorities in American courts. You will recall an American President claimed the right and authority to seize the steel industry under the United Nations Charter. The most dangerous repercussion of this action is that three members of our Supreme Court agreed with Mr. Truman; one was the Chief Justice.

Here is the danger signal.

The Secretary General has no restrictions upon him. He can do as he pleases as long as he makes his report to the General Assembly. If a crime is committed by a member—or an attaché—he may plead immunity. This happened in a case of murder. The New York Police, the FBI, and the Army of the United States cannot enter this extraterritorial "little kingdom." What has become of the sovereignty of the United States?

In a recent U. S. News & World Report there is a very striking article which says: "Serious concern is beginning to be felt that the United Nations is serving as a haven for Communist spies in the United States. That concern is being expressed by investigators for the United States Senate. It is also worrying officials of the United Nations itself."

The CONGRESSIONAL RECORD of the 83d Congress, 2d session, dated June 2, 1954, shows the United States pays one-third of $2,880,000 for UNESCO alone, and an additional one-third of $3 million for the United Nations technical assistance program. The cost of the United Nations to the United States in all demands for the 1953–54 session was $110 million, and for 1957 increased millions. This includes organizations with their hundreds of ambassadors, secretaries, technical assistants, aids, and all the traveling expenses of the hundreds of people that are going around the world in this "do good" job of giveaway. The solemn truth is that the United States has been plundered, misused by her foreign friends. "Show me my enemies and deliver me from my friends," cried a former United States President. The foreign nations are constantly on our doorstep, in Washington, demanding that we increase our aid to save them from communism. Thus far we have done mighty little saving.

From the CONGRESSIONAL RECORD of March 20, 1957, we have these facts as stated by Congressman H. R. GROSS, of Iowa:

"In December 1956 issue of UNESCO Chronicle, there is the following: 'UNESCO gave financial and technical assistance to the Yugoslav Communist National Commission for the organization of an International Seminar on the Economic Education of Workers.'

"Among the countries represented at the seminar was Red China.

"The United States each year gave almost one-third of UNESCO's operating costs, and the above-quoted items are submitted as examples of who and what we support with American taxpayers' dollars.

"Here we are spending a half million dollars to investigate United States citizens who seek employment in international organizations, including the United Nations and UNESCO, and yet sitting over those people in UNESCO is a Communist from Moscow, Russia. How stupid can we get?"

"In my opinion," said Congressman MASON, "UNESCO is one of the most pernicious of the international ventures of the United Nations. It is an educational institution, and therefore it has that pernicious influence on youngsters."

Mr. GROSS. "I heartily agree with the gentleman from Illinois."

Now that the United Nations has its armed forces placed upon foreign soil, will the next move be to express a power of taxation, and will then the sovereign authority of our great Republic pass to a super state? Is the United States of America on the brink of being caught in the vortex of a tornado and snapped up in the spectacle of Old World confusion and rivalry?

The Charter of the United Nations serves the purposes of a foreign super state—yes, of the Communist world. This we condemn. It is not for us in America.

In the First World War we poured out of our Treasury some $21 billion of foreign aid, and following World War II, we have handed out more than $50 billion and the "modern republicanism" administration is asking for $5 billion additional to be given away, when the national debt of the United States exceeds that of all the nations of the world combined.

This can be traced as a direct result of our membership in the United Nations and the constant pressure that is being placed upon us by the Socialists, the neutrals, and the Communists within the United Nations: Spend the United States into bankruptcy, force America to financial collapse, as Britain and France.

The Russian Communists have always been bad actors. "At one blow the Communist revolution robbed France, Italy, Britain, and other countries of prewar and wartime loans to Russia aggregating billions."

We have heard the remarkable effort to exorcize war by the incantation of unsupported treaties, the effort that gave birth to the Kellogg-Briand Pact, or the Pact of Paris. Back of this grand gesture lay a variety of regional movements for peace. We have heard the seven conventions to avert the scourge of war and by peaceful settlement of disputes of other nations, they were quickly initialed. On the foundation laid at Locarno, by the 4-power and 9-power treaties in far eastern affairs, by the growing concord of the American family of nations, by Great Britain's concession of freedom to Southern Ireland and Egypt, the world seemed ready to erect a stately temple for peace. We are aware of an American campaign for the outlawry of war which was originated by a Chicago attorney. France was willing to subscribe publicly with the United States to any mutual agreement tending to outlaw war. To use an American expression, between these two countries, "the American idea had become an international force." The Versailles Treaty ending World War I had expressed the honorable intention to organize the world so that armed forces might be gradually reduced and eventually eliminated. But the task proved unexpectedly too difficult and beyond human power. Germany rose to power under Hitler and became the most formidable armed force marching across Europe. Mussolini, betraying Italy, started the Italians on a death march. Japan in the Far Pacific defied the world. The tragedy and the infamy of Pearl Harbor and the agony of World War II followed.

Now from the United Nations, our country is constantly deluged with the most extravagant propaganda campaign supporting and praising the United Nations that we have ever witnessed. The Communists, Socialists, One-Worlders, Internationals, do-gooders, and the floaters for jobs are having a heyday. No product has ever been sold to the American people in such flamboyant fashion as these social planners with wild imagination are describing the United Nations.

On the battlefield with the U. N. troops in Korea, the flag of the United States, of our valiant defenders, was lowered and the flag of

the United Nations raised above it. We can recall that when General Pershing, Commander of the American Expeditionary Forces, World War I, landed in France, the foreign leaders presented to him the idea that the American soldier should fight under the flag of one of the allied countries, under the command of allied officers. General Pershing's historical reply was: "The American soldiers will fight under the flag of the United States of America and under the command of John J. Pershing." So we did; fought the enemy to their knees and saved the civilization of the world. All honor to this immortal hero, one of the first military commanders of all history, Gen. John J. Pershing.

In comparison hear our gallant, dynamic Gen. Mark Clark as he cried in anguish from Korea: "I am the first American commander compelled to sign a treaty ending a war we did not win."

Every American commander in Korea, all seven of them, proclaimed: "I could have won that war." What prevented our victory? The combination of intrigue, treachery, and a stab in the back from the U. N. robbed us of victory; beginning with the cruel and infamous attack on the greatest military genius of all time, Gen. Douglas MacArthur; causing his dismissal.

From the Pentagon and many of our first-rank officers may be found a dismal look into the future for American safety and victory in battle if dominated by the United Nations.

We are beating a retreat from the bold-aggressive-fearless national policy that has made and kept us great.

From Lord Cherwell, one of Britain's foremost scientists, speaking of the position of the Soviet Union and the extravagant use of the veto, which has now run into more than 60 separate times, we have this statement: "If that entirely negative position is maintained to the end, the world will have sad proof that the original adherence of these countries to the U. N. Organization was a matter of political expediency alone, without any continuing sence of responsibility, etc."

The conduct of the U. N. Organization with the preponderance of power of veto in the hands of the Communists show beyond per adventure of a doubt that the customary Communist use of the big lie now familiar to every student of foreign affairs is nowhere more apparent than in the U. N. Organization. The experience of these 11 years has given illustrations without number, and apparently without limits as well, to the immensity of the big lie; but perhaps none is remembered more vividly than the germ warfare charges made by the Soviet delegation to counteract the evidence of atrocities committed by Communist troops in Korea.

In the place of honor, honesty, and integrity which are inherent in the organizations sponsored on American soil, the proceedings of the United Nations Organization show frequently dishonesty, double dealing, and outright deceit. No organization can operate where suspicion of the integrity of its membership continues and is justified.

The United Nations Charter presupposes the U. N. an instrument for peace; it has been the breeding ground for war. Here are some of the U. N.'s accomplishments:

1. Israel: Jewish State versus Arabs. Arms furnished Israel by Red Czechoslovakia. Established Socialist state. Bernnadotte assassinated. Two hundred thousand Arabs homeless, fed now by the United States * * * alienated entire Moslem world. Provoked war between Israel and Egypt.

2. Korea: Stop aggression. Only 14 out of 56 nations cooperated. Most aid came from the United States—90 percent of everything with South Korea. Victory denied America through U. N.; aggressors divided Korea and stand on the same line as at the beginning of war. U. N. forced division on Synghman Rhee. Armistice worthless and violated. U. N. does nothing. One hundred and forty thousand American casualties.

(a) American military might and money saved Greece and Turkey. United Nations did nothing.

3. French Indochina: United Nations aid nothing. Cost United States nearly $1 billion; immediate demand is for increased financial aid.

4. All Southeast Asia: This area threatened. U. N. does nothing. United States mission prevented war in Thailand. No U. N. aid.

5. NATO, EDC, Geneva, and Cairo: All outside U. N.

6. South and Central America:

1. Guatemala: United States settled this trouble through Ambassador William Pauley.

2. Costa Rica-Nicaragua: Caracas Treaty invoked, and after trouble was settled through direct American-Interventions, a U. N. delegation toured the troubled "battlefield" to give an opinion who caused the trouble.

7. Formosa: U. N. supporting Red China for membership and against Chiang's claim to offshore islands and independence.

8. The important decision-making posts are held by Communists and Socialists.

9. The Secretary General chosen from Socialist countries.

10. The entire atmosphere at the United Nations is unfriendly and intolerant of the United States.

Some say we can't go it alone; maybe not; anymore than we can assume and carry the burdens of the world alone. We should not try it. This course would bankrupt and destroy America as a first world power as it has every first power in world history.

The facts are, we shall never go it alone as long as we are rich and powerful and solvent. We shall go it alone only when we exhaust our resources, give away our superiority of striking power on land, sea, and especially in the air, with A-bombs and H-bombs, and guided missiles. Only then will we find ourselves alone, deserted by foreign powers.

In Holy Writ, St. Luke, chapter 11, verses 21 and 22, we read: "When a strong man armed keepeth his palace, his goods are in peace: But when a stronger than he shall come upon him, and overcome him, he taketh from him all his armour, wherein he trusted, and divideth his spoils."

The last tragic example was the rape of Hungary by Communist Russia while the United Nations stood still and would not heed the cry of freedom as it died.

Now we have the rise to power of the Egyptian "fakir," the Communist puppet, Nasser, dictating to the entire world the use of the Sues Canal waters; these powers were conferred upon Egypt by the United Nations.

A distinguished former Governor and United States Senator of the Empire State (New York), the Honorable Herbert H. Lehman, in a recent address at Toronto, Canada, deplored the United Nations policy in the Middle East; holding that the international body had restored to Egypt the power to blockade Israel in the Sues Canal. It (the U. N.) has given Gamal Abdel Nasser, Egypt's President, and the Kremlin final authority over the canal.

Now listen to the celebrated and world renowned British statesman, Sir Winston Churchill, criticizing the U. N. for its attitude toward the British-French attack on Egypt last fall. He said: "The U. N. has not helped either the free world or the cause of peace." The British are in the U. N., but they don't believe in it.

Valiant youths from several nations, unacquainted with battle, have been sent to guard Nasser. The command is: "Shout—don't shoot." A reproach to any uniform.

The United States, with no forces in the UNEF, has been drafted to pay one-fouth of the entire cost of maintaining this army. The demand cost to the American taxpayers at the beginning exceeds $6 million. Congress should refuse to pay any sum. Russia declined.

These policies have been forced upon the United States and the free nations by Russia and her satellite Communist powers, Russia with the veto power and her nine Communist votes.

Will an attempt next be made to internationalize the Panama Canal? Who knows?

The U. N., being impotent to strike, stood on the side lines and watched Communist Russia gather as slaves in behind its Iron Curtain more than 600 million human beings. Here is the most tragic picture—the supreme pathetic story—of modern history.

What has the United Nations done to free: Hungary, Poland, Czechoslovakia, Rumania, Albania, Estonia, Latvia, Lithuania, East Germany? These states were once free. These sad and defenseless peoples are not interested in the Voice of America—or the Crusade for Freedom.

In the great and historic debates of the past, our statesmen have outlined the position of the United States.

Whatever relations the United States must have with foreign countries, it must be clearly understood that our retention of the provisions of any covenant must be: "Without depriving the people of the United States in advance of the right to determine for themselves what is just and fair when the occasion arises, and without involving them as participants and not as peacemakers in a multitude of quarrels." What has become of our slogans which were given a currency which kept them potent for years to come—no entangling alliances, no foreign snares, no more sacrifice of American boys in foreign wars, no impairment of sovereignty?

One of the eminent statesmen of his time, a former Chief Justice and Secretary of State, Charles Evans Hughes, said: "The American people would never consent to assume any obligations, moral or legal, which would fetter their appropriate freedom of action in and on contingencies." We shall not say that devotion or loyalty to the United Nations is akin to treason and tolerance, but it is un-American. We do say that it is a surrender of our sovereignty, and our foreign policy has become the whipdog of the Socialists, the neutrals, and Communists, who dominate the policies of the United Nations.

United Nations proponents say that the U. N. is only a clearing house for ideas that they can think up declarations, such as the human rights declaration, the genocide declaration, UNESCO declaration, and all the various 20 and more international declarations, but all that the U. N. can do is to recommend. In other words, it is an international Tower of Babel. Each nation, through its representatives in the U. N. speaks and nothing ever comes of it. There is one thing, however, that does come out of it and that is that the U. N. is serving as a sanctuary from which our enemies, the Communists, the Socialists, the Internationalists, the One-Worlders, and all those who have in mind a change in the American idea of democracy can operate. The United Nations has housed those who voice their hatred of us. The Communists have found it possible to stack their delegations with "specialists" trained in sabotage; propaganda, and those who are to take strategic positions to wreck our transportation system, destroy our gas, electric, and power lines and communication and render useless the necessary utilities for our defense in war. Furthermore, it furnishes a place for the enemy to go underground and to give instruction for the complete annihilation of our country with the atomic and H-bombs.

We are told that we must be careful in what we say and what we do for fear we make Russia and her satellites mad with us.

I ask, when did it become necessary for Americans to be afraid to express their opinion for fear that some foreigner would not like it?

How long will America submit to this insulting, degrading performance?

Our eloquent national commander, Dan Daniel, speaking over the Mutual Broadcasting System, said: "We are opposed to the granting of a single dime of American aid to Communist dominated countries." Yet, Poland got millions; Tito to get American jet fighters.

A careful study and a solemn decision in judgment upon the U. N., causes honest men to believe that the Communists and Socialists have created an instrument for international communism to strike down American independence.

Every patriot in this Nation should rise up and say to the Congress: We refuse to pay another dollar to this international Communist organization dominated by Russia and her satellites. Now is the time to say to the Congress: We are finished with the United Nations.

By resolution and by indirection, the American Legion has declared we will not support a superstate or a supergovernment. The American Legion is opposed to the United States being a part of an international super government. And yet, in the face of that resolution, we say to the United States Government, it is all right to go right ahead and support the President in sending an American delegation to the United Nations. We condone the taking of the taxpayers' money to support an international organization bordering upon international communism and the Comintern. Our position is inconsistent. The Legion cannot be halfway in and halfway out.

The time has come, not for general resolution or mutual advice, but for action.

I know not what others will do, but as for me, I favor denouncing the United Nations as an international conspiracy or world agency inimicable to American security, I would urge the United States Government to get out of the United Nations; and invite the United Nations out of the United States; off our blessed land.

Arise, you Legionnaires. Renew ancient faith in the land of your fathers. You are the strongest national force for the common good existing today.

Keep up the fight for Americanism.
Keep step with the National Anthem.
Add new glory to Old Glory.
Embrace America, my beloved.
This is my plea——
This is my prayer.

Fighting for Full Freedom of the Press

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 21, 1957

Mr. REUSS. Mr. Speaker, many of the Members of Congress have been deeply disturbed by the attitude of the Secretary of State toward the free gathering of news by the American press.

One of Wisconsin's consistent fighters for freedom of information is Mr. William T. Evjue, editor and publisher of the Capital Times of Madison, Wis. Mr. Evjue is a newspaperman of the old school—crusading, courageous, and outspoken. I wish to call to the attention of the Congress his remarks on this subject in his column, Hello, Wisconsin, of May 10, 1957:

Roy Roberts, one of the original "I Like Ikers" and the president of the Kansas City Star, made a confession the other day that should be good for the soul of the one-party press. Writing of the monstrous folly of Secretary Dulles in ordering a ban on reporters traveling to Red China, Roberts said of the timid role the newspapers have played in accepting the order, "I am afraid there has been too much leaning over backward so as not to embarrass our Government." William Allen White would have put some thunder into such a statement.

The following editorial is from the Capital Times of the same date:

INCREDIBLE DULLES

Even Time magazine, which has been dedicated these past 4½ years to proving that Secretary Dulles is infallible, finds itself a little shaken by Dulles' conception of freedom of the press.

In a recent letter to Arthur Hays Sulzberger, publisher of the New York Times, Secretary Dulles stoutly insisted that there was no violation of the free press in his order prohibiting United States reporters from visiting Communist China.

The constitutional guaranty of freedom of the press, he said "relates to the publication and not the gathering of news."

This incredible comment about a basic constitutional right by a man who is supposed to be an outstanding lawyer must send a shudder through every citizen who realizes that this man is our principal spokesman in the cold war struggle against communism.

What he is saying, of course, is that the Constitution does not provide for freedom to inquire; only for freedom to publish. In other words, the sources of information can be shut off by Government at any time without doing violence to freedom of the press. The newspapers would be perfectly free to publish blank pages or to make up information for their readers.

In his letter, Dulles also blatantly suggested that there is nothing wrong with the Government making the press a tool of its diplomatic policies. That is the role, of course, that the Russian press plays for the Russian Government. It is the classical view of the totalitarians who place the state and its purposes above all.

But it is not democracy. And it is not a free press, when that view prevails.

If the newspapers of this country were not so deeply enmeshed in the political fabric of the Republican Party they would be standing forth in unison with a demand that Dulles resign. It is terrifying to realize that one of his main functions is to interpret the ways and aims of this country to the rest of the world.

Resolutions Commemorating the Death of Outstanding Leaders of Ukrainian Liberation Movement Fallen in Battle Against the Russian Invaders of Ukraine

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. WIER. Mr. Speaker, I should like to call to the attention of the Members of the House a letter from Dmitro Mandybur, president, and Myron Kramarczuk, secretary of the Organization for the Defense of Four Freedoms for Ukraine, Inc., Minneapolis, Minn., with resolution unanimously approved by the American Ukrainians of the Twin Cities commemorating the death of three Ukrainian statesmen. Under unanimous consent I include the letter and resolution in the Appendix of the RECORD:

ORGANIZATION FOR THE DEFENSE OF FOUR FREEDOMS FOR UKRAINE, INC.,
Minneapolis, Minn., May 26, 1957.

Hon. Congressman ROY W. WIER,
United States House of Representatives, Washington, D. C.

DEAR SIR: We are honored to present to you a copy of a resolution unanimously approved by the American Ukrainians of the Twin Cities at the annual memorial ceremonies commemorating the death of three Ukrainian statesmen.

Symon Petlura, the commander in chief of the Ukrainian Army and head of the Independent Ukrainian State in 1918, was assassinated by Bolshevik Agent Schwartzbart in Paris on May 25, 1926.

Col. Ewhen Konowalec, the leader of the Ukrainian underground movement was also assassinated by a Bolshevik agent, Waluch, in Rotterdam, Holland, on May 23, 1938.

Lt. Gen. Taras Tchuprynka, commander in chief of the Ukrainian Insurgent Army (U. P. A.) fell in battle against the Russian invaders of the Ukraine on March 5, 1950.

These 3 dates, each with a 12-year interval, are now deeply carved in the history of the Ukraine and they prove the continuous struggle of the Ukrainian people against the Russian tyranny. The memorial ceremonies were held on May 26, 1957, in Minneapolis, Minn.

We sincerely hope that this resolution will be of help to you as informative material in your work in the United States Congress.

Sincerely yours,
DMITRO MANDYBUR,
President.
MYRON KRAMARCZUK,
Secretary.

RESOLUTIONS COMMEMORATING THE DEATH OF OUTSTANDING LEADERS OF UKRAINIAN LIBERATION MOVEMENT FALLEN IN BATTLE AGAINST THE RUSSIAN INVADERS OF UKRAINE, MAY 26, 1957, MINNEAPOLIS, MINN.

I

We, the American Ukrainians of Minneapolis and St. Paul, Minn., gathered together on this day to honor the heroic death of three outstanding leaders of Ukrainian liberation movement, unanimously proclaim the following:

1. The enslaved Ukrainian people firmly resist and continue their desperate fight for liberty against the tyranny of communism and Russian imperialism no matter what sacrifices they must make.

2. To break the spirit of this patriotic nation, Moscow makes use of all cruel means such as mass executions, torture, starvation, deportations, death bringing concentration camps, and mass resettlement.

3. The Kremlin makes a constant attempt to exterminate the entire Ukrainian intellectual class: scientists, writers, artists, military men, statesmen, and thousands of men and women who are leaders of their people.

4. On May 25, 1926, Symon Petlura, the commander in chief of the Ukrainian Army and head of the independent Ukrainian State, was assassinated in the Boulevard St. Michel, in Paris, France.

On May 23, 1938, Col. Ewhen Konovaletz, leader and organizer of the Ukrainian Underground Liberation Movement, was murdered in the streets of Rotterdam, Holland.

On March 5, 1950, Gen. Taras Tchuprynka, the commander in chief of the Ukrainian Insurgent Army (UPA), fell in Bilohorsha, Ukraine.

5. It is well known that behind the murder in Paris, as well as the tragedy in Rotterdam and Bilohorsha there was always the same enemy of Ukrainian freedom—Moscow's imperialism.

6. Moscow killing these three leaders in attempt to destroy the symbol of Ukraine's freedom and love for independence made a great miscalculation, because the shots fired in Paris, Rotterdam, and Bilohorsha did not break the spirit of Ukrainian people, and the struggle for independence continues as a passive resistance and as an armed conflict which is conducted by the Ukrainian Insurgent Army (UPA).

II

Because the people of Ukraine are deprived of their privilege of free expression, we feel it is our duty, the duty of free people, to speak in behalf of the enslaved Ukrainian people.

Therefore we accuse the Russian rulers, as well as the whole Communist totalitarian system—the latest form of Russian imperialism—of the following crimes:

1. Violation of the right of self-determination, and infringment of sovereignty and integrity in Ukraine and in the other subjugated countries.

2. Annihilation of all democratic liberties.

3. Destruction of the Ukrainian churches.

4. Systematic and brutal terrorism by the Russian secret police, as well as organization of concentration camps, slave labor, and other atrocities designed to break the spirit of freedom.

5. Systematic extermination of Ukrainian leaders and intellectuals, as well as russification and destruction of Ukrainian culture.

6. Further, we accuse Moscow of provoking wars, and of interference with the domestic affairs of various nations by setting up fifth columns, by organizing disintegration, sabotage, and espionage all over the world.

III

Today, when the inevitable conflict between the two irreconcilable opponents—the world of tyranny, and the world of liberty is approaching a crisis in psychological, ideological, political, and military spheres, we feel it is our duty to draw the attention to the following:

1. In the fight against Moscow's aggression our country must not depend solely on material superiority in armaments, but above all on morally superior ideology.

The American Declaration of Independence contains all the ideological weapons necessary not merely to pierce the brittle communism trappings but to atomize the foundations of the Russian imperialism.

2. Therefore we urge our Government to manifest sincerely the spirit of the American Declaration of Independence and to expand the principle of self-determination guaranteed by national sovereignty not only to satellite countries, but also to Ukraine and other once-independent nations which in the past decades were forcefully integrated into the Russian sphere.

3. We recognize the fact, that complete disintegration of the present Russian empire and establishment of free and independent national states is morally right, is in the interest of America, and is vital for the security of our country.

4. We draw the attention of the American people to the fact that various Russian political circles abroad, as well as certain groups in this country, are still incapable to turn their backs on traditional Russian imperialism. They deny the right of the peoples formerly oppressed by Czarist and later by Communist Russia to their national independence, and they oppose the disintegration of the Soviet Union and restoration of national sovereignty for the subjugated nations.

5. We firmly believe that restoration of free and independent national states on the ruins of the Soviet Russian empire is the only right way of abolishing a permanent Russian world aggression, abolishing the threat of war, and creation of the world which will guarantee the real peace.

IV

On this sad anniversary commemorating the tragic death of these outstanding Ukrainian freedom fighters, we warn the people of America to be aware of the danger of Russian imperialism and its present tool international communism.

Your allies are oppressed peoples by the Russian imperialism, and their historic struggle against that imperialism is the basic asset to the preservation of our American way of life, independence, and our freedom.

P. G. & E. Co. Wants To Monopolize Power Market

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. ENGLE. Mr. Speaker, as I have previously stated several times to my colleagues, the existence of Federal power in an area has the effect of holding down power and energy rates of the private utilities in that area. To see this, one only needs to compare prevailing power rates in the Pacific Northwest and other areas where Federal power is available with areas such as the Northeast where there is no Federal power. This explains the real purpose of the Pacific Gas & Electric Co.'s proposal to construct the Trinity project power facilities, which is to stop, at least for a period of 50 years, any further expansion of Federal power in California in order that it may monopolize the power market in that area. Then there would be no competition to force it to hold down its power rates nor a yardstick with which its rates could be compared.

It is interesting to examine the history of the P. G. & E. resale rates—that is, rates to municipalities and others for power to be resold—in the Central Valley project area and the effect the existence of CVP power has had no such rates. Prior to the time power was marketed from the Central Valley project, the Pacific Gas & Electric Co. had no competition in northern California and its resale schedule was such as to discourage municipalities from operating their power distribution systems. In 1945 the competitive effect of the Central Valley project led the company to adopt a resale schedule considerably lower than the one previously existing. This came at a time when the general trend in power rates was up instead of down and it was made clear at the Public Utility Commission hearing on the matter that the threat of competition had led the company to propose this new lower rate. As a result of this new resale schedule one municipality alone saved over $6 million in a 7-year period. All municipalities purchasing energy from the company profited by this rate decrease which was due largely to the existence of Central Valley project power. Irrigation districts in San Joaquin Valley had somewhat the same experience. In 1951, doubtless due to competition from CVP, the company lowered rates for irrigation districts in the San Joaquin Valley by approximately 20 percent. Again these reductions came at a time when the trend was in the opposite direction.

The point I am making is that if the P. G. & E. Co. is successful in cutting off expansion of Federal power in northern California it will have the area all to itself and if this happens it will be to the detriment of every user of electricity in the area. Existence of Federal power in an area does not just benefit those who actually buy it but it benefits all users of electricity because it is a deterrent to excessive power rates.

Need for Postal Pay Raise

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks I wish to insert in the RECORD the following letter I have received from a postal employee showing clearly the need at the present time for an increase in postal salaries. This letter is typical of the many I have received from postal workers who are writing to me giving illustrations of the inadequacy of their pay:

HONORABLE LESINSKI: I am writing in regard to the question of pay raises for postal employees.

As I am a R. P. O. clerk, one who breaks down and sorts mail for railway post offices, I have to learn and practice the . . . State scheme exam on my own time. That means I have to know the railway routes and the order that they serve the some 1,140 post offices in the State, to keep up on the time schedules and changes, to correctly throw the mail. I consider this skilled labor and feel I should receive at least close to equal pay of some unskilled labor in our city.

My take home pay for one month is $247.70. Let me compare this figure for you with my expenses for the same month.

House payment	$54.00
Loan payment (for house repairs)	37.00
Auto payment	40.50
Groceries (at least $16 per week for family of 5)	64.00
Utilities	14.35
Taxes and assessment per month	15.34
Fuel (winter cost spread over year)	18.00
Total	243.19

That leaves me a balance of $4.51 to take care of expenses and any clothes needed. I will omit luxuries. I'm sure you will agree that my expenses are not unreasonable for 1 month. Perhaps you'll say how does one manage with a salary like that. The answer

is by using savings accumulated while my wife was working, which are fast dwindling. Does this seem fair? The postal service is one to be proud of working for, but on these wages?

A majority of the fellows have part-time jobs which I am going to have to do, but this will deprive my family and myself of the time to spend together. I am requesting your support on this increase. Please not only for myself but for the many other employees who feel as I.

Sincerely.

It appears that the only people who are not aware that the postal employees are desperately in need of an increase in their salaries are the Postmaster General and the administration.

In speaking with the people in my district, the various organizations, and in reading the mail which comes into my office, the fact is evident that postal workers in order to keep abreast with the living conditions must receive a salary commensurate with salaries paid by private industry.

I believe that the article following from the Washington Daily News, by John Cramer is quite pertinent:

RESIGNED POST OFFICE OFFICIAL HITS PAY SETUP

(By John Cramer)

Robert H. Schaffer, postmaster of the New York City post office, the world's largest, has resigned—after a bitter public blast at "inadequate" postal worker pay.

His criticism of pay rates, it's said, had nothing to do with his decision to quit.

By contrast, excellent authority reports that the real reason for his resignation was "disgust" over interference in his operations by regional postal officials.

Mr. Schaffer has not said this publicly, and it probably will be denied.

On postal pay, Mr. Schaffer said:

"What kind of a career service is it that the postal worker has—to work 12 or 14 hours a day—5 or 6 days a week—8 hours in the post office and 4 to 6 hours on an outside job?"

AWARENESS NEEDED

He said he wished "some of those who sit in the seats in all branches of Government could be made aware of the plight of the postal worker who has to augment his Government pay by income from outside employment in order to meet his family needs.

"The truth is that even as the Nation's economy began to expand in the late 1930's and through the fifties, the salaries of postal workers went down and down.

"Until the time that the economic squeeze is lifted off the postal workers, no one will be able to say that morale is way up there."

Then he added:

"A lot of experts outside of the Department have been trying to demonstrate that we have adequate salaries.

"Just let them sit in the postmaster's chair for 6 days, and they will learn differently."

Smart Set

EXTENSION OF REMARKS

OF

HON. JOHN C. KLUCZYNSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1957

Mr. KLUCZYNSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ernest Tucker, of the Chicago American, which appeared in the May 26 edition:

SMART SET

(By Ernest Tucker)

The schoolkids used to bring pennies in to the teacher who bought potted geraniums with them, and on Memorial Day the whole class went out to a cemetery nearby and put the geraniums on the soldiers' graves.

The teacher spoke a few minutes about the meaning of the day. Sometimes the Reverend Mr. Webber, who was the father of one of the girls in the class, gave a short prayer. Chuck Bosley played taps, not very well, on his bugle. Then we went back to school.

That was all, but I'm sure none of us has ever forgotten those few minutes every year in the cemetery, standing by the neat rows of little crosses, listening to the sad, sweet notes of the bugle.

I don't think the kids bring their pennies for geraniums any more. At least none of them I talk to have any such custom. They know what Memorial Day is because they have been told in school, but they don't seem to feel it. It's just another holiday.

There is a parade downtown, and some of the outlying communities have celebrations of one kind or another. Old timers in Oak Park, where I live, tell me that years ago the town put on a major effort. Stores and businesses prepared elaborate floats, all with a Memorial Day theme, and the parade was a high point of the year.

The floats are gone now. The parade is now veterans' groups, school bands, endless Boy Scout, Girl Scout, and Camp Fire Girl troops, and the fire department. Kids decorate their bikes, and dash madly up and down the line of march.

There's nothing wrong with that. But with our little pots of geraniums, long ago, we felt a sense of kinship with the men who lay under the markers. The solemnity of the day lay heavy upon us. We had contributed, in small measure, to perpetuation of a memory. Watching veterans parade, or even watching them lay wreaths on a statue, doesn't give the feeling of participation that the cemetery visit did.

The children on their bikes don't feel the spirit of a day which is, after all, a sad recollection of those whom we remember too seldom.

Around Memorial Day I always think of Frederick Henry Dutton, seaman, second class, who was 18 when he died early in World War II. He was out of boot camp a few weeks, stationed at Mare Island Naval Base in San Francisco Bay. Dutton was attached to an outfit whose duty was loading ammunition on warships.

He wasn't any great sailor. He was lazy and sloppy, and not at all bright. He had no close friends and no discernible ambition except to sit around and play a mouth organ. He was not fond of work but didn't show any of the ingenuity some of his mates did in getting out of it. His dungarees were always dirty; his white hats were never white.

One morning in 1942 Dutton went with his crew to take ammunition cases from a cruiser just back from the South Pacific fighting front. On the dock Dutton tripped over a hawser and fell into San Francisco Bay. We tried to save him, but the savage tide glued him against underwater pilings and he was dead when we finally pulled him up.

Those few minutes when he was under water was the only time in his short life that anyone paid any attention to him.

The cruiser's crew, exhausted from some of the most brutal fighting of the war, crowded the rails to watch attempts to save the little seaman. The men in Dutton's company were shaken up; for most of them it was the first time they had seen violent death.

I had the problem of collecting his personal effects. Dutton had owned as near nothing as anyone could; he had even lost most of his uniform issue. All he really had were a few dungarees and his mouth organ. He had no relatives except an aunt in Missouri who wasn't interested in receiving the body, so we buried him in California.

A week later I heard some of his mates talking. They couldn't even remember his name. A moment of excitement, a few days of barracks gossip, then oblivion.

There were hundreds of thousands of Frederick Henry Duttons in our wars. They did no heroic deeds, helped little or not at all in the national effort. They died gasping for breath with influenza, or poisoned with typhoid, or, like Dutton, as a result of some mischance which might have been their own fault.

When we think of war's dead we think of heroes falling at some flaming barricade. On this Memorial Day remember the Frederick Henry Duttons. They are the war dead, too.

Luther Patrick, Poet, Wit, Congressman Dies—Served Four Terms in Washington—Beloved for His Humor and Courage

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1957

Mr. HUDDLESTON. Mr. Speaker, it was my sorrowful duty yesterday to advise the Members of the House of Representatives of the death of former Representative Luther Patrick. Mr. Patrick served in Congress for four terms, 1937–43 and 1945–47. He was beloved by his colleagues, many of whom are still Members of this body. He represented the Ninth Alabama District, which I am presently privileged to serve.

Under leave heretofore granted, I insert in the Appendix to the CONGRESSIONAL RECORD a newspaper account of Mr. Patrick's death which appeared in yesterday's—Monday, May 27, 1957—issue of the Birmingham Post-Herald, one of the fine dailies of my district:

LUTHER PATRICK; POET, WIT, CONGRESSMAN DIES—LAWYER SERVED FOUR TERMS IN WASHINGTON; BELOVED FOR HIS HUMOR AND COURAGE

Death came last night to Birmingham's beloved "Will Rogers-type" humorist and wit, former Congressman Luther Patrick.

The 66-year-old poet and pioneer radio commentator died at West End Baptist Hospital after a long illness.

He served four terms in Congress.

During the latter part of his life he was confined to a wheelchair with crippling arthritis.

However, he never seemed to lose his courage or his jovial spirits and was frequently contributing letters to the newspapers.

Luther's brand of humor, which always brought chuckles from his many friends, was akin to the people.

It had its roots deep in the earthy soil of Alabama. At the time of his death he was writing a book on folklore.

Funeral will be at 2 p. m. to tomorrow at Johns-Ridout Chapel, the Revs. Paul Clem

and Frank Ledford officiating. Burial will be in Elmwood.

Born in Decatur, Patrick attended the University of Alabama, Louisiana State University at Baton Rouge and Purdue. He obtained his bachelor of laws degree from the University of Alabama in 1918, the year he married Pearl McPherson.

In 1919, he moved from Cullman to Birmingham and began his law practice in early 1920.

He served as a private in the Army during World War I and at one time was assistant attorney general of Alabama and Assistant United States Attorney of the State.

He was a member of the McCoy Methodist Church, Alpha Masonic Lodge, Shriners, Knights of Pythias, Eagles, Elks, High Twelve Club, Men of Prayer Club and The Club.

He wrote three books, Hope Ye're Livin' and Doin' Well, Friends, Neighbors, and Kinfolks and Goosepocket.

He once said membership in the Democrat Party was a southern requirement.

During his last term as Representative, he said he supported education, industry, progress, goodwill, health, fair dealing, thrift, peace, knowledge, truth, and virtue in general.

His motto was "Bear ye one another's burdens—never mind about your own."

After his congressional service, he returned to Birmingham to live at 921 Seventh Street W.

Last year, he was a delegate to the National Democratic Convention.

Surviving, besides his wife are a daughter, Mrs. W. James Brasher, Birmingham; five brothers, Irving and Ivan Patrick, Birmingham: Gilbert Patrick, Jasper; Ferris and E. L. Patrick, Cullman.

Mr. Patrick began the practice of law at Fairfield, after being admitted to the State bar in 1919.

From 1919 to 1921 he served as city attorney of Fairfield.

He also was a pioneer radio commendator and started in this work in 1925 with stations WAPI and WBRC.

The Columbus of the Jet Age

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. MACK of Illinois. Mr. Speaker, a publication which many Members of Congress receive regularly and read with interest is the newsletter produced by Independent Editorial Services, Ltd., of which T. A. McInerny is editor.

I was greatly impressed, Mr. Speaker, with an article carried in the newsletter of May 21 entitled "The Columbus of the Jet Age." I was particularly impressed with this because it concerned one of the outstanding personalities in the world of aviation—Juan T. Trippe, president of Pan American World Airways.

Mr. Trippe was one of the first Marine Corps fliers in World War I and served as a lieutenant in the air over France. There his interest in aviation commenced and where it will end no one knows because Mr. Trippe has pioneered so many aviation achievements that it would be impossible to predict what he has planned beyond the jet age which, at least in commercial transport, is not even yet upon us.

Mr. Speaker, under leave to revise and extend my remarks, I wish to include this editorial feature:

THE COLUMBUS OF THE JET AGE

Probably no industry ever existed quite as complicated as commercial aviation. The activity in Washington by the commercial airlines is extremely feverish as the business increases by leaps and bounds, while at the same time it is hemmed in by real and regulatory barriers.

It takes a man of more than ordinary skill to run an airline because he must live in the past part of the time because of the necessary experience; must live in the present a great deal of the time as high competition for routes develops; and must live in the future part of the time as each new scientific advance must be translated into practical application for the traveling public. The airlines have been extremely fortunate in the pioneering leadership which they have enjoyed during the early phases of their development. C. R. Smith, of American; Patterson, of United; Rickenbacker, of Eastern; Braniff, of Braniff, and many others, have all made tremendous contributions toward making air travel safe, reliable, and acceptable to the public.

But the outstanding genius of aviation yesterday, today, and tomorrow has been Juan Terry Trippe, president and chairman of Pan American. The record of his accomplishments is admitted as monumental by both his friends and those who have been in sharp commercial rivalry with him. Trippe was the real Columbus of intercontinental aviation from the time that he devised his original airline from Key West, Fla., to Habana, Cuba, nearly two generations ago. He is the Columbus of the new age which is dawning in civil aviation, the jet age, which in a few years will make everything that has gone on before seem puny.

This astounding age will bring to travelers facilities such as have never been dreamed before. Huge planes, operating at less cost than present models and carrying almost double the number of passengers, will soon be operating on schedules of well under half present schedules, bringing the far places of the earth within a few hours' travel of our principal population centers. The first jet planes which Pan American will put into service at the end of next year will be supplanted in a few years' time by others which are now being developed capable of double the loads and double the speeds.

Pan American is a brilliantly managed system which is immersed in the problems of opening up the jet age. Other airlines have very heavy difficulties. But few, if any, encounter the troubles of this system which serves 80 countries, and which manages to get along amicably with as many governments while complying with their rules and regulations, in addition to the rules and regulations of the United States.

It is also a fact that many of these countries have their own airlines, mainly because of national pride, and that Pan American's background experience and executive talent have been enlisted to help those enterprises get started.

Currently, according to Chairman WARREN MAGNUSON, of the United States Senate Commerce Committee, a dozen foreign carriers have or are seeking choice routes in the United States to the alarm and resentment of the domestic trunk carriers.

Emerson once wrote that an institution is the lengthened shadow of a man. In Pan American's case, even with an executive staff that is versatile, exceptionally gifted, and strong in depth, this is particularly true. Under such dynamic leadership any company can be expected to grow and prosper, even though bigness in these times makes enterprise a target for attack.

Plight of Ceramic Dinnerware Industry

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received from Mr. David G. Boyce, vice president, sales, the Harker Pottery Co., East Liverpool, Ohio:

THE HARKER POTTERY CO.,
East Liverpool, Ohio., May 1, 1957.

Re H. R. 6630.

Hon. WAYNE L. HAYES,
House of Representatives,
Washington, D. C.

DEAR WAYNE: We were glad to note that OTC bill, H. R. 1550, was defeated. We feel that this new bill is a warmed-over treatment and that none of the amendments eliminate our basic objections; namely, that it will authorize GATT and allow the usurpation of power by the executive branch from the legislative branch of our Federal Government.

You of course know only too well the plight of our ceramic dinnerware industry. During the current year both Paden City Pottery, of Paden City, W. Va., and Southern Potteries, of Irving, Tenn., have succumbed to low-wage foreign competition. Both have publicized that they have been operating in the red during the past several years and both were old, established organizations that had kept abreast of all modern techniques, had experienced personnel in their management and were highly regarded in the china and glass field. We are the oldest pottery in America today and our operations in 1956 were not only in the red, but to a greater extent than during any of our 117 years of continual existence. Other members of the United States Potters Association are currently operating at a loss and will discontinue operations in the near future in the absence of some unusual relief. The net profit, after taxes, of the members of the United States Pottery Association dropped from $4,150,000 in 1947 to $124,000 in 1956. This refers to the aggregate membership and the factual figures are available for anyone to see.

During the greatest boom times in the history of the United States, shipments by domestic manufacturers of earthenware dropped from 27,293,000 dozen in 1947 to 17,721,000 dozen in 1956, or 35 percent. Published figures show the sky-rocketing figures of increased quantities of Japanese imports during the past 4 or 5 years. With labor representing 65 percent of our sales dollar, what else could be expected with current Japanese wage rates averaging approximately 20 cents per hour as compared with our own domestic average rates in excess of $2 per hour? The Sunday New York Times of April 7 featured a sizable ad on page 64 by Gimbel Brothers illustrating and featuring five different patterns of elaborately decorated fine Japanese china in 53-piece sets for $24.98. These were elaborate border, center patterns with platinum and gold edge line equal in quality and beauty to anything that can be produced in this country at four times this amount. Our own product, earthenware, is semi-porcelain and of course much cheaper to manufacture than fine china. Comparable patterns on our cheaper, earthenware body and with these decal decorations would have to retail promotionally between $39 and $49. The enclosed illustration shows patterns which we feature in 53-piece compositions in color (without

the more expensive decalcomania transfer treatments and decorating process) at $29.95 retail.

Please excuse the length of this letter, but our industry is truly faced with "operation survival" and we need your help. Each day we see evidences of other industries feeling the effects of imports from the very low wage countries. Note that the stainless steel tableware industry is carrying their case to Congress and have a hearing scheduled for July 12. In 1958 the Trade Agreements Act of 1955 expires and then of course the present administration will make an effort to persuade Congress to extend the powers of the GATT man for a further period. This present law barely got through the House and Senate in early 1955, by only a few votes. A number in our industry cannot survive until 1958, but without a change at that time many others must realistically throw in the sponge.

Cordially,

THE HARKER POTTERY CO.,
DAVID G. BOYCE,
Vice President, Sales.

Theodore Roosevelt: Leader in Peace and War

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1957

Mr. DEROUNIAN. Mr. Speaker, the 84th Congress created a Commission to prepare plans and a program for signalizing the 100th anniversary of the birth of Theodore Roosevelt in the year 1958.

In carrying out its assigned task, the Theodore Roosevelt Centennial Commission has compiled a chronology of the role of this great leader in the military and naval history of the United States. It is my privilege to request that it be published in the Appendix of the RECORD:

THEODORE ROOSEVELT'S ROLE IN THE MILITARY AND NAVAL HISTORY OF THE UNITED STATES—A CHRONOLOGY OF IMPORTANT EVENTS

August 1, 1882: Commissioned second lieutenant, Company B, Eighth Regiment, New York State National Guard.

November 1882: Published his history, The Naval War of 1812.

February 3, 1883: Promoted to the rank of captain in the National Guard.

February 26, 1886: Resigned his command in the National Guard.

April 11, 1897: Appointed Assistant Secretary of the Navy by President McKinley.

February 25, 1898: While serving as Acting Secretary of the Navy, Roosevelt sent his famous cable ordering Admiral Dewey (in the event of war) to make sure the Spanish fleet did not leave the Asiatic coast. This order made possible the American naval victory at Manila Bay.

March 25, 1898: After seeing pictures of a "flying machine" recommended to the Secretary of the Navy that he appoint two officers of scientific ability and the Secretary of War appoint two like officers for the purpose of studying the "flying machine" and report whether the machines could be duplicated in large numbers, and to make other pertinent recommendations and estimates of cost for production.

April 25, 1898: Accepted appointment as lieutenant colonel in the Rough Riders (officially designated as the 1st United States Cavalry Volunteers).

May 6, 1898: Resigned as Assistant Secretary of the Navy. With Leonard Wood, Roosevelt organized the Rough Riders, and they trained for overseas duty at San Antonio, Tex.

June 14, 1898: Embarked for Cuba with the Rough Riders from Tampa, Fla.

June 24, 1898: Participated in the Battle of Las Guasimas.

July 1, 1898: Participated in the Battle of San Juan Hill.

August 14, 1898: Arrived at Montauk, Long Island, N. Y.

September 16, 1898: Mustered out of the Rough Riders at Montauk, Long Island.

November 6, 1900: Elected Vice President of the United States.

September 14, 1901: Upon the death of McKinley, Roosevelt became the 26th President of the United States. He took the oath of office at Buffalo, N. Y.

February 14, 1903: Army General Staff Corps established with a Chief of Staff to supervise all troops and to issue orders to the whole Army in the name of the Secretary of War.

February 24, 1903: Approved an agreement giving the United States naval coaling stations in Cuba.

November 2, 1903:[1] After Panama seceded from Colombia, Roosevelt sent a cruiser to the area in an effort to protect the interests of the United States. This was followed by quick United States recognition of the Republic of Panama and a treaty which provided for the construction and operation of the Panama Canal. Colombia had previously turned down such a treaty.

June 16, 1903: Delivered the commencement address at the University of Virginia and spoke on the subject of citizenship and a large navy.

December 7, 1903: In his third annual message to Congress, Roosevelt recommended the creation of a naval general staff similar to the recently established Army General Staff.

December 5, 1905: In his fifth annual message to Congress, Roosevelt urged that the number of officers and enlisted men of the Navy be increased. At the same time suggested that submarines would be useful for night attacks.

December 3, 1906: In his sixth annual message to Congress, Roosevelt recommended that the Navy be continued at its present strength by building new ships to replace the obsolete vessels. Also stressed the importance of maintaining the highest standards for both the Army and Navy personnel.

December 3, 1907: In his seventh annual message recommended the maintenance of a fairly large peacetime Army, with extra officers to be trained to be used in emergencies. At the same time, he urged the upbuilding of our Navy and to supply it with auxiliaries, such as coaling stations, supply ships, and fortifications for American harbors.

December 16, 1907. Roosevelt sent the American fleet on a world cruise to test its long-range operations. The fleet returned in February 1909.

April 14, 1908: In a special message to Congress, Roosevelt urged the building of four battleships yearly to maintain the strength of the United States fleet with that of other great naval nations.

December 8, 1908: In his eighth annual messsage to Congress, recommended the creation of a general staff for the Navy in place of the Navy General Board. At the same time, urged the building of four battleships, additional destroyers and colliers which had been recommended by the Navy General Board.

[1] The Navy Department sent instructions to the commanding officer of the *Nashville* and other vessels in the area on this date.

January 13, 1909: Rode horseback for 100 miles to Warrenton, Va., over rough roads to shame the Army for its complaint against his order to keep physically fit.

January 27, 1909: Appointed a commission to study the reorganization of the Navy Department.

February 25, 1909: Sent the Naval Commission Report to Congress.

July 2, 1913: Delivered speech on the American Navy at Newport, R. I.

January 1915: Published America and the War to arouse the country on the necessity of preparedness.

February 1916: Published Fear God and Take Your Own Part.

May 19, 1916: Delivered speech on the subject of preparedness at Detroit, Mich.

March 19, 1917: Offered his services to the Government and wrote to the Secretary of War requesting permission to organize a volunteer division and to command one of its brigades. This request was turned down.

October 1917: Published The Foes of Our Own Household.

November 16, 1917: Delivered speech on National Strength and International Duty, at Princeton, N. J.

The Small Business Act of 1957, H. R. 7474

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1957

Mr. MULTER. Mr. Speaker, on May 22, 1957, I appeared before the House Banking and Currency Committee in support of my bill, H. R. 7474. The following is my testimony before that committee:

STATEMENT OF HON. ABRAHAM J. MULTER, REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK

Mr. MULTER. Mr. Chairman, for the record, I am ABRAHAM J. MULTER, Representative from the 13th District of New York.

I appreciate the opportunity you give me to appear here as a witness, rather than as a member of this committee, and I hope to be able to give you the benefit of the thinking of the Subcommittee No. 2 of the House Small Business Committee, as well as that of many of the members of the full committee.

As you know, 12 of the 13 members of the House Small Business Committee have introduced bills identical with H. R. 7474, which seeks to set up the Small Business Administration as a permanent agency, and to work changes in the existing statute which we trust will make the agency a more effective one in accomplishing the intent and purpose of the Congress.

So that the record may be complete on what has been done by the Small Business Committee, I would like to indicate that after fairly lengthy hearings by Subcommittee No. 2 of the House Small Business Committee, all of which have been printed and I believe are before this committee, consisting of some 429 pages, a notice was sent on May 4 to the members of that subcommittee, and to the ranking minority member, Mr. HILL of the full committee, and to the chairman of the full committee, Mr. PATMAN, advising them that executive sessions of the subcommittee would be held on May 8 and 9, 1957, and inviting them to attend.

I might also indicate that under the rules adopted by the Small Business Committee, the chairman and ranking minority member are not only ex officio members of the subcommittee, but have a right to vote therein. For that reason both the chairman and minority member were invited to attend and participate in the work of subcommittee No. 2.

Subcommittee No. 2 agreed unanimously after 2 days of executive session on the form and substance of H. R. 7474. In accordance with what had been done in prior years, copies of that bill were sent to all members of the full committee so that all of those who desired to do so could join in cosponsoring it. The result is we have a bill cosponsored by all of the 6 Republican members of the full committee and 6 of the 7 Democratic members of the full committee.

I think that speaks well for the desire of that committee to do a good nonpartisan job in bringing before this committee a bill which will best serve the small-business men of the country and at the same time to present a bill which is most likely to meet the objections and include the suggestions of all members who are interested in furthering the small-business enterprises of our country.

I would like to briefly touch upon some of the changes that are effected or will be effected if H. R. 7474 is enacted. I will follow the mimeographed copy of the bill, because in that bill we have indicated very clearly by underlining the changes from existing statute to the proposed bill.

On page 1, there is a technical change, which is approved by the administration.

It merely clarifies what we say is the intent and purpose of Congress, not in giving small business a preferred position, but trying to give it an equal competitive position with big business in our economy.

In section 102, which begins at the bottom of page 1 of the mimeographed copy of the bill, we find the change in the language as to definition. For many years, the House at least has been almost unanimous in agreeing that the arbitrary 500-employee definition, as adopted during the World War II years, was not doing the job it was intended to do.

We recognized that during the war we had to have some kind of a definition, arbitrary though it might be, that would simplify the work of the procurement agencies. But ever since that, every committee of the Congress that has looked into the matter, certainly on the House side, has determined that that definition was unfair and does not do justice to small business.

The Government Operations Committee of the House has repeatedly found fault with that definition. Every time the House Small Business Committee has considered the matter, we have unanimously reported that that definition was unrealistic and unfair and should be changed.

When we wrote into the last enactment of the Small Business Act, a provision requiring the Small Business Administrator to promulgate a definition of small business, which would be different than the arbitrary 500 employee definition, we thought that we had moved a long way toward accomplishing the intent of Congress.

After much urging and prodding by the Small Business Committee, the Administrator did promulgate a definition. He broke it up into two parts. One definition covered the financial assistance program, and the other applied to procurement.

While he found no difficulty in making a definition which ignored the 500 rule, and tried to be realistic, so far as financial assistance is concerned, in the definition, in the second part of the definition, applying to procurement, he adhered to the precise definition we had been finding fault with all through the years. The Small Business Committee, through subcommittee No. 2, conducted a public hearing on the proposed regulation setting up that definition. We heard all of those who participated in making the definition.

As you were told, the Small Business Administrator, Mr. Barnes, convened a task force representing all the agencies of Government. No small-business man nor any representative of any small-business association, was invited to participate on that task force or in any of its deliberations.

It was, therefore, not surprising that although one agency, the General Services Administration, indicated that the 500 rule was a bad rule and that there would be no difficulty in adopting a more realistic one, all the other agencies apparently followed the Defense Department lead of insisting that only the 500 employee definition was workable.

As a result of that hearing, the subcommittee unanimously agreed, and the full committee unanimously agreed, and so reported to the Congress, that that part of the definition, which adhered to the old Defense Department rule and statute of 500 employees should be abandoned—it should not be promulgated as an effective regulation, and that at laest temporarily the Small Business Administration should follow the same rule for procurement as it had promulgated for financial assistance and then come up with a better definition if it found the financial assistance definition did not work well in procurement.

We were very much disappointed and surprised to find that, nevertheless, the Small Business Administrator promulgated and made effective the very definition we had unanimously condemned as to procurement.

Mr. BROWN. What is the difference between your definition and the definition in the Hill bill?

Mr. MULTER. His definition permits adherence to the old statute which we repealed in 1955, saying any business of less than 500 employees is small business and anything over that is big business, for the purpose of procurement.

The definition which the Administrator promulgated for financial assistance, breaks the economy down by industries and in certain industries he uses as a first guide, 250 employees. In some industries such as the electronics industry, he says as many as 1,000 employees may be small business. We wrote into the statute in 1955 a provision—and all the bills before you contain that same provision—whereby in any instance any procurement agency or small business or any competitor or big business, for that matter, who finds fault with the determination or the regulation as affecting a particular company, that they have a right to go to the Small Business Administrator and present the facts and on the facts of the particular case, either involving a company or an industry, then the Small Business Administrator is authorized by law to make a determination that the particular situation calls for, and issue a cerificate accordingly, as to whether or not the particular firm or industry is small business.

The CHAIRMAN. What is the difference in the definition with reference to loan requirements and procurement? Is there a difference?

Mr. MULTER. Yes.

The CHAIRMAN. What is that difference?

Mr. MULTER. For financial assistance the Administrator starts by breaking down the economy into different industries and he has a different rule as to each industry.

I would like to have Mr. Irving Mannes, who is counsel to the Small Business Committee, and assigned to the committees Nos. 1, 2, and 3, sit with me. If Mr. Dalmas is in the room or when he does come in, I would like to have him join me. Mr. Parke Dalmas is the minority advisor to the committee.

I might say that both of these gentlemen were of extremely important aid and assistance to the committee, in all of its work. To come back to your question, in House Report No. 2964 by subcommittee No. 2 of the House Small Business Committee of the 84th Congress, we have set forth in full, as appendixes, beginning at page 11 and through page 20, the definition as promulgated by the Small Business Administrator. There you have the small business size standards set up by him for financial assistance. You will find it is broken down by industries. As I indicated to you, in most industries, a concern is said to be small business, if it has no more than 250 employees. In some instances it may have as many as 1,000 employees.

That was the determination of the Small Business Administrator, after he had had this task force meeting and we had our hearing.

Nevertheless, as to procurement, he takes the same language as his starting point, of the old statute which we repealed, of 500 employees. As I indicated, the statute permits him to make a different finding in any case in accordance with the information submitted to him, whenever anyone comes in in either the financial or procurement program and submits proof that the rule should be different as to any particular company.

Mr. BROWN. I understand the number of employees will not be any test at all.

Mr. MULTER. No, sir. In the proposed new bill, we say that the number of employees—let me give you the exact language.

After continuing the existing language of the statute, which says he may use these criteria, among others, to wit, "number of employees and dollar volume of business"—now mind you, that is the way the statute has read ever since we enacted it, that in setting up the definition of small business—and this is the language of the statute—a small business concern shall be one that is deemed to be independently owned and operated and which is not dominant in its field of operation.

In addition to the foregoing criteria, the Administrator, in making a detailed definition, may use these criteria, among others: Number of employees and dollar volume of business.

That is the way the statute has read up to now and still reads, but SBA has ignored dollar volume of business, or any other criteria, and used solely the number of 500 for that definition for procurement.

So we now add to that language, having in mind he has continually refused to follow the recommendations of the Congress in that regard, we add this proposed language in the bill before you, and I quote: *"Provided, however,* That no definition promulgated by the Administrator for any purpose whatsoever shall be based solely on the number of employees; *And provided further,* That without undue delay, the Administrator shall establish a definition of small business which definition shall be consistent with the intent of Congress. The definition presently in use by the Administrator for financial assistance is hereby continued as the definition for all purposes until the Administrator adopts a new definition based on the criteria stated herein."

In other words, if this language is written into the law he can still use the number of employees as one of his criteria but may not use it as his sole criteria, as he is doing now, for procurement purposes.

The CHAIRMAN. But the committee never decided on any definite rule. The committee was disappointed that both of them left it to the Administrator.

Mr. MULTER. When you say, "the committee," you mean—do you mean the Small Business Committee, sir?

The CHAIRMAN. Yes. You did not. In your bill there is no definition. You supplant those definitions.

Mr. MULTER. Yes; to this extent.

The CHAIRMAN. What is the definition in the bill?

Mr. MULTER. I have just read to you, sir, the new language of the bill. I will read it again. This is the additional language added to the existing statute by this bill:

"*Provided, however,* That no definition promulgated by the Administrator for any purpose whatsoever shall be based solely on the number of employees: *And provided further,* That without undue delay the Administrator shall establish a definition of "small business" which definition shall be consistent with the intent of Congress. The definition presently in use by the Administrator for financial assistance is hereby continued as the definition for all purposes until the Administrator adopts a new definition based on the criteria stated herein."

In other words, we will say to him, by this statute this financial assistance definition as now promulgated and in effect and as set forth on pages 11 to 20 of House Report 2964 shall be the definition for procurement purposes as well as financial assistance purposes, until he comes up with a new definition.

The CHAIRMAN. You say you are dissatisfied with that definition and define a better one?

Mr. MULTER. Yes; but since we say also that the financial program is a good one and working, until he finds it cannot work in procurement, he shall use that definition. We think that is a fair approach.

Mr. RAINS. Let me me ask you this, Mr. MULTER. It seems to me what you really do is maintain the criteria for the definition presently in the act and add to it one additional requirement that he shall not base it solely on the number of employees. It seems to me you are going to make it more difficult to arrive at the decision whether it is small business, if you say he shall not base it solely on that. Maybe he could arrive at the definition of small business, easily as to number of employees, but when you say it can't be based on that solely, don't you think it would be better to say in the bill that criteria he must consider in determining shall be not based solely on the number of employees.

It seems to me you are telling him even though you may be convinced it is small business now under it, we are now adding another step you cannot act until you find it is not based solely on numbers.

I get the impression you are tying it up and making it a little more confused than it is. You are giving him another way out by saying wait a minute, this is small business based on the number of employees, but I can't take that solely.

If you were to say he shall consider those facts, it seems to me, in making his determination, that would be better. But I don't think you ought to eliminate all of the others but saying he cannot find it small business, until he considers all of these others.

Mr. MULTER. The difficulty, as I explained before you came in, is that the statute required him to use his discretion in arriving at a definition. We said he may use these criteria among others, number of employees, and dollar-volume of business. We did not limit him to either one of them. But he limited himself to the number of employees, and in spite of a unanimous report of the full committee and of the subcommittee against his using solely the number of employees, he nevertheless insisted on promulgating that definition, at the same time promulgating a different definition as to financial assistance.

It may be we can improve the language——

Mr. RAINS. It seems to me it would be better to say in language, it shall not be designated, or shall not be excluded simply as small business, solely because he has more employees than 500. But if the criteria is clear, it is now small business, why tie it up more. We would like the definition a bit broader and that is what I think you want to do.

Mr. MULTER. That is what we are trying to do. In this definition he promulgated after the task force met with him, he found most of the small-business concerns have less than 250 employees. Some, as I indicated, have as many as a thousand. But when he gets to the procurement side, purely as a matter of convenience to the procurement agency, he says let's stick to this 500 figure.

Mr. RAINS. I see your point.

Mr. MULTER. I think possibly we can adopt your suggestion, and put that language in the reverse way, so that he knows he still may use it, but must look to other criteria, too.

Mr. RAINS. That is right.

Mr. MULTER. And again I would like to indicate that there is language in the statute now, which we are not changing, which permits anyone who finds fault with the definition as it applies to any particular concern or industry, to come in and on a presentation of facts, ask for and obtain, if entitled to it, a different certification.

So we have not tied his hands. He may take all of the facts as they apply throughout the country, or as they may apply in a particular industry, or a particular company. He will retain full discretion and right to act. What we are trying to do is stop him from continuing the old 500 employees rule, which we took out of the statute and which we have several times told him is not a realistic approach to procurement.

The CHAIRMAN. Does not the number of employees, whether a large or small institution, depend upon the character of the business?

Mr. MULTER. Yes.

The CHAIRMAN. A grocery store with 500 employees would be a very large institution but a steam plant with 500 employees would be a small institution?

Mr. MULTER. Yes. We have that in mind in the language we use in the bill.

Mr. SEELY-BROWN. Is it not true that the testimony before the subcommittee indicated the definition used in providing financial assistance was working out reasonably well, and that that definition had a degree of flexibility that made it work? What we tried to do was to suggest since that definition with its flexibility has worked out well for loan assistance, let us see if we cannot write an equally flexible definition which will provide bona fide help to the recognized small business community for procurement purposes.

If I understand Mr. RAINS' argument, his only question was that the language of the bill might preclude a small business, rather than make it possible for it to come in under the terms of the act.

Mr. RAINS. Of course, a glance at it, and reading of the bill, indicates to me you are adding a restriction instead of broadening the base. I think you are trying to broaden the base.

Mr. MULTER. We are trying to broaden the base and not limit it. Mr. SEELY-BROWN is quite right the testimony before the subcommittee indicates the financial assistance definition is working well. None of the procurement agencies, all of whom appeared before the committee, could indicate why they could not work satisfactorily with that definition, but they were just reluctant to try it. We think what they should do is try the financial assistance definition for procurement.

If it does not work out, the Administrator has the right to change it overnight. At least they ought to give it a trial.

The next change suggested in the bill is a purely technical one at the bottom of page 2. There is no objection to the language change. It refers to the Federal Executive Pay Act. There is no increase of pay called for, but it merely makes the same language applicable to this agency as to all the other agencies.

We simply put in the same language that applies to other Federal agencies. On the next page, page 3, we increase the authorization to $70 million, instead of as it presently appears in the act.

Mr. Barnes has indicated that if in the judgment of this committee, that should be the amount, he will go along with it, although he has recommended a smaller sum. We believe this is the more realistic sum to be asked for, having in mind he still must go before the Appropriations Committee and justify his request for appropriations.

An authorization like this making money available for loans is actually not spending of money. Nevertheless, we follow the language of the various statutes that apply to almost all the other lending agencies, of requiring the agency to come in before the Appropriations Committee and justify their request for the amount needed for the new fiscal year.

Twice now, the Small Business Administrator has been compelled to come in and ask for more money because his original request and our authorization was not enough.

Mr. BROWN. What is the maximum loan now?

Mr. MULTER. The maximum loan now is $250,000, and in our proposed bill we do not change that.

Mr. BROWN. What about $500,000? Do you think that would be better?

Mr. MULTER. I think you will find, sir, in this economy-minded Congress, and I am not saying that to find fault—I think we must be economy-minded—I voted for some cuts, as many of these Members did, and I voted against others, but in this economy-minded Congress, I don't believe you can convince most of the Members that a $500,000 loan is a loan for a small-business man.

In our hearings, before this Banking and Currency Committee I asked Mr. Burger, who represents one of the largest small-business men's associations in the country, one of the most effective ones, if he knew of any cases of a small business concern who sought a loan of more than $250,000 and he said he knew of no such instance.

If the time comes when small business does need a loan of more than $250,000 from this agency, and it will be able to make out a case I think the Small Business Administration will call it to our attention. At no time, in our hearings either in the field or in Washington, have we had anybody approach us and say the $250,000 maximum loan from the Small Business Administration is too little. Even with the limitation of $250,000 from the Small Business Administration they can get a much larger loan by getting a bank to participate. They can get as much as $500,000 if the bank takes half and the Small Business Administration takes half. As a matter of fact, the bank can lend anything up to 90 percent with the agency making the other 10 percent of the participating loan, as long as the agency's limitation does not exceed the $250,000.

Mr. BROWN. I notice Mr. PATMAN is in favor of taking off the limitation altogether. What do you think about that?

Mr. MULTER. Our committee does not agree with him. I am now talking about the subcommittee—and I think most of the members of the full Small Business Committee would not go along with that thinking at this time. If at some future time a case can be made out for it, we would be the first to recommend it, but as it stands today, we say no. If you take the limitation off this is no longer a Small Business Administration bill. That is a principle that the Banking and Currency Committee will have to determine.

If you want to do that, let's take the word "small" out and call it a business administration bill. But I don't think we will agree to that. I think the principle we are agreed on is that we must give this special assistance to small business. Taking the limit off will not do that job. Bear in mind you can get a $5 million loan under this very act for small business, if you will get 20 small business concerns together, each one of whom will be entitled to $250,000, and if they qualify, they can get as much as $5 million.

That is helping them get into a very strong competitive position with big business.

Mr. RAINS. Talking about the bank participation, the trouble is, they won't have it on too short a term, and it is my observation they will not participate in too small amounts, or any time you find one that will participate above 25 percent, you will find it a rarity. Isn't that about true?

Mr. MULTER. I think that is right, Mr. RAINS.

Mr. RAINS. I don't know what you said before, but I would like a couple of questions and maybe you could straighten me out on them. In the first place, I can't see the necessity of making this a permanent organization. I can't see the wisdom of that. Would you mind discussing that?

Mr. MULTER. Yes. When we first brought this agency into being, it was the feeling we should do this on a temporary basis and see how it worked out. I think the experience has been good. While the agency got off to a slow start, I think they are now making progress and doing a better job. As they get more experience with the functions assigned to them, they continue to improve their service. There is still room for much improvement, but I think the time has come when we must decide either to make this a permanent agency, or abandon it.

Mr. RAINS. You take these agencies in the field who represent the Small Business Administration. Under your bill would they be blanketed into civil service, or are they already under it?

Mr. MULTER. They are already under civil service.

Mr. RAINS. Who in this agency is not under civil service?

Mr. MULTER. The Administrator, his deputies, and I believe his counsel.

I think everyone else is civil service. I am not sure, sir, whether the regional directors are exempt or not, but I can get that information for you and supply it to you.

Mr. RAINS. I would like to have it.

Mr. MULTER. I have been told that while the regional directors are in the classification of exempt positions, they nevertheless must qualify under civil-service rules.

Now, may I continue for a moment in answer to your question about why this should be a permanent agency?

Mr. RAINS. Yes.

Mr. MULTER. If this agency is to continue to do a job for small business in procurement, it must have the status of a permanent agency in order to be able to get the attention and the treatment it deserves and should be able to get from other permanent Government agencies.

In both the procurement field and in the financial assistance field, if we did not make this a permanent agency, we will never be able to build up a corps of employees who will be able to render the kind of service we demand from that agency. It must have permanency in order to keep good men for a fair length of time.

As it is now, men come to them, particularly the financial officers, come to them on a temporary basis. The agency loses them almost as fast as it can train them. If we really want this agency to do a good job, we must be able to say to the men they recruit, that this is a permanent agency where you can make a career.

Mrs. GRIFFITHS. Mr. Chairman, may I ask a question?

The CHAIRMAN. Mrs. GRIFFITHS.

Mrs. GRIFFITHS. May I ask you, Mr. MULTER, have you done any checking in the Small Business Administration on their role in procurement?

Mr. MULTER. Yes; we do that constantly.

Mrs. GRIFFITHS. Just exactly what has been their experience?

Mr. MULTER. In some areas their experience has been good. For instance, in the Jacksonville Naval Air Base, their experience there is good because the commanding officer, the military officer, is in tune with our thinking, in tune to congressional thinking in helping the small-business man. He goes out of his way to do a good job. He has a small-business specialist on his staff who thinks the way he does and believes that small business has a real place to fill in Government procurement. There the Small Business Administration gets the utmost cooperation from everybody in that procurement office.

Mrs. GRIFFITHS. But it is because of an individual, it is not because of any method of the armed services, generally, nor is it because the Small Business Administration is doing anything.

Mr. MULTER. In any number of other procurement offices it is bad. Philadelphia and New York are typical of the resentment which procurement has against small business. They go out of their way to disqualify small business from participating in procurement.

There we find the Small Business Administration is doing a job against opposition, but they go in there and fight with the procurement officer. Many times they have to go so far as to issue a certificate of competency to a small-business concern that is obviously qualified, but the procurement officer does not want it to get the business. He disqualifies the concern. It goes to the Small Business Administration, and they make a complete check and issue to him a certificate of competency, which under the law—which will continue if we enact any of the present bills, as we all agree on this—the Small Business Administration issues a certificate of competency which is binding on the procurement offices.

Mrs. GRIFFITHS. You mean the procurement officer can send in his own inspection people to say this business cannot be handled under this plan. But they have to accept the Small Business Administration certificate.

Mr. MULTER. Yes.

Mr. SEELY-BROWN. Mr. MULTER mentioned the name of the Naval Air Station in Jacksonville—is it not also true that certain agencies of the Government, such as Atomic Energy Commission and General Services Administration in particular, and other Government agencies as well have done a very good job in the field of procurement help to small business?

I think it is also true, as the testimony indicated, that a special task force has been set up to see if it could not be possible to come up with a program which would meet the desire that all of us have to help small business participate to an even greater degree in Government procurement. There was filed with our subcommittee a preliminary report, which was encouraging certainly to the members of the subcommittee, who read the report carefully and listened to the testimony.

So I agree with you, we have a problem. You put your finger on the problem, but I think that proper steps have been set up to help resolve that problem and the Small Business Administration, and the Administration with the help of the committee are working together on a task force program which I think will help answer to a very large degree the question you raise, and I think the testimony——

Mr. MULTER. Mr. SEELY-BROWN is absolutely right. As he points out, General Services Administration and the Atomic Energy Commission are doing a good job. As a matter of fact, they lead the way and the Small Business Administration has learned from them how they can go to other procurement agencies and do a better job for small business.

Mr. ADDONIZIO. To what extent is small business participating?

Mr. MULTER. Today about 17 percent of all procurement is going to small business and everybody agrees that is not enough.

Mr. ADDONIZIO. Is it your contention if this is made a permanent agency they would participate to a greater extent?

Mr. MULTER. I believe the Small Business Administration, if made a permanent agency, can do an even better job than they are doing, for the small-business man. For the first half of 1957, the percentage was 16.4 percent that went to smal business. Last year it was 19.6. So it has fallen off.

We find as each 2-year period comes to a close, there is a falling off. Which is another reason we feel it should be a permanent agency. The fellows in procurement feel it is going to fold up and proceed to ignore them. If this were a permanent agency, and they knew it was going to be sitting on them all the time, we could get the percentage up and keep it up.

Mr. RAINS. I don't want to be a prophet of doom, and I don't want to prognosticate, but don't you think if conditions continue as they are, interestwise, tight moneywise, hurts to small business, that 2 years from now what we are talking about now of this $700 million will be—oh, just chips in the bucket, and that instead of a small-business deal such as you are talking about making permanent, that it may become absolutely essential for us to go back to—we won't call it RFC, but it made a success in its day, and therefore it might be wise to continue this on a temporary basis—I don't say the day will come, but it will come if we continue to go down the road we are on, and not fasten on ourselves a permanent agency which as a small-business operation shall be too small to do the job that ought to be done. Don't you think that the job that is to be done could be greater than even contemplated in this particular bill?

Mr. MULTER. If you are right, and none of us can prognosticate that far ahead, that tight money will continue for 2 years, even if we set this up as a permanent agency, you can be sure this agency will be back before this Banking and Currency Committee 2 years from now or sooner and ask for an additional authorization, at which time you can review their activities and decide what they are doing and what they should do.

When we set it up as a permanent agency that does not mean it will continue forever and a day. Subsequent Congresses can always abolish it or put a time limit on its existence.

Mr. RAINS. I feel it takes it out from under the Congress, though, and my feeling is this is merely an experiment. It is not a deal big enough to meet the need. Everybody agrees with that. I feel if we establish it in a degree of permanency we have put the stamp of approval on an agency much too small to do the job that Congress says has to be done.

Mr. MULTER. This has been an experimental program. I think it has proved itself. The time has come now when we must decide what to do with this agency. We believe we should take the position to continue this agency as a permanent one. Whether or not it is going to be big enough only time can tell.

If money eases, and I can foresee that it may ease, if not this year, next year, there won't be as great a demand on the agency

for money as there is today. If the tight-money policy is going to continue and the demand continues to increase as it has in the past 6 months, certainly in the next 2 years they will be back asking for an additional appropriation and in a substantially larger sum.

Mr. SEELY-BROWN. Will Mr. RAINS yield?

Mr. RAINS. Yes.

Mr. SEELY-BROWN. As I understand your comments a moment ago, you indicated a very proper concern, one which I share, that the banks were not participating in the small-business loans to the degree we would like to see. I think one of the reasons they have not participated was because of the fact that the agency was not a permanent agency. In other words, they recognize any participating contract they sign would obviously be good because it was backed by the United States Government, but the testimony certainly indicated to our committee, that by making this agency permanent, giving it a permanent status, even though we may change the rules under which it operates in each Congress, as we always can do, that permanency might encourage the banks to participate to an even greater degree and I believe Mr. MULTER will agree that was the testimony presented before our committee, and was another reason it would be helpful to make it a permanent agency.

Mr. MULTER. I do agree. I expressed during the course of the public hearings a suggestion that one day this agency will attain Cabinet status. I think it should. I think if the economists of the country are right that the backbone of our economy, of our free-enterprise system, is the small-business man, we must have a permanent agency of this kind to watch out for them. Big business is taken care of by Commerce. Labor is taken care of by the Labor Department. At least that was the theory in setting up those departments. There was a time when we thought the Commerce Department would take care of small business. It has never done so. It had a small-business office, but it was merely an office with a man in charge. I do not know of anything it ever did for small business.

I think this agency has proved itself. I think we can say this agency is the spokesman in Government for small business.

The CHAIRMAN. Do you think Congress would have less day-by-day control over it as a permanent agency, than it has if it is solely a temporary agency?

Mr. MULTER. I think there would be more control over this agency by Congress than most agencies. Most agencies find themselves under the jurisdiction of one committee. The Reorganization Act of 1946 charges the Banking and Currency Committee to examine and continually review the activities of all the agencies about which it may legislate. The Small Business Administration is one such agency. In addition, we have the House Select Committee on Small Business. I think that committee has proved itself and one of these days will be made a permanent committee. But whether as a select committee or a permanent committee, it will continue to do the job during the year, in the field and in Washington, of making sure the agency does the work and the job that Congress intends it should do.

The CHAIRMAN. Do you have any statistics on the proportion of the national income that comes from small business—and what percentage is that compared to the contracts?

Mr. MULTER. I don't think there are any complete statistics on small business. The Commerce Department, through its Census Bureau, did gather statistics on the manufacturing corporations. I stress the word "corporations." I think Commerce found there were some 245,000 manufacturing corporations, which accounted for between 40 and 50 percent of the gross national product.

I think they found that 92 percent of those manufacturing corporations employed less than 100 people. I am relying on my memory; my statistics may be slightly wrong, but I believe they are approximately correct.

We are told that there are 4 million small-business concerns of every type throughout the country. I think that our economists are right when they say that small business is the backbone of our free-enterprise economy.

Mr. KILBURN. Of course, there are an awful lot of those that would not have anything to do with procurement, like the grocery store.

Mr. MULTER. You are quite right. Four million includes the retail merchant who does not deal with the Government. It includes the small manufacturing company which does not deal with Government and does not want to deal with Government. You know, you must have a pretty strong financial position in order to deal with Government, the way they take their time inspecting and approving, and then in paying when they get ready. That was one of the problems we had to sit on in these agencies, to see that they paid promptly, so the small-business man could operate.

Mr. KILBURN. They would have to have the line of goods they want.

Mr. MULTER. That is right.

Mr. KILBURN. A gas station would not become part of procurement or a grocery store.

Mr. MULTER. There you get into the question of whether you are going to let the local Government offices buy gasoline locally in small quantities, or in tank-car lots at wholesale. There is always that problem, whether the Government should buy in large quantities at wholesale and warehouse and distribute, or buy from the small-business man at retail. You can't have it both ways.

Mr. KILBURN. I imagine the taxpayer would want us to buy as cheaply as possible.

The CHAIRMAN. You would give us the policy board which consists of the administrator, a typical small-business man, and a typical small-business banker, and it provides no qualifications, with no experience for either one of them.

The only qualification they seem to have is that they are typically small, but I don't know just what a typically small banker is, or a typically small-business man is. Does it mean a small-business man without ambition, who always wants to remain typically small? If that is so, I don't think you have a very good Board. I don't see any argument for that. What is the argument for that?

Mr. RAINS. Could I add one word to what the chairman said, so you will have a full one before you. I can't see how you can get away from the argument we should not have WOC's in Government, instead of Government employees.

The CHAIRMAN. They are day-to-day employees. They have no permanent association with the Government and no responsibility, and I would like to have some argument in favor of it.

Mr. MULTER. Let me answer you, Mr. Chairman, and the other gentlemen who have some doubts about this, by saying first, for a long time, the Small Business Committee has felt that the Loan Policy Board, as set up by the statute, has no place in this law. As a matter of fact, we reported out from this Banking and Currency Committee in accordance with the recommendation of the Small Business Committee one bill which eliminated the Loan Policy Board. None of us have any objection, and as a matter of fact, there is a specific requirement in the statute and this bill, that there must be consultation between the Small Business Administrator, and other Government agencies, having in mind particularly the Secretary of Commerce and the Secretary of the Treasury.

But consultation is one thing and giving them control of making policy is another, and we feel that this agency cannot be a truly independent agency and cannot truly do the job for small business if the Secretary of the Treasury or the Secretary of Commerce or their designees are going to be in control of the Loan Policy Board.

So what we are mainly concerned with is eliminating the Secretary of the Treasury and the Secretary of Commerce as the two controlling members of the Loan Policy Board.

Now, if the Administrator feels he should have a Board—he does have one now, a review board, which reviews loan applications. The Loan Policy Board is not charged with that and does not do that. It makes the overall policy. But if the Loan Policy Board is controlled by two Cabinet officers, then obviously the Administrator is subservient to them. The best proof the Loan Policy Board does not serve a good purpose, in my opinion, is demonstrated by the fact that at every meeting of the Loan Policy Board the resolution has always been presented as to policy, and those are the only resolutions they consider, by the Administrator, and in every instance it has been unanimously adopted.

If there is such unanimity of thinking on the Board, and if the Administrator's view always prevails, then he does not need the Secretary of the Treasury or the Secretary of Commerce to do more than to advise with him.

On the other hand, if there is unanimity because he bows to their will, then the will of the committee and the Congress is not being fulfilled.

The CHAIRMAN. That is not a very strong argument for the reason you want to dispose of the present Board, for which you substitute a small-business man and a small banker.

Mr. MULTER. I am coming to that.

The Administrator should be charged with making the policy and administering it. But there is division among our committee and we came up with this as the alternative of having two small-business men sitting on the Board with him to make policy.

Mr. BROWN. They would be appointed by the Administrator?

Mr. MULTER. They would be appointed by the President, by and with the advice and consent of the Senate.

Let me read to you the language as it appears at the top of page 4 of the proposed bill. "The Policy Board shall establish general policies in the financial assistance, procurement, disposal, and general assistance to small-business programs of the Administration."

In other words, we are calling for a Policy Board which will make all policy for the agency. It will have nothing to do with administration. It will have nothing to do with personnel. It will make all policy as to procurement and financial assistance. We believe with a Policy Board of that kind, we will not have this difficulty, that we are now having with the definition.

Let me continue reading from the proposed bill:

"The members of the Policy Board representative of small banks and small-business concerns shall be appointed from civilian life by the President by and with the advice and consent of the Senate, and they shall be persons of outstanding qualifications in their respective fields of operation known to be familiar and sympathetic with the needs and problems of small business. The members of the Policy Board other than the Administrator shall be actively engaged as full-time operating officials of (1) small bank and (2) a small-business concern which shall be small business as defined in section 102 of this act."

Now, with reference to the possibility there will be w. o. c.'s or others working without compensation I think this committee knows I am opposed to the w. o. c.'s working in Government, except in times of war or emergency.

These men will not be w. o. c.'s. These men, as provided in the previous sentence on page 3, are paid as follows:

"Members of the Policy Board other than the Administrator shall be paid a per diem allowance of $100 for each day spent away from their home or regular place of business for the purpose of attendance at meetings of the Policy Board and the necessary travel; and while so engaged, they may be paid actual travel expenses and not to exceed $25 per diem in lieu of subsistence and other expenses. The maximum time spent for such attendance is not to exceed 50 days in any one calendar year."

There is also a provision: "The Policy Board shall meet at least monthly and at such other times as the Board may determine or on the call of the Administrator to determine administrative programs and policies relating to loans, procurement, disposal and general assistance to small business."

It was the feeling of the committee you could not get a small banker or small-business man of the type you wanted who would give up his banking or business connection and come to Washington full time and the only way you could get him was to compensate him fairly for his time and get him to come down here on a part-time basis.

I appreciate the force of the argument that men who make policy should be full-time employees. If we could get, instead of these 2 small-business men working parttime, if we could get 2 men, say, called Deputy Administrators, appointed to work fulltime, not as a loan policy board, but as a policy board, I think we could accomplish what we are looking for, and eliminate the Secretary of the Treasury and Secretary of Commerce, except for consultation. I am afraid we can't get that. The next best thing, when it comes to the job of making the policy in accordance with the intent of the Congress, let us have two men who are part-time employees but who are on the payroll and who will not have any exemptions on account of conflict of interest. There is nothing in here to give them any exemption on account of conflict of interest. They will have to toe the mark and operate without that exemption.

The CHAIRMAN. The success or failure of the organization depends upon the policies.

Mr. MULTER. I think it does.

The CHAIRMAN. Favorable policies would be very essential for the successful operation of it. And these men who are part-time employees have entire control over that.

Mr. MULTER. I realize the force of the argument that these two part-time employees can outvote the Administrator. There is much to that argument. I can't——

Mr. RAINS. Mr. MULTER, let me ask you one other question. First, I want to compliment you for the hard work and good job you have done on this bill, and with 1 or 2 exceptions it seems to me to be a real good bill. I know you gentlemen have worked very hard and the bill shows it. But it is always the setup in Government that the Congress must hold some Administrator responsible for the work of the Agency. That is true in housing and everything we have.

The appointment of the two men you are talking about would come about by the President, as I understand it.

Mr. MULTER. That is right.

Mr. RAINS. We all know, as a matter of course, the head of the Agency would recommend to the President, whoever the head of the Agency wanted appointed in this policy business, so the result would be these two men, however they came in, would be men whose thinking was along the lines of the thinking of the Administrator. He would not be that dumb, and pick out somebody at variance. So why don't we wipe out the policy board completely and totally and just leave it up to the Administrator.

Mr. MULTER. I hope that my colleague on the Small Business Subcommittee will not think I am underselling this part of the bill, when I tell you that was precisely my suggestion to them. As a matter of fact, when I could not get them to go along with that, I suggested we have a bipartisan board or commission to run the Agency.

My thinking was along the line of your suggestion but we now came along with this, as our best thinking for a compromise. While yours is the way I would have liked to see it work, we agreed on this instead as to the views of the committee I tried to make the best argument I could in accordance with that decision.

Mr. WIDNALL. Would it not have been best to have set up an advisory council and retain the Secretary of the Treasury and Secretary of Commerce on the Loans Advisory Council?

Mr. MULTER. We have now in accordance with the existing language, advisory boards. There is a national advisory board and in each region we have an advisory board. We also continue the language of the existing statute requiring that those boards be really representative, truly representative of small business.

We found on the national level the advisory board, despite the language of the statute, was made up of 20 men, 11 of whom were big-business men. That was a condition contrary to the intent of Congress, and the explicit language of the statute.

We strengthened the language in the statute so as to require these advisory boards and committees, when appointed, to be truly representative of small business. At the same time we have a provision permitting the Administrator to consult with whomever he pleases in or out of Government, so he can get the advice of big-business men who are sympathetic to small business and want to help them.

Mr. WIDNALL. Of course, they would have that power to consult with anybody whether you wrote that in the law or not.

Mr. MULTER. We found it necessary to write it into the bill because the General Accounting Office raised the question he had no right to do this—he had no right to consult with outside persons, or with Government agencies, unless the statute authorized them to do it. They raised the question that it was a technical violation of the law, if he consults with people other than as set out in the statute. So we wrote it in.

Mr. WIDNALL. I don't quarrel with that, but I think if you set up a national advisory board or national advisory council with the Secretary of Treasury and Secretary of Commerce and the two representatives of small business and left the final decisions on policy in the hands of the Administrator, you would have a better set-up than you have today and it would help meet some of the objections raised by you.

Mr. MULTER. I would have no objection to it being done that way, Mr. WIDNALL.

Mr. WIDNALL. I think that might be the type of compromise you would get through the Congress, too.

Mr. MULTER. I agree with our distinguished chairman, Mr. SPENCE, who has so frequently said that good legislation is always the result of compromise. No one of us is vested with all the wisdom of what makes a good bill, I think our Small Business Committee proceeds on that basis, trying to compromise on the best language that will express most nearly the intent that we seek and the purpose that is sought to be accomplished.

Mr. WIDNALL. I have one other question. In connection with procurement for small business, is it not true that thousands of small businesses have the know-how or ability to produce, but they cannot afford the engineering personnel in order to put them in a competitive position with big business?

Mr. MULTER. There is a lot to that. We find it repeatedly.

Mr. WIDNALL. And one of the reasons for shortage of engineers and the fact that big corporations are bidding as high as they can for engineering personnel is the tragic duplication of engineering work in preparation for Government bids. Where you are going out to procure an item and it is all of the same item, all of the engineering has to be done all over again by every single company that bids on that item. The Government purchased that engineering in the first place. It seems to me that the specifications purchased in the first item of procurement can be made available the second time, so that others would not be required to provide for new engineering in their bids.

Mr. MULTER. Typical of what you have in mind is a complaint that came to my desk only yesterday. This concern spent $4,000 in engineering and drafting expense in order to be able to make a bid in accordance with specifications that had been issued and they are now the second low bidder. The first low bidder has been disqualified because it has no plant and sought to get the contract in order to sell it to someone else.

The second low bidder, apparently now qualified, is now told by the procurement agency we are not going to give you this contract. We are going to give it to the third lowest bidder because the specifications were written for the third lowest bidder. They said, "Why do you ask us to bid? It cost us $4,000 to prepare our bid. If you intend it for some particular company, why don't you negotiate with that company and don't have us come in and waste all this money which represents mainly engineering time and money."

Mr. WIDNALL. Isn't it true in these re-bids where you are using the same specifications as the original bid, you have scores of engineers all over the country working on the same problem and coming up with the same answer, with a tragic waste of engineering services and tragic increase in cost, when it comes to the final bid?

Mr. MULTER. There is no doubt you are right.

Mr. WIDNALL. I think we ought to try to work something out to make available to small business the engineering background after the first bid.

Mr. MULTER. We continue in this bill the language now in the act, authorizing the Small Business Administration to give, wherever possible, engineering, technical, financial, and accounting advice to the small-business man who comes to them for it.

To be sure, we don't want it to go out and push itself on small business and tell them how to run their business, but where the small business comes to the SBA office, and asks for help, their setup permits them to give it, though in many of the local offices, they, too, have difficulty getting men who can render that type of service.

But they are doing the best they can with what they have.

Mr. WIDNALL. I have just one other question, Mr. MULTER. You have a suggestion in here that the maximum rate of interest for the Small Business Administration portion of participation in direct business loans shall be no more than 5 percent or the prevailing rate if lower than 5 percent.

Mr. MULTER. Yes.

Mr. WIDNALL. That actually means the Small Business Administration would not be in competition with the banking interests, would it?

Mr. MULTER. That would not put them in competition with private enterprise or banking because we continue the language in the existing statute that the loan applicant must be turned down first and there must be no private financing available for him on reasonable terms before the Small Business Administration can take the application. In practice the Small Business Administration requires he be turned down not only by his regular banking facilities, but by at least one other before they will take his application.

Mr. WIDNALL. And this applies to participating loans, too?

Mr. MULTER. Yes. In practice what the Small Business Administration does is this. When the applicant first comes in for a loan, SBA goes over his statement and puts it in such shape that he has a statement a bank would be willing to look over and consider. Then they ask him, "Have you been to your own bank?" And if he says, "Yes, and they turned me down," they call his bank and find out why they turned him down.

"Is he a bad credit risk, or can't you make the accommodation for any one of a number of reasons?" They try to sell the bank. When the bank says, "No, we won't make the loan," SBA tries to sell the bank on a participating loan. If the bank still says "No" on participation, they send the man to another bank in the community and if that bank turns him down, they follow the same procedure, and say, "Why are you turning him down?"

The bank may turn up something confidential which indicates he is a bad risk. They try to sell the bank on making the loan first, or if not a loan, taking a participating interest in it. When they find the bank will not take the loan in full or in part, then they process the application as a direct loan.

So there can be no competition ratewise. Even today there are participating loans where the bank is charging 7 percent. They are charging 6 percent. There is no difficulty in that.

Mr. WIDNALL. Mr. MULTER, I think you and your committee has come up with a good recommendation and made an honest, sincere effort to assist small business and small-business men and I compliment you on it.

Mr. MULTER. Thank you, Mr. WIDNALL. May I make 1 or 2 more comments on changes in the bill. If there are other questions, I will be glad to answer them either now or as I go along. The suggestion has been made in the course of the public hearings that possibly this agency should charge a fee for the filing of an application as many other agencies do. Our committee has not considered that, but I think this committee, on whatever bill you report, should suggest to the agency that they explore the possibility of charging a fee in connection with the filing of an application and make recommendations as to what that charge should be.

I think it should be a charge which would be reasonable and would cover at least the expense of processing and closing loans.

I realize in the smaller loan, they probably will never be able to charge enough to cover it, because as you know, a loan of $1,000 or $10,000 will cost as much to close as a $100,000 or $150,000 loan. We cannot expect the small-loan applicant to pay the full cost. I do hope SBA will come up with a recommendation about what fee, if any, should be charged for filing and processing.

Mr. SEELY-BROWN. That relates particularly to business loans?

Mr. MULTER. Yes; not to the disaster loans. That is definitely a relief measure. That is why we make it 3-percent interest. But on business loans, I think they should come up with a recommendation.

One other matter, that concerns itself with the question of whether this should be a permanent agency or not. Our committee did not consider, but this committee might consider, whether or not it wants to put a limitation on the term of office of the members of the board, if you have an independent board. There is nothing in the bill on that now.

I believe the President would have a right to remove any administrator who is not doing the job he expects him to do.

At the same time, you would accomplish some of the things you have in mind about continuing this as a temporary agency, if you put in the bill a term of years for the service of the Administrator. In other words, it may be a 2- or 4-year term, so that he, too, knows he must make good before he is reappointed.

The CHAIRMAN. Is he appointed without tenure now?

Mr. MULTER. He is appointed without tenure now, because as it is now, the act, itself, expires at a definite date and his term of office runs out at that time. If we take out the expiration date, we may want to put in a provision that he shall have a term of office for a fixed number of years.

I have tried to cover all of the changes that might be controversial. I think I have done so, with the exception of the provision for pooling loans. There, too, we have tried to liberalize the provisions so as to make sure the Administrator has the right to make the kind of loans that we inended he should make.

For instance, when he made the pool loan for the production of starch, there was some question raised as to whether or not he had the right to do that. He made the loan, nevertheless.

He made a loan for—a pool loan for Boston Fisheries. There was some question raised about that. I don't think the question was properly raised, but the question was raised whether or not he had the right to make the loan for that particular industry.

He has had inquiries about making a pool loan for the newsprint industry.

He has made some very valuable suggestions to the industry in connection therewith, but they have not come forward with a plan or an application. He has considered an application, or rather an inquiry, with reference to making a pool loan for the purchase and resale of groceries and foodstuffs.

Mr. KILBURN. Mr. MULTER——

Mr. MULTER. Yes.

Mr. KILBURN. I don't like to interrupt you here, but there is one point: On page 10 of your bill, down at line 18, it says, "All loans made shall in the judgment of the Administrator offer reasonable assurance of repayment." Isn't that a change from your present language?

Mr. MULTER. Yes.

Mr. KILBURN. Will you explain why there is that change?

Mr. MULTER. May I come back to that in just a minute and finish the thought on the pooling situation.

We have put into the bill some new language with reference to the pooling provision, which we think clarifies the authority of the Administrator to make such loans. I think it goes as far as it possibly can to meet the questions raised by Mr. PATMAN with reference to the cement industry.

If enough people are going to get together who have the know-how or can otherwise qualify, whether it be the cement industry or any other industry, they will qualify under the language we have written in the proposed bill at page 9 and which has been approved by the Administrator.

I want to throw out this thought, before I get to Mr. KILBURN's question, with reference to the pooling loans. I have the utmost respect for my colleagues in the legal profession, but if I as 1 or 2 lawyers were to get together with 4 or 5 businessmen and we had 2 lawyers and 4 or 5 businessmen who wanted to go into some new industry, I don't think that the Congress intended we lawyers were to qualify as small-business men in a business venture to get this kind of a loan.

If there is disagreement with that on the part of this committee, I think it ought to say so. But the Administrator, as he is interpreting it now, I think properly, says, where you are getting a group together for a pool loan, they should all be businessmen who know something about and have some experience in the particular and related lines of endeavor in which they intend to engage in this pooling operation.

If you intend to open the door wide and let anybody come in under this, as long as he can qualify with security, then I think we ought to say so in the pooling provision. The language as we continue it in the statute would not, I don't think, permit that much broader interpretation.

To come back to Mr. KILBURN's question on page 10 of the mimeographed sheet, we do very deliberately propose a change there, by changing subdivision (7) so it will read, "All loans made shall in the judgment of the Administrator offer reasonable assurance of repayment."

The language we have dropped are the words "sound value or." In other words, the statute presently provides that the loan must be of sound value or—and I emphasize "or" in the alternative—offer reasonable assurance of repayment.

The Administrator very frankly told us, when he testified publicly—I am sorry I dropped out some words. Let me give it to you again. The statute now reads, "All loans made shall be of such sound value or so secured as reasonably to assure repayment."

The proposed bill drops out the words "such sound value or so secured."

The CHAIRMAN. That first definition was the one you took from the Reconstruction Finance Corporation?

Mr. MULTER. That is correct. And the Reconstruction Finance Board, and when it had an administrator, he, and then again when it had a board again, it always interpreted that to mean just what it said, that "or" was in the alternative, not in the conjunctive. Or did not mean "and," but meant "or." But Mr. Barnes has told us in the public hearings he interpreted "or" to mean not "or," but "and," and the loan must be——

Mr. KILBURN. How can he interpret "or" to mean "and"?

Mr. MULTER. He did and that is his testimony, and that is why some loans are being turned down.

Mr. KILBURN. Along that line, does this new language mean you cannot take security, if the man has got security?

Mr. MULTER. Oh, no. Where the security is there, he should take the security. I think he would be derelict in his duty in not taking security where the security is available. The language is new to this bill, but not new to the law. This is the precise language in the Export-Import Bank Act which they have always operated under, and if it has been all right in the million dollar loans and they have worked well under it, and the testimony of Mr. Waugh, as President of the Export-Import Bank, was they were doing a good job there for big business as well as small business, because while many of the loans there are in large amount, many of the purchases made out of the large loans were made from small businesses.

They gave us some instances where some purchases were as low as $100 each. There were thousands of purchases out of a million dollar loan. If that language is good there, I am sure it is not too restrictive and much better for this Administrator to use in his operation.

Mr. TALLE. Mr. Chairman——

The CHAIRMAN. Mr. TALLE.

Mr. TALLE. In that connection, if such a change is made, lawyers will look at the new

act, and they will find that the language which was in the RFC Act and which is in the Small Business Act now, has been changed so as to take away the words which, in the law, require security and sound value.

I am sure some sharp lawyer is going to say, these are character loans, now, and collateral is no longer required.

Mr. MULTER. If a lawyer does come up with that argument, the administrator can say to him he is wrong. Look at what was testified to before subcommittee No. 2, and look at the testimony before the House Banking and Currency Committee. He will say to the lawyer, you have no right to determine that. Bear in mind it is the administrator's judgment which will make the decision whether or not the loan is to be made. Our committee has been very careful in telling every complainant we are not going to sit in judgment on the judgment of the administrator.

We are going to see whether he fairly interprets the intent of Congress but we are not going to take his place and determine whether a loan is good, bad or indifferent. We are not going to replace his judgment with our judgment. We are not the lending officer.

Mr. TALLE. Don't you think the lawyer is going to ask the question, "Why did Congress make that change?" He is going to raise that question, I am sure.

Mr. MULTER. And let me give to you the answer that you can give to him.

If you insist that it must be of sound value, and so secured as to offer reasonable assurance of repayment——

The CHAIRMAN. It was not "and." It was "or."

Mr. MULTER. That is right. If SBA interpreted is as "or," we need nothing more. We would not have to change the statute. But since SBA is interpreting it as "and," we must put in the law what we want him to do.

Mr. KILBURN. Why don't you put language in there and say, "or" is "or."

Mr. MULTER. I think that would make us a little bit ridiculous, don't you think?

Mr. KILBURN. Don't you think he is being a little ridiculous?

Mr. MULTER. Yes, but he is the Administrator. Let us put it in there in such a way that he must interpret it our way, without making ourselves ridiculous.

Mr. BROWN. Why can't we handle that in the report and keep the definition like it was in RFC?

Mr. MULTER. That will probably serve the purpose.

I just wanted to make this brief comment to Mr. TALLE's question and then I will leave you to the next witness, sir.

There are many instances where the sound value of the loan is not sufficient to warrant SBA making a loan in and of itself. But if SBA takes the guaranty of someone else who is just as financially responsible, who would on his own right be entitled to come in and get a loan, and who will guarantee the loan which does not have sound value, SBA then has reasonable assurance of repayment.

I wonder if I make myself clear. In other words, if I can get somebody to guarantee my loan, even though I, myself, cannot give him ample security, and the guaranty does give ample security, he should make the loan. As it is today, he can look at my collateral and say it is insufficient and I don't care whether you bring in 50 guarantors, your loan is not of sound value and he will not make the loan. Certainly we did not intend that.

That is the way it is being interpreted and we did not intend that.

Thank you for your patience.

The CHAIRMAN. I think a little reduction in taxation might help the small-business man.

Mr. MULTER. I am sorry we cannot touch on that. But it is one of the sore points that needs attention.

The CHAIRMAN. We did not want to introduce that in the course of the evidence here.

Mr. MULTER. No, sir. I am sure the Ways and Means Committee would object, if we did.

Trinity River Project

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. SCUDDER. Mr. Speaker, the Santa Rosa Press-Democrat in my district in California recently ran a series of three editorials on the tendency of high taxes to speed up the trend toward state socialism. One of the examples it gave was the case of the Trinity partnership project.

The newspaper cited the attacks on the proposal of the Pacific Gas & Electric Co. to install and operate the power facilities of the Federal Government's Trinity River project, and pay the Government an annual fee for the use of its falling water. I might add at this point that there is nothing new or unusual about this proposal for private industry to participate with Government in power development and pay rent for its falling water. Actually, during the last 15 years, private California electric utilities have made payments of over $163 million to Government agencies for power and for water with which to generate power.

The Government and private enterprise have worked together in the past on many cooperative contracts that have greatly benefited the people of my State. There is a bill now pending in Congress to allow joint development of the Central Valley's Trinity project that would save the taxpayers of this country over a third of a billion dollars. A saving of this size is worthy of the attention of all of us.

Passage of my bill, H. R. 6997, would save the Federal Government an immediate outlay of $56 million for the power facilities, plus another three-hundred-or-more-million dollars in future benefits from rent of the falling water and from taxes.

Mr. Speaker, I call the attention of my colleagues to the May 9, 1957, editorial in the Santa Rosa Press-Democrat and the points it raises on the Trinity partnership principle. The editorial is entitled "Pattern of Socialism Is Becoming Clear." It begins:

On Tuesday in this space we said that any government has a natural tendency toward state socialism, and that high taxes speeded up the process. We gave a few examples and said that you could figure it out for yourself.

Since then, several people have said we were unduly alarmed. So here is another example.

The editorial goes on to say that one of the opponents of my bill, H. R. 6997, "in attacking the partnership proposal of Pacific Gas & Electric Co. whereunder it would install power-generating facilities at the Trinity project, pay the Government for the use of falling water and then return the water to the Government, became quite irate."

He said the proposal would bar Uncle Sam from installing steam-generating or atomic-generating plants, in the Central Valley project.

How much further toward socialism can you go?

The excuse for the Government being in the hydroelectric generating business has always been that with water falling from Federal dams, it made sense to turn generators with the falling water, and make and sell electricity.

But with steam plants, no natural resources whatever are involved. You burn natural gas or other fuel to generate the steam to turn the generators.

There must be a clear-cut plan among the socialists in our Government to put Uncle Sam in the commercial business of generating electricity in steam plants in the Central Valley project, or—

The editor says the opponents of joint development of Trinity's resources—

would not be so busy denouncing the proposed P. G. & E. partnership.

The editorial concludes:

The pattern already exists in the Tennessee Valley Authority, where the Government started out making electricity with water from dams, and is now manufacturing more electricity in steam plants than from falling water.

And if you don't think high taxes speed up the march toward state socialism, consider this:

P. G. & E. has to pay Uncle Sam 52 cents out of every $1 it nets, in corporate income taxes. Your electric rates would be much lower if a big piece of them didn't have to be passed on to Uncle Sam in paying this heavy tax. Socialized power, which pays no income taxes, frequently sells for lower rates than does private power. The higher the taxes, the greater the spread between rates—and the greater the urge to socialize more power development.

It's a con game, of course—as long as Uncle Sam spends so many billions, somebody has to pay the taxes and the portion not paid by socialized power systems is simply paid by you in your own high individual rates. Regardless of whether you pay it hidden in your electric bill from P. G. & E., or whether you pay it in withholding from your paycheck, you pay the cost of running the Federal Government.

A Cotton Program To Expand Markets Through Competitive Pricing

EXTENSION OF REMARKS
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. JONES of Missouri. Mr. Speaker, I have today introduced a bill which has for its purpose to increase farm income and to expand markets for cotton by enabling cotton to be sold competitively in domestic and foreign markets.

This is not my bill, Mr. Speaker, and I am claiming no pride of authorship, although I have had the privilege of working with a large group of men, each expert in his own field, who represent most of the segments in the cotton industry, and I believe the bill which has resulted from numerous conferences and is the product of many compromises, warrants the studious consideration of all Members of this House.

Farmers and particliuarly cotton producers are not the only persons who will benefit from the provisions of this bill, when and if it becomes law. Actually, I know of no group which will not benefit, including the consumers of cotton and other textiles.

Primarily, this bill, if enacted into law, would insure the continuation and expansion of our export program on a worldwide competitive basis, without the necessity of subsidy payments, or losses which have been necessary in moving the huge surpluses of cotton which were built up over a long period of years through a combination of circumstances which I shall not take time to discuss here.

With a minimum of Government support, it would enable cotton to compete successfully with synthetics and other substitutes in the domestic market, giving the consumer the advantages which accrue from the preferential use of cotton and cotton products and at the same time assuring an adequate supply of cotton at reasonable price levels.

Yes; it would at the same time protect the farmer's income, and permit him to slightly increase his production of cotton to a more realistic basis, and to afford the family size farm an opportunity to enjoy more economic stability.

The introduction of this bill comes at a time, Mr. Speaker, when my section of Missouri, which incidentally produces more than 99 percent of all the cotton grown in Missouri, is faced with the greatest disaster which we have experienced in the past generation. Due to unprecedented floods, which have virtually destroyed one-third to one-half of the cotton crop which has been planted, southeast Missouri is now faced with a condition which in all probability will result in the nearest thing to a crop failure which our area of the State has ever experienced.

I know of nothing which at this time could give our people greater hope and more encouragement than for Congress to give conscientious and sympathetic consideration to this type of legislation, which would not only be beneficial to that section, but to every other section of the country in which cotton can be produced.

As stated earlier Mr. Speaker, all segments of the cotton industry, after several industrywide conferences and meetings, have agreed on the principles involved in this bill. I mean the producer, the cotton ginner, the warehouseman, the buyers, the shippers, the cotton merchant, representatives of our large cotton exchanges, the cottonseed processors, and yes, even the spinners and textile mills, have agreed that something needs to be done, and to be done this year.

The bill which I have introduced, and which other Members of Congress, both in this House and in the other body, will I am sure support, is the result of the general agreement which has been reached. We are hoping, Mr. Speaker, to have the opportunity at an early date, of hearing testimony on this bill, and I am sure I am speaking for all of the sponsors of this legislation when I say that we will welcome the opportunity of explaining the details of its operation. Yes, Mr. Speaker, we not only welcome the opportunity to explain what we believe to be the merits of this legislation, but we will also welcome any questions which anyone may have. Likewise, we will welcome suggestions for improvement if you feel that the legislation can be improved.

I am including herewith a brief analysis of what we the sponsors of this legislation believe it will do. We urge you to read it, and to let us have your comments:

DUAL ALLOTMENT PROGRAM FOR COTTON: DOMESTIC ALLOTMENT—EXPORT ALLOTMENT

The dual allotment program would—

A. Protect the farmer's income and permit him to use his land and equipment more efficiently.

B. Provide full price competition both at home and abroad.

C. Eliminate the need for a special export sales program.

D. Increase consumption and prevent accumulation of surpluses.

E. Return cotton handling and marketing to normal channels of trade.

F. Eliminate present conditions which create unfair competition for American cotton mills.

G. Benefit consumers through lower retail prices, and wider choice of fabrics.

H. Would reduce cost to Government.

I. Counteract inflationary trend in textile markets.

The stated objectives would be accomplished as follows:

First. The loan program would be continued, but the loan level woudl be slightly—probably 5 percent—under the world price for cotton as determined by the Secretary of Agriculture as of June 1 of the calendar year in which the cotton is produced.

Second. The national marketing quota would be estimated domestic consumption plus exports. Under this method the minimum national marketing quota for 1958 would be 14 million bales which woud provide a national acreage allotment of 20½ million acres, or an increase of 17 percent over 1957. This method would insure continuation of acreage allotments and marketing quotas and provide protection against unregulated production.

Third. Producers taking advantage of increased cotton allotments would be excluded from the cotton acreage reserve provisions of the Soil Bank. State, county, and farm history would be preserved under this provision.

Fourth. Domestic allotment: Marketing equalization payments would be made to the producer through the cotton merchant to represent the difference between the average spot market price or loan price, whichever is higher, and a stated percentage—probably 90 percent—of parity.

Fifth. Export allotment: There would be no marketing equalization payments. The program would be financed with unused funds available for cotton payments under the Soil Bank Act; and, insofar as such funds are insufficient, the Secretary of Agriculture would be authorized to use funds of the Commodity Credit Corporation.

Why France Won't Appease Nasser

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1957

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the New York Times on Monday, May 20, 1957, entitled "Why France Won't Appease Nasser," by C. L. Sulzberger:

WHY FRANCE WON'T APPEASE NASSER

(By C. L. Sulzberger)

PARIS, May 19.—Christian Pineau, who arrives in New York tomorrow to reopen the Suez discussion before U. N., is an indomitably logical man possessed of cold reason. His appearance is not calculated to invite favor through any warm charm. Rather short, inclined to the rotund, with a large, almost bald head, he looks somewhat like a solemn, intellectual Humpty Dumpty.

But the outward aspect is deceiving. He is personally bold and persistent. During the war he worked courageously for the resistance, escaped to London several times on secret missions, and was captured by the Gestapo upon one parachuted return. Sentenced to death, instead he spent 18 months in the concentration camp of Buchenwald.

Pineau has been a Socialist all his mature life, but he is intimately connected with both France's bourgeoisie and intelligentsia. His father was an army officer. His stepfather, Jean Giraudoux, is one of this country's most famous authors. The Foreign Minister himself wrote 2 collections of fairy tales—primarily addressed to his own 6 children.

FRANCE REFUSES TO DEAL

A complex and intricate individual, Pineau is not intimately known by many people. When he took over the Quai d'Orsay 15 months ago the permanent diplomatic staff began to complain it was rarely if ever consulted by the new minister. Some French officials, as well as those of the United States and Britain, were surprised when this Government suddenly resolved to raise again the issue of Suez—just as the other Western nations were making their humiliating deal with Nasser.

The reasons for this French move are by no means founded solely upon abstract morality. They are thoroughly rational, from France's point of view, and ultimately connected with the heart of this country's foreign policy.

Pineau argues that the Security Council, including Russia, accepted six basic principles governing canal administration. The third of these isolated its operations from the national politics of any single nation—meaning Egypt. This has now been violated, according to the French. In fact last month the Council debate showed majority agreement to that effect.

ONE-NATION BOYCOTT

France refuses to go along with its Allies in swallowing Nasser's bitter pill. For the moment, it is continuing a one-nation boycott of the canal at great cost and inconvenience. Why? There are two explicit reasons.

First of all, this Government feels Egypt cannot be allowed to get away with unilateral violation of a U. N. decision. Russia did, in the case of Hungary. But if Nasser is permitted to emulate his Soviet friends, the U. N. will fall apart. The West cannot accept international discipline only to see it ignored by other nations.

Therefore, if Egypt is not brought to heel, France will feel free to overlook any future restrictions the U. N. may vote concerning this country's policy in Algeria. Should Paris be expected at a later date to adjust policy in North Africa to Security Council desires, Cairo must first be made to do so—now.

ALGERIAN QUESTION AN ISSUE

Secondly, Pineau sees potential danger to French interests if Nasser is not immediately checked. With the canal under unhampered Egyptian political control, Cairo could exclude French shipping if it wishes to support the Algerian rebellion. Furthermore, if the U. N. should ever censure France on Algeria, Nasser might argue he was legally justified in such action. Therefore, at all costs, Pineau is determined to fight the issue now, to insist on freeing the canal from the Egyptian dictator's control.

Related to this attitude is France's developing new Middle Eastern policy. This country does not consider the 1950 Big Three declaration on Palestinian frontiers as still valid. It claims Dulles himself destroyed any possibility of joint action outside the North Atlantic area by precisely limiting cooperation to the region specified within the NATO treaty.

PLAYING A LONE HAND

The French, consequently, openly base their planning on the closest cooperation with Israel, regardless of Arab or Allied opinion. They consider Israel the only democratic bastion and potential industrial complex in the Levant south of Turkey. Even if they have to act alone, they are going to shore up that bastion.

As Pineau prepares his Suez case in New York, France's destroyers are cruising the Red Sea region. They intend implicitly to protect any merchant vessels taking goods to Israel via the canal or the Aqaba Gulf. A test case on such shipping rights could easily develop concurrently with the Security Council debate.

This country appears to be playing a lone hand in this tricky game. It feels that regardless of what France's closest allies consider politic concessions, Paris cannot accept the road of appeasement. To do this, Pineau believes, would destroy a foundation of French diplomacy, would expose it to grave embarrassment in Algeria and might open the way for further Nasser blackmail of the West.

Cut Budget Cry Is False

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1957

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial from Labor, official publication of the railway labor unions:

CUT BUDGET CRY IS FALSE

An unprecedented, powerful drive is on to cut the President's budget, reduce Government spending, and lower taxes. If the American people allow themselves to be fooled by this drive, they won't get reduced spending or any justified tax cuts. All they will get is slashes in programs which cost comparatively little but bring big benefits to the people. That's the main purpose of the drive.

A good example of the cut the budget propaganda is a special bulletin entitled "Taxpayer's Dollar," put out by the United States Chamber of Commerce. Its front-page headline says: "Budget Battle Entering Crucial Stage; Campaign for Cuts Must Continue—Chamber Drives for Government Economy."

That's the picture the chamber and other big-business organizations paint publicly, although they know the real picture is entirely different. It is described in Kiplinger's Washington Letter, which is circulated privately to businessmen.

"Don't let yourself be kidded by all this talk of budget cutting," the letter says. "It simply isn't true, it's baloney, misleading a lot of people. Many cuts are fictitious, for money will have to be voted later to make up for deficiencies. The cutting merely represents postponement.

"Also note that cutting appropriations is quite different from cutting spending, and it's spending, not appropriations, that determines tax needs."

The private letter to businessmen goes on to show that the Government agencies which spend the most money have huge funds hanging over unspent from previous appropriations. For this and other reasons, they can spend just as much money in the coming year regardless of how much Congress cuts their new appropriations.

All that is well known to the highly paid budget experts of the big-business organizations, but they don't tell the truth publicly. They want to keep the people's eyes focused on a fictitious picture of big spending cuts, while they work behind the scenes to knock out small but vitally important sums for services which are opposed by antiunion employers and selfish business interests.

That was well illustrated by the partially successful attempts in the House to kill or cut Labor Department and Health, Education, and Welfare Department funds which are used to protect and benefit workers and the rest of the plain people. There will be no more such attempts. More of them will succeed if the voters are fooled into urging Congress to make blind slashes in the budget.

Security and Independence for Our Senior Citizens

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr. McDONOUGH. Mr. Speaker, the American people cherish independence—independence as a nation and independence as individuals—as a vital element of their national heritage.

Today it is as important to an American to maintain his self-respect and independence as a free citizen as it was to the American pioneers of a hundred years ago. He wants the opportunity to choose his own profession, to make his own decisions as they regard his own welfare and that of his family. He wants the right to prove his ability and to test his own judgment, and he is willing to accept his destiny in the acknowledgment of his mistakes as well as the acclaim for his successes.

But an American today faces a major problem in his efforts to maintain the personal independence he so cherishes. He lives at a time when our Nation is expanding in an era of progress unprecedented in world history. He lives in an age of prosperity such as the pioneer of a hundred years ago could but dimly envision in his most fantastic prophesy.

But today's Americah also lives in an age of soaring living costs, and the highest living standard any people on earth have ever known. And with this fabulous prosperity has come an age of astronomical government spending, unbelievable government debt, declining buying power of each dollar earned, and accompanying high taxes on Federal, State, and local level which shrink earning power and diminish the ability of an American to save part of his earnings during his years of high productivity so that he can meet the costs of raising and educating his family, and also accumulate enough in savings to assure on adequate income for his years of retirement when he is no longer able to maintain employment.

Social security has offered a partial solution to the problem faced by the American senior citizen. But it has fallen far short of its goal of providing independence and security for our elder people.

Our senior citizens who find themselves faced with existence on the small pension provided by present social security are in many instances unable to afford even the bare necessities of life. It is difficult for them to find shelter at low enough cost so that any part of their small allowance will be left to provide a minimum of the food necessary to maintain life. There is little left over for any small luxury, and no provision for adequate medical attention. Hospitalization or nursing care for the most part can be obtained only as a charity patient where such facilities might be available to the impoverished.

Unless the senior citizen has managed to save enough to augment his paltry social security income or receives assistance from relatives, he faces declining years of extended impoverishment haunted by the fear of losing all self-respect and personal independence as a charge of public charity, if inflation decreases his limited buying power or illness threatens.

We have improved social security it is true, but not enough. We have raised payments to a small extent, but not sufficient to provide security. We have extended social-security coverage, but we have not provided adequate protection for all our citizens so that every American can accept the challenge of the age

in which he lives, devote the productive years of his life to the security and welfare of the United States and to the care of his own family, and face the years of retirement with the secure knowledge that an adequate pension will be available to allow him to maintain his independence and self-respect as an American and to enjoy his later years assured of an income sufficient to provide him with a decent living and necessary medical care.

It is high time we took the necessary steps to improve social security until it actually does the job for which it was intended—the job of assuring security to our senior citizens. We must not create a new forgotten man in America—the man of elder years. We must not reduce any American to a state of abject dependence on charity for the necessities of life and for his very existence.

We must act now to revise and improve our social security system until we have devised a retirement program which will achieve its goal of providing an adequate retirement pension for every American upon reaching the age of senior citizen.

Walker S. Buel

SPEECH

OF

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1957

Mr. VANIK. Mr. Chairman, Thursday the Washington press corps suffered the loss of one of its most popular and highly respected members, Mr. Walker S. Buel, head of the Cleveland Plain Dealer Bureau in Washington for the past 37 years as well as chief Washington correspondent for the Cleveland News during the past 3 years. His death was caused by complications resulting during abdominal surgery.

Mr. Buel was born in Springfield, Ohio, on January 15, 1890, and was educated at Buchtel College and Western Reserve University. In 1912 he joined the Cleveland Plain Dealer and covered the Cleveland city hall and the statehouse in Columbus, Ohio, in 1917. In 1919 he became head of the Washington bureau of the Cleveland Plain Dealer.

Mr. Buel was elected to membership in the Gridiron Club in 1922 and served as its president in 1932 and as treasurer of the organization during the past 12 years. He was acclaimed for his many contributions to the famous Gridiron shows.

Through James C. Hagerty, White House Press Secretary, President Eisenhower expressed his regrets at losing a "very old and very dear friend." Mr. Hagerty described Mr. Buel as "truly a great gentleman and a distinguished reporter."

Following are several of the many editorials which appeared in newspapers of this country and which pay deserved tribute to this distinguished citizen:

[From the Cleveland Plain Dealer of May 24, 1957]

WALKER SHOWERS BUEL

Death comes to every man, but to some it is given that their influence will live on through the impact of their personalities on others, the opinions they molded and the institutions they helped to build. Such is the case with Walker S. Buel, whose life was dedicated to this newspaper during more than one-third of the time it has existed. He was a part of the Plain Dealer, and the Plain Dealer was a part of him.

It is with sadness that we record his passing, but even sadness cannot exclude the memories of glorious days when he mingled with the great and the near-great and reported and interpreted momentous events in the Nation's capital for readers of this newspaper. He was on intimate terms with Presidents and Cabinet members, with Senators and Representatives, with politicians, and bureaucrats during the period which witnessed the transfer of more and more power from the State capitals to Washington and during which Washington became, for all practical purposes, the capital of the free world.

And there were days of fun, too, when, as one of the leading spirits of the famed Gridiron Club, he wrote lyrics and fashioned barbs which, always in good taste and never too harshy, deflated the egos of those in the seats of power and periodically reminded them that they were answerable to the people through the instrumentality of a free press.

We at the Plain Dealer knew him affectionately as "Sitting Buel," a nickname coined by his colleagues when he first developed the technique, which is now common practice, of utilizing the radio and television for fast coverage of Presidential campaigns and national conventions. Many a time, sitting in his compartment on a Presidential campaign train, or the workroom at a national convention, he was able to flash news of important events while his colleagues were fighting their way through crowds or waiting for packed elevators to get to telephones or wire facilities.

The reporters who worked with Walker at national conventions also knew him as "Papa Buel" and "The Good Provider," nicknames he was justifiably proud of being called. For he always saw that his associates were well taken care of in the way of lodgings and provender. But when it came time to work, there was no letdown, no relaxation, either for him or for his staff, until the paper had been put to bed and the wire had closed for the night.

The Plain Dealer is a better newspaper because of what Walker Buel put into it. That is the reward every dedicated newspaperman strives for. Regretfully we say farewell to one who achieved it.

[From the Cleveland Press of May 24, 1957]

THAT WALKER S. BUEL BYLINE WILL BE GRIEVOUSLY MISSED

To oldtimers in the newspaper business, it seems as if it were only yesterday that Walker S. Buel, a tall gangling youth, was covering the justice courts in Cleveland and cutting his eyeteeth on less important stories.

The Plain Dealer reporter had all the attributes of a good newspaperman, an inquiring mind, the faculty of making and keeping friends, the ability to put into words what he found out.

It was not surprising that Mr. Buel moved on to Columbus, where he was legislative correspondent for a couple of years, and then to Washington.

He knew all the Presidents from Warren G. Harding to Dwight Eisenhower, and was on easy terms with Senators and Congressmen. The newspaper profession loses an able craftsman with his death.

[From the Cleveland News of May 24, 1957]

WALKER S. BUEL, WASHINGTON STAR

Walker Showers Buel, chief of the Washington news bureau of this paper and the Cleveland Plain Dealer, who had served there for nearly 40 years, was a fine political editor and writer, whose death ends one of the longest careers of the kind in the Capital.

Schooled on the Plain Dealer staff starting in 1912, Mr. Buel became a political expert in print by instinct, and was the newspaper's politics reporter here and in Columbus before his Washington career. Such men as Newton D. Baker, James M. Cox, Maurice Maschke, and Vic Donahey, whose campaigns he reported in those days, became his lifelong friends and admirers. Seven Presidents of the United States knew and liked him for his great fairness, perspicacity, and warmhearted companionship. The Gridiron Club of Washington correspondents turned to him for its top wit and music for every dinner-show for more than 30 years. The Ohio-born boy who grew to national stature never lost his modesty or his kindness, and the personal sense of loss for us is considerable.

[From the Washington Evening Star of May 24, 1957]

WALKER S. BUEL

W. [illegible] Buel, who died yesterday at 67, was a veteran of 45 years on the staff of his distinguished newspaper, the Cleveland Plain Dealer. He was a senior, a widely known and respected member of the Washington corps of correspondents, which he joined in 1919. In his newspaper life he witnessed many changes in the personnel and practices of journalism and in the customs and attitudes of the readers to whom he reported. Yet one of the qualities which so endeared him to his colleagues and to an unusually large number of friends here and around the country was that they found so little change in Walker Buel. Disabilities of advancing age and recurring illness failed to dim a gay enthusiasm and zestful interest which kept him young. He was a shrewd and competent recorder and critic of the art of politics. He never watched its repetitive patterns through the tired eyes of a cynic; he looked forward to them as fresh adventures in reporting, new items for "my column." He had become a delightful fixture, in the columns of the newspaper he served so long and so well; in the Gridiron Club, of which he was the beloved dictator, and in the hearts of so many friends who found his courage, his loyalties and prejudices, his optimism and unyielding determination the sources of strength and comfort.

[From the Washington Post and Times Herald of May 26, 1957]

WALKER S. BUEL

Washington has lost a newspaperman who was a professional in the best sense of the word with the death on Thursday at 67 of Walker S. Buel. As a correspondent here for the Cleveland Plain Dealer since 1920, Walker Buel chronicled the politics of seven administrations with an unfailing sense of the high drama beneath the facade of everyday political maneuver. He remained unstaled by cynicism despite his long tenure, and—like every good newspaperman—he retained the enthusiasm of a cub reporter when he came upon a startling news development or a provocative item for his ably written and deservedly influential column.

Walker Buel's many friends in the National Press Club will remember him both for his almost courtly manners and his infectious humor. In a city where Potomac air sometimes puffs out the shirt and turns men into statuary prematurely, Walker Buel was in large part responsible for the success of the Gridiron Club. The satiric skits he contributed helped redress the balance in this frequently all-too-solemn Capital. A shrewd

observer, a lucid writer, and a stanch friend, Walker Buel won the confidence and affection not only of men high on the pyramid of political power, but of his colleagues as well.

Finding Out About Fallout

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1957

Mr. HOLIFIELD. Mr. Speaker, under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD an editorial which appeared in the Christian Science Monitor of May 18, 1957, entitled "Finding Out About Fallout," written by Mr. Neal Stanford.

Yesterday, Monday, May 27, 1957, the Special Subcommittee on Radiation of the Joint Committee on Atomic Energy, of which I am chairman, began hearings on one of the most vital questions of our age, fallout from nuclear weapons explosions and how it affects man and his world.

Mr. Stanford, in his editorial, has shown exceptional understanding of the complexity of the hearings and comprehension of their truly fundamental nature. As he points out, the sum total of the basic scientific information gathered during these hearings "will be an immensely valuable contribution to a subject that is still largely a mystery."

I believe every Member of this body should read Mr. Stanford's editorial which follows:

FINDING OUT ABOUT FALLOUT
(By Neal Stanford)

To date fallout has been like the weather—everybody talks about it; nobody does anything about it. The warning that there is danger from radioactive fallout from nuclear weapons has been called "poppycock" by some scientists and scholars. But is it?

Congress has now decided to find out—that is, find out if it is at all possible to get a definitive answer. The end of this month it is opening public hearings on fallout problems and has invited a lengthy and impressive list of witnesses to testify: experts in physics, meteorology, geology, biology, medicine, and any other relevant "ology." Hearings may go on two weeks, possibly three. And this may be only the first round of such hearings.

After the committee has studied the testimony and tried to organize it into some recognizable pattern of consistencies or contradictions, it may call another set of hearings—this time to consider what to do about it. For the first time, Congress is becoming really collectively concerned over this threat of fallout.

The concern is due to a number of things: to the confusion and contradictions on the subject obvious even among the scientific community; to the mounting public alarm over fallout, reflected in congressional mail, as the world goes from H-bomb test to H-bomb test.

Chairman CHET HOLIFIELD, Democratic Representative from California, said in announcing the hearings: "It is evident that a great deal of concern exists among the scientific community, and the public at large, over the problem of radioactive debris thrown into the atmosphere by nuclear weapons explosions, and over its effects on man after it has come down to earth. * * * The plain fact of the matter is that none of us knows enough about this phenomenon as yet and a great deal of confusion has resulted from the mass of conflicting statements on the subject."

To get a clear picture from these hearings will require real effort by the committee and the public. For there is going to be a lot of conflicting testimony, a lot of speculation, deductions, assumptions loosed in these 3 weeks—even if only half of what the papers have been printing about fallout hazards is repeated.

Representative HOLIFIELD says the hearings are "to educate the committee and the public"—and it is no secret both can stand a lot of educating on the subject. The only trouble is, there is no one recognized, authorized, omniscient, spokesman on the subject. And it may take some time for the maze of testimony, the scientific jargon of the witnesses, to be made understandable to the public.

That is why, while the hearings will undoubtedly start off with a bang, with floodlights, klieg lights, spotlights, and all the et ceteras that go with a major congressional investigation, the publicity will not last. When the witnesses start explaining cosmic radiations, the kinetic energy of neutrons, induced radioactivity, fractionation, radioiodine, half life, equilibrium values, RAD, REM, RBE, much of the public, and the press, and I suspect even some of the committee, will drift away, or possibly fall asleep. For these hearings are going to be highly technical and scientific, as well as personal and political.

Representative HOLIFIELD has thoughtfully drawn up some 20 pages of subjects, questions, and issues he wants the witnesses to explore. But even he and his committee colleagues are not sure they are asking the right questions or not omitting some vital but currently obscure factors. For they are literally—even if courageously—exploring an unknown.

No one can say what total knowledge of the subject includes, so no one can say how much or how little of the subject is voiced in the hearings. It will be difficult to hold the hearings to the subject, for no one really knows just where the boundaries of the subject are. But certainly the opening sessions will try to explain such elementary things as: What is fallout? How does it originate? What happens to it? What makes it a hazard? How do we learn about it? How adequate is our information?

There will be a real effort made not only to spell out what we do know about fallout but to define the areas of knowledge about fallout that we don't know. The committee's report of these hearings should be an immensely valuable contribution to a subject that is still largely a mystery.

St. Joachim's, the Mother Church of Italian Immigrants

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a brief article on St. Joachim's Roman Catholic Church in New York, which was founded in 1888 and is sometimes described as the mother church of Italian immigrants.

The church is in danger of being demolished to make way for a housing project. A plan is now afoot to save the church edifice and make it part of the new housing community to be established there. Because of its religious and historical value, a movement has also been undertaken to preserve this house of worship as a national shrine.

All of this is discussed in the article which I am inserting into the RECORD. The article is written by Ursula M. Scervini, the daughter of Frank A. Scervini, well-known civic leader and humanitarian. It is published in the journal of the Charity Workers of the Blessed Trinity, founded 3 years ago by Mr. Scervini, a charitable organization which is spearheading the drive to save St. Joachim's from destruction.

The article reads as follows:

THE CRUSADE FOR ST. JOACHIM'S
(By Ursula M. Scervini)

The Charity Workers of the Blessed Trinity have undertaken and dedicated themselves to champion the cause of St. Joachim's Roman Catholic Church. We seek to preserve it as a national shrine and as a symbol of the devout faith of the Italian-American population of the United States. St. Joachim's should remain as a firm and historical landmark reminding us always of the many contributions it has made to our religion and to society. St. Joachim's is a tradition to be kept and a heritage to be safeguarded.

St. Joachim's can be justly called the mother church of the Italian immigrants. It was founded in 1888 by the congregation of the Missionary Fathers of St. Charles Borrameo, an order of missionaries who followed the immigrants to America, for the specific purpose of adjusting these immigrants to the customs of the New World. It was at St. Joachim's Church that the immigrant practiced and kept alive his Catholicism and was also taught to become a better citizen of his adopted land. For here was a haven where its protectors spoke the same language as the immigrant.

It was here at this chapel of refined beauty and saintly elegance that our first American saint, Mother Frances X. Cabrini, began her cradle of activities in America. Her first assignment upon landing on our shores was at Roosevelt Street, Manhattan, the site of St. Joachim's. There are those among us today who still recall meeting Mother Cabrini at St. Joachim's from whence her fruits of labor flowed throughout the country.

The significance and influence of the church is so great and so far-reaching among former parishioners and friends that they constantly return to this shrine from remote parts to participate in its activities. For years St. Joachim's has enjoyed this continued respect and admiration as a house of worship. However, today a cloud hovers over this shrine which for years has radiated only warmth and love through its portals. It is the site of the housing project being sponsored by the municipal credit union. The present plans call for the demolition of St. Joachim's.

The Charity Workers of the Blessed Trinity are not hindering progress. Our newly proposed Batista plan blends St. Joachim's Roman Catholic Church and the housing project as one unit. Everyone's needs will be satisfied and a house of worship will not be needlessly destroyed.

Our campaign has gained wonderful support and cooperation from 47 councils of the Knights of Columbus, 143 citywide civic organizations, and other committees of diversi-

fied nationalities and religions. In addition we have 180,000 signatures to petitions favoring the preservation of St. Joachim's as a national shrine and have received considerable newspaper coverage on our efforts.

The people want St. Joachim's and we of the Charity Workers of the Blessed Trinity have the will, the courage, and the faith to save this church for the people.

We are the champions of St. Joachim's. Our fight is still going on and because it is a just cause we have no fear. The powers that be will respect the will of the people. With our faith in God we will continue our crusade to prevent the demolition of St. Joachim's and to make it a national shrine where new generations will be able to worship in the tradition of their ancestors—the immigrants—paying homage to God our Father and his sainted child Mother Cabrini.

For these compelling reasons we dedicate ourselves and this evening's affair to the crusade of St. Joachim's. This is a night for keeping alive the spirit of a great church. We welcome all and any support. For in this crusade we are motivated by the spirit of love and charity which daily reflects itself at the shrine of St. Joachim's Roman Catholic Church.

Highway Traffic Safety Award

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. McDONOUGH. Mr. Speaker, the national highway and traffic death toll has reached such appalling totals as to constitute a major and almost insoluble problem.

Continued study and analysis by traffic and safety engineers, and revision and amendments of existing laws has failed to check the upward swing of this grim chart, and far too few citizens, apart from these authorities, actually concern themselves with this tragic traffic safety situation.

I think it is pertinent that I bring before this body a brief reference to the sustained and fruitful efforts of an outstanding California businessman, Mr. Robert E. Petersen, whose contributions, direct and indirect, to the general traffic safety of the Nation are important and demonstrable.

When Bob Petersen first became interested in the problems of the motorist and of safety back in 1948, he was convinced that the most fertile area in which to work for traffic safety was among the more youthful drivers across the country. Not that youth is the only offender against safety measures, but because the habit of careful driving is easier to initiate among the young.

To meet this issue head on, Petersen began a crusade of preaching safe driving to the thousands of so-called hot-rod enthusiasts in the United States. He correctly believed that the most constructive way was not to scold, preach, or carp, but to help organize a sport and to form a national organization to provide pride of membership and to establish aims and goals designed to eliminate irresponsibility and to stress highway courtesy and safety. Petersen was a dominant factor in the formation of the National Hot Rod Association, whose slogan is "Dedicated to Safety."

Through the outlet of the Petersen Publications, Petersen has constantly preached safety in all its phases. This includes a continuing crusade among the more than 1 million motorist-readers for more careful driving. In addition, Petersen constantly examines the new models and cars and reports objectively on their safety factors, or lack of them. Many of the safety features which he has fought for over the years have been adapted into today's cars. He also has made many practical suggestions for safety improvements in the highways themselves.

It is significant that the California Safety Council selected Mr. Petersen this year as the recipient of its first annual distinguish service award in recognition of his great and beneficial influence among youthful drivers, and his other valuable contributions toward greater highway safety.

Petersen also has been cited by the Los Angeles County Board of Supervisors for his safety work and for his remarkable accomplishments as the founder and head of one of California's biggest and fastest-growing publishing industries.

The fine citizenship manifest by Mr. Petersen and the cooperation and results he has achieved in the field of traffic safety are deserving of our sincerest commendation as well as the appreciation of the people of the United States.

Massacre—A Chapter in the Development of the Western Frontier

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, May 28, 1957

Mr. NEUBERGER. Mr. President, one of the outstanding western writers in our country is Marshall Sprague, of Colorado Springs, Colo. I have received from Mr. Sprague a brief summary of his forthcoming book, Massacre, which is soon to be published—on June 12, 1957—by Little, Brown & Co., of Boston. Because Massacre describes a vivid and important chapter in the development of the vast western frontier, I ask unanimous consent that I may have printed in the Appendix of the RECORD a copy of the recent letter to me from Marshall Sprague of Colorado Springs, Colo.

In the letter Mr. Sprague emphasizes that the West needs real development and not exploitation.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COLORADO SPRINGS, COLO., *May 20, 1957.*
Senator RICHARD L. NEUBERGER,
United States Senate, Washington, D. C.

DEAR SENATOR DICK: The central action of my Little, Brown book Massacre occurred on September 29, 1879, when a small band of Ute Indians, pretty peaceful up to then, murdered their White River Indian agent, Nathan Meeker, and his employees, ambushed a force of 150 soldiers as they hurried in to help, kidnaped Meeker's wife and daughter and another young woman and held them for 23 days. As punishment, all the Colorado Utes lost most of their 12-million-acre Ute Reservation. The locale of the massacre on White River and the ambush on Milk Creek was 50 and 25 miles south of present Craig, Colo., the western-slope hometown of Senator Ed Johnson. The locale is roughly 125 miles east of Echo Park.

I approach this climax through the career of Nathan Meeker from his birth near Cleveland through his period as agriculture editor for Horace Greeley's New York Tribune, then founder of the cooperative colony of Greeley, Colo., and finally Ute Indian agent at White River in 1878–79, charged by the Government to convince the Utes that they must become farmers. Meeker was not a tactful man, but in Massacre I contend that his death was the inevitable result of manifest destiny pressing inexorably and finally crushing the Utes as it had crushed most other tribes from the beginning. The Utes, of course, liked their own way of life, their own hunting economy, which had done well by them for centuries. But their civilization was much too wasteful in its use of land to be tolerated in a United States of rapidly increasing population. Like most western Indians, they could not change to white ways in time. The murder of Meeker was an expression of their frustration.

For your "brief remarks to the Senate," I would suggest that Massacre tells the tragedy of Indians who lost everything because of their wasteful use of land. This high dry West, today as in 1879, still feels the huge influx of people from the crowded East. This West today, is still a principal safety valve. We need its vast spaces, which means that there must be no wasteful use of any of it. It is the Nation's most inspiring and critical problem in conservation, because everything in it is so scarce and must go such a long way. In particular, its water and power resources cannot be exploited for the benefit of the few. The criterion is not a matter of public versus private ideology, but a matter of absolute necessity—the most beneficial use of the land for the greatest possible number. That is, after all, our historical tendency.

The best of everything to you and Mrs. Neuberger.

MARSHALL SPRAGUE.

The Red River Canal

EXTENSION OF REMARKS
OF
HON. RUSSELL B. LONG
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 28, 1957

Mr. LONG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by Representative OVERTON BROOKS, of Louisiana, before the Red River Valley Association Convention, in Shreveport, La., on April 23, 1957. In my opinion, this address does a creditable job of explaining the reasons why navigation is necessary between Shreveport, La., and the Mississippi River, and why it cannot be achieved except through the medium of a lateral canal,

making use of the existing waterways paralleling the Red River.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY CONGRESSMAN OVERTON BROOKS BEFORE THE RED RIVER VALLEY ASSOCIATION, APRIL 21, 22, 23, 1957, SHREVEPORT, LA.

In the year 1899 the last boat steaming up the Red River arrived at Shreveport and after leaving its cargo retraced its course back to the Mississippi. Since this date no river boats have arrived at Shreveport, and the Red River has not been used for navigation. The question naturally arises, "Why has this stream not been used for waterborne commerce in more than 50 years?"

The answer is that the Red River over the years became unsuited for navigation. It has developed like many other streams in this nation which have changed due to the stripping of the hillsides of timber and to the cultivation of the lands by draining them and making possible the quick removal of water from the land. The little streams throughout our countryside have often dried up and have even disappeared in many instances in the course of the development of our Nation.

Red River has suffered this fate. The banks are soft and crumble and melt away under the terrific impact of high water rushing downstream to the sea. Channels have changed in the course of time to such an extent that boundaries have disappeared and old lines have been marked out. Parts of Bossier Parish, for instance, now find themselves on the Caddo side of the River. In at least one instance we have built a great bridge over the Red River and this was in Avoyelles Parish—only to find later that the river actually bypassed the bridge and left the structure high and dry, making a several million dollar structure, in the course of a very short time, worthless and unusable. In another instance, in northern Bossier, within the last few years, the State was compelled to spend tens of thousands of dollars to stop the ever-moving process of a Red River-changing channel in order to save another bridge in the course of construction in the Plain Dealing area and prevent it from being bypassed.

From the time the last river boat came to Shreveport, our people began to yearn for and to hope for the day when navigation would be restored to the river. They have seen other river ports in Louisiana and elsewhere thrive and grow and expand while our own valley—as fertile as the Garden of Eden—does not keep pace with this growth of these other areas. We have the people, the climate, the natural advantages of other localities; but we fail to provide the water transportation and water rates which they enjoy. This is the real difference between the Red River Valley cities and towns and other places.

In the years prior to 1946, we who were interested in the further development of our valley had been at work trying to restore navigation. At first we asked for navigation on the Red River itself as the answer to our traffic problems. We know that every large community must of necessity have every form of transportation—road, rail, air, pipelines, and water—and that the community that fails in any one respect does not contribute fully to its own development competitively with other more fortunate communities. After working on this matter for years, our plans were submitted to the Board of Rivers and Harbors of the Army Engineers in Washington—a board composed of the best hydraulic engineers in America.

I was present when this hearing occurred in Washington in 1946. I can look back over the years and realize how important this hearing was to our people here. Claudius Dickson of Shreveport was president of the Red River Valley Association and headed the delegation going to Washington. John Ewing of the Shreveport Times, a director of the Kansas City Southern Railway, came up especially and made a splendid presentation. Senator John H. Overton, my uncle, organized the meeting and presented the witnesses. Other distinguished citizens, many now gone to their rewards, made appearances on behalf of water transportation along the Red River. We all asked for navigation on the river itself.

After months of study and deliberation, the Board of Rivers and Harbors on April 19, 1946, in effect turned down our request for navigation on the Red River, but approved a plan for a waterway to be built on the south side of the river in the alluvial valley as a canal. There can be no question but that the approval of the Overton Waterway was a rejection of the use of the channel of Red River for navigation purposes. Since this decision was rendered, year by year, we have asked the Congress for money for the purpose of planning, blueprinting, and for engineering work for the lateral canal, and the Congress has granted this request; and has provided in all $515,000 for this purpose.

Why did the Board of Rivers and Harbors turn down the use of the channel of the Red River for navigation purposes but, at the same time, approved the construction of a canal along the south side of the river from Shreveport to the Atchafalaya? There were a number of reasons for this decision.

The first reason was that which I have already discussed; namely, the shifting of the channel, the caving and disintegration of the banks of the stream, the lack of availability of an adequate supply of water in the Red; and the greater cost of providing for navigation along the channel of Red River and the greater length of the channel of the river for transportation, for such purposes over that of the canal.

I think it is obvious that navigation on the Red River would require more water than navigation on the Overton Waterway. This is, of course, because the Red River is a flowing stream and the canal will be a slack-water course. It will require much more water to maintain a channel of a specified depth on the flowing stream than on a slack-water canal. How much more will be required depends upon the rate of the flow of the river and this will depend upon the number of obstacles placed in the path of the current.

The third reason that the use of the Red River channel for navigation purposes was discarded is that such a route must be much longer than the canal type of waterway. The Overton Waterway, as designed, is 205 miles long. On the other hand, the Red River channel is 280 miles long—75 miles longer than the proposed Overton Waterway. The Red River channel, of course, is longer because it is filled with curves, and bends. Then, too, its current will provide a serious obstacle to upstream navigation. The lack of current on the Overton Waterway, as designed, makes for much less bank wash and erosion; and provides for a greater stabilization of bank and channel.

The use of the Red River channel, if this were feasible, would require 12 locks and dams. The dams on the river, of necessity would be much larger and longer than those on the canal, for from bank to bank the river is much wider and, of course, would cost much more money to construct. It is obvious also that banks above and below the locks and the dams would have to be completely stabilized for some distance to prevent what occurred in Avoyelles Parish when the Red River cut a pathway around one of the bridges which had been constructed and thereby rendered the bridge useless. This would require much money. The project to stabilize the banks of the Red 3 miles above and 3 miles below Shreveport has already cost the Government over $10 million. This will give you some idea of the cost of stabilizing the river for a distance of 280 miles.

The original estimate of the cost of the Overton Waterway was $42 million. Since this estimate was made in 1946, of course, prices have gone up considerably. The engineers will give you a further cost estimate; but I would guess that it would certainly run under $100 million. On the other hand, the cost of building the Red River route, using the river channel for navigation, will run $300 million or better—2 or 3 times that of the cost of the waterway.

Besides this, the engineers say that it is not feasible to build the waterway on the Red River. Constant shifting of channels, crumbling of banks, and varying elevations of water make real problems; and these, in turn, make the river itself unsuited and unusable for navigation purposes.

You may say, "Well, Congressman, who says that the river is unsuitable for navigation besides yourself?" I answer, "The United States Corps of Army Engineers."

When we are sick, we go to a doctor; when we have toothache, we visit a dentist; and when we need to build a great canal for navigation, we look to our engineers. They have not let us down in any emergency.

This is the group of engineers which has built the program of flood control and navigation for our Nation since its inception. It is the group which was founded by the Father of Our Country, George Washington, when he was President of the United States. He sent to Europe to obtain three of the very best engineers from the armies of Napoleon, and they formed what is now our Army engineers. Since that time our Corps of Engineers has rated tops in conduct, ability, and efficiency.

The Army engineers is the same organization which landed its men on the shores of Normandy in France in World War II, even before the combat troops landed; and they cut the barbed wire and removed the obstacles, preparing the way for the landing of the infantry and the artillery, the tanks and the jeeps. They won an immortal place in the hearts and minds of our people; and neither time nor distance will efface the valor of their efforts nor the impact of their achievements in the development of America. I think we can safely depend upon them in the building of the Overton waterway.

The canal when built will begin at the confluence of the Old and Mississippi Rivers, and will continue on up to Shreveport, 206 miles to the northwest. The first 7 miles is through Old River, and the next 24 miles through Red River, at which point it follows Coulee des Grues, Choctaw Bayou, and Chatlain Lake Canal to Alexandria. It then proceeds through land cuts to Cane River through Natchitoches, and then on to Bayou Pierre and to Shreveport. It will use 120 miles of existing waterway as compared to 86 miles of land cuts. At Shreveport a turnaround basin will be built and a basin for loading and unloading will be built at all of the large stopping points.

It is fair to say that most of the land utilized will be far removed from urban centers and will be low or swampy land not normally used for cultivation. By the same token, the number of roads to be rerouted will be reduced to a minimum.

I have heard it said that such a canal will split the countryside wide open; and that a barrier greater than anything we have experienced will be erected to prevent the free passage to and fro across the waterway. This, of course, is not true. The waterway, of course, will be no greater a barrier than is Bayou Pierre and Cane River at the present time. At this time, these streams and others

like them must be bridged if we are to cross them. The same will apply to the canal.

On the other hand, the canal will pass through rather low places in the countryside; and this waterway will provide means of draining these sections of central and northwest Louisiana, which they do not now have. It is estimated that flood control and drainage benefits for the area will exceed $1 million per year. Flood control is an item for which we will spend millions of dollars even though we do not build the canal. If built, the canal will help take care of this expense and no other development presently contemplated will provide flood control and drainage benefits as indicated by the building of the canal.

Of course, this canal will cost lots of money. Any worthwhile project will cost money; and the question is, whether or not it is justified. The Army Engineers will settle this question, and I submit that they are better to dispose of this question accurately than any other group of people.

The actual or total benefits from the construction of this project will be inestimable. A million and a half people have settled in this portion of the Red River Valley and they are all affected by freight rates. Every rate increase of the railroad companies and the truck carriers, and the buses, adds to the cost of living of our people. Those live in the areas of Louisiana where navigation is available, know the difference in the costs. A rate increase is often the difference between success and failure of business.

Throughout the length and breadth of this country, we see the great cities and towns grow up along the rivers and the harbors. Navigation has attracted the people and businesses to these spots. Cost of living is lower and business prospers in such locations. And we see the great highways terminating at the sea and at the inland ports; and even the railroads, feeling the quickening impulse of lower rates, lay double tracks, add to their equipment and personnel and begin to boom in the stimulus of the increased transportation attendant with the port and with navigation. It is largely in places where there is navigation that the communities grow and prosper. New Orleans, the Crescent City; St. Louis, the hub of America; Chicago, the windy city; Pittsburgh and its golden triangle—all of these great cities are built on waterways and the backbone of their prosperity and growth lies in the development which lower freight rates and navigation have given to the community.

The Overton Waterway will open up to us, for waterborne commerce, the great ports along the Mississippi, such as Baton Rouge, New Orleans, Memphis, and St. Louis; the ports along the Atchafalaya and along the Intercoastal Canal, such as Lake Charles, Houston, and Beaumont. It will connect our communities directly with navigation all along the inland waterways of America—with Pittsburgh, Chicago, Minneapolis, and Sioux City. It will develop in our midst a new type of industry and bring fresh opportunity and new accomplishment to our people.

If we are going to have navigation for the Red River Valley below Shreveport, it is going to be by way of the Overton Waterway. Congress will never appropriate funds for the construction of a great project such as this if it is not approved by the Corps of Engineers. Nor will the people who must support the project by local cooperation approve it in the absence of the recommendations of the Army engineers. We can use all of the persuasion possible and apply political pressure, but I can tell you this—the Army engineers will not yield to the point of recommending a project which they feel is not worthy of the approval.

If, therefore, we reject the canal proposal, make no mistake, navigation in the Red River Valley is dead. We have no alternative. If we accept the proposal, we move forward. The way is not smooth. It is rough; filled with opposition and difficulties; but at the end of the rainbow, it offers the fulfillment of a dream of 55 years—navigation in the Red River Valley. We moved forward—at times, it is true, slowly—but always forward, and ultimately over the years we leave to our children the priceless heritage of having developed our God-given resources to the best of our ability. We leave to them the basis for competitive commerce in our valley, for further development greater than otherwise would have been possible; for prosperity and for happiness.

Waiting Game

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1957

Mr. ULLMAN. Mr. Speaker, the May 27 edition of the Baltimore Sun carried an interesting as well as informative column by Mr. Thomas O'Neill. In his column Mr. O'Neill pointed out the disastrous effect that administration appointments have had on the sound public power program initiated and implemented by President Roosevelt and President Truman.

I highly recommend this article to my colleagues, and under unanimous consent, I insert it in the Appendix of the RECORD.

The article follows:

POLITICS AND PEOPLE
(By Thomas O'Neill)

WAITING GAME

WASHINGTON.—Time and circumstances are working for the administration in its purpose of reversing the public power trend of its Democratic predecessors. On three fronts President Eisenhower now has opportunities to curb the expansion of public production of power, both hydroelectric and atomic, and appears reasonably sure to use them. A vacancy on the Tennessee Valley Authority opens the way for the first Republican-appointed majority in that agency's history. Another impending replacement will remove from the Atomic Energy Commission a strong voice urging Government-financed construction of atomic-power plants. And Mr. Eisenhower has a veto ready in the event Congress enacts a last-chance measure to authorize a Federal power and flood-control dam at Hells Canyon in the Pacific Northwest.

A single term was insufficient for Mr. Eisenhower to make over all the public agencies and commissions in the Federal establishment. Appointments to the Tennessee Valley Authority, for example, are for terms of 9 years. In his second term, however, the boards come within his reach. Sympathetic appointees will implant his philosophy beyond his departure from the White House. His repugnance to the Government operation of powerplants has always been plain, as on the occasion when he cited TVA as an instance of creeping socialism. His disdain was further emphasized when the retirement of Dr. Harry A. Curtis from the TVA this month upon the expiration of his term received no official White House notice such as the customary note of appreciation.

The retirement left the TVA board divided between the chairman, Gen. Herbert Vogel, appointed 3 years ago by the present administration, and Dr. Raymond R. Paty, serving until 1960 under a Truman appointment. All appointees to the board are required by law to attest a belief in its purposes, but there are degrees of fervor in belief. General Vogel looks less enthusiastically upon the construction of steam plants to augment TVA's hydroeletric output than did his colleagues, and he was consistently outvoted by Dr. Curtis and Dr. Paty. A pro-Vogel majority is now in prospect.

With the development of atomic energy and the approach of the time when it can operate competitively against both water- and steam-produced electric power, the dispute over the role of the Government has entered that area. The Commission Chairman, Mr. Lewis Strauss (pronounced straws), a Wall Street banker and a Taft Republican who was appointed by Mr. Eisenhower, believes that the construction of atomic reactors for power production is within the capacities of private business and should in general be left to such enterprise. The lone surviving Truman appointee to the Atomic Energy Commission, Mr. Thomas E. Murray, a wealthy engineer with more than 200 patents upon his own inventions, believes that the profit incentive for private industry is too far distant and that the Government must take the lead.

Mr. Murray's term on the Atomic Energy Commission expires June 30. His reappointment by Mr. Eisenhower is most unlikely. Against him, in the eyes of a White House which treasures close harmony in the ranks above everything, is his habit of speaking out when displeased.

A letter to the White House from a majority of the congressional Joint Committee on Atomic Energy commending Mr. Murray for reappointment on the basis of his experience and ability got a chill reception. President Eisenhower observed coldly that such appointments were his province alone. Onlookers promptly wrote off Mr. Murray as a sure casualty. His complaint against Mr. Strauss has been chiefly on the score that the Commission Chairman was dictatorial, and concealed pertinent information from his colleagues. Congress took heed of this complaint in 1955 with the enactment of a law expressly forbidding one-man rule, a measure which President Eisenhower signed with expressed reluctance.

Advocates of a multipurpose Federal dam at Hells Canyon, a deep gorge separating Idaho and Oregon, concede that a bill they are pressing is the last hope in a 10-year battle for the project. The bill's chances are hardly good. A similar measure failed in the Senate last year. A license for private construction has been issued to the Idaho Power Co. and building has started. The administration has encouraged the private company by tax concessions. Sponsors of the public dam insist that Democratic election victories in the Northwest last November constituted a mandate for the Federal project. The administration is unimpressed.

Minimum Wage Historic Background

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include an article in the June issue of his news-

paper by Ed Marciniak, the gifted and dedicated editor of Work, the monthly publication of the Catholic Council on Working Life, an organization working for social reform on the principles of The Condition of Labor by Pope Leo XIII and Reconstructing the Social Order by Pope Pius XI and which is open to all men of good will, Catholics, Protestants, and Jews.

Mr. Marciniak's article was prompted by the recent publication by Farrar, Straus and Cudahy of a biography of Bishop Edward Vincent O'Hara, who was born in Minnesota but spent many years of his life in Oregon where he was a dynamic force in the fight for the protection of the rights of working women.

It was in an Oregon case—*Muller* v. *Oregon* (208 U. S. 412), that the United States Supreme Court upheld the constitutionality of laws limiting the hours of female employment. It was in this case, decided in February of 1908, that in the opinion delivered by Mr. Justice Brewer it was held in regard to women:

> Her physical structure and a proper discharge of her maternal functions—having in view not merely her own health, but the well-being of the race—justify legislation to protect her from the greed as well as the passion of man.

This was in 1908. It assured the workingwomen of that State the protection of a State law limiting their hours of employment. The next step was to assure them the minimum of a living wage. In 1913 the Illinois Senate vice and wage committee, of which I as lieutenant governor of Illinois was the chairman, conducted hearings that aroused the conscience of the Nation, with the result that in 1913 nine States, including Oregon, enacted State minimum-wage laws, all passed after the investigation conducted by the Illinois committee. Those were the first minimum-wage laws in our country.

Again it was in an Oregon case that the constitutionality of the legislation was established. This was in the case of Stettler against O'Hara, decided by the United States Supreme Court in 1917. With this preface, tracing the historic background, I am extending my remarks to include Ed Marcinink's tribute to the memory of a truly great American and champion of social justice, Bishop Edwin Vincent O'Hara, who while of the same name was not related to me.

The article follows:

A REFORMER: HIS NAME WAS O'HARA

(By Ed Marciniak)

One of the most famous labor cases in the United States Supreme Court history, *Stettler* v. *O'Hara*, upheld in 1917 the constitutionality of the Oregon minimum-wage law for women. It was the first time that the High Court had approved such an advanced piece of labor legislation.

The defendant in the case was Father Edwin Vincent O'Hara, chairman of the Oregon Minimum Wage Commission. He died late last year as Archbishop O'Hara, of Kansas City, Mo., and his biography has just been published.

The archbishop was a remarkable man: He paid attention to the Popes and listened to his people. From the people he learned of their needs, and from the church he got the vision and the push to do something about them. This virtue graced all his 51 years as a priest.

DEFENDING WORKERS

Not long after his first appointment in 1905 to the cathedral parish of Portland, Oreg., young Father O'Hara found himself on a soapbox explaining Leo XIII's defense of the workingman's right to a living wage. He shared this makeshift platform weekly with a well-known Marxist who insisted that he was trying to save the workers from "religion, the enemy of the workingman."

From the people who came to such a forum and from his parishioners Father O'Hara learned that low wages were being paid. He often quoted Leo XIII's famous conclusion: that a worker's "remuneration must be enough to support the wage earner in reasonable and frugal comfort."

As the former pupil of Msgr. John A. Ryan, who was author of that great book, The Living Wage, and of the Minnesota minimum-wage law, it was not surprising to find Father O'Hara leading the fight for an Oregon minimum-wage law. In his campaign he solicited and obtained advice and support of national figures like Samuel Gompers, Woodrow Wilson, Louis Brandeis, Jane Addams, and others.

FRIENDS TO THE RESCUE

When the Oregon State Legislature finally passed the bill, he was its logical choice for the chairman of the public body set up to enforce the law. When the law's constitutionality was challenged, many friends came to Father O'Hara's defense. Felix Frankfurter, who was later to become a Supreme Court Justice, volunteered to plead Father O'Hara's case before the High Court.

The result is now history. Father O'Hara won. The Court upheld the constitutionality of the Oregon law which eventually became the model for similar laws in more than a dozen States.

THE PASTOR'S JOB

How did Father O'Hara feel about all of this? He explained:

"In fulfilling these papal injunctions the pastor will find that his activities on behalf of his workingmen will fall into three general channels * * * education, organization, and legislation." The rest of his life was spent in these channels.

After returning in 1919 from Europe, where he served as a chaplain during World War I, he was put in charge of education for the diocese.

Portland had a lot of rural schools. His farm background as a youth, his willingness to hear the farmers out, and his characteristic eagerness to get the facts soon had him involved in rural life as deeply as he had been in Portland's factory wage problems.

Was there a rural problem? There was, he insisted. "Fundamentally the rural problem * * * has been one of isolation and drudgery."

ACTION IN RURAL LIFE

With such convictions, nobody was surprised at what happened next. In 1920 he became pastor of a rural parish in Eugene, Oreg., and the first director of the new rural life bureau in the social action department of the National Catholic Welfare Conference.

In the summer of 1923 he called a national meeting of Catholic rural life leaders who gave birth to the Catholic Rural Life Conference. Today, the conference is a vigorous, influential body.

His interest in rural schools led him to another activity which was to flower after he became bishop of Great Falls, Mont., in 1930: The establishment of the Confraternity of Christian Doctrine.

TRUST IN LAITY

Back of his concern with the spread of Christian doctrine was his conviction, based upon experience, that the church needed lay leadership.

"To assume that the laity are to act simply as rubber stamps for the clergy is to deny them leadership. * * * The intelligent layman must be allowed a certain freedom of action. He must not be held in constant check, under penalty of losing his service altogether."

When he came to Kansas City, Mo., in 1939 he found himself surrounded by Dixie's racial segregation and discrimination.

He found this the region where the title "American" went only to those who were "free, white, and Protestant." The tradition was strong against accepting Negroes, Jews, and Catholics.

There were no Jim Crow streetcars, but segregation was fixed in schools, hospitals, and hotels in hundreds of different ways.

OPPOSING RACISM

He confronted men with the Catholic teaching on the oneness of all men in the Mystical Body of Christ. He saw to it that there was no color line in the church—so that when the Supreme Court banned segregation in the public schools, the way had already been paved by integration of the parish schools of his diocese.

He founded the city's first interracial maternity hospital and then extended it into an accredited general hospital in which Negro surgeons and nurses could practice. It was called the Queen of the World Hospital and staffed by 18 Maryknoll nuns, all graduate M. D.'s.

He was a member of the National Association for the Advancement of Colored People and the Urban League, and an active supporter of both the Japanese American Citizens League and the National Conference of Christians and Jews.

When the news reached the world of the outrages perpetrated against the Jews by the Nazis, he immediately sent a message to the president of the Synagogue Council of America, saying:

"In these tragic days of grief and mourning of the Jewish people may we all understand that we are our brother's keepers; may all who profess the Christian faith especially understand the declaration of Pope Pius XI that 'all Christians are spiritually Semites.'"

LITURGICAL REFORM

In the last years of his life he was a leader in the movement to transform more of the church's liturgy into the language of the people so that they might act like adults in the house of worship. He actively tried to arouse an interest in the problems being faced by fellow Christians in South America.

His interests were as catholic as the church and that is why it took Jim Shaw a 274-page book to write about them.

Not long before his death, George Bernanos came to see him. When Bishop O'Hara asked about the attacks Bernanos made on Catholics in his books, the author of The Diary of a Country Priest was quick to justify himself.

"When I was a boy in school," he said, "I would doze over my lessons. The teacher used to come along and rap my knuckles and I would wake up and study. In my books I am trying to wake up a sleeping body of Christians."

Bernanos and Archbishop O'Hara were strong opposites—Bernanos fiery, impatient, and biting; the archbishop, patient, diplomatic, and always eager to listen.

In his own gentle, never faltering way, Archbishop O'Hara spent 51 years trying to arouse the sleeping Christians of North America.

North Brookfield Poultry Farmer Honored as "Great Living American"

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1957

Mr. PHILBIN. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I insert an excellent article from the Boston Daily Globe by its noted writer, Mr. Joseph F. Dinneen, Jr., touching upon the award to my friend and constituent, Mr. J. J. Warren, who recently received the United States Chamber of Commerce award as one of the great living Americans.

Breeder of a crossbred hen which established a new world's record for egg laying, Mr. Warren was chosen, not only for his breeding achievements, but for his outstanding accomplishments in 35 years as a successful, noted poultryman.

I may say that I am very proud of the wide recognition Mr. Warren has received in being selected as "a great living American" because he so highly merits that distinction and honor. Through the years, by reason of his hard work, perseverance, ability in his field, tenacity of purpose, and the high quality of his citizenship, he has won the respect and admiration of all those who know him.

Mr. Warren's story is an American success story founded in hard work, ambition, capacity and enterprise. It is triumph, not only for Mr. Warren, but also for the fine community in which he lives and works. It is evidence of the fact that America is a land of opportunity where men are usually judged on their merits and can rise to the top in competition.

Mr. Warren has been a great and successful competitor and the people of my district and State join me, I know, in heartily congratulating him for his remarkable record and wishing for him and his family every measure of continued success and happiness for the future.

The article follows:

[From the Boston Daily Globe of April 18, 1957]

NORTH BROOKFIELD POULTRY FARMER HONORED AS "GREAT LIVING AMERICAN"

(By Joseph F. Dinneen, Jr.)

J. J. Warren, a hard-working poultryman who has lived in the comparative obscurity of his North Brookfield farm for most of his 64 years, was catapulted into the national limelight last week.

A United States Chamber of Commerce announcement issued in Washington, D. C., reported that J. J. Warren was 1 of 9 chosen to be honored as a great living American.

The North Brookfield poultry farmer found himself in select company.

The other eight chosen:

Movie magnate Cecil B. DeMille.

Secretary of the Treasury George M. Humphrey.

Former Ambassador to Italy Clare Booth Luce.

Olympic sprint champion Bobby Morrow.

Artist Norman Rockwell.

Mental health pioneer Dr. William C. Menninger.

Labor columnist Victor Riesel.

Lt. Col. Frank K. Everest of the Air Force.

Breeder of a crossbred hen which established a new world's record for egg laying, Warren was singled out for honor because of his outstanding contribution in the field of agriculture, and, more precisely, for his accomplishments in 35 years as a poultryman.

Warren reacted much like any person caught by surprise. He showed a quizzical, doubtful, "Who me?" look when first informed of the high honor.

He professes the first he knew of the award was on March 6 when he received a letter from the United Chamber of Commerce informing him he had been selected as one of the great living Americans.

The poultryman said he had no idea how his name had been placed in nomination for such an award.

Warren said the letter informed him he had been chosen as one of the select group who "during 1956 made a unique and distinctive contribution to our American way of life under our system of democracy and free enterprise."

A panel of judges, he was told, selected him for recognition "because of your achievement in developing the hen which established a new record for an individual crossbred hen in the National Egg Laying Contests for 1955–56, symbolizing the increasing productivity in agriculture."

The awards—first ever made—will be presented by John S. Coleman, retiring president of the chamber, at the 45th annual meeting in Washington, D. C., April 29.

Warren will be there. He wrote Coleman recently, "It was with a deep sense of pleasure and humility that I read your letter of March 6. To be selected as one of the "Great Living Americans" of 1956 is such a signal honor that it is difficult for me to find words to express my feelings."

Accompanying him to the ceremonies, he said, will be Miss North Brookfield III. The comely miss, he explained, is the Hen of the Year for 1956 and champion hen of the 1955–56 national hen laying contests. The Warren-bred bird laid 342 eggs in a 50-week test.

Miss North Brookfield III, his third top prize bird in the 18 years of the championship contest, currently is in Virginia on the farm of television star Arthur Godfrey. Warren made a gift of the hen to Godfrey after the TV funnyman made mention of her on his program when she gathered national laurels. Warren and Godfrey have never met.

According to the chamber, the nominees for the award were limited to American citizens who "by their own initiative, have made a notable contribution to human progress." A dedicated poultryman, Warren filled the bill in his field.

A native of Batavia, N. Y., he came to North Brookfield with his family when he was only 8. His boyhood was spent on the family general farm which produced milk and dairy products, vegetables, poultry, and eggs.

Following graduation from high school in 1913, Warren went to the Massachusetts Agricultural College (now the University of Massachusetts), graduating in 1917 with a B. S. degree in poultry and husbandry.

After Army service, including a year overseas, he worked in Iowa as a poultry specialist for 4 years, saving enough money to return to North Brookfield where he bought a 22-acre farm which mushroomed to over 300 acres as the years passed.

Warren started with only a few hundred breeding hens but success has multiplied the size of his flocks to nearly 25,000. The estimated yield last year was about 5 million eggs. Two million of the eggs stayed on the farm and yielded about 1.5 million chicks. The rest were sent to market.

Despite the size of the flocks and enormity of the operation, the Warren farm employs only about 30. Modern methods have eliminated the need for more help. The buildings look old and weather-beaten as one approaches, but inside they contain the finest and most modern of equipment.

The operation rests firmly in the hands of the Warren family. Three older boys, Jim, Jr., 28; Bill, 26, and George, 25, are all actively engaged in the business with their father. All live within a stone's throw of the poultry farm.

Two other sons will be active participants when they are older. They are Neil, 16, a junior at St. Johns Preparatory School, Danvers, and Dick, 13, an eighth grader at St. Josephs in North Brookfield. A daughter, Catherine, 12 ("and please spell it with a C") is a seventh grade student.

A devoted family man, Warren says both he and the children "owe a great debt of gratitude to their mother," C. Regina Warren. The children, he said, are especially indebted for "their moral training and assistance in their foundation studies."

The three oldest boys all attended the University of Massachusetts. Warren expects that the other two boys will also attend his alma mater after they complete their high school education.

Winning prizes for outstanding poultry specimens is nothing new to J. J. Warren. The early family home, now converted into an office, is as filled with them as the athletic office of a college.

Warren says he has been sending birds to the egg-laying tests for about 25 years. "Over the years," he says, "we have won many tests. Our Rhode Island Reds and production Crossbreds have made some records that still stand."

In 1938, he said, one of his Reds won the hen of the year award. In 1949, a pen of his Reds set a new all-time production record for Rhode Island Reds and heavy breeds. The hen of the year for 1949 was chosen from that pen.

Last year's "Hen of the Year" honor—third time it was captured—came with the selection of the Production Barred Cross hen at the Northeastern Poultry Producers Council Exposition in Syracuse, N. Y.

The inclusion of the name of J. J. Warren may have cause some puzzled head-scratching in some circles but not to the poultrymen and farmers throughout the country who know his product. The farm has a list of hundreds of customers for their pedigreed chicks.

For the slim, short, bushy-haired poultry farmer, the trip to Washington will be his first vacation in 18 years. A humble, mild-mannered man, he is somewhat awed by the names of the eight others on the list.

But the United States Chamber of Commerce did not lay an egg when they placed the name of poultryman J. J. Warren on the list.

OTHERS CITED

Chosen by the United States Chamber of Commerce as "Great Living Americans," besides J. J. Warren, were:

Cecil B. DeMille—for achievement in motion pactures, notably The Ten Commandments.

Secretary of the Treasury George M. Humphrey—for achievement in Federal tax reforms, particularly in revisin the Internal Revenue Code.

Mrs. Clare Boothe Luce—for achievements in international relations as Ambassador to Italy.

Bobby Morrow of Abilene Christian College in Texas—for achievements as winner of three gold medals in 1956 Olympics.

Norman Rockwell—for achievements as artist as "interpreter of the American scene."

Victor Riesel—for achievements as columnist in labor reporting, particularly his defense of union members against corrupt and oppressive leaders despite threats to his per-

sonal safety. (He was blinded in an assault a year ago.)

Lt. Col. Frank K. Everest of the Air Force—for his "supreme courage" in flying the rocket-powered Bell X2 airplane 1,900 miles per hour.

Dr. William C. Menninger—for achievements as mental health pioneer.

Conference Report on the State-Justice-Judiciary Appropriation Bill

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 28, 1957

Mr. SPARKMAN. Mr. President, it is gratifying that the conferees on the State-Justice-Judiciary and related agencies appropriation bill have reached an agreement so quickly. It is a tribute to the efficiency with which this measure has been handled.

The credit should go to the Senator from Texas [Mr. JOHNSON], the junior Senator from Arkansas [Mr. FULBRIGHT], and the other members of the subcommittee who labored so diligently.

This morning, the distinguished commentator of the New York Times, Arthur Krock, commented on a statement made by the junior Senator from Arkansas in connection with this bill. He pointed out that the words of the Senator from Arkansas carry great weight because of his studious, longtime concern with foreign policy.

I ask unanimous consent that the article be printed in the Appendix of the RECORD in the hope that it will be read by every Senator.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MORE PROOF THAT FORESIGHT MAY BE VAIN
(By Arthur Krock)

WASHINGTON, May 27.—The comments on the Taiwan riots that were made today by Senator FULBRIGHT, one of the most responsible, effective, and early champions of free world collective security, furnish new evidence that unexpected events can threaten the most careful planning. The riots and their concentrated show of anti-Americanism, said the Senator, are still another proof that the United States Information Agency has failed to popularize American policy, even with such recipients of our lavish help and protection as the Chinese on Taiwan.

FULBRIGHT made this observation in connection with criticism of Abbott Washburn, a USIA official, for issuing a statement designed to promote a restoration of the Agency's fiscal 1958 appropriation that the House cut to $106 million, from the administration's request of $144 million, and the Senate to $90 million. The statement, asserting that the full reduction would cripple the agency and bestow important benefits on the Soviet Union, was issued as House and Senate conferees prepared to fix the final amount of the USIA appropriation, a time-honored stroke of executive lobbying that always angers some group in Congress.

That was not the important aspect of the incident, because carefully timed executive budget lobbying is conventional and will go on forever. The importance is supplied in this instance by the identity of the congressional critic, and by the reminder of the impact of the unforeseen that is implicit in his use of the Taiwan riots to point up the criticism.

THE FULBRIGHT BACKGROUND

1. The junior Senator from Arkansas is a leader of the small bipartisan band that helped to substitute internationalism for isolationism as United States policy. As a young Member of the House he proposed, and the House on September 21, 1943, approved, the Fulbright resolution that gave early and powerful impetus to this fundamental change. The resolution called for "the creation of appropriate international machinery with power adequate to establish and to maintain a just and lasting peace among the nations of the world, and as favoring participation by the United States therein."

FULBRIGHT is also the author of Public Law 584, the legislation by which teachers and students are exchanged among many nations by means of fellowships. It is the cultural counterpart of the free world collective security policy for which the Senator labored as a pioneer. Against this background his adverse judgment of the USIA acquires special influence with his colleagues. This influence was strengthened with the Democrats by a recent charge that the New-Fair Deal had been "in the grip of an alien ideology." That was publicly said by the Administration official who obviously should shun partisanship more than any other—Arthur Larson, the new Director of the USIA.

2. The Communist propaganda agency may have had a hand, and probably had, in the anti-American riots on Taiwan and in the nonviolent Japanese demonstrations against the United States. The military trials that were the occasions for these incidents automatically opened a season of happy hunting for Communist troublemakers.

THE FACTOR OF TIMING

Nevertheless, the resentment displayed against the large American contingents seemed to spring from a feeling that was more than ready to be organized for violence. And this display on Taiwan and in Japan, coming at a time when Congress and the President were in a dispute involving the efficacy, cost, and useful duration of the mutual-security program, was certain to enter the dispute and play some part in the ultimate decision. Hence, the events belong in the category of unforeseen events that have damaged apparently perfect plans and now and then have cast them on the scrap heap. So it could develop that the administration's mutual-security program, particularly that part which is assigned to the USIA, will be restricted more than it would have been if the Taiwan riots had not occurred at this legislative juncture.

Whether or not that is the consequence, it was an enlightened and avant garde American internationalist, Senator FULBRIGHT, who made clear today his belief that the riots supply another argument against the appropriation of more than the Senate's $90 million for the Information Agency, and another reason why it should be put under the State Department with a revised code of procedures.

Timing, by blind chance or by design, is ancient among the factors that determine the courses of humanity. It has swayed legislative battles, and has turned the tide of war. The tropicallike thunderstorm in the late afternoon and night of June 17, 1815, disastrously slowed Napoleon's pursuit of Wellington, whom Ney, disregarding the Emperor's message, had allowed to begin his retreat unmolested.

The Taiwan riots will not affect the administration's foreign program as the rain did Napoleon's plan of battle at Waterloo. But they bring sharply to mind the ever-present perils to the best-laid plans of mice and men.

Lease-Purchase, Also Called Profit-and-Lease, Principle Applied by Some States To Lick School Construction Problem Themselves Without Federal Government Aid

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. CRAMER. Mr. Speaker, it is interesting to note by a recent article in the May 26 Washington Star, which I am including in the RECORD, that the States of Maine, Pennsylvania, Georgia, Wisconsin and Indiana have passed legislation to apply the lease-purchase—which is also referred to in the States as a profit-and-lease act—principles to solving the schoolroom shortage problem locally without relying on the Federal Government to pass school construction grants.

It is refreshing to see these States evolve a self-help program within the States and it is interesting to note that the principle employed closely approximates the Federal Lease-Purchase Act of 1954 passed by the 83d Republican Congress in its effort to meet some of our post office and Federal building needs without direct construction appropriations, but rather with the utilization of private enterprise and capital. This is the Federal act that expires by July 22, 1957, unless it is extended before that date, and on which Congress is dragging its feet. I have consistently maintained that the responsibility for school construction is a local one and that a majority of the people in this country are willing to accept this challenge—and even more are not willing to risk Federal control or interference with local educational processes through Federal aid intervention. I commend this article to my colleagues and to those States that might find some merit in such a proposal or some encouragement to devise a different one in the knowledge that some States are advancing on their own in meeting schoolroom shortages.

The article follows:

ALTERNATIVE TO FEDERAL AID—INDIANA HAS NEW SCHOOL CONSTRUCTION PLAN
(By Phil Yeager)

Indiana has a notion that it can get the schools it needs without any particular help from Uncle Sam.

At least the Hoosiers have come up with an alternative to the Federal aid concept—an alternative which, if it works, might set a pattern other States will want to follow.

A lot of ingredients are mixed up in the Indiana formula, but the major ones are:

A system of private financing designed to get around the sluggish bond market and avoid the need for immediate big cash outlays.

A slashing of the legal redtape which hamstrings many States in contracting for new schools.

Unique teamwork between designers and builders in providing, at low cost, the flexible, modern schools demanded by the future.

Legislation begun by the Indiana General Assembly in 1955 and completed at the cur-

rent session a few weeks ago laid the groundwork for the Indiana plan.

Under the old system, a locality wanting a new school first acquired the necessary site. Then an architect drew plans for the school on speculation. If plans were approved by the school board, construction bids were asked. If and when bids were submitted within the desired financial limits, bonds were issued to finance the building. If the bonds sold, construction began.

Many States today operate in that fashion.

A PACKAGED DEAL

Under the new Indiana plan, a district wanting a new school advertises its intention to build with a description of what it wants. Bidders submit design and a construction bid combined, which cuts fees as well as costly construction corners. A single contract is let with a company which finances and builds the school, even providing the site if necessary. Component parts of the school are made, and sometimes partially assembled, at the builder's plant and shipped to the site where the school is erected.

Construction time under the new system is likely to be half, or even a third, that of conventional schedules. When the building is finished it is leased by the builder to the school board for a period of years, at the end of which time title passes to the appropriate school authority.

Here is what the State assembly did to get its plan set up.

To cut school costs without sacrificing quality, it passed an offsite construction act which permits the acquisition, assembly, and construction of schools away from the eventual site. The act takes advantage of the economies allowed by prefabrication, but gets around the inflexibility of function often associated with prefabrication by providing for use of component parts which may be assembled according to need, location, size, etc. The parts can be made cheaply but meshed with any plans the school district may have in mind.

The law also authorizes the acquisition of plans, parts, and construction in a single package contract.

To ease financing problems, the assembly passed a profit-and-lease act which authorizes private financing of new schools by permitting school boards to lease sites and buildings through private corporations for profit.

Under this law, school boards contract with private groups to provide the site and school and, at the same time, arrange for their long-term lease. A "fair and reasonable" rental is allowed such groups, the rental being paid by local taxes. Leases may run anywhere up to 50 years, but when they expire the school becomes the property of the community. School boards have the option of purchasing the facilities outright at any time, nominal penalties attaching only during the first 10 years of the lease if the purchase takes place then.

Four other States—Maine, Pennsylvania, Georgia and Wisconsin—are also authorized to make use of the lease-purchase principle. But none of them has advanced to the stage set by Indiana and, apparently, no other State has ventured into this kind of financing.

NEW STYLES IN SCHOOLS

A critical element in the success of the Indiana plan is the development of more economical, more flexible schools. In this respect, parallel endeavors by two of the Nation's industrial giants, Republic Steel and United States Steel, are held highly significant.

During the past few years the steel companies have been working with designers to create flexible prefabricated components which will permit quality construction of the cheaper schools desired.

Republic has developed a pattern based structually on 3-, 6-, and 9-foot component modules; it is a flexible scheme, and it permits a choice of different building materials such as tile, brick, concrete block, and porcelain panel to suit the needs and financial limitations of the builder. A U. S. Steel system is based on all-steel room units; it emphasizes more rapid construction and is somewhat cheaper to build.

Republic is completing the first of its modular schools at Hymera, Ind. U. S. Steel has finished 2, 1 at Gary and the other a parochial school at Emmitsburg, Md.

In both systems costs range between $18,000 and $22,000 per room, whereas the national norm is around $30,000 or more.

This kind of saving, added to the economy of construction time, is expected to more than compensate for whatever cost increase, if any, comes out of Indiana's new private financing system.

Supreme Court Should Grant Rehearing on Girard College Case

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. CRAMER. Mr. Speaker, the Supreme Court is considering the request to reopen the Girard College case and to permit oral arguments and in the light of the considerable public consternation, among many lawyers as well as laymen, over the decision, I call the attention of the House to the editorial in the Tampa Daily Times of May 25 calling for the reopening of the case.

The editorial follows:

COURT SHOULD RECONSIDER GIRARD COLLEGE OPINION

The Supreme Court should consider carefully the trend of public opinion in considering a request to reopen the Girard College case and permit oral arguments.

The Court previously ruled that the college, a private institution specifically endowed for the purpose of educating poor, white orphan boys, must also admit Negro students.

No public funds are used for the college. It is financed solely from a bequest of Stephen Girard. The Girard will has been valid for 109 years.

The Supreme Court based its integration edict on the fact that the Board of City Trusts, which administers the college is a public body set up by the Pennsylvania Legislature. Since the board receives no public funds, it seems that the Court has leaned over backward in its decision.

The will of Stephen Girard had no indication of malice or prejudice in it. There was nothing to show that Mr. Girard wished to discriminate against colored children. In all probability, he would have been delighted if someone else had set up a similar school for Negro orphans.

But he chose as his particular project the creation of a school for poor, white orphan boys. After all, one man's resources can accomplish only so much.

The Court's action will cause each person to wonder if he may specify how the fruits of his life's labor shall be honorably expended after his death.

The board of trustees of the college has pointed out that the Court's April opinion was handed down without permitting representatives of the college to submit an argument.

It is difficult to understand what logic the Justices used in associating Girard College, a completely private institution, with the 1954 opinion that public schools should be integrated.

The Court should grant the college's request to reconsider this case. It should also sample public opinion and sense the widespread and shocked indignation that the Girard opinion has generated.

Traditionally, an individual's last request has been held inviolable. But tradition is faring poorly in Washington these days.

Public opinion is strongly in favor of the Court reverting to the duty of interpreting the law rather than continuing to write new laws.

Are We Wasting Natural Resources?

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. PHILBIN. Mr. Speaker, the rate at which we are utilizing and, in many instances, wasting our natural resources is giving our scientists and sociologists special concern these days. Every American should be concerned.

Some of these experts are of the opinion that we are rapidly becoming a have-not nation in many respects. At the turn of the century we were assured by some of our great steel corporations that we had an inexhaustible supply of iron ore in the Mesabi Range of Minnesota. Notwithstanding these assurances of strongly expressed, cocksure confidence, I am informed that we are now down to mining taconite which is a low-grade 30-percent ore and that we are importing iron ore.

Relatively the same situation obtains in the oil industry. In 1930 when the east Texas field was discovered, it was assumed that we had an indefinite supply of oil. But that has not proved to be the case and we are now in the role of an oil importer.

Is there a national attitude of unconcern for the future? Are we tending to minimize or overlook completely the serious problems of supply of natural resources that we are bound to have to face in years ahead? Have our methods been wasteful and improvident in utilizing these natural resources? Are we doing enough research to replace them when the day comes that they are exhausted? Are we spreading ourselves too thin by exporting large quantities of valuable resources to other parts of the world? What situation will confront us when our resources are relatively exhausted and the comparatively unexploited resources of the Communist world are fully developed?

I pose these questions because I believe they are worthy of careful intensive study and that we are indulging in an unwise luxury when we are deferring our search for appropriate answers. There are many agencies I know that are

charged with some degree of responsibility for conserving and keeping inventory of natural resources and how to develop them. But it seems to me that there should be an integrated study inaugurated by appropriate committees of the Congress on a very broad scale designed to collect the facts relating to the present status of our natural resources supply and make recommendation for their more prudent utilization as well as provide some rational plan for developing satisfactory substitutes for these steadily depleting resources.

I think that the Congress should fully assume its responsibility in this all-vital and all-important field of conservation because at the rate we are going it is certain that the most serious problems lie ahead of us, and we must move to try to cope with them in order to protect the paramount interest of the American Nation and its people.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

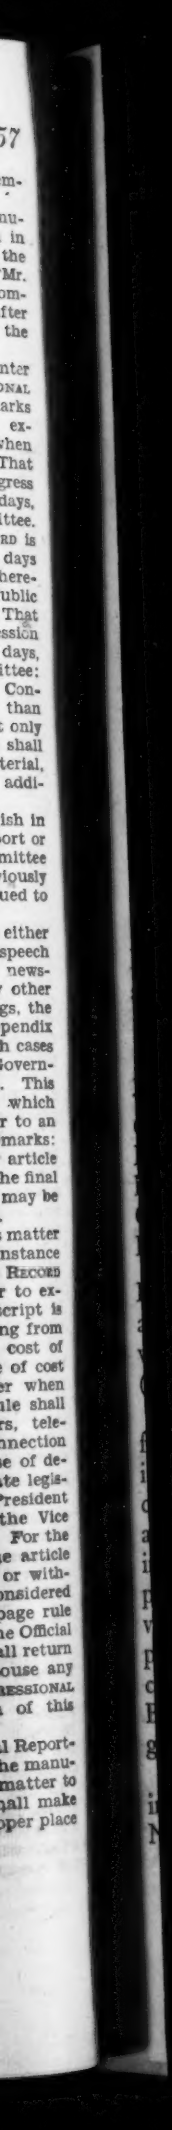
8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.



Appendix

The Red River Canal

EXTENSION OF REMARKS
OF
HON. RUSSELL B. LONG
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 28, 1957

Mr. LONG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me concerning the need for a canal to connect Shreveport, La., and, subsequently, Denison, Tex., and Jefferson, Tex., with the Mississippi River. This address was made before the Red River Valley Association Convention, in Shreveport, La., on April 23, 1957. The growth of the areas in the State of Louisiana now served by waterways has been so phenomenal that it is my feeling that the tabulations contained in this address will be of general interest, since they demonstrate a definite trend in the industrial development of our Nation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF HON. RUSSELL B. LONG, OF LOUISIANA, BEFORE THE RED RIVER VALLEY ASSOCIATION CONVENTION, SHREVEPORT, LA., APRIL 23, 1957

It is certainly a pleasure to have the opportunity to talk to you immediately after hearing the Chief of Engineers tell you that, after a thorough recheck, he finds that the Red River lateral canal has a favorable economic ratio and he is ready to start to work on your project.

You have come a long way in a little over a year with this project, and I think the report you have just heard is a great tribute to your association—to Roy Matthias, to Clif Fairbanks, and to his beloved predecessor, our good friend Fred Webb. They worked hard to bring this project back and certainly deserve a big hand for having done so.

Two years ago Roy Matthias came to me in Washington and said he wanted my help in getting construction started on the Overton Red River Canal. I told him that I would be happy to do all I could, but that I needed help from the people from northwest Louisiana in the way of an expression that they wanted and needed this waterway.

Roy certainly brought that message back to you, because on several occasions I have had that expression—particularly when more than 175 of you came to Washington for the express purpose of urging the construction of a waterway to connect Shreveport with the Mississippi River. Your efforts have not been wasted.

NEED BETTER RATES

Last year, when I spoke before this meeting, I told you that it was my feeling that this section of Louisiana needed a waterway if it hoped to kep pace with the progress of the rest of the State.

I told you that Shreveport was a captive port and, because of this, those who wished to trade with it were forced to pay a premium freight rate because it did not have a waterway. I cited you some examples and I pointed to the other great cities of Louisiana and said that they were getting the lion's share of industry's new money—because they had a waterway.

During the past year, the trend I called attention to then has become even more noticeable. Let's look at the figures that have just been released by the Department of Commerce and Industry of the State of Louisiana:

During 1956, a total of $563 million was invested in the State by new industry. The breakdown indicating the parishes that received the major portion of this investment looks like this:

Calcasieu	$109,000,000
East Baton Rouge	84,000,000
Ascension	80,000,000
Jefferson	49,000,000
Ouachita	65,000,000
Total	387,000,000

On the other hand, let us compare the figures for new industrial development in the seven parishes of the Red River Valley:

Caddo	$4,000,000
Avoyelles	20,000
Bossier	74,000
Rapides	161,000
Natchitoches	----------
Grant	----------
Red River	----------
Total	4,255,000

It is particularly interesting to note that Ouachita received a big share of this investment with $65 million dollars. Just a little over 2 years ago, an official of the largest industry that was using the 6½-foot channel of the Ouachita River came to me with the fear that the Corps of Engineers might be forced to abandon maintenance of this project because of the amount of traffic that was using the waterway. Just as they have done in the case of your waterway, the engineers made a recheck and discovered that industry wanted to use it, but they wanted a 9-foot channel. Based on these findings, we were successful in securing planning money for the already authorized 9-foot channel, and it appears that this was all that was necessary to cause new industry to rush to the banks of this waterway-to-be.

NEW MONEY AND JOBS

The half billion dollars of new money that industry invested in Louisiana during 1956 represents nearly 12,000 new jobs at wages far beyond the average for Louisiana. It does not stop there. So far, during 1956, industry has continued to invest more than $1 million a day and some 2,000 new jobs have opened up in the State this year as a result of an additional investment in excess of $107 million.

The investment that industry has made in Louisiana during the past 15 months indicates that it is anxious to locate in the State, first of all because an unlimited supply of industrial water can be found there, and, secondly, the flood-protection program has advanced to the stage where the people and the factories behind the levees have reasonable assurance that they will not be flooded out every spring. As evidence that industry is attracted by the waterways, the investment figures for the two principal areas of the State served by waterways—the New Orleans-Baton Rouge area and the Lake Charles-Calcasieu area—are continuing to grow by leaps and bounds. The people of that area are clamoring for a wider and deeper channel to the sea and a wider and deeper Intracoastal Waterway to the east and west.

Investments by industry
[In millions]

Parish	1956	1957 January to March
East Baton Rouge	$84.4	$12.5
West Baton Rouge	----------	----------
Iberville	11.0	43.5
Ascension	80.8	----------
St. John the Baptist	----------	----------
St. James	66.5	----------
St. Charles	18.9	----------
Jefferson	48.9	1.4
Plaquemines	2.4	1.7
St. Bernard	26.3	.1
Orleans	6.1	2.6
Calcasieu	109.4	35.9
Total for 12 parishes	454.7	97.7
Total State investment	563.3	107.1
Percent of total State investment in 11-parish Baton Rouge–New Orleans area and Lake Charles area	80	81

THE GOLDEN HORN

The Baton Rouge-New Orleans story is truly a revelation. So astounding is the growth in this area that it has been called the fastest growing area in America.

Industrialists who come to Louisiana see in a hurry what is happening. As Gov. Averell Harriman of New York, pointed out to New Orleans businessmen a short time ago—"the rate at which industries are growing along the Mississippi River between Baton Rouge and New Orleans wil cause those two major cities to expand until they practically meet."

As indicated by the figures above, during 1956 and the early part of 1957, better than 60 percent of new industry located in the area along the Mississippi River, commencing a few miles south of New Orleans and extending upstream a few miles north of Baton Rouge.

The magazine Business Week makes a significant point with respect to the location of industries. It points out that many industries prefer to locate on the east bank of the Mississippi River because it throws them into the southern freight-rate zone rather than to locate on the western bank which has somewhat higher freight rates. Nevertheless, those large industries which move their products primarily by water and pipelines can locate on either bank without penalty. The point to keep in mind is that, when a large corporation prefers the east bank of the Mississippi River to the west bank because freight rates are somewhat more favorable on the east bank, one can begin to understand what a tremendous disadvantage is suffered by an area which lacks the competition of water transportation.

In our lifetime, we have seen the population of East Baton Rouge Parish increase from 30,000 to nearly 200,000. Industry began to flock to the banks of the Mississippi River in the area that provided deepwater navigation just as soon as the flood-control program was well underway. Since 1950, outlays and commitments by industry on the 130-mile stretch of river from Baton Rouge to New Orleans total more than $1 billion. There is no indication that this movement

is even approaching a point of diminishing returns. This is the picture as it exists today:

Starting about 30 miles above Baton Rouge, at St. Francisville, a new paper mill is under construction. It will cost about $35 million.

In the Baton Rouge area, W. R. Grace & Co. is building an $18 million polyethylene plant and United States Rubber Co. is constructing a $5 million resin plant. Esso Standard Oil Co., which claims its Baton Rouge oil refinery is the Nation's largest, the Ethyl Corp., General Chemical and Solvay Process divisions of Allied Chemical & Dye Corp., Lion Oil Co., Copolymer Rubber & Chemical Corp., Shell Oil Co., America Cyanamid, Consolidated Chemicals, Foster Grant, and Nyotex Chemicals have all made plans to boost their present capacities.

Moving southward, in Iberville Parish, the Dow Chemical Corp. is building a $50 million installation that is to begin producing chlorine, caustic soda, and a number of organic chemicals next year. I have been told that the investments this corporation will make in that section will ultimately run to more than $300 million.

A few miles farther down, at Geismar, Wyandotte Chemicals Corp. is constructing a $28 million chlorine and caustic soda-making installation. That represents its first major venture away from its Michigan home plant.

Still a few miles further south, at Burnside, the Olin-Revere Metals Corp. is building a $51 million alumina plant. It is expected that this plant will, in a brief space of time, aggregate an $80 million investment and that this investment will be developed in the very near future.

At Gramercy, just a few miles further south, the Kaiser Aluminum & Chemical Corp. is putting up a $70 million alumina and chemicals plant—its third facility in the Louisiana area. It has been estimated that this plant will eventually represent a $200 million investment.

Ten miles below that point, at Reserve, Webb & Knapp, Inc., has begun the first phase of work on what it eventually intends to be a large industrial community.

Jefferson and Orleans Parishes are running out of industrial locations along the Mississippi River. Because there was little place where industry could locate in Orleans Parish, Jefferson has exceeded Orleans during recent years in acquiring major industrial expansion.

The same is true on the east bank in St. Barnard Parish, to a lesser extent, but Freeport Sulphur Co. has announced its intention to locate a $100 million nickel and cobalt plant at Braithwaite in Plaquemines Parish a bit further below New Orleans.

NEW ORLEANS CLAMORING

Areas that already have the advantages of water transportation understand the problems involved and are constantly behind their delegation pressing for improvements of their transportation facilities. Along the Mississippi River we have one of the best navigation highways in the world. It amounts to an inland harbor almost 200 miles long from Baton Rouge to the end of the industrial area below New Orleans.

As I have pointed out, that area has some of the best transportation facilities on earth, yet New Orleans is pressing for an additional outlet to the sea. Not only has that channel been authorized, but this year I predict that construction money will be made available to commence building this $100 million tidewater channel from the Industrial Canal at New Orleans to the Gulf of Mexico that will create 80,000 acres of new industrial sites to permit this tremendous development to continue.

This great area along the Mississippi River has an unlimited supply of fresh water, good railroad connections, and magnificent water transportation facilities, attracting the largest of American corporate investments, the area is growing so rapidly that construction men estimate that the area will be short more than 20,000 construction workers merely to construct the new industries already projected.

POPULATION TREND

Now let's check and see where our population is increasing as a result of this activity:

Here is a comparison of the population trend in the areas that have water transportation as compared with the Red River Valley which does not have it:

Population trend 1940–56

AREAS WITH WATER TRANSPORTATION

Parish	1940	1950	1956 (estimate)	Percent gain (+) or loss (−) 1940–56
	Thousands	*Thousands*	*Thousands*	
Calcasieu	56.5	89.6	119.2	+111
East Baton Rouge	88.4	158.2	212.5	+140
Jefferson	50.4	103.9	152.2	+200
St. Bernard	7.3	11.1	14.7	+100
Orleans	494.5	570.4	630.2	+27
Total	697.1	-------	1,128.8	[1] +62

[1] Average.

RED RIVER VALLEY

Parish	1940	1950	1956 (estimate)	Percent gain (+) or loss (−) 1940–56
	Thousands	*Thousands*	*Thousands*	
Caddo	150.2	176.5	205.9	+37
De Soto	31.8	24.4	22.9	−3
Red River	15.9	12.1	10.8	−3
Natchitoches	41.0	38.1	37.6	−1
Rapides	73.4	90.6	106.0	+44
Avoyelles	39.3	38.0	38.7	−1
Grant	15.9	14.3	13.8	−1
Total	366.2	-------	436.1	+19

When you note that New Orleans increased by only 27 percent during this period, it is important to keep in mind that New Orleans is limited for expansion and, during the last 16 years, has been spreading over into Jefferson, St. Bernard and Plaquemines Parishes, which accounts for the increase of more than 200 percent in Jefferson Parish during the same period. The overall average increase for the area of the three Parishes of Orleans, Jefferson, and St. Bernard is 60 percent.

Much of the population increase of Shreveport and Alexandria is due to the activities of the Air Force and the Army. It would be well to keep in mind that a major cutback in defense expenditures could have a very depressing effect upon these areas, particularly if we do not call upon industrial expansion to take up the slack.

A good example of the industrial problem can be demonstrated by the situation which exists at our shell loading plant a few miles from Minden, La. We are trying to keep that plant operating in competition with similar plants across the country. Nevertheless, we know that certain of the shell loading plants in America are going to be closed within a year. It is entirely possible that a difference of 10 cents or fifteen cents per shell loaded may be the difference between staying in production or closing down.

Now let us look for just one moment at the freight rate situation at the Louisiana ordanence plant between Shreveport and Minden plant: Rail freight to the Shreveport area is $4 a ton more than rail freight to New Orleans, accounted for by the fact that the rail rates to New Orleans must compete with water transportation. This means that the material to produce a 50-pound shell will cost 10 cents more to be delivered by rail than it would cost to deliver the same thing by rail to New Orleans. If the same material is to be moved across the country to an ammunition depot, it would cost an additional 10 cents extra in order to bring the shell to its destination. This additional 20 cents in cost may very well prove to be the difference between operating that plant and closing it down.

Any major industrialist who is considering placing a plant in the Shreveport area or the Alexandria area would have to keep those factors in mind. He certainly would not want to choose a location where unfavorable rates would mean the difference between staying in business or going out of it.

So it becomes important for Shreveport, Alexandria, and the other cities on the Red River to have a waterway and to have one now. And it becomes important for Jefferson, Tex., to have a waterway and the sooner we can get this part of it started the sooner we can help my good friend, Congressman WRIGHT PATMAN, to extend it to serve the steel mill and other industries in his area.

LOCAL COOPERATION

I realize that we failed at ratify a constitutional amendment that would have set up the means of local cooperation for this project, but I feel that can be surmounted and I intend to go with your able representatives to testify before the Appropriations Committee to see if we can't get you some preconstruction planning money that will actually get this project underway. We cannot afford to lose any more time.

FLOOD-CONTROL FACTORS

There is one more factor to be considered. It is important to consider the drainage benefits that would result from a lateral canal from Shreveport to the Mississippi River. When we have high water on the Red River the water backs up into the low areas. The area around Powhatan in Natchitoches Parish is a good example. High water on the Red River submerges an area approximately 10 miles wide and 25 miles long in that vicinity. Here we have wonderful soil; rich, flat alluvial land—from which periodically the people farming it must evacuate; they must lose their crops, and sell their livestock at a sacrifice.

At the present time Bayou Pierre must be used to drain that area, discharging its water into the Red River north of Natchitoches. When the Red River Canal is constructed, we can then close off Bayou Pierre and drain the rainwater that falls on the south side of the Red River down the canal, emptying it into Red River north of Boyce.

When you recall the terrible flooding and backwater conditions along the Cane River prior to the construction of the Cane River closure, you will, of course, realize what great advantages can result in using this water to our advantage rather than to our harm. Furthermore, with the construction of the additional upstream reservoirs we will have a more dependable water supply along Red River. It will be possible for farmers to pump water from the canal for irrigation purposes during the dry periods. Crops that would be destroyed by drought during the dry months can thus be saved and the land can be made to produce at a maximum. It will not be necessary to lift the water over the levees in order to get to it nor will we have to contend with the constant problem of the channel changing its course as is the case in the Red River.

We are doing a lot of talking about economy and cutting the budget these days. I am heartily in favor of cutting out a lot of wasteful spending in our foreign aid program—but I am not in favor of cutting out our needed and desirable public works. I consider the Red River Canal a necessary

public work, and if it is humanly possible, I would like to see some money made available to General Itschner for the next fiscal year. I don't know whether or not it will be possible to do any "adding" this year, but I will certainly testify in that direction and reiterate to the committee what I have said here—we need this waterway and should start work on it now if this section of our State is to retain its rightful place in the development of our country.

BANK STABILIZATION

And now, I want to talk a little bit about another subject that is very close to your hearts—bank stabilization.

As we reviewed the figures that represent the investments industry is making today in those sections of the country which afford the unrestricted use of a waterway, we come to the realization that our land today is becoming more and more valuable.

The first step in making those waterways available to industry on an unrestricted basis was flood proofing. It cost well over a billion dollars to perform that mission on the lower Mississippi Valley and took a great deal of courage and foresight on the part of the legislators who could see in the years to come the 6 to 1 return on their investment which can be demonstrated today.

The job of flood proofing is essentially complete. A lot remains to be done in the way of raising levees, improving conditions, relieving many areas which it was first thought would have to be forever considered as backwater areas, and do other things to maintain the progress which has been made. The time will never come when the job of maintenance can cease. But we have arrived at the time when we can start feeling the real benefits that this protective system affords.

One of the by-products of the picture of progress is the enhanced value of our land. It has become so valuable in fact that we can no longer afford to give it to the river without a struggle.

In our early days of flood control we let the river take the lead and when it encroached too closely to our lines of defense, we retreated—retreated by means of a setback levee. The figures we have just reviewed bring us to the realization that the land we give to the river forever is possibly the most valuable asset we have in America today, and we can no longer afford to be so wasteful.

Today we have reached another great era in the development of our waterways. We have reached the end of the setback era—we must have the foresight to realize that the time has come to enter the period of complete river stabilization.

America is still a young nation. To match our less than 200 years of experience, some nations of the world have been stabilizing their rivers for hundreds of years before we started. Nevertheless, in our few brief innings we have learned a great deal which others have copied. We have learned enough to embark on a full-scale program of bank stabilization, and we have the end products in sight that will more than amply justify even the million dollar a mile revetment on the Mississippi River.

Many years ago we realized that the Red River was very difficult to tame. We know that from its source near Canyon, Tex., it has a fall of 465 feet. We know it has a bed of sand and that its banks are notoriously unstable. In an effort to tame this fractious river we embarked more than 10 years ago on a comprehensive plan for flood control, and, as one of its adjuncts, the Corps of Engineers has undertaken a complete study of the bank stabilization problem.

I feel certain that the recent rise we have had will provide the engineers the material they need to complete this important study. Perhaps that is the bright ray of sunshine that comes from behind recent rain clouds. Perhaps this recent rise will be not just one more high water but one that will help to point the way to a program that will make it possible for your banks to resist the periodic ravages of your unpredictable river.

It will not be an easy job to sell a complete program of bank stabilization to the Congress. The main reason it will be difficult is because it will be necessarily expensive. However, as the value of our land increases to those who run our Nation's industry, it should become less and less difficult to balance the cost of these works in the scale that we must use as a criterion before we can spend appropriated funds.

I am glad General Itschner is here, because I want to assure him that when his report is ready, on Red River and on the Mississippi, I am ready to launch a full-scale campaign to bring this Nation out of the setback era and into the final phase of flood control—the age of stability. I know the corps is doing its usual outstanding job of achieving completeness of those reports in the least possible time. When the Red River report is complete, I assure him and you that I will do everything in my power to see to it that its findings are put to good use in the shortest possible time.

The Measure of Service

EXTENSION OF REMARKS
OF
HON. CHARLES H. BROWN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. BROWN of Missouri. Mr. Speaker, in these days of troublesome costs on everything, it is high time that someone take cognizance of some free services that have been extended to the Nation by radio and television.

Prior to coming to the Congress, I was closely associated with radio and television people; and I have seen at close range their invaluable contribution to public-service projects, both local and national. No community ever began a charity drive or a civic project campaign that it did not summon the radio and television people. Always they have responded generously with free time and labor. Too often we accept this public service as a public right and give too little thanks to the public-spirited individuals who make it possible. For that reason, I call the attention of the House to an editorial in Television Age, April 8, 1957, which attempts to measure the immeasurable: The public service of one of civilization's great achievements—television.

The editorial follows:

THE MEASURE OF SERVICE

In its second annual survey of public-service broadcasting scheduled by television stations and networks, this journal has learned that the industry continues to rate very high in this category of programming and advertising.

Again during 1956, as in 1955, about 18 percent of the total net time revenue has been devoted to public service. We hasten to acknowledge that a dollar bill is not a very good measuring stick for this kind of research, but it is the one currently in vogue among those public-welfare organizations employing television for such purpose.

The real measure, of course, is found in results—and television may claim properly its share of glory along with the other media and with the many magnificent agencies which are carrying forward this work.

It is foreseeable, now, that infantile paralysis may be stamped out.

Recent news stories have indicated 1957 as the turning point year in the fight against cancer.

Tremendous advances have been made in dealing with heart disease, both in its treatment and its prevention.

Multiple sclerosis. Arthritis. Mental illness.

All of these are giving way to the pressure of public awareness and medical research.

The media, television prominent among them, through the collection of funds and the indoctrination of the citizens at large, are helping in the age-old search for the hidden enemy, and contributing to its vanquishment.

But what of the enemy now seen? The lad who commands his car to kill? The fuzzy-cheeked boy who wanders with the wolf-pack in shadowed streets, a switch-blade his sceptre of defiance? What of these whose name is Cain?

It is eminently evident that television cannot take the place of parents, although it has been accused variously of neglecting that responsibility.

Television, at this stage of the art's development, cannot have babies nor, for that matter, rear them to manhood. But perhaps there is an assignment here for the medium which has contributed so richly to getting out the vote (a record breaker in 1956, which was supposed to be the year of apathy), fighting disease, helping in disaster, extracting blood from the general public, recruiting young men and women for the armed forces, selling bonds, and buying college scholarships for worthy young people.

Possibly the great hope for tomorrow may reside more surely than we know in the disposition that is to be made of the young people who would now appear to be unworthy and that here, more than in any other single prospect of public service, lies the greatest challenge to the greatest medium.

Television has lent its powerful persuasion in the battle to make the heart beat longer, the crippled to walk, and in urging the faithless toward faith.

Can it, with professional assistance, slow the comets on our highways? Can it put a football or a baseball in the hand that holds a hidden weapon? Can it help the parents-who-are help the parents-who-will-be?

Television Age, having examined the record, believes it can—and has not seen the dollar that could measure the worth of that humanitarian service.

Proposed Increase in the Salaries of Postal Transportation Clerks and Other Postal Employees

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 29, 1957

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of the statement presented this morning by Paul A. Nagle,

president, National Postal Transport Association, before the Subcommittee on Federal Compensation of the Senate Post Office and Civil Service Committee.

Mr. Nagle is a newcomer to Federal association leadership in Washington. Yet, in a comparatively short time, he has made a profound impression on the Members of Congress with his knowledge of postal problems, his integrity, devotion to his task, and ability to gain needed adjustments in the working conditions of those he represents.

I ask that his statement of this morning be printed in the RECORD because it seems to me it furnishes a clear, concise, and complete justification for an immediate pay adjustment for postal workers.

I urge every Member of this body to read the statement in full.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF PAUL A. NAGLE, PRESIDENT, NATIONAL POSTAL TRANSPORT ASSOCIATION, BEFORE THE SUBCOMMITTEE ON FEDERAL EMPLOYEES COMPENSATION COMMITTEE ON POST OFFICE AND CIVIL SERVICE, UNITED STATES SENATE, MAY 27, 1957

Mr. Chairman, my name is Paul A. Nagle. I am President of the National Postal Transport Association, representing 30,000 employees of the Post Office Department's Postal Transportation Service.

I appear before you this morning in support of S. 27, to provide for an increase in the salaries of postal transportation clerks and other postal employees. S. 27 was sponsored by Senator JOHNSTON for himself and Senators LANGER, NEUBERGER, YOUNG, HUMPHREY, MCNAMARA, and MAGNUSON. We want first to expres sour indebtedness to that distinguished group of sponsors, which includes the chairman of this subcommittee, for having stepped forward in defense of the country's postal employees.

We believe the increases contemplated by S. 27 are equitable and proper in view of (1) the record of postal employee salary legislation under which incomes of postal employees have lagged substantially both in time and in size behind the levels paid to employees in private industry; (2) the way in which it is extremely difficult for postal management to recruit new employees and retain present employees at the existing rates; (3) the need to restore to postal employees the level or standard of living enjoyed by other people in their respective communities.

Much has been said about the postal deficit. We believe that in these United States at this peak point in the standard of American living, it is appropriate also to consider the economic deficit endured for so many years by postal employees. S. 27 would ease that pressure upon the postal worker.

Much also has been said about postal subsidies. The Postmaster General has taken justifiable pride in identifying certain subsidies and in separating them from the postal deficit. We believe the time has come to apply this same process to the postal subsidy embodied in the salary deficiency of postal employees.

The chairman of this subcommittee has rightly observed that unless industrial prices and wages are controlled, Congress faces the necessity of adjusting the pay of Federal employees. He has observed further that the "meat of the coconut" is that the prevailing $4,300 average postal employee income is simply not enough to support an American family at today's prices.

Under present circumstances there is in our estimation no question but that AFL–CIO President Meany was right when he said Federal employees should not be "expected to subsidize the Government by working for less than a decent American standard of wages."

Mr. Chairman, the spokesman of the Cordiner committee testified on May 21, that it is no longer appropriate to claim that Federal employees receive more fringe benefits than are available to employees in private industry. The witness said: "That statement was right once; it's not right today."

He said that the big start in plans for fringe benefits in industrial operations took place in the 1940's. It was at this precise period that the salaries of our members began their sharpest relative decline. The loss which they have since suffered in comparison to employees in outside industry accentuates even further the salary deficiency under which our people are currently laboring.

The witness for the Bureau of the Budget advised this distinguished committee that the administration policy is to oppose Federal employee salary increases in order to avoid "added demands for existing goods and services." The automobile industry—currently suffering a lower than anticipated sales volume—may be less than exuberant over this condition when it is reflected that of those of our members who report automobile ownership, the average model is 1950 and is in the low-priced three grouping.

The lack of concern by the Post Office Department for the problem of employee salaries came in for its sharpest indictment from a resigning field official. Postmaster Robert H. Schaffer, on the occasion of his leaving the postmastership in New York called postal salaries dismal and asked:

"What kind of a career service is this, where a postal worker has to work 12 to 14 hours daily—8 in the Post Office and 4 to 6 hours on a part-time job—in order to make a decent living?"

You have already been furnished percentages depicting the way in which postal employee salaries have lagged behind the rate of upward adjustment given to employees in private industry. From 1930 to 1956 those of our members who are assigned to terminals had an upward adjustment of 105 percent. Clerks assigned to duty at airport mail facilities had an increase of only 92 percent and clerks assigned to road duty had an increase of 101 percent in the same period. Since comparisons have been made and since those of our members who continue to be assigned to duty in railway post office cars are constantly in contact with employees of the railroads, it is interesting to reflect that by comparison with the 101 percent upward adjustment of our clerks so assigned, the American Federation of Labor-Congress of Industrial Organizations in its collective bargaining report shows that employees of class I railroads have had upward adjustments on an hourly basis of 286 percent in the same period. This is virtually three times the increase that our people have received and it is readily understandable that there would be widespread resentment in the face of such circumstances.

Perhaps the best percentage arguments for postal salary increases come from the Post Office Department itself. In its chart No. 3 used by the Department in testimony on postage rates before the House Post Office Committee on March 19, 1957, there was shown to have been a 450 percent increase in weekly wages in the United States in the period 1932 to 1957. The purpose of the chart was the justification of a postage rate increase, but the 450 percent shows up extremely sharply beside the 92 to 105 percent adjustments in salary accorded postal transportation clerks in the like period.

This subcommittee's distinguished chairman has commented repeatedly that when there are no controls upon industrial wages, industrial income or capital profits, it is improper to seek to impose restrictions upon that small segment of the American community embodied by the Federal employee.

As it has correctively been stated, our members do not begrudge the earnings of industrial employees or industrial management. We believe, on the other hand, that it is perfectly proper to expect that our incomes should be such as to enable us to keep abreast of the rising standard of American living.

We subscribe particularly to the sentiment that the legislation before you, S. 27, is a pay restoration rather than a pay increase.

Mr. Chairman, there has been introduced by the General Counsel for the Post Office Department testimony to indicate that the separation rate in post office employment was 1.1 percent while in manufacturing industry the rate was 3.53 percent, a figure almost 4 times as great as that in the postal service. At the time this testimony was submitted, counsel for the committee observed that there are many intangible factors such as the great reluctance of a long-term career postal employee to forfeit his seniority, his job assignment, his bidding rights, and associated factors in order to secure a more favorable dollar income in private employment. We suggest that perhaps more significant than the overall number of persons being separated would be an accounting of the short term labor turnover in postal service. We believe it would also be appropriate to have an accounting made of the amount of money involved in training the persons who replace those people who quit the postal service. We believe it is inappropriate to consider the entire scope of manufacturing industry which has certain areas in which there are manifestly lower career characteristics than those which historically have prevailed in Federal service.

We think it highly significant to quote here from an article entitled Why Workers Walk Out. The article appeared in Nation's Business, the publication of the United States Chamber of Commerce, October 1956 issue. The article advances the following as an appraisal of replacement training costs:

"Depending on the business and the rank of the employee who leaves, such costs as training, hiring, accounting, advertising, tool breakage and spoilage, overtime of other employees, supervisor's lost time in training new men, lowered morale and higher accident insurance rates swell the price of turnover. Industry and government studies find costs ranging from $36 to $25,000 for a single resignation."

Mr. Chairman, in the considered opinion of the National Postal Transport Association, the decline in the standards of postal service is due to a combination of factors. These include a lack of postal policy and the inability to maintain an effective staff of trained personnel.

In testimony on postage rates before the House Post Office Committee, departmental spokesmen conceded that one-third of all postal employees are now performing service on an hourly rate basis. There is an increasing tendency to dilute the civil service structure through the use of temporary employees without civil service status. We believe that the needs of an efficient postal service dictate that there be a stable force of career postal employees. It is in the interests of attaining such stability that we ask for favorable consideration of S. 27 by this subcommittee.

The Post Office Department claims to possess data to show that the rate of turnover is slight, and it maintains that only in selected areas is there difficulty in recruitment. However, it seems well to recall that in conferences with the Post Office Department on the staffing arrangements which prevail in the Postal Transportation Service, we have on several occasions pointed to the unrealistic procedures by which the staffing needs are related to the two lightest months of the calendar year. We have asked that

a more realistic basis for staffing be developed and that additional regular employee assignments be created to reflect this adjustment. We are told that there is no particular purpose in making such assignments since it is impossible to secure people to accept placement in them. The National Postal Transport Association is unable to comprehend official opposition to a pay increase when recruitment at prevailing rates is impossible.

In the past, as part of the labor education program of the National Postal Transport Association, we have tried to aid in postal recruitment. We have sought to enlist the support of our branch officers on the premise that quality postal service requires staffing by the traditionally high quality of postal personnel. At our own expense the National Postal Transport Association produced a 16 millimeter motion picture which has been used extensively in our recruitment program. The film has been shown widely before schools and college groups, and has been telecast by more than 100 television stations throughout the country.

We find it impossible any longer to endorse the Post Office Department's recruitment efforts. We cannot now recommend the postal service to promising young men seeking positions. Employment in the Post Office Department no longer offers even relatively good pay; its fringe benefits are now only average; any employee pride that existed in the postal service has been lost in declining service standards and in the failure to recognize and protect the human dignities of its employees.

If efficient postal service is to be preserved, it would seem that the only course open to the administration and the Post Office Department—barring an immediate pay raise—is a draft. I do not recommend or advise. I merely state the facts. In critical times, men must be drafted into military service. These are critical times in the postal service. Recruitment has reached an alltime low. Prospective applicants are discouraged by the prospect of an unrewarding future. In all fairness, I feel that I can no longer support any recruitment program for a career that offers such dim prospects.

We suggest it would be far better to begin the process of restoring the stature of postal service by the enactment of S. 27 in its present form.

Mr. Chairman, this distinguished group has displayed convincingly its firm desire to achieve economic justice for the postal employee. We are gratified indeed for the opportunity to have appeared before you to present the views of the National Postal Transport Association.

The Brighter Day

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 29, 1957

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent speech by Ollie Lee, of Walnut Grove, Ala. Ollie was a high-school student at the time he delivered this speech.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE BRIGHTER DAY
(By Ollie Lee)

The history of farming is the story of a continuous struggle. Farmers in all ages have been confronted with problems that challenged their initiative and will power to find a solution beneficial to all. The narrative of how the farming people have met and solved these problems and have moved toward a brighter day forms a brilliant thread in the pattern of human development.

Agriculture has been one of the basic vocations since the creation of man. The first recorded family was a farm family, and from this primeval heritage farming has continued to expand and advance to the position which it holds today. The influence of farming upon the civilization of the world is one of tremendous significance, for truly agriculture is the backbone of civilization.

In the past, as humanity has advanced to higher standards of living, farmers have been instrumental in the forward movement. The earliest farmers had only crude instruments of stone with which to till the soil, and in most cases, only a mere existence was possible. Most farmers were poor, stooped beneath the yokes of poverty and hardship.

But the scene has changed tremendously. Step by step, farmers have progressed toward a better way of life, carrying with them the standard of civilization.

Farmers in America enjoy a standard of living which could well be the envy of previous generations. Modern conveniences have made life more pleasant for the farmers. Modern machinery and modern methods have made it possible for the agricultural world to overcome its natural pests and handicaps and to establish an economic status unparalleled in farming history.

The social life of farm people today holds great possibilities that were unknown a few generations ago. In ancient times farmers had very few social privileges. They were considered one of the lowest classes of people and few of them were fortunate enough to obtain an education.

But today the American farmer has many opportunities for social and intellectual development. Due to his higher standard of living, for more contacts with the rest of the world are possible, and the farmers are better educated and more able to educate their children than in any other time in history.

These advances are the signposts of progress which mark the way agriculture has trodden. Although there have been difficulties to overcome, problems to solve, enemies to fight, and barriers to cross, farmers have steadily moved toward better things.

There are reasons for the progress of any group. When we analyze the world of agriculture, we can see three underlying causes of growth and development that have made possible the standard of living which the American farmer possesses.

First of all, there were, of necessity, inspired motives. Farmers realized their conditions and the problems they had to face. They also caught a vision of the better way of life to which they were entitled and which they could obtain. Within the hearts of the poor tillers of the soil, there was born a determination to rise from servitude and poverty, illiteracy and inequality, and to throw off the yokes of bondage and suppression. The farming class became conscious of the possibilities for improving its condition.

The longing for political equality and social justice has been in the heart of underprivileged man since the dawn of time. But when the Renaissance and the subsequent industrial revolution brought enormous wealth into the pockets of industrialists and tradesmen, and began to raise the standard of living of the upper and middle classes, this longing was intensified among the poor agrarian people. They began to hope for a better day and to seek a solution whereby they might obtain a portion of the pie.

Out of this condition were born ideals that have inspired the people of agriculture to this day. Medieval overlords attempted to suppress these ideals, but the fire of courage, inspiration, and enthusiasm could not be extinguished. Instead, with the passing years and decades, the flame burned brighter and stronger until farmers had reached a respectable position in the world.

The second impetus to agricultural betterment was dynamic leadership. As long as farmers were without an inspired leader to champion their cause, you may be sure there was little accomplishment toward improving their condition. But among the farming people have arisen leaders with vision and determination to pioneer the way of advancement for the noblest class of people on earth.

The third condition to social and economic progress is unity and cooperation. By banding themselves together in unions, cooperatives, and other agrarian organizations, they have produced great changes in the political and economic fields for their mutual benefit, and, consequently, for the benefit of their Nation as a whole, for what is good for all of America's farmers is good for all of America.

Thus we see how the world of agriculture has come up from the peasantry, poverty, and political inequality that once ruled its ranks to its better position of today. However, even though we have made great progress in the past, we, as farmers and future farmers, have now come to another place of challenge. We must not be content with the achievements of past generations, but we must meet the problems of this hour with the same sincere determination and courage that has brought agriculture thus far.

Today the American farmers are facing a crisis which holds dire threats comparable to the situation that existed during the great depression in the early 1930's. In the past few years conditions have accumulated under which farmers have been oppressed, bound, and crushed until now they face a situation that is relative to the despotism of the Middle Ages. Economic hardship has come upon the majority of our grassroots farmers, bringing with it the threat of financial insecurity and social degeneration.

This crisis has been developing for several years. There are many factors that, when accumulated, form the problem of American farmers.

One of the most important of these conditions is the economic vice in which the farmer finds himself today. Rising costs of goods a farmer must purchase and falling prices of his produce are narrowing the margin of living upon which the farmer depends, placing him in an economic death squeeze.

Surpluses are soaring upward, acreage allotments downward, and at the same time, millions of dollars of taxpayers' money, which farmers must help pay, are being spent on land reclamation to be used by wealthy landlords to produce more surplus. The farmer is caught in a gigantic whirlpool that threatens to strangle the American agricultural economy. The situation is so serious that it has driven thousands of farmers off their land in search of a living, and it constitutes a threat to our entire Nation.

What is the reason for a class of people so noble, so brave and persistent, so thoroughly American in principle as are our farm people, being down in the gutter? No group in America is more deserving of economic liberty and equality than is her agrarian people. But selfishness and greed have bound the farmer to the slave block, there to lie at the mercies of a power-mad, money-hungry coalition of crooked politicians, selfish business, and corrupt labor unions.

The same kind of action that brought about the elevation of agriculture above its problems and difficulties in the past is necessary for the present crisis. The hour demands inspired farm programs, visionary leaders, and united, cooperative effort.

In conclusion, I appeal to you as citizens of America; the time has come for an all-out effort to liberate the American farmer from

the dungeons of poverty, exploitation, and injustice. He must be restored to his rightful place of economic liberty and equality for which he has so valiantly fought in the past. By doing this, we can avert a major calamity that faces America, and we will open the door to a glorious future and usher in the brighter day for all.

Development of Indian Resources

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Wednesday, May 29, 1957

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dated April 18, 1957, which I received from Commissioner Glenn L. Emmons of the Bureau of Indian Affairs, and a letter dated April 25, which my colleague [Mr. MANSFIELD] and I wrote to Mr. Emmons. My colleague and I believe—and I know many other Senators share this view—that one of the best ways to help the Indian people develop their own human resources and tribal resources and, incidentally, become taxpayers instead of tax recipients, is through the establishment of industry and more jobs in Indian country. Unfortunately, as the facts in our letter show, the Indian Bureau is not as enthusiastic about industrialization as it is about the relocation program, which is the only and inadequate suggestion which Commissioner Emmons makes concerning the plight of the Indians on Hill 57 near Great Falls, Mont.

At this time I commend the senior Senator from Illinois [Mr. DOUGLAS] for his keen awareness of the possibilities for developing Indian resources through passage of S. 964, the area redevelopment bill, which I was pleased to cosponsor. The Senator from Illinois has set aside a full day of hearings on S. 964 before his banking and currency subcommittee to consider the Indian assistance aspects of this tremendously important legislation. The date of this hearing will be May 14. I thank my good friend from Illinois for leading out in this important effort to deal justly with the first Americans.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE,
COMMITTEE ON INTERIOR
AND INSULAR AFFAIRS,
April 25, 1957.

Mr. GLENN L. EMMONS,
Commissioner of Indian Affairs, Department of the Interior, Washington, D. C.

DEAR MR. EMMONS: Several weeks ago you were informed of the willingness of citizens of Great Falls, Mont., to donate land on hill 57 for the purpose of establishing a reservation there. In your letter of April 18 you state that this suggestion could not be accepted by the Bureau.

You also ask that legislation to create a new reservation not be introduced. Your suggestion regarding Hill 57 and the Indians there is relocation.

"We will," you wrote, "pledge to offer to every eligible Indian who applies in person at his reservation the special relocation assistance to find a better way of life in areas where it is really available to those who are motivated to meet this challenge."

You gave no alternative to relocation, a program for which those Indians on Hill 57 who are not enrolled members of a tribe are ineligible.

As for those Indians who would be eligible, we would like to point out to you that, while we support the program, relocation in itself is no answer to the problems on Hill 57 and on the reservations of Montana and other States. Many Indians who want to relocate will do so whether or not there is a special relocation program. Others choose not to leave the land of their fathers. They are willing and anxious to work, if job opportunities are available nearby, and they have proved themselves to be skillful and competent workers in those few areas where jobs have been made available.

The Federal Government and the Indian Bureau, Mr. Emmons, do not fulfill their obligations to the Indians by offering only relocation, which frequently means moving from a rural slum to an urban slum. The Federal Government and the Bureau which you head have further obligations to our Indian citizens. One of the best ways to help the Indian people develop their own human resources, and incidentally become taxpayers instead of tax recipients, is through the establishment of industry and more jobs in Indian country.

We are aware of the modest efforts in this field by the Indian Bureau. If your Department supported industrialization with the enthusiasm with which it supports relocation, there would be no cause for complaint.

However, we note, for example, that the amount of money loaned to tribes for purposes such as industrial development has steadily decreased under your administration. As of June 30, 1956, the outstanding loans receivable and the cash balance in the revolving loan fund under the jurisdiction of your Bureau totaled $15,548,591. The amount of money on loan to the tribes has steadily decreased. The approximate amounts, by year, are: 1952, $11 million; 1953, $10.2 million; 1954, $9.5 million; 1955, $8.3 million; 1956, $7.7 million. What is your explanation of this decrease in the use of available money for development of tribal resources?

Your annual credit report for the fiscal year ending June 30, 1956, states that financing through the Bureau has increased from $22,991,070 in 1952 to $29,961,299. But included in these totals is $8,737,444 from tribal funds in 1952 and $21,216,541 in tribal funds in 1956. In other words some tribes were able to increase their own financing which is commendable. However, many tribes, including several in Montana, have practically no tribal funds. They could put to good use the money which has been steadily accumulating in the tribal loan fund under your administration.

We note, too, that the Indian Bureau has not yet submitted to the Banking and Currency Committee its views on S. 964, the area redevelopment bill which we cosponsored along with Senator DOUGLAS. A departmental report was requested 3 months ago and hearings have been in progress for some time. Passage of this bill would, in our opinion, be of tremendous benefit to Indian tribes, in that the bill would establish a program to attract industry to Indian country and help Indians establish their own industries. We cannot help but contrast your enthusiasm last year for the Indian help features of this legislation with your inaction so far this year.

To refer specifically to some of the industrial possibilities in Montana, we are following with great interest the negotiations for development of a pulpwood industry and establishment of a small sawmill on the Rocky Bay Reservation. We are hopeful that these new industries, which would provide jobs for a number of Indians, can get under way by this fall, and we shall appreciate such help as you can provide in this undertaking.

We would also like to receive from you verification of the statement, made to us verbally by Bureau officials, that arrangements will be made shortly for the northern Cheyenne Tribe to utilize its coal deposits on the Tongue River Reservation.

Along with our House colleagues, Representatives LEE METCALF and LEROY ANDERSON, we are willing and anxious to do all that can possibly be done to help our Indian citizens. We recognize the difficulties and burdens inherent in your task as Commissioner of Indian Affairs and hope that you can, as you suggested to the Indians in your letter of April 18, "meet this challenge."

We shall appreciate an early report from you on these matters, which we can discuss in greater detail at forthcoming hearings on Indian legislation.

Sincerely yours,

JAMES E. MURRAY,
United States Senator.
MIKE MANSFIELD,
United States Senator.

UNITED STATES DEPARTMENT
OF THE INTERIOR,
BUREAU OF INDIAN AFFAIRS,
Washington, D. C., April 18, 1957.

Hon. JAMES E. MURRAY,
United States Senate,
Washington, D. C.

DEAR SENATOR MURRAY: We have had several letters from you since March 21 regarding the establishment of Bureau facilities for Indians on Hill 57 near Great Falls, Mont. While the intentions of some of the citizens of Great Falls, Mont., to find ways and means of alleviating the conditions on Hill 57 are laudable, the suggestion they have advanced to designate this particular area as a reservation is one which cannot be accepted by the Bureau.

This Bureau does not have and cannot assume authority over or responsibility for this particular group of Indians any more than it could over any particular community or grouping of off-reservation Indians in any other part of the country. For years, Indians have been leaving the reservation areas and settling in other communities. Some have settled in metropolitan areas under quite unsatisfactory living conditions. Such situations, like those prevailing on Hill 57, are community problems and responsibilities of the State and its political subdivisions. The Federal Government could not discharge this task.

The many services extended to Indians living on reservation lands, including primarily services which are generally provided to our citizenry through State and local governmental auspices, have been enabled and justified as Federal responsibilities on the basis of Indian residency on trust (therefore tax-exempt) lands. The Bureau of Indian Affairs cannot, and should not, follow the Indian wherever he might go with a full gamut of services which duplicate those offered by local governments on the basis of residency rather than ethnic origin.

We understand that the great majority of the Indians who have congregated on Hill 57 near Great Falls are enrolled at the Fort Belknap and Turtle Mountain Reservations. Admittedly, these reservations are grossly overpopulated in relation to the resources base available there to afford them a living. But the Bureau does offer them alternatives in the form of very generous assistance to relocate in centers of maximum opportunity in a wage economy. Their failure to avail themselves of those services indicates a gravitation to Hill 57 by choice rather than by dint of necessity.

As you are probably aware, the act of March 3, 1927 (44 Stat. 1347, 25 U. S. C. 398d), has been construed to prohibit the establishment of new Indian reservations without enabling legislation by the Congress. Therefore, we are returning the deeds to land on Hill 57 which Messrs. Mallette propose to donate for the purpose of establishing a reservation. We would suggest that legislation not be introduced to create a new reservation, but rather we will pledge to offer to every eligible Indian who applies in person at his reservation the special relocation assistance to find a better way of life in areas where it is really available to those who are motivated to meet this challenge.

Sincerely yours,

GLENN L. EMMONS,
Commissioner.

The Item Veto

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Wednesday, May 29, 1957

Mr. BUSH. Mr. President, there is an editorial in today's issue of the New York Times entitled "The Item Veto." I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE ITEM VETO

In the developing fight over the Federal budget President Eisenhower has twice in recent weeks asked Congress to give him the power to veto specific items in appropriation bills. This is "one simple way to save a lot of money," said the President a few days ago, noting that it would permit him to block expensive public works projects that appeared to be unwise or unnecessary from a national point of view. "If the item veto existed right now I could do some serious expense cutting," the President rather wistfully observed.

As things are, and always have been since adoption of the Constitution, the President must either accept or veto a bill in toto. The Constitution doesn't define what a bill is, nor is there any constitutional provision that denies the President the right to veto a bill in part; but the all-or-nothing principle has become firmly embedded in our constitutional practices. The subject wasn't even mentioned in the constitutional convention, and didn't become an issue at all until the middle of the 19th century. But then the item veto for appropriation bills blossomed forth in the constitution of the Confederate States of America. Georgia and Texas soon followed suit; and today more than three-quarters of the 48 State constitutions grant this power to the governor. In a survey made some years ago the respective governors reported that the system was working well.

Congress, however, has always been jealous of its real or assumed prerogatives, with the result that it has consistently rejected efforts to establish the item veto either by statute or by constitutional amendment ever since this power was first requested by President Grant. In more recent times it has been asked for by President Franklin D. Roosevelt and supported by such legislators as Senators Vandenberg and DOUGLAS—always with the same outcome. There is no ground to suppose that the present efforts of President Eisenhower, seconded by Representative KEATING, of New York and others, will enjoy any better fate.

The compelling reason for an item veto on appropriation bills—that it would permit the President to eliminate extravagant or foolish or merely political pork-barrel expenditures while retaining desirable features of any given money bill—is of course also the basic reason for Congress' resistance. Each individual Member has his pet projects which would be endangered if the President could pick and choose among them all. Opponents of the item veto add that it would give the President too much power and make it easier for him to carry out political reprisals against individual Members.

There is no doubt that the item veto would increase Presidential power; but under the present system the President is hamstrung in his efforts to control expenditures against any Congress that is addicted to logrolling and to porkbarrels—and what Congress is not? Inasmuch as the President and Vice President are the only nationally elected officers of the Government, it is a reasonably safe bet that the President will look at a proposed outlay of public funds with a somewhat more objective view than could be expected of the Congressman in whose district the funds are to be spent. Furthermore, Congress always has the last say anyway if it can muster a two-thirds vote in favor of any vetoed item.

Since the President already has the constitutional power of veto over bills as a whole, it might even be argued that Congress is actually circumventing the President's veto power when it includes different kinds of items in one bill, and that therefore the grant of an item veto to the President would be merely restoring the balance between Chief Executive and Congress as originally envisaged in the Constitution.

Unheeded Prophet

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 29, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the April 18, 1957, issue of The Light of San Antonio, Tex., entitled "Prophet Unheard."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PROPHET UNHEARD

So, you've just shoveled up your Federal income tax, pursuant to the 16th amendment, ratified in 1913 after its proponents vowed it would never take more than a split-fraction of anyone's earnings.

But there was one prophet who warned as follows while the amendment was under consideration:

"A hand from Washington will be stretched out and placed upon every man's business; the eye of a Federal inspector will be in every man's countinghouse.

"The law will, of necessity, have inquisitorial features; it will provide penalties; it will create complicated machinery. * * *

"An army of Federal inspectors, spies, and detectives will descend upon the State. They will compel men of business to show their books and to disclose the secrets of their affairs. They will dictate forms of bookkeeping by which men must keep an account of their earnings.

"When the Federal Government gets a stranglehold upon the individual businessman, State lines will exist nowhere except upon the maps. Its agents will everywhere supervise the commercial life of the States."

The prophet was Speaker Richard E. Byrd of the Virginia House of Delegates, father of the present Senator HARRY F. BYRD.

Few bothered to listen to him.

The Fees Are High

EXTENSION OF REMARKS
OF
HON. FRANK A. BARRETT
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Wednesday, May 29, 1957

Mr. BARRETT. Mr. President, according to press reports, the son of the late Col. Billy Mitchell is making a valiant effort to have the court-martial proceedings against his distinguished father, the late Col. Billy Mitchell, expunged from the records. I hope that he will succeed in his laudable ambition to clear the record of his illustrious father.

In the course of some remarks I made at the dedication of several splendid new dormitories and a dining hall at the Warren Air Force Base in Cheyenne, last Saturday, I referred to the case of Colonel Mitchell. My good friend, Lewis E. Bates, the editor of the Wyoming State Tribune, of Cheyenne, wrote an editorial under date of May 28, entitled "The Fees Are High." It is a strong editorial, and I trust that the Members of Congress will take the time to read it. It is most illuminating and informative. I ask unanimous consent to have it published in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE FEES ARE HIGH

"Bitter" experience has demonstrated "the absolute necessity" of being prepared for every contingency, Senator FRANK A. BARRETT, Republican, of Wyoming, said in his Saturday address at Warren Airbase. As an example of this, he declared:

"Out of all our military people [in the 1920's], only that venturesome fellow, Col. 'Billy' Mitchell, had the temerity and the courage to stand up and tell our whole defense organization that the airplane would play a major part in the defense of the free world, and for that statement he was court-martialed and convicted and discharged, and in the eyes of some of his contemporaries even dishonored.

"Yet today nearly everyone in authority is ready to admit how right 'Billy' Mitchell was and how wrong his accusers."

How wrong were they? The plain answer to that can be found in but a few quotes from the transcript of the Mitchell court-martial, as researched by Columnist Roscoe Drummond. It follows:

Prosecutor: "You say that 'in future wars soldiers will invade by leaping in parachutes from airplanes.' Would you care to reveal who gave you this startling information?"

Mitchell: "Nobody gave it to me. It's quite obvious to anyone with the slightest foresight."

Prosecutor: "Is it your actual belief that the country is vulnerable to attack from the air?"

Mitchell: "In the foreseeable future."

Prosecutor: "Colonel Mitchell, do you have any idea of the width of the Atlantic Ocean?"

Mitchell: "Approximately 3,000 miles."

Prosecutor: "And the Pacific Ocean?"

Mitchell: "I know what you are getting at, and I tell you that it won't be long before airplanes will fly nonstop across both oceans."

Prosecutor: "You say that 'airships traveling 1,000 miles an hour will fight each other in the stratosphere.' Do you have any comprehension how fast 1,000 miles an hour is?"

Mitchell: "Of course I do."

Prosecutor: "Do you know it is faster than the speed of sound?"

Mitchell: "Approximately 250 miles faster than the speed of sound."

The prosecutor then recalled that Colonel Mitchell had said he foresaw an air attack on Pearl Harbor and asked: "Does your crystal ball reveal by what enemy this mythical attack will be made? By whom, Colonel, by whom?"

Mitchell: "The attack will be made by the Japanese."

The Army did its level best to picture Colonel Mitchell as a "crackpot," and still with us are many who condemn rebels and their supposedly crackpot ideas.

But all should reflect on the colonel's remarkable foresight, the prophecies—which have come true—labeled as fantastic when he made them.

Must we be forever admitting, as Senator BARRETT said, "that experience is a good school but the fees are high"?

What Price Civil Rights?

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 29, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "What Price Civil Rights?" from the May 14, 1957, issue of the Atlanta (Ga.) Journal.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT PRICE CIVIL RIGHTS?

It is beginning to appear that the Eisenhower administration's civil-rights proposals may not make it through Congress this session.

This is fine for any hasty, politically inspired move in this field would serve only to further confuse the issues and worsen the strained relations between the two races.

It is also good, for at this point of the debate there is apparent confusion as to what is and what isn't a civil right.

In their haste to sew up the critical Negro vote for the next election, sponsors of the present bill seem ready to jettison that most basic of rights, trial by jury.

And where, as Senator MCCLELLAN, of Arkansas, so pointedly reminded a labor-conscious Senate subcommittee on constitutional rights Monday, does the right to work fit in the scheme of things?

Debate and critical examination of this administration proposal by those well versed in constitutional law have exposed it for what it is—politics. Not only that, but politics of the kind that would risk the destruction of our whole system of constitutional safeguards for the sake of a few more seats in Congress.

At this stage of the game Congress seems solidly for civil rights in general. But the enthusiasm of each Member for each right varies in proportion to its impact on the voters of his constituency.

Taxes and the Future

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 29, 1957

Mr. MARTIN of Pennsylvania. Mr. President, American people are now considering taxes. There is a tendency to try to shift the burden from one level of government to another. Local government is attempting to secure grants from the States, and the States want grants from the Federal Government. It all comes out of the same pocket.

Industry is giving much consideration to, and changing from one location to another.

The Pittsburgh Sun-Telegraph of Monday, May 27, contains a very interesting editorial on the subject "Look to the Future." I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LOOK TO THE FUTURE

Repeal of Allegheny County's tax on machinery was in a fair way to be accomplished until the county commissioners reversed their original approval of the plan and came out against it.

The Pennsylvania Economy League had recommended that the tax be eliminated gradually over a 5-year period. The purpose was to make the county more attractive to industry.

Then came a storm of protest from manufacturing communities. They said loss of the machinery taxes would ruin them.

A counterproposal now has come from the county's big manufacturing corporations.

They suggest that to compensate the county and municipalities for the loss of machinery taxes the corporations would be willing to have taxes now levied on their machinery added to their real estate taxes.

What they are concerned with is that new machinery which they may acquire shall be free from taxes. They are looking to the future.

Raising companies' real estate assessments was the plan followed in Beaver County when the machinery taxes were abolished there. It has worked out very successfully.

Taxes on machinery are a bonanza to the citizens of great manufacturing towns like Duquesne, Homestead and Aliquippa.

The citizens are loath to surrender this source of revenue. They scoff at threats that companies oppressed by high taxes may move elsewhere.

They feel that the companies are so firmly established in their communities that it would be impossible for them to leave and that the companies are at the mercy of the taxing authorities.

In cases like this it is necessary to look to the future.

We are in an era of great industrial expansion and all large manufacturing companies contemplate the construction of new plants.

Will such companies establish new plants in Allegheny County if they can obtain exemption from machinery taxes elsewhere?

An answer to this may be found in a letter which has been made public by General Motors, the world's largest manufacturing corporation.

The letter is from President H. H. Curtice to Gov. G. Mennen Williams of Michigan.

General Motors, Mr. Curtice writes, considers Michigan its home State. The focal point of its operations is there.

Forty-five percent of General Motors's physical investment in the United States is in Michigan and about 45 percent of its payroll disbursements go to Michigan employees numbering more than 211,000.

But Michigan now is taxing General Motors at a higher rate, Mr. Curtice asserts, than any other State except one. He does not name the other State, but goes on:

"Even the present level of business taxation in Michigan already has led us to locate plants in other States where the taxes per General Motors job are less than one-half of the present taxes per job in Michigan.

"This also will be taken into consideration in the placement of additional plants."

Anchored as it is in Michigan, General Motors will not hesitate to establish new plants in other States to escape oppressive taxation.

Is there any reason to suppose that the great companies supposedly anchored in Allegheny County would continue to submit to taxes which they could escape if they would build their new plants in other counties?

When one reflects on the huge benefits direct and indirect that everybody in a community derives from a great manufacturing plant established there, one should think twice before jeopardizing such an asset.

Luther Patrick: He Bore His Fellow Man's Burden

SPEECH

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1957

Mr. ROBERTS. Mr. Speaker, the Nation and the State of Alabama lost one of its most distinguished citizens Sunday night when the Honorable Luther Patrick, former ninth district Alabama Congressman, died in Birmingham following a long illness.

Luther Patrick served four terms in this House, 1937–43 and 1945–47. He was a stanch Democrat and a devoted statesman, beloved by his fellow Members and all who knew him.

Luther Patrick's motto was "Bear ye one another's burdens—never mind about your own." These were not idle words with Mr. Patrick; they were his creed by which he lived day by day.

He helped to lift others' burdens by a remarkable sense of humor, a keen wit, and a clearly wielded pen. He wrote three books and was working on another on folklore when he passed away. He loved to write poetry, and the people of Alabama loved to read what he wrote.

Even during the latter part of his life when he was confined to a wheelchair

with crippling arthritis, Luther Patrick did not turn aside from his motto. He lifted others' burdens, never minding his own, with his writings and his Will Rogers type of humor.

I am sure that I speak for the Members and others who knew him when I say that we grieve the passing of Luther Patrick. His life carried out with faithfulness the words of Saint Paul, from which Luther Patrick's credo of life was taken: "Bear ye one another's burdens, and so fulfill the law of Christ."

Purchase and Stockpiling of Strategic Materials

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 29, 1957

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials which appeared in the May 8 and May 22, 1957, issues of the Miles City (Mont.) Star. The editorials are entitled "This Promise Needs Keeping" and "Perfidy Threatens Defense."

I call particular attention to these statements in the editorials:

While the defense demand for tungsten appears to have multiplied 3 to 4 times in recent months, a little group of willful men must accept the grave responsibility for cutting down domestic production * * *. There is no money because the House Appropriations Committee has welshed on its 1956 pledges, and despite the Senate's rollcall vote of 64–17 to provide the promised funds, continues the congressional stalemate.

"When," ask the editors of the Star, "will Congress decide to keep its word?"

I ask that the editorials be printed in full in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Miles City (Mont.) Daily Star of May 8, 1957]

THIS PROMISE NEEDS KEEPING

Rejection by the House of a $30 million promise for continued purchase and stockpiling of strategic minerals—notably tungsten—threatens to stall in its tracks defense efforts to develop the heat-resistant metals we must have for faster planes and lightweight radiation shielding essential to atomic aircraft.

Back of this story is a perfect example of the absurdity of passing legislation requiring money to implement it—and not providing the money. Last year Congress passed interim legislation authorizing $90 million for the purchase of tungsten, the funds to come from subsequent appropriation bills. Just before knocking off for the campaign, the solons provided $21 million to support these purchases for the balance of 1956—with the promise of $30 million more as soon as the new Congress convened in January, with the balance to follow in the 1958 budget.

But the unforeseen economy drive touched off by public resentment of President Eisenhower's record-breaking budget, has caused the House to renege and cut the minerals purchase item out of the $335 million urgent deficiency appropriations bill which the Senate passed in February. A Senate majority, outraged at what it considered a shocking breach of faith on the part of the House restored this item by a rollcall vote of 64 to 17. But the House conferees again bypassed the promised funds and the future of strategic metals remains deadlocked.

Under the original strategic minerals legislation, the United States had just reached the point of self-sufficiency in domestic tungsten supply when the House action had the effect of wiping out this hard-won advantage. Thousands of hardrock miners are idle today and the mines are closing one by one—just at a time when tremendous increases in our need for tungsten are being developed.

Without the Government purchase program, America is at the mercy of foreign producers since the world price of these metals is too low to support American wage scales. Without the program there is hardship for our miners and loss to owners. But most important of all, at a time when our tungsten requirements are bound to increase tremendously if we are to keep pace with progress, and when the failure of our tottery world peace could shut off imports, is Congress going to say that $30 million—a little less than the cost of four jet bombers—is too high a price for survival?

The merits of this case were settled last year. When will Congress decide to keep its word?

[From the Miles City (Mont.) Daily Star of May 22, 1957]

PERFIDY THREATENS DEFENSE

Tungsten is the stuff that seems most likely to break the "heat barrier" that has halted the efforts of engine and plane builders to press further into supersonic speeds. It is anticipated that alloys containing up to 50 percent, or more, of tungsten will provide metals that will resist the heat of skin friction above Mach 2, and extend the life of jet engines (costing up to $600,000 a copy) 4–to 5 times. Tungsten is today's best hope of lightweight radiation shielding to make possible atomic aircraft.

Thus, while the defense demand for tungsten appears to have multiplied 3 to 4 times in recent months, a little group of willful men must accept the grave responsibility for cutting down domestic production. Our stockpile, officially estimated last June as good for 6 years, now in the light of increased demand may contain but a year-and-a-half's supply. As matters stand we must look overseas for more. The world's largest source of supply is in Communist China and other principal sources are either behind the Iron Curtain or close to it.

That we do possess the natural resources to make the Nation self-sufficient and immune to foreign blackmail has been amply proved under the Mineral Purchase Act of 1953, extended in 1956 to run through 1958. This legislation authorized a support price, in lieu of a tariff, to permit the opening and operation of mines to produce strategic materials—notably tungsten—in competition with low-wage foreign countries.

The effect, in the case of tungsten, has been to develop domestic production adequate to our needs—if it is permitted to continue. But, right now, at a time when tungsten is probably the most critical of all defense metals, hard rock miners are idle and mines are closing—because there is no money to support the act. And there is no money because the House Appropriation Committee has welshed on its 1956 pledges, and despite the Senate's rollcall vote of 64 to 17 to provide the promised funds, continues the congressional stalemate.

This is another instance of the folly of legislation that authorizes money, but does not appropriate it. The 1956 extension authorized $91 million. A subsequent appropriation bill provided $21 million to support the act through 1956, with the lawmakers promising $30 million more when the 1957 session opened in January, with $40 million more in the 1958 budget to complete the obligation.

Discouraging and unjust as this double-cross is to the miners and operators, its threat to the Nation's safety is terrifying. The House, unless it acts quickly to restore the promised funds, is handing over to the Red commanders of the world's greatest submarine fleet control of the free world's strategic metals.

Renegotiation of Contracts

EXTENSION OF REMARKS
OF
HON. WILLIAM E. HESS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. HESS. Mr. Speaker, William M. Allen, president of Boeing Airplane Co., delivered an address on May 24, 1957, before a meeting of members of the aircraft industry and their distinguished guests from the armed services. His address was entitled "Fundamentals Affecting Our Security." Under leave to extend my remarks I include that portion of the address which concerns negotiation and renegotiation of contracts:

Let us come next to the matter of earnings. In speaking of earnings, I am not pleading the cause of stockholders. Rather, I shall consider the relationship of earnings to our objective of making certain that our best efforts are being directed toward the maintenance of our security.

There is a feeling often evidenced in the halls of Congress that the way to make sure that the taxpayer is getting the greatest value for his dollar is to keep the profits of the defense contractor as low as possible whether through the process of negotiation or renegotiation. The same philosophy exists with respect to the salaries of personnel in defense industries and our military establishments. The lower they are, so the reasoning goes, the less our defense is costing. This philosophy possibly could be supported if our sole occupation within this country was to prepare for, or engage in, war. However, when our military establishments and our defense industries are in competition with commercial enterprises for people, and our defense industries are in competition with commercial enterprises for capital, I find this philosophy to be completely fallacious.

Let us look for a moment at this problem as applied to our military services. Recently, as I was boarding a commercial airliner near Loring Air Force Base, I was introduced to several young Air Force captains who were boarding the same plane. It developed that they were on their way to Wichita to ferry a B–52 from Wichita to Loring I have no doubt that these fine-looking young officers were highly competent. However, in light of the responsibilities involved in their mission, it was interesting to contemplate the disparity between the tangible recognition given to their responsibilities and the recognition of similar or lesser responsibilities within private industry. I am quite sure that the compensation of the pilot and the copilot of the twin-engine transport on which we were riding substantially exceeded that of the two captains going out to return with a B–52.

With respect to salaries in defense industries the real question is whether the quality of the people involved is what it should be. Even our Government cannot afford mediocre management in companies from which it is buying billions of dollars of defense equipment each year. There is no simpler method of securing less defense per dollar than by poor management in our defense industries.

In regard to the earnings of defense industries, I know that this group is quite well versed on that matter. You are aware, I am sure, that the rate of profit on sales within our industry is approximately half of that in industry generally, and that the aircraft industry plows back a far greater percentage of earnings than is the case in commercial enterprises. You are also probably quite familiar with that favorite approach of the Renegotiation Board, namely, the return on "book net worth" theory. I will not labor that point other than to make the following brief comments. First, the contribution of the contractor, whether it be good, bad, or indifferent, plays no part in such a formula. Second, the application of the formula when applied over the number of years required to design, develop, manufacture, and deliver an aircraft, as contrasted with picking on a single year in which there have been heavy deliveries, will show, at least in the case of my company, that the return on book net worth has been no more than in the case of industry generally. And finally, the application of such a formula places a premium on the company that has engaged in the defense business as a supplementary occupation—it having built up its net worth through commercial activities, and penalizes the contractor that has dedicated itself to the defense effort.

However, on this matter of adequacy of earnings, I propose a somewhat different approach. Bear in mind our objective to make certain that we are putting our best efforts into the defense effort. We are competing for people—we are competing for capital, and I need not remind this group of the rapidity with which developments are taking place within the defense industry. In light of the responsibility placed on our industry to keep ahead qualitatively in this desperate contest with Russia, are we being permitted to earn enough to enable us to meet the challenge with which we are confronted. I feel strongly that we are not, recognizing, of course, that any Government contractor taking this position is at once subject to the charge that he is actuated by selfish motives. Furthermore, if I am correct in my position, I will agree that considerable public education appears desirable. The survey, made by the Opinion Research Corp., indicates that 48 percent of the general public believes that our industry makes a reasonable profit on its defense business, while 17 percent registers the belief that our industry realizes too much profit. I find that yours truly is a member of a decided, but dedicated, minority, namely, 2 percent, who believe that the industry is not permitted to gain enough profit on its business with the Government. This is a fraternity, the membership of which, in my opinion, should be expanded considerably.

Let me again emphasize the thought that it is the nature of the things that we are competing for which makes this consideration of earnings so important. May I give you an example which illustrates the point I am endeavoring to make.

During the Korean crisis, we brought into our subcontractor program a large company that had performed very well for us during World War II. During the war, the subcontractor's commercial production had been cut off and his energies had been entirely invested in defense work. His performance had been of sufficient caliber to lead us to place our new work with his firm with a feeling of confidence. But the firm's performance started out poorly and then went from bad to worse. I had a meeting with the president of the firm. Said he, "At the time we entered into our subcontract with you, we thought that commercial production would be severely curtailed. However, we were subsequently offered large commercial contracts and, due to the pressure of that work, we have been unable to fulfill our obligations to you." "You must bear in mind," he said, "that our opportunity for profit on commercial work is far greater than under our subcontract with you." A shameful position, I will agree. It brought forth my best Montana vocabulary. But we live and learn—that is, we live if we learn soon enough. Let us not stake our national security on the outcome of a contest between patriotism and the almighty dollar. It is far safer to have both of these incentives working on the same side.

Gentlemen, in my remarks regarding competition and earnings, I have endeavored to stress the necessity of providing incentives comparable to those existing in activities outside of the defense effort. I would like to conclude by discussing the inadvisability of one branch of our Government creating desirable incentives and then having another branch of our Government destroy those incentives. You guessed it—I am again about to make some remarks on the subject of renegotiation. I shall use the experience of the Boeing Co. before the Renegotiation Board for the year 1953, as an example. Our profits after taxes but before renegotiation for that year represented a return on sales of 1.9 percent.

Whenever it is feasible to do so, the Boeing Co. has chosen to operate under fixed price incentive contracts. Under this type of contract, after sufficient experience is gained to permit a reasonably accurate forecast of future costs, the Government and the contractor agree upon a target price. The contract provides that if the contractor is able to produce at lower than the target, the Government will get a percentage of the savings—usually 80 percent and the contractor will receive the remaining 20 percent in the form of incentive profits. If, however, the actual cost exceeds the target, then 20 percent of the excess is paid by the company and the remainder by the Government.

During the year 1953, our principal deliveries were of B–47's and KC–97's. At the time the target prices for these aircraft were agreed upon, we had had considerable past experience on which to base estimates of future costs. However, due to what we considered to be extraordinary efforts, we produced at less than the estimates agreed upon and saved the Government $43 million on aircraft delivered in 1953. As a reward for this performance, the company received in incentive profits before taxes slightly less than $11 million. I should state that we have an incentive compensation plan in our company in which all supervisors participate. The total amount distributed under this plan is dependent upon the earnings of the company. Consequently, each supervisor has a very real and direct interest in producing as efficiently as possible and thereby increasing the profits of the company through incentive earnings.

The Renegotiation Board has recently decided that the Boeing Co. had excessive earnings in 1953 of $7,500,000 before taxes. This decision requires us to refund about 70 percent of the amount earned by the company in 1953 as incentive earnings.

To recapitulate—after substantial production experience, the Air Force agreed with the contractor upon probable costs of further production, and to provide a stimulant to reduce costs agreed on a sharing between the contractor and the Government of underruns of actual costs as compared to previously determined probable costs. Long after the risks had been taken and the results were known, the Renegotiation Board unilaterally determines that 70 percent of the contractor's share of the savings must be returned to the Government.

It would be difficult to conceive a more direct assault on the incentive to provide more defense per dollar. These are facts which should not and cannot be concealed from the members of an organization, and there is no desire on our part to conceal them. However, we are doing our utmost to lessen the deleterious effect of this unenlightened action. Last week I discussed the matter with several thousand supervisors in Seattle and will do the same in Wichita tomorrow evening. Among other things, I tell them that the Board's decision should not be viewed as final—it is being challenged in the tax court. The Board, after commending the company on its cost performance and contribution to the defense effort, gave as reasons for its determination of excessive profits our increased volume of sales, a substantial subcontracting program, extensive use of Government-owned facilities, and high return on book net worth. These are all factors which the Air Force procurement people are required by regulation to take into consideration in establishing the contractual profit percentage.

The Honorable CARL VINSON, who has been a leader in Congress on renegotiation legislation, has stated the objectives of the act to be as follows: "Renegotiation does no more than prevent or eliminate profits that are clearly excessive and unreasonable on an overall basis—profits that it would be clearly unconscionable for a contractor to retain from his dealing with his Government in circumstances which preclude proper initial pricing."

As I have pointed out, the earnings in question were from contracts where initial pricing had been agreed upon based on a substantial amount of past experience. In other words, the circumstances permitted proper initial pricing.

The Renegotiation Act, as it is being administered, is destroying incentive. It is taking from the industry reasonable earnings needed to conduct essential research and development work and to acquire facilities. I submit that it is being administered in a manner inconsistent with the intent of Congress. Congress should review the objectives and the administration of the act and advise the Board of the spirit and purpose of the act.

Both Thomas Jefferson and Patrick Henry are credited with the statement "Eternal vigilance is the price of liberty." Gen. George Kenney does not share with anyone his version of the same thought. He puts it this way: "Freedom is not a cheap commodity."

If we are to get the best results from our free-enterprise system, as applied to our defense effort, we must: First, afford our defense effort an equal opportunity in its competition with consumer enterprises for people and capital. Second, foster and preserve competition. Defense business must not be awarded on "share the wealth" or "pork barrel" considerations. Third, establish consistency, fairness, and coordination of purpose on the part of the Government in its transactions with the contractor. One agency must not be permitted arbitrarily to destroy the incentives for economical production previously arranged by another branch of the Government.

Medical and Dental Schools and Schools of Public Health

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. FOGARTY. Mr. Speaker, I have introduced a bill in the House today to provide Federal funds on a matching basis for the construction of facilities for medical and dental schools and schools of public health.

The bill authorizes $60 million a year for a period of 5 years. Eight million a year is earmarked for dental schools, seven million for schools of public health, and forty-five million for medical schools.

The shortage of health education facilities today is probably the most serious bottleneck in our whole medical system. These schools which produce the general practitioners, the specialists, and the research scientists fall far short of accommodating the fully qualified and competent young men and women in America who are anxious to train and qualify in medical, dental, and public-health fields.

In 1955–56, in medical schools alone, only half of the 15,000 applicants for admission in this country were accepted. This left the other 7,500 to turn to other fields of endeavor or to go abroad for training. As a result, the number of American medical students who are forced to attend foreign schools is equivalent to the capacity of four additional medical schools in the United States.

Moreover a sharp increase in applicants is expected during the next 10 years by the Association of American Colleges, and from 1967 on, when the postwar generation will have come to age, the increase in national population and the increase in applicants for medical education will present a staggering problem. Unless we do something now to cushion that impact, the ratio of doctors to general population will drop to the point where the health of the entire Nation will be in jeopardy.

One year ago the Congress enacted a law providing $30 million a year on a matching basis for the construction of health research facilities. The first $30 million appropriated under the terms of that law was allocated in a few short months and already there are more valid applications on hand for grants than the entire $90 million authorization provides for. This research-building program is a fine one and it will add impetus to our research effort but unless the total pool of doctors is swelled we shall soon be short of research men, for the research program can draw men and women only from the total number of doctors in the country.

The Interstate and Foreign Commerce Committee has held long and thorough hearings on this subject. Hearings were held in the 81st, the 82d, the 83d, and the 84th Congresses. Early this year the committee published a staff report summarizing the facts that were brought to light in the course of those hearings. They were compelling facts and they point clearly to the need for immediate action for Federal aid on a matching basis for the construction of facilities in medical, dental, and public health schools.

I invite your attention to that fine report and urge that the bill I have introduced be considered at an early date so that it can be acted on in the first session of the current Congress.

Hells Canyon Dam

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 29, 1957

Mr. MURRAY. Mr. President, the conservationists in the United States are demonstrating their intelligent approach to our resources problems by making an all-out effort to assure construction of high Hells Canyon Dam.

The Citizens Committee on Natural Resources explains that "major conservation values would not be jeopardized." The committee adds:

With a high dam, no forest, no farmlands, game areas, fish runs, national parks, or wilderness areas would be destroyed.

Failure to insist on full use of Hells Canyon will result in the construction of other dams in the Snake River drainage to compensate for the loss in water-storage capacity that would be sacrificed in the small dams.

I ask unanimous consent to have printed in the Appendix of the RECORD an article from the May 24, 1957, Louisville Times on the subject, written by the editor emeritus, Mr. Tom Wallace.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONSERVATIONISTS FOR FEDERAL DAM AT HELLS CANYON—PLAN BEFORE CONGRESS PREFERRED TO SERIES OF SMALL IMPOUNDMENTS CONTEMPLATED BY POWER COMPANY

(By Tom Wallace)

Innumerable dams to create what is called public power have been built without being opposed by conservation organizations, but rarely, if ever once previously, have conservation organizations been champions of a public power project as they now are of the proposed Hells Canyon Government-built dam.

The reason for their support of that public power project is that they do not think it would be as damaging to natural resources as dams which would be built by private enterprise should the Hells Canyon project of the Government be defeated.

The Citizens Committee on Natural Resources, which is based in Washington, is just what its name describes it as being. It has no political affiliation or leanings. It has no policy for or against public power. It is concerned exclusively with natural resources. In that respect it is like the Izaak Walton League of America and many other national organizations and like innumerable local organizations such as those—4,000 of them—which, in New York, opposed the proposed Panther Creek Dam in the Adirondack Reserve and defeated that project.

Such organizations are represented in such projects as the recent successful effort to eliminate Echo Park Dam from the upper Colorado Basin development project on the ground that Echo Park Dam was not essential to the project and would do irreparable damage to Dinosaur National Monument.

Like organizations twice defeated efforts to dam Potomac River and obliterate Great Falls of the Potomac near Washington. One project was for public power, the other was private enterprise. The conservationists consistently oppose damage to natural resources regardless of by what forces the damage would be done.

The same sort of organizations opposed obliteration of Cumberland Falls, a Kentucky asset of renown, and contributed to defeat of a private-enterprise project there. The same sort of organizations, in most or in many instances the same organizations, now oppose a proposed expressway through Rock Creek Park in Washington, regardless of the argument of proponents that it would be a beautiful parkway.

The record of conservation organizations, speaking generally—and I know of no exception—has been, during more than a quarter of a century, singularly clear and wholly clean. They have kept out of politics and kept up an honest and intelligently conceived fight in behalf of, in words of the Izaak Walton League of America, "woods, waters, and wildlife." And in addition a fight in behalf of the duty of the National Government, State government, and municipal, and county governments to have and to hold parks which are more urgently needed as population increases.

The Citizens Committee on Natural Resources thus explains its position as to Hells Canyon:

"Hells Canyon is the deepest and best undeveloped dam site in America. Major conservation values would not be jeopardized if it were developed fully.

"With a high dam, no forests, farmlands, game areas, fish runs, national parks or wilderness areas would be destroyed.

"Failure to insist on full use of Hells Canyon will result in the construction of other dams in the Snake River drainage to compensate for the loss in water storage capacity that would be sacrificed in small dams.

"Some of the alternative dams already are being proposed. Bruce Eddy, Penny Cliffs, and Nez Perce would destroy thousands of acres of forestlands, invade wilderness areas, destroy spawning runs of salmon and steelhead trout, and flood important areas of big game range for the largest elk herd in the country. Maximum use of Hells Canyon would prevent these losses.

"The Federal Power Commission recently licensed the Idaho Power Co. to build 3 small dams in the Hells Canyon stretch of the Snake River. Construction of these dams will destroy the Hells Canyon site.

"Senate bill 555 would authorize construction by the Federal Government of the much more efficient high dam in Hells Canyon and make full use of the area. S. 555 would set aside the Federal Power Commission licenses for the low dams.

"A high Federal dam will be no more costly to taxpayers than the plan of the Idaho Power Co. In addition, it will prevent the sacrifice of valuable natural resources.

"The Idaho Power Co. has been granted a $65 million tax-free subsidy for the construction of 2 of its proposed dams. This subsidy is, in effect, an interest-free loan worth $376 million. Senator HARRY F. BYRD, of Virginia, respected chairman of the Senate Finance Committee, called this tax subsidy utterly indefensible.

"In fact, the $65 million handout plus the cost of any other Federal dam constructed to compensate for the resource values lost because of the Idaho Power Co.'s

project, would cost the taxpayers more than it would to build and own a high Hells Canyon Dam."

If private enterprise were proposing to build the Hells Canyon Dam which the Government has proposed to build and if the Government were proposing to build the other dams mentioned in the report of the Citizens Committee on Natural Resources, the conservation organizations would be advocating the private enterprise project and opposing the proposed public power projects.

It is because they are always on the level that conservation organizations have grown greatly in influence since the time when a conservationist was looked upon as a hobbyist to whom practical men need not pay attention.

It is because of their clean records and the obvious reasonableness of their contentions that the conservationists have won the sympathy of the more advanced elements of the business and banking world, and of educators.

Their record created a situation in which Yale created a Department of Conservation and called as its head, and was fortunate in procuring, Dr. Paul Sears, a man of wide experience in the field of conservation; a man whose attitude toward natural resources was based on breadth of vision.

Within my recollection, even among so-called conservationists, anyone who lifted a voice in behalf of protecting natural resources was asked what his interest was; whether it was quail or ducks or fish. A familiar jest among so-called conservationists was aimed at "the fellow who calls himself a conservationist although he never wets a line or empties a shell."

I, who had not wet a line or emptied a shell within 40 years, was elected national president of the Izaak Walton League of America and reelected for a second term. The Izaak Walton League was far in advance, in its attitude toward natural resources, of the humorists to whose familiar jest I have referred.

Nowadays even churchmen's voices are heard in behalf of natural resources. I read recently an address by a bishop on which I intend commenting in this space.

Tariffs on Watches and Jewelry

EXTENSION OF REMARKS
OF
HON. RICHARD H. POFF
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. POFF. Mr. Speaker, upon request, I submit herewith for inclusion in the RECORD a resolution adopted by the Virginia Retail Jewelers Association in its convention held in Roanoke, Va., on May 7, 1957:

Whereas the health and stability of the jewelry industry is dependent on the quality of the retail distribution furnished by the retail jewelers of America; and

Whereas the products of the watchmakers of Switzerland have contributed immeasurably to the well-being of retail jewelers in America; and

Whereas the past and proposed increases in tariffs on watches imported into the United States have had and will have a deleterious effect on the volume and profits of retail jewelry sales: Be it therefore

Resolved by the Virginia Retail Jewelers Association in convention in Roanoke, Va., on May 7, 1957, That we urge upon all segments of the jewelry industry that they consider the effect upon the entire industry, especially retailers, of increased tariffs on jewelry items and modify their positions accordingly in their representations in the Congress.

Hells Canyon and Bruces Eddy Dams

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 29, 1957

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Lewiston (Idaho) Tribune of May 20, 1957.

The article reports that the Idaho-Oregon-Washington Wildlife Federation has endorsed construction of high Hells Canyon dam and opposed construction of Bruces Eddy Dam on the Clearwater, which would flood a wildlife habitat and ruin an important fishing stream.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SPORTSMEN SUPPORT HELLS CANYON, RENEW OPPOSITION TO BRUCES EDDY

Idaho-Oregon-Washington Wildlife Federation yesterday endorsed construction of a high Hells Canyon Dam and opposed the rivers and harbors omnibus bill which includes authorization for Bruces Eddy Dam.

In a resolution passed yesterday at a meeting at the Lewis-Clark Hotel, the group stated it would petition President Eisenhower to veto the omnibus bill if it passes in its present form. The President vetoed an omnibus bill at the last session of Congress.

The leaders of sportsmen's organizations from three States oppose Bruces Eddy Dam, proposed for the North Fork of the Clearwater River, on the grounds it would flood wildlife habitat and ruin a fishing stream. They contend Hells Canyon on the Snake River would provide more power and water storage with little damage to fish or wildlife.

A bill authorizing Hells Canyon has been passed by a Senate committee and is expected to come to a vote soon.

OPPOSE SNAKE NARROWS

In other action on dams, the federation opposed a House bill authorizing Snake Narrows Dam and asked that Spruce Park on the Flathead River not be considered as a reclamation project but left in the wilderness area where it now lies.

The group voted opposition to Oregon's classification of steelhead as a food fish and will assist Oregon sportsmen in their efforts to have a law enacted making it a game fish.

Other resolutions included:

Endorsing the House pollution control bill, which would appropriate $50 million to help municipalities finance sewage disposal plants.

Endorsing a House bill authorizing States to enforce fish and game laws on military reservations.

SEEK SILTING PONDS

Asking Bureau of Reclamation to plan impoundments in connection with future irrigation projects. These ponds could be stocked with fish as a replacement for migratory fish losses, could provide waterfowl habitat and allow for siltation of irrigation water before it returns to the river.

Endorsing the wilderness bill, which would restrict the authority of Government departments to withdraw lands from wilderness areas without the consent of Congress.

Frank Cullen, of St. Maries, chairman of district 1, Idaho Wildlife Federation, presided over the 2-day session.

Representatives were present from 2 districts of the IWF, 4 districts of the Washington State Sports Council, the Oregon Wildlife Federation, and the Columbia River Sportsmen's Council. Frank Burton of Amber, Wash., National Wildlife Federation district chairman, also attended.

The 1958 meeting will be held at Richland in May.

Response to President on Aid Shown Synthetic

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. ABERNETHY. Mr. Speaker, shortly after the President's recent television address which was designed to obtain public support for his budgetary provisions for the foreign aid program, White House spokesmen announced that the telegraphic response was overwhelmingly favorable. It now appears that this "really amazing" response was organized and was organized with the knowledge of White House officials.

There is an article in the Washington Evening Star of May 24 which outlines the procedure followed. It is written by Thomas Winship, the Washington correspondent of the Boston Globe, and distributed by the North American Newspaper Alliance. Mr. Winship is an able and conscientious reporter and the facts that he has reported must be accepted.

Under unanimous consent I included Mr. Winship's brief article entitled "Response to President on Aid Shown Synthetic," as a part of my remarks:

RESPONSE TO PRESIDENT ON AID SHOWN SYNTHETIC

(By Thomas Winship)

President Eisenhower received a "really amazing" telegraphic response to his Tuesday night speech on foreign aid, largely because it was engineered that way.

White House Press Secretary James C. Hagerty told reporters 24 hours after the President's television talk that telegrams were running 9 to 1 in favor of the program, that messages were coming from both large organizations and the Joe Doaks. All in all, he said, the response "has been really quite amazing."

But several Senators at the Capitol were "amazed," too, when they found at their offices the next morning several "back Ike" telegrams, sent from home even before Mr. Eisenhower went on the air.

The answer is that much of this flow of foreign-aid telegrams to Washington was not exactly a spontaneous sounding from Main Street.

SOME ARRIVE TOO SOON

In Washington parlance, much of it was "inspired." There's nothing new about inspired mail lobbies, but this one was a particularly neat operation—except for the telegrams which reached Washington too soon.

One Eastern Senator's office had similarly worded telegrams from the same general section of his State, one sent at 2:11 p. m.

Tuesday, another at 8:08 p. m., and another at 8:34 p. m. Another Senator received half a dozen telegrams sent at varying times just before the President began speaking, which was at 9:30 p. m. Tuesday.

Checks by a reporter showed that the chief catalyst of the initial flow of "back Ike" messages was a dynamic Philadelphia housewife, who has lobbied here for years as a labor of love on behalf of the United Nations Emergency Children's Relief Fund. She is Mrs. Betty Jacobs, who commutes between Washington and Philadelphia when things are stirring.

She went to work on behalf of the President's foreign-aid program with the full knowledge of the White House, State Department and a high-powered Government-financed agency, the International Development Advisory Board. The latter group is headed by Eric Johnston, president of the Motion Picture Association of America.

Also in the public acceptance phase of the message were Time-Fortune editors, Emmett Hughes and C. D. Jackson, sometime White House speech writers.

All Government agencies spiritedly deny that a single telegram urging folks to wire Mr. Eisenhower went out from their offices at Government expense.

"No, sir; we are not a propaganda agency. We are strictly an advisory agency," said William Schmeisser, IDAB's executive director.

"Betty Jacobs worked out of our office only a couple of days," he said, "and then she only made some phone calls. All she wanted from us were the names of people on the citizen groups represented on our board. That's all there is to it."

PAID OWN BILLS

"If anyone thinks these telegrams were inspired at Government expense. I invite them to look at my home telephone bill," said Mrs. Jacobs. "It's all been out of my own pocket.

"I've been deeply interested in our foreign economic aid programs for years, and I've been working with groups supporting it. It was a pleasure to lend a hand on this," she added.

"The only real help I got from the State Department and others close to the President's mutual-security program and his speech were facts," Mrs. Jacobs asserted.

The mail still is running 9 to 1 for continued foreign aid, and in goodly numbers.

And everyone on the inside tells you the same thing:

"Betty did it."

Address of Hon. William M. Tuck, of Virginia, Before the Jefferson-Jackson Day Dinner of the Eighth Congressional District in Charlottesville, Va., May 25, 1957

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1957

Mr. ABBITT. Mr. Speaker, on Saturday night, May 25, 1957, the Honorable WILLIAM M. TUCK, Representative from the Fifth Congressional District of Virginia, delivered a most important speech before the Jefferson-Jackson Day Dinner of the Eighth Congressional District of Virginia at Charlottesville, Va.

Congressman TUCK is one of the outstanding Members of Congress who is rendering faithful and loyal service not only to the people of the Fifth Congressional District but to the Commonwealth of Virginia as well as the entire Nation.

I join with Congressman TUCK in his commendation of the Honorable HOWARD W. SMITH, Representative of the Eighth Congressional District of Virginia. Judge SMITH, as he is affectionately called, is one of the great Americans of today. I commend his people upon having such an outstanding Representative to look after their interests in the Halls of the Congress.

Congressman TUCK's speech is as follows:

ADDRESS OF REPRESENTATIVE WILLIAM M. TUCK BEFORE THE JEFFERSON-JACKSON DAY DINNER OF THE EIGHTH CONGRESSIONAL DISTRICT IN CHARLOTTESVILLE, VA., MAY 25, 1957

I am happy to be here this evening as the guest of the Democrats of the Eighth Congressional District, and I was highly flattered and honored when Judge Smith and Calvin Haley invited me to come and enjoy this fine fellowship.

Your district is rich in history and resources, and occupies a prominent place in the life and welfare of this Commonwealth. You have able representation in the general assembly; your officials who hold positions of leadership in the State government are of the highest caliber; your membership on the Democratic executive and State central committees is made up of men and women who are thoroughly devoted to the public welfare; and your county and city officials throughout the district are citizens of high character and purpose who apply themselves diligently to the faithful discharge of their duties. From Albemarle to Northumberland; from Loudoun to Goochland; and from King William to Culpeper, I salute the Democrats of this great district and express my admiration and esteem for all of you.

The Democrats of the Eighth Congressional District in general, and those who live in Charlottesville and Albemarle County in particular, are most fortunate in having as residents of your community the Honorable Colgate W. Darden, Jr., and the Honorable John Stewart Battle. These two illustrious statesmen are devoted public servants and stalwart Democrats. Their administrations as chief executives of this State were in the finest traditions of the Commonwealth, and their contributions to the cause of good government are shining examples of what the Democratic Party in Virginia stands for. I know you will join with me in extending hearty greetings and best wishes to Colgate Darden and John Battle.

I am aware of the high esteem and warm affection you have for your beloved Congressman, Hon. HOWARD W. SMITH, but sometimes I wonder if the people of this congressional district—and for that matter the Commonwealth of Virginia, and the Nation—fully realize and appreciate the sterling qualities of leadershp and ability of this outstanding public servant and statesman. I have admired him throughout his public career, but since I became a Member of the Congress it has been my pleasure and privilege to know him intimately, follow his leadership, and marvel at his eminent qualifications. Although not a seeker of publicity and modest and unpretentious to a marked degree, Judge SMITH is always on the front line in the battle for sound legislative measures and in support of fundamental doctrines and principles which he believes in so firmly. In his capacity as chairman of the all-important and powerful Committee on Rules in the House of Representatives, he has performed valiant service in the interest of sound government and in the defense of States' rights.

It was highly gratifying when on February 22, 1955, the American Good Government Society, in a resolution of tribute and honor to HOWARD WORTH SMITH, described him in appropriate language as a statesman, lawyer, farmer, and banker who has served the public weal in an illustrious manner, and it was pointed out that among his notable achievements is the Smith Act of 1940, which has resulted in the conviction of Communist leaders and aliens whose purpose was the overthrow of our cherished form of government. Judge SMITH has also made notable contributions in the legislative field concerning amendments to the National Labor Relations Act which formed the necessary groundwork for the Taft-Hartley Law. The list of his worthy achievements is lengthy. He is a tower of strength in the Congress and considered by many as its most outstanding member.

I know many of you are familiar with the notable address Judge SMITH delivered at the New York Herald Tribune Forum on October 24, 1950, entitled "The Kind of American I Am." It was inserted in the CONGRESSIONAL RECORD immediately following its delivery, and again last year by a colleague who deemed it appropriate to commend it again to the membership of the Congress for its outline of sound doctrines and Democratic principles.

In that address, Judge Smith said he is proud to be known as a conservative Democrat and one who adheres unservingly to the fundamental principles of government embedded in the Bill of Rights. He is a worthy Representative of the congressional district of this great Commonwealth that was the home of George Washington, who conceived the idea of a Constitution; of George Mason, the great exponent of democratic government who wrote the Bill of Rights; Thomas Jefferson, who wrote the Declaration of Independence and founded the Democratic Party; James Madison, the father of the Constitution; James Monroe, author of the Monroe Doctrine, and John Marshall, Chief Justice of the Supreme Court, who, by his decisions, breathed life and vitality into the Constitution.

I cannot find words adequate to pay proper and appropriate tribute to your beloved Congressman. His devotion to duty; outstanding capabilities; wise leadership and calm and courageous conduct are a source of inspiration to me.

It is always appropriate and fitting at all Democratic gatherings to pay respect to the memory of Thomas Jefferson, the founder of the Democratic Party. As every Virginian knows, he was its first champion and the most brilliant, farsighted, and bold philosopher the Republic has ever known. He envisioned the Democratic Party as the party of the people and declared that governments are not the masters but the servants of the people.

Jefferson stood for the legitimate rights of the States and in the most positive terms advocated the greatest degree of local government. He denounced the idea of government catering to groups seeking special privileges, and it was his belief that the greatest danger the young Republic would ever have to face from within was the threat of centralization of authority and its inevitable abuses of individual liberties. Although we have been saddened and perturbed to witness flagrant abuse of Jeffersonian principles in national administrations, claiming to be his adherents, it behooves us as Virginia Democrats to insist upon steadfast adherence to the principles and philosophies espoused by the sage of Monticello.

With masterful emphasis, Mr. Jefferson wrote: "I do verily believe that, if the princi-

ple were to prevail of a common law being in force in the United States in which the General (Federal) Government at once possesses all the powers of the State governments and reduces us to a single consolidated government, it would become the most corrupt government on earth." Let us exert our every effort to maintain State autonomy and protect the traditional American form of local self-government operating in the communities and the counties and the States.

Although he was born to wealth and position, Jefferson believed that tyranny could best be thwarted by letting the power reside in the people. He was opposed to tyranny in any form, and one of his most immortal utterances was, "I have sworn upon the altar of God eternal hostility against every form of tyranny over the mind of man."

Jefferson's personal platform at the time he was elected President was as follows:

I do with sincere zeal wish an inviolable preservation of our Federal Constitution according to the true sense in which it was adopted by the States.

I am for preserving to the States powers not yielded by them to the Union.

I am opposed to transferring all the powers of the States to the General Government, and of that Government to the executive branch.

I am for a government rigorously frugal and simple, applying all the savings of public revenue to the public debt.

I am opposed to increasing the public debt on the principle that it is a public blessing.

I am for freedom of religion and freedom of the press, and against all violations of the Constitution.

We should likewise pay tribute here to the hallowed memory of that other great patron saint of the Democratic Party, the immortal Andrew Jackson. Although born in such obscurity that two States have claimed his birthplace, he rose to fame as a legislator, jurist, soldier, statesman, and President, and he espoused and upheld with vigor and determination the sound doctrines and high principles upon which the Democratic Party was founded. A recent visit to Jackson's beautiful country home, the Hermitage near Nashville, Tenn., was indeed an inspiring experience.

Senator BYRD, in addressing the Kiwanis Club in Richmond on April 3, pointed out that Andrew Jackson was the only President of the United States to pay off the Federal debt in toto. Although the debt was not large, he paid it off and boasted about it, and Senator BYRD said that when he is asked what kind of a Democrat he is, he is proud to reply, "I am an Andrew Jackson Democrat."

I am reluctant to disturb the sociality and conviviality of this occasion, and yet there are dangers confronting us so vital to the interest and welfare of our country I would not be doing my duty as a citizen of the Commonwealth were I to fail to point them out.

The most alarming is the pattern now employed by the Supreme Court of the United States in decision after decision which reveals a studied campaign to obliterate the rights of the sovereign states. Some of the recent decisions of this court break down our Constitution and shatter our Bill of Rights which was penned on the soil of this Commonwealth and which has found its way into the Constitution not only of the United States, but of every State in the American Union.

Prior to 1896 there was practically no public school system in any of the States, including Virginia. In that year the Supreme Court of the United States handed down a decision in the case of *Plessy* v. *Ferguson*, pronouncing what is known as the "separate but equal doctrine"; that is, that the States could provide separate schools for the races provided the schools were substantially equal.

The validity and soundness of this decision was upheld many times by the Supreme Court of the United States and by other courts. Even as late as 1927 the Supreme Court, speaking through Chief Justice Taft, a former President, enunciated this same sound doctrine. Relying upon these decisions, the States have spent millions of dollars constructing school systems for the training and education of our children.

On May 17, 1954, the Supreme Court overruled this and many other decisions of the court, striking down at the same time the Constitutions of at least 17 States, holding that if we operate public schools they must be integrated. No legal authority was cited in support of this infamous opinion which undertakes to substitute a government of men for a government of laws, and the only authority was psychology and sociology of a doubtful variety, referring to such men as E. Franklin Frazier, a Negro, who wrote a book entitled, "The Negro in the United States," and who extolled the characteristics of such Communists as Paul Robeson, and who signed a statement condemning any punitive measures directed against the Communist Party in the United States.

The Supreme Court in its opinion further referred to another authority, a man by the name of Gunnar Myrdal, who is a notorious Swedish Socialist, imported to the United States in 1937 by the Carnegie Foundation of Alger Hiss fame. Myrdal has an utter contempt for the principles upon which the United States was founded and the political system to which our people adhere. The very book to which the Chief Justice in his opinion referred, by this Socialist Myrdal, stated that the Constitution of the United States was "impractical and unsuited to modern conditions, and its adoption was merely a plot against the common people." This is plain unvarnished communism and is the authority cited by the Supreme Court of the United States for this improvident, unwise and, I believe, unpatriotic decision.

This loved prophet of the Supreme Court, Myrdal, has written another book entitled "An International Economy," in which he argues against the awkward fact of the United States bigness and urges equalization and integration of all peoples through redistribution of natural and commercial wealth. Apparently he doesn't approve of the size of the United States any more than he does the United States Constitution. So respectful of its prophet is our High Court (or was on May 17, 1954) that it might entertain an antitrust suit against the United States of America as a monopoly in restraint of trade. Also, of course, in restraint of Russia.

It is said that members of the bar are now forced in self-defense to study the works of Gunnar Myrdal and acquaint themselves with his philosophy in order to prepare for cases when there is a possibility of Supreme Court consideration.

It would seem that the school decision of 1954 would have done enough violence to our Constitution for at least one generation, but the Supreme Court thinks otherwise and continues to render these decisions which are disturbing to all thoughtful and patriotic Americans. The unbridled attempts of the Supreme Court to usurp the powers of Congress and to amend the Constitution of the United States by judicial decree may succeed in awakening and arousing the people, not only in the South but in all parts of the country, to the dangers which confront us, and to the fact that our Constitution is being jettisoned by the very branch of the Government designed to preserve and protect it.

Despite the fact that the wise legislation sponsored by Judge Smith contains a provision distinctly preserving the rights and powers of States to pass antisedition and anti-Communist laws, the Supreme Court, in the case of the *Commonwealth of Pennsylvania* v. *Nelson*, handed down a decision reversing the conviction of a Communist by the name of Nelson in the State courts of Pennsylvania. The Court declared that the Congress in passing the Smith Act, despite this provision to the contrary, had preempted the field and the States were without power to deal with Communists and subversives and others who would overthrow the State and Federal governments. The Supreme Court has struck down the powers of the States to convict Communists and other leftwing elements who wish to destroy our Constitution and to reduce each State as well as the Government of the United States to a shambles.

The people of Pennsylvania, and others who know of this decision, are incensed over the matter and are beginning to understand and appreciate the force and efficacy of the arguments which we have recently made in the South in respect to the school decision case. They now seem to realize what the members of the General Assembly of Virginia and other southern States meant when they passed almost unanimously the "Resolutions of Interposition" protesting the unauthorized and unprecedented acts of the Supreme Court of the United States. Citizens of other States are likewise beginning to understand the meaning of the language employed and the constitutional principles declared in that historic document known as the "Southern Manifesto," signed by more than 100 members of the Congress.

The great State of New York has likewise come under the hammer of the Supreme Court of the United States in a case involving the principle. In that State, a school teacher who had refused to testify before one of the congressional committees, seeking cloak and shelter under the beneficence and protective wings of the fifth amendment to the Constitution of the United States, because of lost confidence in her loyalty, was discharged. The Supreme Court handed down a decision denying to the sovereign State of New York the right to fire the school teacher, whose compensation was entirely from State funds.

Among the most recent decisions of the Supreme Court was the one handed down in the Girard College case, where the late Stephen Girard of Philadelphia by his last will and testament created a trust fund for the erection, maintenance, and operation of a college for as many poor white male orphans as the income from the fund shall be adequate to maintain. The Supreme Court held that the operation of Girard College, pursuant to the provisions of the last will and testament of the individual who created the fund to finance its operation, was null and void because the student body is made up of white boys. In total disregard of the sanctity of the will of Stephen Girard, Negro politicians have now prevailed in their contention that he had no right to make a will which provided for the education of white boys alone and that the college must now be compelled to admit Negroes. As you know, the Supreme Court decreed that Stephen Girard's stipulation of white orphan boys must be disregarded for the extraordinary reason that the "board which operated the Girard College is an agency of the State of Pennsylvania" and that "the board's refusal to admit Negroes constituted discrimination by the State of Pennsylvania." A decision of this nature takes us far down the road to tyranny and presents a frightening situation showing a rapid approach to a centralized Federal tyranny.

As recently as Monday, May 6, 1957, we became aware of decisions of the Supreme Court of the United States which constitute flagrant substitution of the high court's

judgment for the judgment of the States. In the New Mexico and California cases where, after patient and careful consideration, the State authorities had denied two former Communists admission to the respective bars of New Mexico and California on the ground that their long and open activities as Communist Party members prove their moral unfitness to become members of the bars, the United States Supreme Court made it its business to trample underfoot the decisions of both State courts by holding that the due process clauses of the 14th amendment had been violated and the State court decisions were, therefore, unconstitutional. In a recent editorial on this subject, the able editor of the Richmond News Leader asked the following pertinent questions: "If a State no longer can fix standards of propriety and fitness for its teachers; if a State no longer can operate its public schools so as to avoid domestic strife; if a State no longer can establish its own rules for appellate proceedings; if a State no longer can pass upon the fitness of prospective lawyers who would become officers of State courts—what, then, is left to the States?"

Another iniquitous onslaught against the States rights is inherent in the so-called civil rights proposal now pending in the Congress. As Senator HARRY F. BYRD has so forcefully stated, this legislation is punitive in nature and clearly designed to punish the South for its refusal to submit to the Supreme Court's decision in the school case which is in complete violation of our constitutional rights. But these unwarranted and ill-advised so-called civil rights proposals are fraught with extreme danger not only to the South, but to every State in the Union. They constitute a grave threat to the sovereignty and to the future existence of our States on an autonomous basis.

I joined with seven of my colleagues on the Judiciary Committee of the House of Representatives in presenting the minority views on the bill H. R. 6127 in an earnest effort to outline in detail the unsoundness of these proposals and the shocking manner in which they would usurp the rights of the States. Our own able attorney general, Hon. J. Lindsay Almond, Jr., appeared before the Judiciary Committee and presented a masterful argument in opposition to the bill, as did many other outstanding lawyers.

Real craftsmanship was employed by the skillful and dexterous political professional who drafted the proposed legislation, and although his approach is a surreptitious one the flagrant violation of our fundamental rights is quite plain.

We are confronted with a proposal by the Attorney General of the United States to violate the sacred precincts of the constitutionally embedded system of trial by jury. He does this by the simple proposal of permitting the United States to become a party to what appears to be a civil suit, but before the suit is consummated it develops into a criminal procedure and he succeeds in abolishing, if this proposal is enacted, the time-honored safeguard and means of applying the sanctions of a penal statute. He proposes to lodge and substitute for these safeguards the contempt powers of the Federal Judiciary, some of whom rule with a ruthless and tyrannical hand. He would set at naught and banish from the American scene the right of an accused person to demand the nature and cause of his accusation, to be confronted by his accusers, to demand proof, to place himself in a position to plead former jeopardy, to cross-examine those hostile to his rights, to call for witnesses in his behalf, and to demand a fair, speedy, and impartial trial before a jury of his peers, without whose unanimous consent he cannot be found guilty. In order to accomplish his purpose to amend the criminal conspiracy statute (which in effect these proposals do) he would sacrifice all of these constitutional principles.

One of the features of the bill provides for the establishment of a Commission on Civil Rights. On its face this appears harmless except as a foolish expenditure of public funds in a country where we are already overloaded with debt, but the serious objection is not the establishment of another costly and foolish bureau, but the establishment of one with sweeping powers so unlimited as to constitute a board of inquisition and ex parte condemnation. Such a Commission will serve no good purpose and will provide a source of harassment to the several States which it will seek to victimize in derogation of their rights under the Constitution to administer their own internal governmental affairs. The duties of the Commission, as outlined in the bill, are fantastic and the powers proposed to be invested in the Commission would be another abrogation of State sovereignty and in careless disregard of the rights of individual citizens of the various States.

One of the oldest and most thoroughly established and salutary rules in American jurisprudence is the requirement for the exhaustion of State administrative remedies before resort to a Federal court. The pending proposals provide for the abolishment of this principle in the amendment to the so-called civil rights statutes and the amendment relating to the right to vote. Every thoughtful person must agree that wherever parties may have their rights adjudicated at the State and local level, Federal courts should not interfere, and indeed they have no right to do so. The only conclusion to be reached is that the attempt to enact these so-called civil rights proposals into law constitutes a deliberate, open, and blatant expression of total lack of faith and confidence in the virtue and the integrity of our respective State governments in general and our State judicial systems in particular, and constitute an insult of the ugliest sort.

The proponents of this legislation completely overlook and refuse to recognize that there are no Federal elections. There is no Federal election machinery and no provision in the Constitution of the United States which authorizes it. No constitutional authority is conferred upon the Federal Government to conduct, regulate, and administer any election. On the other hand the Constitution expressly negates any concept of such authority in the Federal Government, and it is made abundantly clear that such authority resides only with the States. The States have clear constitutional rights to regulate and administer their own electoral processes. We should never agree to permit the Attorney General of the United States to meddle with State elections and brush aside State law, remedy, procedure, States' rights, jurisdiction, and authority in matters pertaining to elections.

One of the most frightening phases of this whole situation is the apparent complete lack of knowledge on the part of the President of the United States of what is going on. President Eisenhower admitted at a rcent press conference that he has not even read the so-called civil-rights bill. He is quoted by the press as having made the following amazing statement, "The civil-rights bill is a very moderate thing, done in all decency and in a simple attempt to study the matter, see where the Federal responsibilities lie, and to move in strict accordance with the Supreme Court's decision, and no faster and no further."

My friend, Jack Kilpatrick, the able editor of the Richmond News Leader, recently in an editorial described the President's apparent ignorance of the gravest issue of State and Federal relations now before the Congress, as a gross neglect of duties, and he very aptly suggested that the President "tuck a copy of the bill in his golf bag and read it while riding in his electric cart from tee to tee at Burning Tree."

Our mutual friend and your district chairman, Ben Garrett, kindly sent me one of the King William County medals cast as a part of King William's observance of the Jamestown Festival. It is a most attractive bronze medal with the seal of the circuit court of King William County on one side, and a picture of the old courthouse on the other, and with one of the most timely and appropriate inscriptions imaginable. The inscription reads, "The Constitution or the Supreme Court—Liberty or Tyranny." I shall fight with all the power at my command in support of the Constitution and liberty, and I appeal to every lover of liberty in this Nation to awaken to the dangers confronting us and recall the warning of the Founding Fathers and the makers of the Constitution, that an uncontrolled Supreme Court makes despotism—yea, tyranny.

The people are rightly concerned about high taxes and the current Federal budget which is the largest in peacetime history. I will not impose upon your good nature by dwelling upon this unpleasant subject unduly. I do want to say, however, that it is highly gratifying to observe that the American public is demanding a reduction in unnecessary Federal expenditures and I fervently hope that there will be such a compelling force of public opinion as to guarantee a large measure of return to fiscal sanity and solvency. The current budget can be reduced by six or seven billion dollars with no danger to our national defense or serious impairment of normal and essential functions of Government.

We in Virginia are blessed with good government. Our government is interested in the well-being and happiness of all for whom government was established. We still believe in the fundamental principle that all authority resides in the people, and that the government is the servant of the people and not their master.

Because of our steadfast and firm determination to adhere to the fundamental principles of government established on the soil of Virginia, and which has made our Commonwealth and our country great, and which we cherish, many of those who would change everything, even our form of government derisively refer to us as old fashioned. So much so that be believe with Jefferson, who asserted "that government is best which governs least," and with Cleveland, who believed "that it was the duty of the people to support the Government instead of the Government supporting the people." Indeed we are so old fashioned that we believe in economy and honesty in Government. So old fashioned that we believe in paying our debts. We have resisted socialism and its Russian counterpart, communism, and irrespective of what may happen elsewhere I firmly believe that Virginians will continue to resist these trends.

We believe that the faithful and impartial enforcement of law is paramount and we recognize that as the first and foremost function of Government. In short, we believe in those Jeffersonian principles upon which the Nation was founded and has grown to maturity as a leader among the free peoples of the world. We jealously guard our rights as individuals and as citizens under a free government, and we seek through our public services to strengthen and preserve those rights, rather than to weaken and destroy them.

We cherish this great heritage, unequaled elsewhere on earth. We recognize that these great blessings are accompanied by grave responsibilities, foremost of which is the obligation of so exercising our liberties that succeeding generations may enjoy the same rights and privileges, with neither fear nor restraint. With the benefit of the experi-

ence of those who have preceded us, we should be able to strengthen and revitalize the democratic institutions which are the very sinews of our American way of life.

At Williamsburg, we have the Nation's foremost example of the restoration of the physical reminders of our early heritage. We should also include a restoration of ideas, and Virginians should lead the way in restoring the sound ideas of government bequeathed to us by Jefferson and the early founders of the Democratic Party, and when we invoke their names and honor their memories we should also be mindful of and never depart from the fundamental principles they so courageously enunciated.

As one who has been actively identified with the affairs of the Democratic Party in the State of Virginia for many years, I am indeed hopeful that you will exert in your respective localities a steadfast and unflagging effort to advance the cause of the Democratic Party of the State of Virginia to the end that we may have a continuation of the fine type of government with which Virginia has been blessed and to which our people are entitled.

Labor Groups Favor School Aid

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1957

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I want to call the attention of the Members to the formal endorsement of H. R. 1—the Federal aid for classroom construction legislation—by major labor groups.

Prior to this action by the AFL–CIO groups, this legislation had the endorsement of the UMW and scores of independent union groups. Their position is a clear indication of how the average citizen feels about this emergency in our schools.

The statement follows:

For years the critical shortage of classrooms in the Nation's schools has continued unabated. At the beginning of the present school year there were 159,000 fewer classrooms than needed to adequately house America's more than 32 million schoolchildren.

Failure to build these needed classrooms has meant a terrible burden on the future of our children.

Hundreds of thousands are forced to go to half-day sessions in overcrowded buildings. As a result, they have not been able to get the kind of education which American society demands of its citizens and which they need if they are to compete successfully in a world where expanding technology makes greater and greater demands on individuals.

Other schoolchildren daily risk injury and death in ramshackle firetraps kept in use long after their useful life has ended.

This is a heritage to our children which America should not and cannot permit. The implication of poor education extends not only to the children themselves, but to the future of our Nation in a divided world.

We deplore the action of the United States Chamber of Commerce in misusing statistics to minimize the apparent school needs. Misrepresentation in this critical area is inexcusable.

It has been clear for some time that the States cannot meet this problem alone. Despite heroic effort, the States have been unable to erase the backlog of school construction.

Only the resources of the Federal Government are adequate to meet this challenge, and progress has been made to this end. The Committee on Education and Labor of the House of Representatives has reported favorably a bill, H. R. 1, authorizing $1.5 billion in grants to the States for school construction.

The bill is a compromise measure. It is entitled to the support of all Americans, without any of the complicating amendments which have helped to defeat it in the past.

The AFL–CIO urges the Congress to meet its obligation to America's children by promptly enacting H. R. 1 into law, without crippling amendments.

Address by Hon. John W. McCormack, of Massachusetts, Upon the Presentation to Him of the Bellarmine Medal, Bellarmine College, Louisville, Ky., May 13, 1957

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1957

Mr. DELANEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an address by the distinguished majority leader, the Honorable JOHN W. MCCORMACK, upon the presentation to him of the Bellarmine Medal, May 13, 1957, at Bellarmine College, Louisville, Ky.

The award known as the Bellarmine Medal was established in 1955 by Bellarmine College, Louisville, Ky. Its purpose is to honor annually a person "who, on the national or international scene has exemplified in a notable manner the virtues of justice, charity, and temperateness in dealing with difficult and controversial problems."

The specific emphasis in the medal's definition of purpose is derived from the character and achievements of the college's patron, Robert Bellarmine, 16th century saint, theologian, philosopher, and educator. St. Robert lived and worked most of his life in the midst of controversy. His fairness, mildness, and dispassionate devotion to truth were the occasion of admiring wonder on the part of both friends and opponents.

The 1957 recipient of the Bellarmine Medal is the Honorable JOHN W. MCCORMACK, of Massachusetts, majority leader of the House of Representatives. He has been a Member of the United States House of Representatives since 1928. Since 1940, he has been majority leader of the House during the sessions when the House was organized by the Democratic Party. His achievements have been recognized by the presentation of honorary degrees from 10 American universities and colleges.

Bellarmine College finds in the career of Mr. MCCORMACK a notable exemplification of the qualities that the Bellarmine Medal was established to honor.

Mr. MCCORMACK's address follows:

The Most Reverend John A. Floersh, Archbishop of Louisville, the distinguished president of Bellarmine College, Monsignor Horrigan, right reverend, very reverend, and reverend fathers; Your Excellency, Gov. Albert B. Chandler, Your Honor, Mayor Andrew Broaddus, distinguished and invited guests, ladies and gentlemen, I am deeply touched by the honor that has been conferred upon me. The fact that those who selected me as the recipient of this year's Bellarmine medal feel I am worthy of it, touches me very much. While I have received many honors in the past, all of which I value very much, there is none that I shall treasure more than the one you have conferred upon me this evening, and Mrs. McCormack joins with me in expressing to you our deep appreciation.

I might also say that Mrs. McCormack and I will carry away with us from Louisville fond and lasting memories of your hospitality.

Down through the ages our church has given to mankind great leaders, not only in times of peace and tranquility, but particularly in times of pain and stress. Among those great leaders is a 16th century churchman, Robert Cardinal Bellarmine, Saint Robert Bellarmine—doctor of the church, educator, scholar, diplomat, and the patron of your young but dynamic college.

I know that Archbishop Floersh, the beloved spiritual leader of your archdiocese, derives great happiness and satisfaction, and rightfully so, in the existence of your fine college.

For after years of prayer and hope, it was under his far-seeing and courageous leadership that Bellarmine College came into being—the prayers, the hopes, and the planning of many years by His Excellency, and countless of others, and the fulfillment thereof some 7 years ago.

For many generations to come will go forth its graduates, possessing a complete education, and with its motto, "In the love of truth" firmly impressed upon their minds, graduate students possessing a truly integrated philosophy of life, and as so eloquently stated in the purposes of your college, aware that there is a higher and more certain source of truth, namely, the divine revelation entrusted by God to His church, and of the further fact that there can never be any genuine conflict between the truths of reason and the truths of revelation, since all truth, on whatever level, is from God.

And I can project my mind ahead and see for generations to come young graduates leaving the hallowed environment of Bellarmine College, becoming leaders in all walks of human activity, and wielding great influence for God, for country, for mankind, for college.

In the motto of your college the word "love" is an important part. How significant and meaningful is the word "love." And how significant and meaningful also is another word, the direct opposite and the enemy of the word "love"—the word "hate."

Let us apply those two simple, but significant, words to the world of today. One could well say that the struggle today is between the forces of love and the forces of hate—that love is the origin of our way of thinking and acting, of our philosophy of life; that hate is the origin of everything destructive and in the world of today, of the Communist ideology and thought and action.

Love of God, love of neighbor, the grave is not the end; position and power is a trust and not a personal attribute. The rights of the individual are God-given, such as liberty, freedom, and the pursuit of hap-

piness. Government is the servant and not the master; the result is popular sovereignty, democracy, and representative government, and a government of law, and not of men.

Let me convey to you a short but comprehensive picture of the results that follow with hate the origin of Communist thought and action.

Hatred of God, hatred of neighbor, the grave is the end, power is personal, might is right, destroy all who do not agree or do not submit; the result: Vicious dictatorship in the form of atheistic or international communism with the imposition of persecution, imprisonment, death, and martyrdom. And the other important word in your college motto is "truth." For it is truth that makes men and women free; and the doctrine of popular sovereignty, the people determining their own form of government, has been taught through the centuries by the great doctors of the Catholic Church. One of the most notable in the world, as well as in church history, is Robert Cardinal Bellarmine, whose feast the church celebrates today.

From the time of his ordination in 1570 to his death in 1621, the brilliant cardinal had a most fruitful life. He has left his imprint on the prominent pages of church and world history.

The period in which he lived was one of religious and temporal controversy. It has been said of him that when he spoke, his words made him seem like one inspired.

As an illustration of his brilliant mind and the deep respect in which he was held, when Pope Clement VIII nominated him a cardinal, he did so on the ground that "he had not his equal for learning."

While in the controversy with King James I of England, Bellarmine stood out uncompromisingly as the champion of the Pope's supremacy in all things spiritual; he also wrote extensively on temporal authority, and is one of the great figures of history against the absolutism of his day, and a great advocate of the doctrine of the consent of the governed. It took a brave man to take such a position in his day.

There are remarkable facts about St. Robert Bellarmine's advocacy of the principle that all just government rests upon the free consent of the governed. He popularized the principal of popular sovereignty and democratic procedures at the time when kings and emperors were in the ascendancy, with the result that today whenever a scholar writes about King James the First's pretentions about "the divine right of kings" he completes the story by describing Robert Bellarmine's role as the King's most honorable, redoubtable and invincible critic whose victory in the controversy of his day and age is a source of satisfaction to all who hated tyranny in the 17th century, and has been ratified by an overwhelming vote of approval and confidence in our own age.

For Robert Cardinal Bellarmine was the outstanding champion in the age of royal absolutism, of a philosophy of the state that is best described as "perennial." He is one of those rare figures recorded in the pages of history who has truly and effectively influenced the course of history. It was the cardinal's vocation to revivify basic truths and, by the solidity and style of his presentation, to win a new audience for sound tradition. He knew how to put first things first. Let me quote a few of his utterances on the subject of popular sovereignty, as clear as they are explicit. "Political power in general, without reference to particular forms of it such as monarchy, aristocracy, or democracy, has its immediate origin from God alone. This is so because such power is a necessary corollary of the nature of man, and consequently must have its sanction from Him who made that nature."

The next question to be decided, however, was the juridical principle that brings the state into being as a concrete reality under a particular form of government. Once more, this prince of philosophers expresses himself in unmistakable terms:

"In the second place, it is to be noted that this power rests immediately, as in its subject, in the whole multitude of the people, for the power comes from God, and God having assigned it to no particular man must have given it to the multitude."

"For it is obvious," Bellarmine continues, "that concrete and particular forms of government have their sanction from the law of nations and not from the law of nature. For it is obvious that it rests with the people as a whole to decide whether they shall set over themselves a king, or consuls, or other magistrates. Furthermore, for a legitimate reason the people can change their government from a monarchy to an aristocracy or democracy, and also the other way about, as we read happened in ancient Rome." He also believed, as we do in America, that the interests of the general public are best served by a government of checks and balances. The distribution of powers among the coordinate branches of government, executive, legislative, and judicial, is the very core of Bellarmine's doctrine.

Commenting up the desirability of the nation or tripartite division of civil administration, the brilliant cardinal resumes his advocacy of popular participation in government. "All men," he writes, "assuredly prefer a form of government in which they can each have a share, and such a form is the one that we propose because in it a man's worth and not his birth is what counts."

These words are completely consonant, not only with the American Declaration of Independence, but also with the soul of the Constitution of the United States. According to Robert Bellarmine, every official of each one of the three coordinate branches of civil administration is obliged, under God, to seek "not his own advantage but the good of the people.". "The citizen," he adds, "is governed with a view to his own interest, not to that of his ruler."

There is no question but what the views on popular sovereignty or Robert Cardinal Bellarmine had a profound impression upon George Mason when he framed the famed Virginia bill of rights, and upon Thomas Jefferson and James Madison in their contribution toward framing the Declaration of Independence and later the Constitution of the United States.

It is well known that these distinguished fathers of our country were students of the teachings and political philosophy of Bellarmine and the other great doctors of the Catholic Church.

For example, when the framers of the Declaration of Independence proclaimed, "All men are created equal" they were stating in condensed form the view of the ballarmine that "in a commonwealth all men are born naturally free and equal."

When the American patriots in the Declaration of Independece proclaimed that governments are instituted among men deriving their just powers from the Government, they were reasoning in terms comparable to those used by Bellarmine that "the people themselves immediately and directly hold a political power as long as they have not transferred this power to some king or ruler."

When Thomas Jefferson, writing in the name of his colleagues, declared that "prudence, indeed, will dictate that governments long established should not be changed for light and transient causes"-he was emphasizing the same principle of caution and discretion which was proclaimed by Robert Bellarmine who taught that "if there be a lawful cause the multitude may change the kingdom into an aristocracy or a democracy."

When in giving the ultimate justification to their struggle for independence the Founding Fathers appealed to God, and insisting that the people "are endowed by their Creator with certain unalienable rights"; they could have summed up their whole position in the words of Bellarmine, who wrote that "political power emanates from God."

Cardinal Bellarmine lived in a period of intense controversy. Today, you and I are living in a period of controversy, one of the most trying periods of the known history of man. The thoughts and words of Bellarmine are just as applicable today as they were in his day.

As the church has given to mankind great leaders in the past, particularly in every crisis, so has the church given to the world a great leader during the period of pain that it is now undergoing. For in Pope Pius XII the church gives not only to the universal church, but to the world, one of the great leaders of all times.

On December 23, 1956, His Holiness Pope Pius XII gave his Christmas message to the world. It was an eloquent and effective message from one of the great men of all times, churchman, scholar, diplomat. What His Holiness said on that occasion will take its place as one of the great historic documents of all time.

In a few words his message could be characterized as one "calling for stronger alliance against the Communist conspiracy." Since 1939, His Holiness has made not less than 18 Christmas messages, but this one was direct and vigorous in its broad political sense, making in effect a ringing call for realism. It was a call against appeasement, inaction, and fear. It was the church militant speaking in the light of present world conditions.

The Pope reminded the world of the grim realisms of the life of today.

Among other things His Holiness said was, "men do look upon the struggle unjustly forced upon them by their enemy as a crusade." Like the conditions of the early centuries of the church, the days of martyrdom have returned again. And like we had the crusaders and their spirit of those days, so do we need the spirit of the crusaders today, the spirit of affirmative and dynamic democracy.

The days of martyrdom exist again. Catholic, Protestant, and Jew have all suffered through the vicious persecution of atheistic communism.

To all who want life and freedom, and without respect to race, color, or creed, or geographical location, the Christmas message of Pope Pius XII, if followed, charts the road to success and to peace.

As I have said, Pope Pius XII made a ringing call for realism. It is the duty of each and every one of us to be realistic and objective in our evaluation of world conditions. In doing that we have to take the hard road, oftentimes forming our opinions contrary to our hopes and desires.

For we must realize that we are faced with a cold, sinister ideology dominated by leaders with the minds of "world killers" bent on world revolution and world domination, and that as long as those who control the Kremlin adhere to doctrinaire communism, they are prisoners of an ideology that forces them on and on in their determination to dominate the whole world and to impose communism, if necessary by force and through fear.

The Holy Father spoke to the entire world, not to communicants of the Catholic church alone. He spoke with profound knowledge of the Communist conspiracy of world domination, its intents and its purposes. He spoke with knowledge of the inhuman consequences that follow wherever communism takes over. He knows that in this battle of "Love versus hate" that all peoples without regard to race, color, or creed putting into

active and dynamic operation the commandments of God, is not only the answer to international communism, but is the only sure and ultimate road to victory. For while it is necessary for us to be powerful from a military angle, Pope Pius XII also knows it is necessary for us to be powerful from a moral and spiritual angle, for he knows that the moral and spiritual forces of the world, both outside and behind the Iron Curtain, with their love of and faith in God, will be the deciding influence between victory and defeat.

From the angle of our own beloved country, it is very apparent that we have a rendezvous with destiny. Whether we want it or whether we like it or not, the United States is the leader of the non-Communist world. All persons and all peoples who want to be free under their own law, and there are countless of millions of them behind the Iron Curtain, look to America for leadership.

In forming our policies we must think in terms of realism as so well stated by His Holiness in his message of last Christmas. We cannot afford to think and act alone in terms of a dream world, one that we dream and hope for. We can pray for such a world and ask God to guide and direct us in making our contribution toward such a future world, but in the face of the enemy that confronts us, to form our Nation's policies on hope alone in the road to inaction, weakness, uncertainty and appeasement. And Chamberlain showed that appeasement is the road to war.

I have said that the world is undergoing one of the most, if not the most, trying and challenging periods in the known history of man. It is the forces of dictatorship in most vicious form, dedicated to world conquest and determined to control not only the body, but the will and the spirit of man—to try and force that will and spirit to forget their beliefs, their faith in God and his law, and to be remolded to the likeness of atheistic or international communism.

To some the present period is one of frustration, of confusion, and of defeat. To others a period of faith and confidence and ultimate victory. This trying and challenging period is one that tests our faith, our courage, and our strength.

No matter how dark the situation may be, possession by individuals and nations of deep faith might well be the sustaining difference between victory and defeat. Faith keeps alive confidence and above all, spiritual strength, which is so important in any crisis.

I have made reference to the fact that there is now a return to the days of martyrdom. The history of the past 25 years shows that the days of persecution, death, and martyrdom are not over. This has been particularly evidenced by recent events in Hungary, and one of the principal ways by and through which the vicious forces of international communism can be frustrated and stopped is by the return of the spirit of the crusader.

I emphasize the fight of the brave people of Hungary because it is a living scene in our lifetime, historic to future generations, of the sacrifices people will make to possess liberty.

Hungary is representative of the hopes of people everywhere to either regain or retain liberty.

For the rights of the individual, called liberty, are God given and therefore inherent, which man may temporarily suppress, but can never destroy.

Bellarmine knew this and taught it in his day, as Pope Pius XII and others do today.

For Hungary has taught the Communist and non-Communist world of today that the spirit of freedom and desire for liberty cannot be killed by tanks and superior guns.

And there will be future Hungarys—for example, Poland, East Germany, Latvia, Lithuania, and even in the Soviet Union itself—for the inherent desire for liberty cannot be destroyed.

In the event of such uprisings, as in Hungary, we should, we must, have a policy to capitalize the situation, because the ultimate defeat of international communism is going to be made by those who, if necessary, are willing to fight and die for their liberty. There are many Patrick Henrys in the world of today.

The brave action of the people of Hungary shows: (1) That the Kremlin masquerade of moderation is over; (2) that peaceful coexistence is exposed for what it is, an expediency to try and deceive the free world and to lull it into complacency; (3) that severe tensions exist behind the Iron Curtain; (4) that the world killers of the Kremlin cannot depend upon any satellite nation; (5) that if we capitalize the situation, Hungary will be the turning point of this era and the beginning of the death of atheistic communism.

But we can only capitalize by sound policy and by being strong, firm, and unafraid.

It is vitally important that our people be united in this grave emergency. In connection with this, a sound, objective public opinion is necessary. For public opinion wields a tremendous influence, for good or for harm, in forming policy and in the passage of legislation in the national interest of our country.

This is a responsibility of each citizen. And in days like we are undergoing, we must think the hard way, not the easy way, like "the river flows along the line of least resistance."

Far greater at times than Presidents, Members of Congress, governors, and other elected officials is the voice and power of public opinion.

For example, 3 months before Pearl Harbor I saw the extension of the Selective Service Act pass the National House of Representatives by 1 vote, 203 to 202. Every Member who voted against this very important bill was just as good an American as I and others who voted for its passage.

There is no question in my mind but what the honest, but emotional and erroneous public opinion that prevailed against the bill played an important part in the minds of Members who voted against it.

It is in these trying days that we are undergoing, when there is neither peace nor war, we are faced with a grave emergency that a democracy experiences its greatest strain.

For, in time of peace, we can have disturbing conditions, but people can take care of them at some future election.

In time of war, public opinion, in response to the law of self-preservation of nation and individual, even when in disagreement with some governmental policy must silence itself and support.

But, in the period I term a "danger potential," when there is neither peace nor war, public opinion is usually aroused spontaneously, operates violently, is mainly based on hope, not reason, and while honestly entertained, is to a powerful extent emotional and erroneous.

We must, therefore, think along objective lines.

We must realize that we are faced by a cold, calculating, deliberate force, determined to dominate the world by any means possible.

We must realize that as long as the Kremlin adheres to doctrinaire communism, and that expediency may cause them temporarily to change their policy, that their intent and purpose never change.

We must also realize that we cannot negotiate with them on a moral level, because they hate God and His law, and they have no moral concept.

We cannot deal with them on the level of idealism because they have no idealistic concept.

As long as they adhere to doctrinaire Marxism and international communism, there is only one level on which we can negotiate with them, and that is on the level of the law of self-preservation. For they cannot deny that this law applies to the Soviet Union and its people as it does to other nations and their peoples.

And we must be strong militarily, for the only thing the Communists respect is what they fear, and that is force and power greater than they possess themselves.

But we must also have moral and spiritual strength, for that is a reserve strength that guns and tanks cannot defeat. It could well be the difference between victory and defeat.

And we must think and act not as Democrats, not as Republicans, but as Americans.

What Happens When Public Schools Slip

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial which appeared in a recent edition of the Tupelo (Miss.) Daily Journal. The editorial follows:

WHAT HAPPENS WHEN PUBLIC SCHOOLS SLIP

One of the major dangers growing out of the current forced integration of public schools is the possibility that our schools will become so poor that wealthier parents will withdraw their children and send them to private institutions.

And as they do, our system of public education is likely to lose gradually its financial support, leading eventually toward a weak and inadequately financed system of education for the great mass of children in America.

At the moment some people still consider this a farfetched fear.

But the trend toward private education has been growing rapidly in several cities where integration has made unusually deep inroads.

And the fact that private schools may become a serious threat to public education unless we can maintain the quality of instruction in county and municipal schools is indicated by what has happened recently in New York City.

New York's Columbia University is one of America's largest and best known colleges. But it is more than that.

Its department of education is perhaps the most highly rated in the country, teachers and administrators from all over the country going there for the very last word in how to run a school.

Columbia is also a center of liberal thought which has brought forth such awards as the famed Pulitzer prize and similar forms of recognition for individuals and groups promoting brotherhood and harmony among racial groups.

It was, for example, an award from this university to Hodding Carter of Greenville that set this Mississippi editor on the road to national fame. And it was Columbia University which claimed Dwight Eisenhower as its president before he became President of the United States.

The fact that top members of the faculty of Columbia University have one by one pulled their children out of an integrated

public school and transferred them to a private institution is, therefore, a matter of significance to the rest of the Nation.

For if these men who hold the biggest names in the field of American education and who long have promoted classroom integration for others refuse to accept it in a public school attended by their own children, then there is likelihood that other parents may be even quicker to take this same step when faced with a similar problem.

And as they do, an educational system may develop in which good instruction is offered in private schools to children of upper income group, while the children of middle and low income parents attend schools even poorer than our present ones.

Here is the remarkable story of what has happened recently at Columbia University, perhaps America's leading center of liberalism and advanced study in the field of education.

Most faculty members at Columbia have for years sent their children to Morningside Heights public school, generally recognized as one of the best in New York City.

But this year under New York's program of deliberate integration, colored students made up more than half of the student body at Morningside Heights. The theory was that the children of the university professors would tend to raise the level of the poorer students so that all would benefit from the integrated classroom situation.

Actually, however, academic standards in the school sank so low that one by one the university professors began withdrawing their children and sending them to private schools.

Soon these withdrawals became so noticeable that a meeting of faculty members was called and the fact pointed out that if Columbia University was to retain its reputation as a center of liberal thought and a recognized leader among the Nation's educators, the professors must quit pulling their children out of public school.

Another meeting was held some time later to check on progress in this matter. And to the amazement of the Columbia faculty members, it was discovered that every single member attending the meeting had become so dissatisfied with the standards at the integrated Morningside Heights Public School that he had withdrawn his own children and put them in a private school.

The American Mercury magazine recently commented in regard to this situation.

"The leadership in the fight to end segregation is supplied by those best able to protect their own children from the full effects of this policy.

"Wealth is the perfect insulation against the common herd of all colors.

"Where integration lowers the standards of the public schools, the wealthy can and are moving in numbers to the private schools."

Wherever this trend to private schools becomes widespread, as in Washington, D. C. and among faculty members at Columbia University, there is likely over a period of time to develop a lack of interest among wealthier citizens for the Nation's system of public schools.

For having their own children in private institutions, they will come to resent any increase in their taxes to improve schools which they, themselves, are not using.

And when the leaders of a community develop this attitude, the public schools are likely the suffer financially regardless of what the ordinary people may desire.

The providing of the best possible education to all regardless of economic standing is such an important part of America's strength, that we must not let the trend toward private schools get out of hand.

And that, in turn, will require the maintenance of the highest possible levels of instruction in our public schools, allowing neither financial starvation nor a sudden influx of inadequately prepared students in a program of integration to destroy the standards of instruction which even now are lower than they should be.

The Pork Program

EXTENSION OF REMARKS
OF
HON. MYRON V. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial of May 24 by Rex Woods of the Arkansas City Traveler, entitled "The Pork Program." Mr. Woods describes herein the development of a systematized breeding, raising and marketing program for hogs that may revolutionize the entire industry in the next few years:

THE PORK PROGRAM

The rapid turn to milo growing in Kansas may change the farm economy and it promises to lift one phase of agriculture to a new level in Arkansas City. Since Maurer-Neuer packers announced this week they are cooperating with a milling company in sponsoring a new program for hog raising, farmers and businessmen have pricked up their ears.

At the outset the program sounds reasonable and feasible. It is something to get excited about. Since World War II it has been obvious there had to be a new twist to farming if some farmers were going to stay in the business. What is happening may make a lasting impression. Arkansas City should take more than a passing interest in the program.

Everyone knows the chicken business went aboveground and became a scientific undertaking. Chicks are hatched, fed and marketed and their feet never touch the ground. They grow fat and face the frying pan.

There is no logical reason why pork should not come to the table by a similar route. It will if the program proposed here is accepted. Up in the corn country fattening a hog is a rather expensive undertaking when one considers the price of corn and the cost of farm buildings that will protect porkers during the cold winter months. Kansas has something different to offer.

This State is growing milo and Iowa State College, after experimenting several years, finds milo and a supplemental feed will do the job at less cost. Furthermore, hogs can be turned out faster and at regular intervals if a program is followed. So Iowa State College recommended Kansas for the start of a program and Arkansas City was selected as the ideal place to get the campaign underway. This area seemed ideal from several standpoints and one was abundance of water in summer.

Cost of getting into this program is relatively low when one considers all aspects. The local packing plant is going to pay a premium for hogs that qualify.

A great deal of time has been devoted to explaining why the meat-type hog must be the breeding stock in this program. This animal produces meat where fat used to line the old-type larder. It seems the lady of the house—the buyer of the family rations—looks for the chop with the meat. She doesn't want the fat. So the packer must satisfy her, and to do this the farmer must raise the hog that has the meat.

One appealing angle to this program is the marketing plan. Pigs will be born at regular intervals and go to market throughout the year. Farmers in the program won't be worrying about the spring pig crop. They won't face the price slump that comes when most hogs are dumped on the market. Furthermore, to keep a unit that will produce 500 pigs a year should not take more than half the farmer's time.

Kansas is going to be doing something that has been left up to northern States for many years. It is going to feed the milo crop to livestock. It is going to be a feeder State. Then the livestock will be shipped west, not east, to meet the demands of a growing population.

The multiple hog farrowing program is so new it mentions such things as professional pigalow and a hog porch, but if interested parties will talk with packinghouse officials they'll see there is nothing complicated to the plan. It makes sense.

A unit will be started by the local plant and perhaps farmers will take time to look it over and satisfy themselves that although this is a first, it is practical.

This is an exciting adventure in a new agricultural program. If it hadn't been for the Maurer-Neuer Co. here any other city might have been the "ideal spot" to kick off the program.

An interesting editorial from the Pratt Tribune bears out the claims that Kansas is producing more milo. It said:

"Out on the western Kansas high plains farmers are preparing to plant what is shaping up as a record-sized milo crop.

"In Finney County, for example, farm agent Oscar Norby predicts that in the next week or 10 days farmers will plant some 200,000 acres of milo and should harvest some 4 million bushels in the fall.

"The milo planting is going to be big all over Kansas. No doubt about that. And plenty of it will go into the ground in this area.

"Milo is the No. 2 punch for the Kansas farmer. If the moisture isn't right for wheat planting in the fall, he can wait until spring and plant milo.

"This year you can look for a record milo yield in Kansas. Only since the war has milo been given a big planting play. The biggest previous season was back in 1951 for the high plains region.

"Farmers also can start anticipating soil bank payments. They should be out within the next 30 days. And that money from Uncle Sam will be an economic shot in the arm to not only the farmers but to the communities who list the farmer as their No. 1 industrial worker.

"The soil bank's future is clouded, but right now the farmer isn't too worried about it. Give him plenty of rain and he'd rather be planting, working, and growing crops than sitting around renting his land to the Government to let it idle along."

Public Opinion Survey, 11th Congressional District of Illinois

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1957

Mr. SHEEHAN. Mr. Speaker, for the seventh consecutive year I have conducted a public opinion poll of my constituents in the 11th Congressional Dis-

trict, on the northwest side of the city of Chicago.

This year, 54,711 questionnaires were mailed, and, as of this date, 7,452 have been tabulated—a return of nearly 14 percent. The questionnaires were sent to every fourth name on the polling list of voters of every precinct in the 11th District which list is put out by the Board of Election Commissioners of the City of Chicago.

We have no means of knowing the political affiliation of the recipients of the questionnaire, and this, in our opinion, results in an impartial distribution which most nearly reflects a proper cross section of the voters in the 11th District.

The 1957 survey results are as follows:

	Yes	Percent	No	Percent	Answer	Percent
1. Are you in favor of the United States continuing as a member of the United Nations?	5,282	70.9	1,747	23.4	423	5.7
2. Do you favor the proposed $4,400,000,000 foreign-aid bill?	1,027	13.8	5,946	79.8	479	6.4
3. Do you approve of the Republican foreign policy in general?	2,674	35.9	3,738	50.2	1,040	13.9
4. Do you approve of the Eisenhower administration to date?	3,104	41.7	3,113	41.8	1,235	16.5
5. Do you approve of the recent action of Congress in giving the executive department the power to use troops under the so-called Middle East doctrine? (The Constitution reserves to the Congress the right to declare war, and this action practically transfers this right to the Executive. This legislation also included $200,000,000 of additional foreign aid for the Middle East.)	1,441	19.3	5,349	71.8	662	8.9
6. Do you approve of United States participation in the International Atomic Energy Agency to broaden the exchange of peaceful atomic information?	4,834	64.9	2,107	28.3	511	6.8
7. Do you approve of the performance of John Foster Dulles as Secretary of State?	2,631	36.3	3,324	44.6	1,497	20.1
8. Do you favor the President's proposal of Federal aid to education for school construction to be distributed on the basis of local need? (Present bills under consideration provide from $2,000,000,000 to $3,600,000,000 of aid over a period from 4 to 6 years. Illinois citizens will contribute an estimated $24,000,000 and receive back about $12,000,000.)	3,681	49.4	3,192	42.8	579	7.8
9. Do you favor the President's proposal asking Congress to enact a strong civil rights program to enforce the voting rights of all citizens, to establish a Civil Rights Division in the Justice Department, and to create a bipartisan Commission to investigate violations of the law?	4,405	59.1	1,998	26.8	1,049	14.1
10. Have you ever had any personal experience wherein you felt you were deprived of your civil rights?	847	11.4	6,163	82.7	442	5.9
11. Do you favor more adequate laws providing for full disclosure to the public and to the U. S. Government of the operation of union pension and welfare funds?	6,722	90.2	463	6.2	267	3.6
12. Would you favor a "right to work" law which permits citizens to work regardless of whether or not they belong to a union?	5,552	74.5	1,502	20.2	398	5.3
13. Do you think the President's budget of $72,000,000,000 is too high?	6,078	81.6	757	10.2	617	8.2
14. Do you favor as a means of controlling spending under the budget that Congress temporarily fail to authorize new legislation creating projects not already in existence?	4,363	58.5	1,512	20.3	1,577	21.2
15. Do you agree with Senator BYRD of Virginia when he said "I think the present deal is going to finally land somewhere midway between the New Deal and the Fair Deal"?	3,774	50.6	1,309	17.6	2,369	31.8

Four of the questions on this year's questionnaire are a repetition of previous years, and a comparison of the trend during the years is as follows, the 1957 results having been compiled by a division of International Business Machines, Inc.:

	1957			1956			1955			1954			1953		
	Yes	No	No opinion	Yes	No	No opinion	Yes	No	No opinion	Yes	No	No opinion	Yes	No	No opinion
1. Are you in favor of the United States continuing as a member of the U. N.?	70.9	23.4	5.7	73.2	24.0	2.8	69.5	28.3	2.2	67.0	29.9	3.1	64.1	35.9	.....
2. Do you favor further arms and military aid for foreign nations?	.....	.....	.....	.....	.....	.....	44.9	49.8	5.3	45.7	46.4	7.9	44.7	55.3	.....
3. Do you favor continued economic aid (point 4) to foreign nations for development of backward areas?	.....	.....	.....	.....	.....	.....	50.0	46.0	4.0	54.4	38.8	6.8	43.3	56.7	.....
4. Do you favor the proposed $4.4 billion foreign aid bill ($4.9 billion in 1956)?	13.8	79.8	6.4	22.3	72.4	5.3	.....	.....	.....	.....	.....	.....	.....	.....	.....
5. Do you approve of the Republican foreign policy in general?	35.9	50.2	13.9	62.3	29.6	8.1	56.9	30.3	12.8	52.9	36.6	10.5	78.5	21.5	.....
6. Do you approve of the Eisenhower administration to date?	41.7	41.8	16.5	76.4	16.1	7.5	65.3	23.9	10.8	58.0	25.9	16.1	84.2	15.8	.....

The Truth About the Budget

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. MOORE. Mr. Speaker, at this time when we are earnestly engaged in examining the Defense Department budget, I think it most appropriate to call attention of the House to the following editorial which appeared in the West Virginian, published at Fairmont, W. Va., on May 15, 1957. I am in wholehearted agreement with the sentiments expressed, and wish to commend my good friend, Mr. Richard Parrish, the editor of the West Virginian, for his clear thinking and timeliness of this editorial:

THE TRUTH ABOUT THE BUDGET

It is timely to recall, as a followup to the President's radio and television defense of his budget, the many occasions on which Secretary Humphrey's remark about a depression that "will curl your hair" has been used as a club with which to assault the President and his budget.

The Democratic politicians have quoted the remark a thousand times, but not nearly as often, at that, as have certain of the Republican politicians—notably those who can't stand the thought of the party being in step with the times: that is to say, modern.

Now it develops, thanks to some research by Columnist David Lawrence, that Mr. Humphrey's "curl your hair" remark did not refer to the current budget.

Here is exactly what Secretary Humphrey said:

"I think there is some hope you can reduce expenditures all along the line. I would certainly deplore the day that we couldn't ever reduce expenditures of this terrific amount, the terrific tax take we are taking out of this country. If we don't over a long period of time, I will predict that you will have a depression that will curl your hair, because we are just taking too much money out of this economy that we need to make the jobs that you have to have as time goes on."

Like the President, Mr. Humphrey wants budget reductions but, as he said, "I think this budget as now drawn has been prepared with the very greatest care, and I think it is the best that we can possibly do right now. * * *"

Contrary to reports, the men are in agreement, so that when the President opposes damaging budget cuts he has the support of his Secretary of the Treasury.

The President's talk, which will be given editorial consideration on another day, can be expected to provide us with a better understanding of the budget and with the reasons why the President is opposed to a descent to political expediency in cutting the budget.

Remove the fat, but keep the solid meat.

In Defense of King Cotton

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following editorial which appeared in the Greenville (Miss.) Delta Democrat-Times on Thursday, May 23, 1957:

IN DEFENSE OF KING COTTON

That King Cotton editorial in Life magazine last week was a slick piece of antifarm legislation propaganda. But the theme of the tirade just wasn't true.

Borrowing the most tried and proven methods of the political demagogue, Life pounced again upon Delta and Pine Land Co., "a British stock company," for its only cited example of farm program mishandling.

"The Government last year laid out $1.4 million in crop loans to one of the biggest of all these corporate cotton industrialists, Mississippi's Delta & Pine Land Co., a British stock company," the editorial declared. But it failed to point out that D&PL has sold most of the cotton put in loan last year. This means that the Government already has been repaid and has made a profit on the loan that Life was so upset about.

The editorial declares that no other industry as successful as the cotton production industry has received help from the Government, ignoring the direct loans or subsidies to shipping, the airlines, private manufacturers and—through low second-class mail rates—Life magazine itself.

The editorial hints that because of improved farming methods and mechanization, the cotton producer is rolling in money as never before. The fellow who wrote the piece should have investigated some of the cost factors involved.

The final and biggest blunder is the advocation that the cotton industry be left to struggle on its own, without aid or regulations. "It no longer makes sense," Life declared, "(to keep) the marginal uneconomic, hillside, patch farmers turning out poor cotton that isn't needed anyway. It keeps them at it when, if left to their own devices, they could go to a town and work at a useful job."

This, of course, is a gross example of pre-Hoover, big business first thinking, including some of the most carelessly uninformed assumptions about a situation the writer obviously knows nothing about. Putting such a program into practice would throw the entire cotton belt into economic panic. The ill effects would deal a death blow to small businesses in the area, since the squeezed out small farmer would not be able to find those "useful" jobs and therefore would lose his meager purchasing power.

We admit the Government's farm policy is not perfect nor even nearly perfect. Most of the current problems facing the industry and the Nation because of cotton surpluses have resulted from the mistakes of 1950 and 1951 when increased production was encouraged as a result of a wartime fear of shortages.

We doubt that the nonfarming people of the Nation will be misled by such slanted propaganda. Drastic changes in the direction sought by Life could result in a depression of such wide scope it would cause even the author of that editorial to sweat through his cotton shirt.

Relief to the Hungry Peoples of the Soviet Slave Empire

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. COLLIER. Mr. Speaker, under leave to extend my remarks in the RECORD I would like to draw the attention of the House to some possibilities and some grave dangers in our Government's apparent aim to win the captive peoples of Eastern Europe away from their Soviet slaveowners.

There has been much talk recently in administration circles of providing assistance to the people of Hungary, Poland, Czechoslovakia, and the Baltic States who have for so many years suffered starvation and want as Red slaves. The idea apparently is to demonstrate the failure of communism by providing them with food and clothing which their Communist masters are unable to supply. The aim, if it works, is admirable.

But I submit there are extensive dangers in this proposal. The most important of these is that our altruism and free giving may boomerang. Instead of accomplishing our purpose of feeding the starving, and our ultimate goal of lighting for them the path to freedom, we may actually wind up bolstering the very tyranny which has caused the suffering in the Soviet orbit and which still beats the drums of world conquest.

A great American statesman who has served his country and humanity well for over 40 years has pointed the way to avoiding these pitfalls while still accomplishing our aims. As early as 1921, former President Herbert Hoover, then director of the American Relief Administration, foresaw the dangers and drafted a document to sidestep them. He undertook to feed and clothe the hungry and cold peasants and slum dwellers who for 4 years had been in the hell of Soviet slavery.

Mr. Hoover's proposals made in 1921 have been rediscovered by the Citizens Foreign Relations Committee and have been presented to Secretary of Agriculture Ezra Taft Benson. It is to be hoped that this remarkable document has been passed on to others in the administration.

Mr. Hoover recognized fully the dangers of the Kremlin taking credit for the bigness of the American heart. So, he drafted a most careful contract to be presented to Maxim Litvinov, who represented the slave owners in this negotiation. Under terms of this unusually foresighted contract, American relief supplies would have to be distributed directly to the suffering. ARA representatives, Americans for the most part, would administer the program right down to the street-corner level. The ARA would pick those Russians needed in distributing the supplies—the Kremlin would have no say in the matter at all. In short, American supplies would be controlled by American relief agents until they actually reached the stomachs of the recipients. And there was to be no propaganda claims by the Russians; indeed, there could be no such claims. It was apparent to all who received, that their Communist masters had failed them; that free Americans were willing and able to do the job.

The administration now has a copy of this contract. Additionally, it could, if willing, now call on the elder statesman of the United States, this same Herbert Hoover, for advice on how, if we are to supply such relief to the hungry peoples of the Soviet slave empire, such a program could be administered so the people in need would receive and the Kremlin would not be permitted to appropriate for the collective leadership of Russia the credit. Unless some such precautions are taken, the results of American help would be to tighten the fast-slipping control of Moscow's masters over people who after 12 years of dark terror are beginning to see the first faint streaks of the dawning of freedom.

Nuclear Giveaway

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. NEAL. Mr. Speaker, while it is not within the province of this House to usurp the treatymaking authority of the other side of the Hill, I do not think it amiss to call your attention to an international agreement now pending in that body which will affect us all.

I refer to the pending ratification of the charter of the International Atomic Energy Agency whose authority will embrace the widely heralded atoms for peace plan first proposed by President Eisenhower before the United Nations in 1953.

From that initial proposal, the President went on to declare in New York City on October 26, 1956, that the United States stood ready to make immediately available to this Agency some 5,000 kilograms of nuclear fuel uranium 235 from 20,000 kilograms allocated earlier in the year, the 5,000 kilograms to go for peaceful uses to friendly nations.

According to the best estimates, this would mean giving away some $125 million to other nations. All told, the 20,000 kilograms, to be distributed over a 3-year period, have cost the taxpayers of the United States approximately $500 million, according to best available estimates of the cost of this precious material.

Aside from its cost, however, there are graver considerations involved in a congressional decision on whether or not the Agency charter shall be ratified.

Its announced purpose is the peaceful use of the wondrous power of the shattered atom to promote health, industry, and peace throughout the world. I, for one, do not believe that the United States needs to prove much further its peaceful intentions and its philanthropy to all and sundry, including those who were our enemies during World War II.

In its organizational structure, the Agency leaves much to be desired from the standpoint of our own national interest and security.

The total membership of the Agency shall consist of 90 nations. I am told that some 80 nations have already signed the covenant with Soviet Russia and its satellites being among the first to get on this new combination band wagon and gravy train.

It would be governed by general conference of 10 members at first, with a

rotation of 5 members annually after the first full year of operation.

Operation of this agency would be by majority vote, but here again, the United States will have, as it has in the United Nations, only 1 vote in contrast to the 3 satellites controlled by Russia. And beyond the satellite votes, there exists the generally sympathetic postures usually adopted by many of the so-called Asian and African members when matters affecting the Soviet Motherland come up for a vote.

Once again, it is the story of the United Nations—the United States will bear 80 percent of the cost, largely represented by our donation of 20,000 kilograms of uranium 235, but have only one-ninetyth of the operational control of the establishment which distributes the product made possible through the taxes paid by the citizens of this Republic.

As a threat to the security of this Nation, I cannot emphasize too strongly that the material to be distributed by the Agency is only two steps away from the fissionable material from which bombs are made. Some 90 percent of the processing necessary to make it suitable for bombs has been accomplished.

Think, Mr. Speaker, of the alarming possibilities should any member of the Agency fail to live up to its obligations and contractual promises once it had in its possession uranium 235. Solely on the treaty-breaking performances of a great many members of the United Nations to date, I am not so sanguine as to believe that their respect for international instruments would grow stronger in dealing with this precious and coveted material which American technical genius has created.

A great many careful studies have been made of this plan, and the only practical conclusion is that you can no more delineate between peaceful and military uses of uranium than you can resolve the old question of how many angels can dance on the head of a pin.

During United Nations debate on this matter, Soviet Russia contended that the meager safeguards set up in the original proposal were unnecessary. Her curious position was that in the absence of an agreement abolishing nuclear weapons, any safeguards having to do with inspection of even peaceful atomic installations constituted an invasion of the sovereign rights of a nation.

Her stand was immediately followed by the introduction of amendments by four neutralist but consistently pro-Russian United Nations members, which, although defeated, had an effect in sum total which watered down the original safeguard provisions.

And what will happen once we have made our initial giveaway of uranium 235?

I can foresee as the next logical step, a great demand from the recipients for continued billions in United States money to finance the industrial installations, to furnish the technicians, and the construction know-how necessary to utilize the raw energy of the uranium 235.

Most Members of this House are well aware that we have bought many a pig in a poke during and after World War II.

The wisdom of many of these international boondoggles has been disproved time and time again. In our case, the burned child does not dread the hot stove.

He seeks it out again and again as demonstrated in this instant case of another seizure of unwarranted international optimism.

International Communist Infiltration

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, one of the paradoxes of the international situation of the world is that the free nations continue to main diplomatic relationships with the Soviet and satellite powers, notwithstanding the fact that these communistic countries so grossly and dangerously abuse and transgress every semblance of diplomatic propriety, and use their legations and embassies as nests for spies and agents who carry on, ceaselessly and relentlessly, the effort to undermine and destroy the free governments to which they are accredited.

These dangerous mischief makers love to fish in troubled waters, and in the peace-loving lands they foster and augment, almost unimpeded, every situation of local friction or discontent in order to bring about distrust of government, with a corresponding buildup for communism. Everywhere, and in every possible way, communistic infiltration is taking place in noncommunistic countries; and the very constitutional provisions and statutes for individual freedom are being perverted to protect the activities of these subversive agents.

In this connection, and under leave granted, I include as a part of these remarks the following editorial appearing in the May 25, 1957, issue of the Americas Daily, the ably edited and conducted Spanish-English newspaper published at Miami Springs, Fla.:

INTERNATIONAL COMMUNIST INFILTRATION AND THE COLD WAR

No one should believe that the campaign of international communism is manifested only in the acts and events known under the name of cold war, because that would be to turn our backs on reality, a very dangerous reality, as is the one regarding the quiet Red infiltration in different countries of the world.

Only that which assumes proportions of international scandal is, naturally, what finds echo in the newspapers and creates political problems to the great powers. However, it is convenient to think about the existence of many quiet, under-cover movements, with strict discipline and technical methods, that are taking place in all the continents of the world, following blindly the orders from the Kremlin.

These movements, although discreet and quiet, are very serious, in particular if one takes into consideration the lack of preventive measures in those countries which are the objectives in the almost imperceptible maneuvers of Moscow.

The tenacity of the leaders of international communism comes to light, in some cases, with plainly flagrant events, because they benefit Russian interests, creating international conflicts of very serious proportions. But in other cases, their tenacity is manifested with completely different tactics, in clandestine acts, sowing collective mistrust beneficial to any movement tending to create social instability, on which communism thrives.

The tactics used for the attainment of these objectives are so difficult to identify, that in this fact is rooted, basically, the seriousness of the matter, because the work of the Communists is developed within a great tolerance, and even with candorous participation of democratic people, of a moral and ideological background incompatible with the communistic doctrine and system.

Those who exercise some leading function in the community and who notice on time this type of Red infiltration, should sound the alarm to others, so they will be prepared, before it will be too late, against the threat that this sustained effort of Communist infiltration, cleverly directed from Moscow, represents.

Alabama Ore Makes Alabama Steel for Ingalls Ships

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. HUDDLESTON. Mr. Speaker, mineral wealth is the backbone of my district. The Birmingham area is the only spot on the globe where coal, iron ore, and limestone are found in such close proximity. These minerals, of course, are the principal ingredients required to make iron and steel.

From the mines and quarries, these products have to travel less than 11 miles before reaching Birmingham's big steel mills. Steel made in Birmingham is found in all parts of the world. It is now being used to build two giant ocean liners on the Mississippi gulf coast. From the ore fields to the shipyards is a distance of less than 300 miles.

The luxury liners are being built by the Ingalls Shipbuilding Co., an organization which has its home offices in Birmingham. In my opinion, it is particularly noteworthy that this Jefferson County shipbuilding organization uses Jefferson County steel made from Jefferson County's rich mineral deposits to build its ships.

Under leave heretofore granted, I am happy to insert an article which appeared in the May 27, 1957, edition of the Birmingham Post-Herald, one of the fine dailies of my district:

ALABAMA ORE MAKES ALABAMA STEEL FOR INGALLS SHIPS

Alabama steel—more than 20,000 tons of it—is going into the fabrication of two modern luxury liners which in a few months will be plying the seas between New York and the east-coast ports of South America.

Under construction at the Pascagoula, Miss., shipyard of Ingalls Shipbuilding Co. are two modern passenger-cargo vessels for the Moore-McCormack Lines.

More than 90 percent of the steel going into the building of the big liners, each of which has a displacement of almost 23,000 tons, is being manufactured at the Birmingham district plants of United States Steel's Tennessee Coal and Iron Division.

Thousands of tons of plates and structural shapes have already been delivered from the Birmingham plants to the shipyard in Pascagoula and more is flowing steadily to the Mississippi coast.

Most of the principal raw materials going into the making of the steel for the ships traveled less than 12 miles from TCI's mines and quarries to the big steel plants at Fairfield and Ensley.

The steel itself moves only about 300 miles from the rolling mills to Pascagoula. Once it has been fabricated into the ships, however, it will be ready to range the hemispheres.

The two liners, which will be among the most modern and most luxurious ships ever built, will replace three older vessels being retired by the steamship line, with a speed in excess of 23 knots, they will clip 7 days from the round-trip traveling time between North and South America.

Each ship will have an overall length of more than 600 feet. Each will have luxurious accommodations for 553 passengers, plus a cargo capacity of 6,000 tons.

Passenger and crew accommodations will be air conditioned throughout. With all main structural work of steel, and decorative paneling of nonflammable material, both ships will be virtually fireproof.

Interior decoration for the vessels was planned by Raymond Loewy, famous industrial designer.

The vessels will raise to 19 the number of ships operated by Moore-McCormack which were built by Ingalls at Pascagoula, principally of Alabama steel.

Speaking of Teen-Agers

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Times-Leader of Wilkes-Barre, Pa., for Tuesday, May 28, 1957:

SPEAKING OF TEEN-AGERS

So many derogatory references have been made about teen-agers in print that there is danger of giving a wrong impression to the public.

With this in mind, we call attention again to the fact that not all the news about adolescents, by any means, is bad. Take, for example, a gathering that is to be held at Fox Hill Country Club tonight by the Student Program Council of the Catholic Youth Center of Wilkes-Barre.

The council consists of 100 representatives of public and parochial high schools. In sharp contrast to the teen-agers who are making the front pages and other pages in the daily newspapers as well with their escapades, these youngsters attract relatively little attention, yet they are engaging in wholesome activities that augur well for their future as citizens.

The point is that the activities of normal boys and girls like members of this student council do not make spectacular reading with the result the public may overlook the fact they represent the vast majority and are typical of modern youth. The undesirables are a small minority.

It is a privilege to call attention to a group that provides such a refreshing contrast to the widely publicized delinquents.

The Pledge of Allegiance to the Flag

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. PORTER. Mr. Speaker, it is with considerable pleasure that I bring to the attention of this distinguished House five letters received from residents of the Fourth Congressional District of Oregon, which I have the privilege to represent.

These letters come from the principal of Washington School in Grants Pass, Oreg., and four of her students in the fourth grade. They concern the recorded version of The Pledge of Allegiance. They indicate solidly that this recording has brought pleasure and more important, I believe, that it has given them a better understanding and love of our pledge. I think my distinguished and honored colleague, LOUIS C. RABAUT, of Michigan, deserves much credit for initiating this fine project.

I wish it were possible to share with you each of the letters from the students. They are carefully and neatly composed and written and bring much credit to their instructor. Additionally, I believe they are samples of the reaction people of our Nation had when they heard for the first time this new version of the pledge as set to music.

Certainly sincere thanks go to songwriter Irving Ceasar, the members of the American Society of Composers, Authors and Publishers, the United States Air Force Band, the United States Marine Band and all others who joined forces in this inspiring work.

The letters follow. All were dated May 13, 1957:

MUSICAL PLEDGE IS PRAISED

DEAR MR. PORTER: Our primary children and teachers are thoroughly enjoying the Pledge by the Singing Sergeants. It is very satisfying to teach patriotism and ideals to young children because they are truly impressed and have such wonderful ideas of their own.

The beautiful record has proved a real climax to our year's "most important project," good citizenship.

Thank you for sending it.

Sincerely,

MISS EDYTHE ANDREWS,
Principal and Teacher.

DEAR MR. PORTER: Our school has been waiting for this opportunity to get such a good record as you sent us. The record you sent was one of the best records I have heard. When I hear a record like the one you sent I think of the brave men out on the battlefields fighting for our country. I think of the men that died on the battlefield for our country. Many like Washington helped save our country. We have been studying about famous people and have been enjoying studying about them too.

Sincerely yours,

BOBBY RAMBOLL, 4A.

DEAR MR. PORTER: We are studying how to be good citizens in our geography and Weekly Reader. In our geography (Your People and Mine) we are reading a unit on great Americans. We joined Junior Red Cross after we studied about Clara Barton and her wonderful work.

Thank you for the nice record of the Pledge. We all enjoyed it very much.

Sincerely yours,

LORI VANNICE, 4A.

DEAR MR. PORTER: Thank you for the record. It was very pretty. We have a good citizen quiz named Check-a-ways.

When our teacher plays that record it makes me think of "The Big Picture" (it is a television program), and a show named "Battle Cry."

Sincerely,

ERNEST MOFFIT, 4A.

DEAR MR. PORTER: We are studying how to be a good citizen in school. We have little folders called Checkaways, which is all about citizenship. We are the seniors of Washington School so we have to set a good example for the younger folks.

I like The Pledge sung by the Singing Sergeants and accompanied by the United States Air Force Band. Patriotic songs are one of my favorite kinds of songs. I think everybody should enjoy patriotic music.

I will be leaving Washington this year, and I am very sad, for as being my first year at Washington I like it very much.

Sincerely,

ANITA GROVES, 4A.

To Protect the Funds

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of May 28, 1957:

TO PROTECT THE FUNDS

Congress should give a high priority to the proposed legislation for protection of worker welfare and pension funds. Disclosures before the MCCLELLAN committee of the misuse and abuses practiced in the Teamsters Union have made it sufficiently clear that something more than self-regulation of these large trust funds is essential. Not only is the interest of the union members—potential beneficiaries—involved. In the case of the Teamsters, for example, there was evidence that union officials had employed money from the funds in efforts to promote vice and control local politics and law enforcement—reprehensible activities bearing directly upon the public interest.

Legislation now recommended by the administration would offer protection against these abuses through the following requirements: Annual audits and registration with the Labor Department. Publication by the Department of financial statements on the funds. Establishment of penalties for embezzlement or tampering with fund records. Both the administration proposal, submitted

to the Congress by Secretary of Labor Mitchell and a comparable bill sponsored by Senator DOUGLAS, Illinois Democrat, would apply the regulations to management-operated funds as well as those controlled only by the labor unions. In several respects the new legislative proposals are stiffer than those submitted by the administration to the last Congress—admittedly reflecting reaction to the McClellan committee findings.

Mr. Mitchell has made it clear that there is no objective of securing "punitive legislation aimed at undermining or weakening the general body of organized labor." It is equally clear that the proposed regulations would not hamper or harmfully restrict the administration of the many funds already managed with integrity and effectiveness. It would, however, be a great disservice to labor-management relations at large to leave uncontrolled the obvious temptation for corrupt use and dissipation of these large funds. Congress has both the opportunity and the responsibility now to take constructive action.

Hungarians in America

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Wednesday, May 29, 1957

Mr. WATKINS. Mr. President, many of the values in the resettlement of Hungarian refugee families in a particular American locale, for instance, Reading, Pa., are recounted in a recent article in Newsweek magazine. The article explains as well the role of a private organization, the Lutheran Refugee Service, in furthering this humanitarian work.

To judge the effectiveness of our national program for refugees we need special reports of this nature. I commend a reading of the article to fellow Members in Congress, and I ask at this time unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HUNGARIANS IN AMERICA—THE FORTUNE OF A FAMILY

(Camp Kilmer went back into mothballs last week, 6 months after the first Hungarian refugees arrived at the New Jersey barracks. A limited number is still coming in, but mass arrivals have ended. (In Austria, where 35,000 refugees are marking time, some 2,400 staged a 4-day hunger strike in protest against the curtailment of the United States program.) How are those already here making out? Have they found jobs, homes, friends? How many were tainted with communism? In this special report, Newsweek Associate Editor Jack Iams answers these questions and follows the fortunes of a typical refugee family.)

For the family of Lazos Ban, an electrician who took an active part in the Hungarian uprising, the American dream was a roseate reality last week. The four of them—Ban, his wife, his stepson, Andy, and his nephew, Bill—were living in a comfortable apartment in Reading, Pa. They all had jobs, bringing in a total of $180 a week, not counting overtime. They had a shiny, new television set, two-thirds paid for. To top off their good fortune, they had just had word that Erzsebeth Ban's other son (by a former marriage), George, who had vanished in the confusion of their escape last November, was alive and well in Switzerland, with reasonable expectations of coming soon to the United States.

Perhaps the Bans were luckier than most—harder working, more adjustable. But a look at the Hungarian refugee picture as a whole would indicate that the Bans' success story was typical of the great majority of the uprooted thousands who have poured by ship and plane into the country where liberty holds "the lamp beside the golden door."

Inevitably, after the first emotional wave of sympathy that caused the United States to open its doors for the Hungarian refugees, there was an adverse reaction. Perhaps the commonest charge against the refugees was that they included a large number of Communists who had taken advantage of Uncle Sam's good nature to slip in among the legitimate freedom fighters. On this score, the Immigration and Nationalization Service last week produced a figure to clear the air.

THE FACTS

Of the 31,983 admitted, as of latest count, exactly five have been involuntarily returned to Europe for security reasons, that is, Communist "taint."

Another 27 have been involuntarily returned for various technical reasons, mostly for giving false or inaccurate information on their original applications (such as misstatements as to marital status). Among those sent back involuntarily, seven were children.

In addition, 101 refugees have gone back voluntarily, mostly to Hungary, some to Austria, for such reasons as homesickness or because they thought they couldn't cope with American life.

As for the question of how the refugees have been faring materially, that is something for which there are, so far, no overall statistics. They are scattered through all of the 48 States (and one is in Alaska) and their well-being is left up to the hundreds of local welfare groups who sponsored them. However, the United States Employment Service estimates that 85 to 90 percent of the employables have found jobs by now.

TYPICAL FAMILY

Probably as good a way as any to see what has happened to most of the refugees is to trace the story of the Ban family.

Lazos Ban, or Louis, as he prefers to be called now, was a foreman in an electrical-heating-equipment plant in the small city of Papa, 80 miles west of Budapest. It was a good job and well paid—better paid, on paper, than the job he has now. But the buying power of his pay was pitiably low; it took a week's wages to buy a shirt. Erzsebeth (or Elizabeth) Ban helped out with earnings as a seamstress.

When the uprising started last October, Ban, now 35, was a member of the trade-union council in Papa and was one of those who voted to go on strike. This alone would have made him a marked man when the Russians eventually took over. But, in addition, as open warfare broke loose in Budapest, Ban and his older stepson, George (who is now 19), drove a truck from Papa to the capital with food and ammunition for the anti-Communist forces, often under the fire of Russian guns. When the Soviet troops and tanks finally crushed the desperate freedom fighters, Louis Ban and George knew that their only chance to avoid deportation, or death, was to get out while they could.

The Bans were luckier than most in having to wait only a short time in Austria before being flown to the United States, and they got another lucky break at Camp Kilmer. There a genial Lutheran minister from Reading, the Reverend Julius Sathmary, who was working with the Lutheran Refugee Service, liked the looks of the Ban family and chose them as the first to be resettled in his predominantly Pennsylvania-Dutch area.

STARTING ANEW

After spending a couple of rather cramped weeks in a trailer, the Bans moved into a reasonably spacious four-room apartment on the second floor of a red brick house on a street that is mostly of red brick houses, close to the business center of Reading. Their rent is $55 a month. Furniture—nothing fancy, but serviceable—was provided for them by well-wishers in Mr. Sathmary's congregation, and the Bans were particularly moved to find a closet full of good second-hand clothing.

Today they have new furniture which they are buying on time themselves, and above all, they have the television set, a $229 model, in the living room. The whole family is crazy about television—favorite program: The Lone Ranger—and they watch it for hours on most evenings. They are a little sheepish about the amount of time they spend viewing, but they justify it on the ground that it helps their English.

LANGUAGE BARRIER

Their English needs all the help it can get. Although all of them attend language classes two evening a week, they still have great difficulty in exchanging more than the simplest ideas. They manage things like shopping and bus rides, but their social relations are limited almost entirely to the forty-odd fellow refugees who have settled in Reading or to the few Hungarians who already lived there.

The language barrier has made itself felt in their jobs, too, but all things considered, they are doing remarkably well. Within a week of his arrival in Reading, Louis Ban had obtained work as a maintenance mechanic in the Marco Industries plant at Womelsdorf, about 15 miles west of Reading, a factory that makes small motors and employs about 700 people. He has proved to be an excellent mechanic and is well liked by his fellow workers. But his supervisor, master mechanic Anton Dahm, admits regretfully that "we have trouble getting ideas through to him." This is in spite of the fact that a number of the employees speak German which Ban understands. Ban went to work there at $1.65 an hour and has since had two small raises, bringing his present pay to $1.82 an hour for a 40-hour week.

LOVE AND GRATITUDE

Elizabeth Ban also found work soon after their arrival, as a seamstress in a bright and distinctly chic little establishment called the Bride Shop in Pottstown, 16 miles southeast of Reading. She is paid a dollar an hour, and though she has been offered a similar position at higher pay, she is happy working there and feels a debt of gratitude to the shop's proprietor, a rather dashing young woman named Lenny Holland-Moritz. Miss Holland-Moritz is equally happy with Mrs. Ban and feels that she is making progress in English except for overuse of the word "okay."

Andy, too, was quick in getting his job as a bus boy at Howard Johnson's, one of that chain's restaurants on the Pennsylvania Turnpike, about 10 miles south of Reading. He gives every impression of enjoying the work and he goes about it with great elan. Everybody likes him, says assistant manager Joan Lutz, and he is a good and willing worker. The pay is 85 cents an hour.

Bill was the slowest to find work, but recently, on the strength of Andy's showing, he, too, was taken on at Howard Johnson's, at the same pay.

That is the way the Ban family shapes up today. They are almost embarrassingly grateful to the United States for all that has been done for them—they love America with a passion that few native-born citizens ever get around to expressing. Last month they

had a chance to put their gratitude into concrete form. Unofficially, they undertook to sponsor another Hungarian family—a young couple and 2-year-old child—whom they took into their own apartment and supported for 4 weeks until they were able to stand on their own feet. That, the Bans feel, is the American way of doing things.

Employment of the Physically Handicapped

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1957

Mr. KELLEY of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the very excellent talk made May 24, 1957, by A. J. Hayes, president, International Association of Machinists, AFL–CIO, at the luncheon meeting of the President's Committee on Employment of the Physically Handicapped:

REMARKS BY A. J. HAYES, PRESIDENT, INTERNATIONAL ASSOCIATION OF MACHINISTS, AT LUNCHEON MEETING OF THE PRESIDENT'S COMMITTEE ON EMPLOYMENT OF THE PHYSICALLY HANDICAPPED, HOTEL WASHINGTON, WASHINGTON, D. C., MAY 24, 1957

I appear here today as a sort of double paradox. I am a member of the President's Committee, but I am representing the American Federation of Labor and Congress of Industrial Organizations. I am substituting for President Meany, of the AFL–CIO, but the opinions I will express are my own. I take comfort in the fact that there is no area of disagreement between organized labor and the President's Committee in this worthwhile field of endeavor. And I am sure that when I air my own views on the subject I speak in substance for all labor.

It is 10 years since this Committee was established by the President of the United States, 8 years since his action was confirmed by Congress through legislation. In the decade of its existence, the Committee has, I believe, done a remarkable job in bringing the problems, the rights, and the abilities of our handicapped fellow Americans out from the dark corners of our civilization, to which they had been relegated by a sort of Victorian thinking, into the consciousness of the people of the United States.

Largely as a result of this public concern with the problems of our handicapped citizens and public appreciation of the contributions they can make to our expanding economy, the Secretary of Labor of the United States was able to state in his annual report for the fiscal year 1956, that in the 12-month period covered by the report more than 290,000 handicapped workers were placed in jobs by the public employment service. In addition, some 66,300 such handicapped persons were restored to productive employment through State-Federal rehabilitation programs. The number of handicapped workers placed represents the largest number for any peacetime year and the number of handicapped persons rehabilitated is also a record.

This record, I believe, is a tribute to the vision and determination of the members of the President's Committee and of the permanent staff which has conscientiously and ably given continuity to their program. It is a special tribute, I think, to the inspired leadership of Admiral McIntire and General Maas, and I feel sure that the inspiration and devotion which has brought the committee and its worthy cause so far in its first decade of existence will continue to guide it in the future.

It is proper that the committee take pride in the job it has done in arousing the conscience of America in regard to the problem of the handicapped and in developing widespread appreciation for the contributions which they can make to the future of our Nation. But that is only a beginning. An aroused conscience and a willingness to help are not enough to do the job. And the unpleasant fact is this: That the mechanics for restoring the handicapped to productive capacity and for fitting them into industry have not kept pace with the promotional work of this committee. If the committee's work is to be as valuable in the future as it has been in the past, the committee must, it seems to me, turn its attention more and more to the job of seeing that the mechanics of medical restoration, vocational training and actual placement are improved to the point where the job we say must be done will, in fact, be done.

Let us examine, for a moment, the weaknesses of our present rehabilitation and job-placement systems. First of all we do not really know the extent of the job before us. We have no census or inventory of physically handicapped persons in the United States. The National Health Survey now being conducted by the Census Bureau at the request of the Public Health Service, should help eliminate this deficiency. When it is finished, we shall have an accurate idea of the job which faces us.

In our goal to place the handicapped in jobs, we are still not being fair with prospective employers in most cases. We produce records proving that the handicapped are able, loyal, productive, and safe workers. But in the vast majority of our States, we leave employers of handicapped workers open to unfair liability in case of injuries to the handicapped. It is true that 43 of our 48 State workmen's compensation laws have provisions for some sort of second injury fund. As you know, the purpose of a second-injury fund is to limit the liability of an employer of a handicapped worker to the extent of injury resulting from an accident or illness incurred in the employer's employ. But the real fact is that fewer than a dozen States have second-injury funds of the type which really accomplish their objective. The rest of them leave employers wide open to extensive and unfair liability for subsequent injuries to handicapped persons. The result, of course, is to deny handicapped job applicants a fair opportunity of finding employment.

Inadequate second-injury fund provisions in the vast majority of our States constitutes only one of the many shortcomings of our workmen's compensation picture. Workers handicapped as a result of job injuries or occupational illnesses in many of our States are still denied the basic opportunity of physical restoration, by inadequate weekly compensation benefits and, even more seriously, by unrealistically low limits on the amount of medical care which they are entitled to receive under their State laws. In fact, the variations among our State workmen's compensation laws and the total inadequacy of compensation and medical benefits under many of them, raises a serious question as to whether or not we can afford to continue under our traditional system of workmen's compensation in the United States, or whether we must seek out a new system geared to the needs and requirements of injured workers in the mid-20th century.

In addition to these weaknesses in our State workmen's compensation laws, very few of them pay any attention to the basic need for rehabilitation of injured workers with a permanent disability. By and large, the framers and administrators of our State workmen's compensation systems are content to plod along with the concepts of workmen's compensation which prevailed 40 years ago when this type of legislation was first introduced on the American scene; and this, in spite of the fact that one of the purported purposes of workmen's compensation is to restore the injured employee to an employable status.

Perhaps we should not be too severe in our criticism of our workmen's compensation system and of those who are responsible for its status and its administration, in view of the fact that we as a people have paid precious little attention to the over-all job of rehabilitating the handicapped and fitting them for profitable employment. There are only about 30 true rehabilitation centers in the United States today, and all of them have developed over the past 10 years. In addition, figures released by the Department of Health, Education, and Welfare show that we are dangerously short of the skills needed for the physical and vocational rehabilitation of handicapped persons. These are some of the serious bottlenecks we face in the essential job of implementing our good intentions to do right by our army of handicapped persons.

In its statement this year the the Committee of Appropriations of the House of Representatives, the Office of Vocational Rehabilitation noted that in 1955 only 4 institutions in the United States were offering specific training in the field of rehabilitation counseling, and that these institutions graduated only 25 persons. The Office of Vocational Rehabilitation expects that by 1958, 510 persons will be taking training in rehabilitation counseling under grants provided by that office and that an equal number will be taking similar training without direct Federal aid. This is a hopeful situation, but it does reveal a serious backlog in a skill essential to the complete rehabilitation of the handicapped.

Another serious bottleneck lies in a serious shortage of qualified specialists in physical medicine and rehabilitation. In its report to the House Committee on Appropriations the Office of Vocational Rehabilitation noted that there are 500 vacant positions requiring qualified specialists in these fields of medicine, and that only 48 percent of existing residences in this field are currently filled in contrast to 80 percent in medical specialties generally. The expected increase in the number of physicians taking training in the field is a step in the right direction, but it will supply only a fraction of the number of specialists needed to serve the requirements of a complete rehabilitation program.

In sum, while we have been raising the hopes of the physically handicapped by sympathetic understanding of their problems and a new appreciation of their capabilities, and while we have been conditioning employers to look upon the physically handicapped job seeker in a new light, we have not been developing programs geared to the expectations of the handicapped or the needs of employers. If this committee is to continue as a vital force for progress in the employment of the physically handicapped, its members must, it seems to me, individually and collectively set about the task of modernizing our antiquated system of workmen's compensation and of cooperating with organizations in the fields of medical and vocational rehabilitation to obtain the funds and the personnel which they so sorely need to fit handicapped persons for employment.

As members of this committee we know, and I believe that more and more of the leaders of business and industry are coming to realize, that the job of rehabilitation is a practical and a profitable one. The rehabilitation of the physically handicapped is a humanitarian work, to be sure. And

even if there were no direct return to the Nation in a financial sense, we would have the obligation of giving the physically handicapped every opportunity to restore themselves to a position of independent and useful citizens. And this obligation would not be one merely to the persons directly concerned, but to our stated belief in the dignity of man and the opportunity of every individual to achieve for himself the kind of life to which he aspires and for which he is capable.

The inalienable rights to life, liberty and the pursuit of happiness, which the founders of this Nation set forth in the Declaration of Independence, are not conditioned by race, color, creed, economic condition of birth, or by physical handicap. And to fail to provide the physically handicapped with every possible opportunity to achieve dignity, independence, and profitable employment, is to deny in part the high principles upon which our Nation was founded. This is why organized labor in America is wholeheartedly behind every program designed to assist and enocrauge the physically handicapped. It is true, of course, that the vast majority of the physically handicapped fall within the ranks of wage earners or potential wage earners—those represented by the organized labor movement. But, in our minds, the problem is not merely one of enlightened self-interest. It is a question of achieving freedom and justice for the individual. And that is the basic purpose of labor in all of its endeavors.

It is fortunate that what is right morally is also profitable financially, in this as in other worthy fields of endeavor. Has it ever occurred to you how frequently this has been proved true?

There was a time in the history of our country when the efforts of unions and other groups in behalf of a system of universal public education were denounced as threatening the very foundations of our social and economic structures. Yet, today, all of us appreciate the fact that an educated and informed citizenry is the very foundation of free and democratic government. There was a time when labor's demands for higher wages and increased leisure time were denounced as threatening the prosperity of other segments of the economy, and even such a rugged individualist as Henry Ford was condemned by many of his fellow industrialists for his $5 a day pay scale and later for his 8-hour-a-day work schedule. Yet we know today that a high level of wages and ample leisure time are necessary to maintain and expand the mass purchasing power which makes possible our country's vaunted mass production. There was a time, too, when the apostles of industrial safety were looked upon as soft-headed "do-gooders." And yet, today, every efficient and responsible management knows that "safety is good business."

So it is, also, in the field of rehabilitation. And the money spent in fitting the handicapped for employment is more than repaid by their contributions to our economy and their increased ability to share the expenses of operating the Government whose assistance helped them to independence and employment. It was on this basis that Secretary Folsom was able to report last month to a mid-West conference of the Harvard Business School that "last year, largely because of modest budget increases in this (vocational rehabilitation) program, the number of persons rehabilitated was increased to 66,000—a new record. Before they received these services, these people had annual earnings of about $17 million. After rehabilitation, their earnings were increased to about $127 million per year. So the increased income taxes alone will pay for the cost of rehabilitation within a few years. Furthermore, about 13,000 of these people were receiving public assistance before they were rehabilitated. The cost of continuing public assistance for them would have been far greater than the cost of rehabilitation."

When the President's Committee on Employment of the Physically Handicapped was first established 10 years ago it had little to go on except the general knowledge that many, many thousands of our citizens were being denied an opportunity for free and profitable lives because of their physical handicaps, and the moral sense that this situation was unfair, unjust, and undemocratic. By devotion to the cause and by the inspiration of its leadership, the President's Committee has brought about a revolution in the thinking of Americans in all walks of life in their attitude toward the physically handicapped. Because of the heightened interest it has brought about in the specific problems of rehabilitating the handicapped both physically and economically, we are beginning to obtain a clear picture of specifically what we must do and where we must do it to translate worthy desires into practical programs of action.

We know the tragic deficiencies in our present system of State workmen's compensation laws. We know the shortages in personnel essential to the task of rehabilitating the physically handicapped. Let us continue the committee's work of inspiration and guidance, by all means. But let us realize, too, that this work must be supplemented by increasing aid to those concerned with the specific problems of rendering service to the handicapped in their desires to obtain the full benefits of a society in which all men are free and in which each has full opportunity to develop himself to the limit which his abilities and talents will permit.

Ambassador of Ireland Visits Wilkes-Barre

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader Evening News of Monday, May 27, 1957, commenting on the visit to Wilkes-Barre of His Excellency John Joseph Hearne, Ambassador of Ireland to the United States, who gave the commencement address earlier this week at the graduation exercises of College Misericordia, which is located at Dallas, Pa., near Wilkes-Barre:

It is a privilege today to welcome to Wilkes-Barre the Ambassador of Ireland to the United States, John Joseph Hearne, who is to be the speaker at the commencement of College Misericordia tonight. He is a familiar figure in the Nation's Capital where he has been stationed since 1950 and he is no stranger to Greater Wilkes-Barre, having been the city's guest in 1954.

Ireland has been described frequently as a land of poets and scholars. Ambassador Hearne easily qualifies for inclusion in the latter category. A lawyer, lecturer and educator, as well as a diplomat and public official, he has had an impressive career.

Here he will be in friendly hands, for Irish immigrants settled in this area in colonial days and their descendants, as well as later arrivals, constitute an important segment of the population.

The Friendly Sons of St. Patrick in Wilkes-Barre and Pittston, as well as churches and schools, preserve the traditions, so dear to men and women with Irish blood in their veins. Americans of Irish extraction locally may not be so numerous as their New York and Boston counterparts, but they yield to neither metropolis in their affection for the land of their forefathers.

In the Pillory

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I am including the text of an editorial entitled "In the Pillory" from the March 14 issue of New Times, an English-language publication emanating from Moscow. Needless to say, I feel extremely honored at the uncomplimentary references to me in the Soviet-controlled press and hope that I shall continue to merit such "flattering" attention.

The editorial follows:

IN THE PILLORY

Amid all the events of recent weeks, the publication, has an Appendix to the United States CONGRESSIONAL RECORD, of what is known as the Kersten memorandum, has passed almost unnoticed.

The name of Kersten is notorious. When sitting in the House of Representatives in 1951, this arrant reactionary authored the scandalous Mutual Security Act amendment providing for the appropriation of $100 million annually for subversive activities against the Soviet Union and the people's democracies.

Under this provision alone, the United States Congress has since allocated $600 million for these purposes.

Kersten was not returned to the present Congress, but he has not languished in obscurity. From June 1955 to February 1956 he served, by his own account, as "White House consultant on psychological warfare." And he has his followers in Congress too. Congressman BENTLEY has put his new memorandum into the official congressional annuals, being of the opinion that "presentation of his views is both timely and useful."

In this memorandum Kersten, that tireless anti-Sovieteer, again urges forming military units of fugitive recreants from the Socialist countries to operate against the U. S. S. R. and the people's democracies "in affiliation with United States Ground Forces". He proposes developing air and naval units recruited among paid traitors and assassins. The nuclei of such units, he says, are already based at Kaiserslautern in Western Germany.

In a sense one can agree with Congressman BENTLEY that publication of Kersten's plan has been timely and useful. Timely, because it has come on the heels of the U. N. discussion of America's interference in the internal affairs of the people's democracies and its subversive activities against these countries. Useful, because it gives everyone a chance to see how much stock can be taken in the assurances of Messrs. KNOWLAND and Lodge that the United States is not engaged in any such activities and has not intention of being.

In an effort to sidetrack attention from the disgraceful doings of American sub-

versive centers, Lodge threatened to bring answering exposures which would, he said, "make your hair stand on end." But he failed to stir a hair on anybody's head. The exposures which the United States delegate announced with such a flourish proved to be nothing but a repetition of the oft-repeated and long-since-nailed lies about the machinations of world communism.

Lodge promised that his charges would all be within the bounds of demonstrable truth. All he succeeded in demonstrating was that there was nothing to demonstrate; for the Soviet Union and the other socialist countries adhere strictly in all they do to the principles of noninterference in other nations' affairs and peaceful coexistence.

On the other hand, the delegates of the U. S. S. R., Byelorussia, the Ukraine, Czechoslovakia, Poland, Rumania, Bulgaria, and Albania brought before the organization facts convicting the United States rulers of gross interference in these countries' internal affairs, and widespread subversion against them. These irrefutable facts have put the imperialists in the pillory. They conclusively prove that spying, sabotage, seditious propaganda have been raised by Washington to the level of official policy and that this is one of the reasons for the worsening of the international situation.

There is no form of subversive activity that the United States has not employed in these past years against the countries of the socialist camp. The counterrevolutionary putsch in Hungary is the latest, but by no means the only, proof of it.

Not content with encircling the socialist countries with bases of attack, the imperialist politicians have been smuggling spies and saboteurs into them, sending over balloons with leaflets inciting to sabotage and wrecking, forming armed gangs of reactionary riffraff. The elementary standards of international conduct, the most elementary decencies in relations between nations have been outraged.

It is 10 years in this year of 1957 since the adoption by the U. N. General Assembly of the resolution condemning all forms of propaganda which is either designed or likely to provoke or encourage any threat to peace, breach of the peace, or act of aggression. For America's politicians they have been years of deliberate and systematic violation of the United Nations will.

It is during these 10 years that the Voice of America and Free Europe networks have launched their poisonous subversive propaganda. It is during these 10 years that American leaders have taking to aping soapbox orators and addressing inflammatory messages to other peoples on every occasion or none.

A characteristic instance of this was cited in the U. N. by the Rumanian delegate. Every year on May 10, the anniversary of the Hohenzollerns' accession to the throne, the State Department of the United States of America—"the great transatlantic Republic"—issues a statement declaring that this day should remain Rumania's national holiday. In coming forward as a champion of the Rumanian Hohenzollerns, whom the people have driven from the country, State Secretary Dulles seems bent on justifying the caustic observations of his great countryman Mark Twain, who said:

"Unquestionably the person that can get lowest down in cringing before royalty and nobility, and can get most satisfaction out of crawling on his belly before them, is an American. Not all Americans, but when an American does it he makes competition impossible."

Dulles' laughable appeals to the citizens of the Rumanian People's Republic might not be worth mentioning if it were not that they reflect in miniature Washington's broader designs. In proclaiming their doctrine of the liberation of the people's democracies, the American imperialists are out to restore in this part of Europe the worst regimes of the past.

What the objects are, the performers will be. Not for nothing do attempts to execute the liberation plans have to rely on the broken remnants of the routed exploiter classes, on reactionaries who have fled the country, on all that dirty scum which the great revolutions of our century have washed up on the hospitable shores of Western Europe and North America.

Needless to say, these plans are built on sand. But when the American radio talks of freedom and democracy, it is well to remember them.

A Farm Program on a Commodity-by-Commodity Basis

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. COOLEY. Mr. Speaker, there was a significant meeting in Washington yesterday that is encouraging to all of us who are interested in the well-being of the farmers of the Nation.

This meeting brought together representatives of a dozen national and regional farm organizations to explore the possibilities of all working together for a farm program, on a commodity-by-commodity basis, that would bring relief to our hard-pressed farm families and start agriculture on the road to a fair share in the Nation's prosperity.

In the last 4 years the house of agriculture has been divided. Farm organization has been alined against farm organization, crop against crop, and region against region. I personally am convinced that this was deliberately done as part of a scheme to destroy the price-support program that served our farmers so well for 2 decades.

Now it is encouraging, indeed, that a movement has been launched to restore the family spirit to the house of agriculture, through a community of effort by persons and organizations speaking for the various commodities.

Mr. Speaker, I am including as a part of my remarks a press release issued from the National Milk Producers Federation, following yesterday's meeting of the commodity groups. This matter follows:

WASHINGTON, D. C., May 28.—A preliminary meeting of 12 national and regional farm organizations representing producers of individual commodities was held here Tuesday "to discuss a joint approach to the solution of agricultural problems on a commodity-by-commodity basis." A further meeting was scheduled for August 6 to which other commodity producer groups will be invited.

The group appeared to be unanimous in the view (1) that there is a common denominator in the interests of the several commodity groups; (2) that there is lack of agreement among the general farm organizations on farm policies; and (3) that commodity approaches which have the support of other commodity groups can be most effective toward the solution of farm problems.

It was emphasized that there is need for cooperation between the commodity groups to further the interests of their members. No one program will fill the bill for all farm commodities for all time to come, the spokesmen added.

Plans were reported being developed by poultry, livestock, wheat, and dairy groups under which producers would finance their own industrywide programs including farmer control over expanded production, research, advertising, and marketing development.

Among subjects listed for future study were (1) whether efficiency is the answer to the overall farm problem; (2) the development of a meaningful parity formula; (3) the effect of United States foreign policies on domestic farm difficulties; and (4) the problem of diverted acres as they affect individual commodities.

"The role of the commodity organization is the most vital one among all national groups representing farmers," stated E. M. Norton, secretary of the National Milk Producers Federation. "It is one which cannot be preempted by an organization in which there inevitably are conflicts of interests among various commodity groups. Every commodity group can be helpful in solving the problems of other commodity groups, when they know what those problems are."

Those attending the session included: George M. Strayer, Hudson, Iowa, executive vice president, American Soybean Association; Robert W. Scott, New River, N. C., president, United States Poultry and Egg Association; Chester C. Housh, Elkton, Va., executive committeeman, National Turkey Federation; George B. Blair, Lake Charles, La., general manager, American Rice Growers Cooperative Association; Alan T. Rains, Washington, D. C., executive vice president, United Fresh Fruit and Vegetable Association; Joseph H. Shelly, Washington, D. C., executive secretary, Vegetable Growers Association of America; A. E. Mercker, Washington, D. C., executive director, National Potato Council; James B. Nanse, Alamo, Tenn., president, National Swine Growers Council; Robert J. Novins, Toms Rivers, N. J., general counsel, United States Poultry and Egg Association; Roy Hendrickson, Washington, D. C., executive secretary, National Federation of Grain Cooperatives; Hubert J. Hughes, Imperial, Nebr., K. Kendrick, Stratford, Tex., and George L. Reid, Jr., Washington, D. C., president, national program chairman, and legislative representative, respectively, National Association of Wheat Growers; and E. M. Norton, Washington, D. C., secretary, National Milk Producers Federation.

Helping Poland's Scholars

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of May 28, 1957, commenting on the grant of $475,000 made by the Rockefeller Foundation to Polish universities and research institutions:

HELPING POLAND'S SCHOLARS

From Copernicus to Madame Curie the contributions of Polish scientists and scholars to the fund of world knowledge and culture have been substantial. Over the past 18 years, however, Poland's opportunity

to continue to make such contributions has been hampered, first by the human losses and physical destruction of World War II, then by the breaking of old ties which Polish scholars had maintained with the West.

It is to both these problems that the Rockefeller Foundation's grant of $475,000 to Poland is addressed. Most of the money will be used to purchase equipment and materials needed by Polish universities and research institutions. The rest will finance renewed contacts between Polish scholars and their Western colleagues. If experience is any guide, these expenditures should prove well worth while in the years to come. Meanwhile, the Rockefeller Foundation's action, like the similar step by the Ford Foundation, gives evidence of the desire to reknit the ties of Polish-American friendship, ties which go back to the founding days of our Nation almost 200 years ago.

School Aid Cut Should Be 100 Percent

EXTENSION OF REMARKS
OF
HON. FRANK IKARD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. IKARD. Mr. Speaker, under leave to extend my remarks, I am including an editorial from the Vernon (Tex.) Daily Record, dated May 26, 1957, entitled "School Aid Cut Should Be 100 Percent":

SCHOOL AID CUT SHOULD BE 100 PERCENT

As a means of making the undertaking more attractive, sponsors of legislation to provide Federal aid for school construction have lowered the amount to be spent during the first year of a 5-year program from $2 billion to $1.5 billion. This is a concession to the advocates of economy in total Federal spending for the coming fiscal year.

Whether the reduced size of the package will improve its chance of passage remains to be seen. Of some significance is the fact that the House Rules Committee has ordered the measure reported in a form which will permit amendments. Certain to be offered is an amendment which would prohibit allocation of any of the money to schools in States which still practice segregation in the schools.

If this amendment should be adopted, which is not unlikely in spite of the President's plea that it be rejected, it can be taken for granted that the school-aid program will not get through at this session of Congress. If its adopton can be prevented this year chance of finally defeating it should be good, because it is becoming apparent as time goes on that State and local authorities are taking care of the situation.

But rejection at this session would be important from another angle. If it could be known at an early date that there is to be no Federal money available for construction of local school buildings local effort would be stimulated. No doubt many communities and some States will delay construction as long as there is a chance that Uncle Sam will pick up the tab.

The encouraging aspect of this struggle to keep the schools free from Federal control is that debate has shown a steady decline in measurable sentiment for the program. When the proposal was first endorsed by the Eisenhower administration, in spite of the President's repeated assertions that support of the schools is and should remain the responsibility of local units of government. Its early approval was taken for granted. A rigged White House conference didn't produce the ground swell of popular support which advocates of the plan had expected, and subsequent discussions has had the effect of exposing the phony character of the case for a program which means eventually handing over the control of public schools to the Federal Government.

There is reason for encouragement over the reduction in this year's appropriation by half a billion, but any amount is 100 percent too much.

North Dakota Has State Commission for Celebration of 100th Anniversary of Theodore Roosevelt's Birth

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. BURDICK. Mr. Speaker, in 1958 the Federal Theodore Roosevelt Centennial Commission will observe the 100th anniversary of the birth of Theodore Roosevelt, one of the truly great men of our times. "Teddy" was an early settler in North Dakota and built up his ranch at Medora in our State, and added much to the color and interest of the early days.

Mr. Hal S. Davies, editor of the Minot Daily News and a member of the Theodore Roosevelt Centennial Commission, has sent me an editorial from his newspaper which under unanimous consent I should like to have inserted in the RECORD:

T. R. AND CONSERVATION

North Dakota's action in creating a State commission to cooperate with the Federal Theodore Roosevelt Centennial Commission in observing the 100th anniversary in 1958 of the birth of that great American, is a welcome tribute to one of the State's most famous adopted sons. For Theodore Roosevelt, though born in New York City, made public acknowledgment of his enduring affection for the West and of his particular attachment to the North Dakota regions where he built up his physical strength as a young man just on the threshold of his extraordinary public career.

We are confident that the citizens of North Dakota through their cities and towns, churches, schools, patriotic societies, and other civic organizations will want to take full part in the observance which will be launched this year on Sunday, October 27 (on the conclusion of what would have been Teddy's 99th year) by the religious forces of the community.

At the same time, we venture to suggest that the national administration take fullest note of this centennial year, utilizing the occasion to particularly good purpose in a program designed to help strengthen the free world and, more particularly, the Western Hemispheric nations.

It was in 1908 Theodore Roosevelt convened the first conference of State governors, primarily for the purpose of considering action in regard to the conservation of our natural resources; 1958, therefore, is also the 50th anniversary of a significant public development with which Theodore Roosevelt's name is eternally linked.

Despite ups and downs, conservation concepts and programs that were initiated under the inspiration of Theodore Roosevelt have yielded the American people enormous values in the preservation of their water, forest, wildlife, and other national resources.

There is a similar need and opportunity for coordinated action by the countries of the Western Hemisphere. In our common struggle for an ever higher level of prosperity and for our increased strength against those who may have designs upon our security, all of us of the Western Hemisphere would do well to pool our knowledge on the subject of our natural resources and to consider jointly the policies to follow with regard to their preservation and wisest utilization. A squandering of these God-given resources, in the wastes of erosion, of reckless forest depletion, and of mistaken water and watershed policies will prove costly, not only for our national being but also for the well-being of all the people who live in the Western Hemisphere.

Is this not a challenging opportunity for the United States to take the lead in the convening, during 1958, of representatives of all of the friendly nations of North and South America for the mutual consideration of sound Western Hemispheric conservation policies?

Such a conference would, in the nature of things, constitute a special tribute to Theodore Roosevelt, whose influence on America's conservation thinking was greater than that of any other President.

At the same time, it will be more than a personal tribute. It will demonstrate that Washington is ready to provide international leadership of a high order toward the strengthening, without threat to any other power, of the resources of all the lands linked together in hemispheric friendship, that, in the long run, will determine our economic level, prosperity, and security.

Memorial Day at the Cathedral of the Pines, Rindge, N. H.

EXTENSION OF REMARKS
OF
HON. PERKINS BASS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. BASS of New Hampshire. Mr. Speaker, tomorrow I will have the honor of representing President Eisenhower at Memorial Day services at the Cathedral of the Pines in Rindge, N. H. It is a particular privilege for me to participate this year just weeks after the Congress has recognized the dedication of the altar of the Nation at the Cathedral of the Pines as a memorial to all the war dead of all of our wars.

I am including herewith an Associated Press story which appeared in the May 26 issue of the Boston Sunday Globe:

NEW HAMPSHIRE CATHEDRAL OF PINES HAS UNIQUE SERVICE

RINDGE, N. H., May 25.—Unique among Memorial Day services to be conducted Thursday will be those high on a pine-crowned New Hampshire hilltop before a stone structure known as the altar of the Nation.

Congress in a resolve this May voted recognition to that altar—in the famed Cathedral of the Pines—as a memorial to all America's war dead in all wars.

Thus are commemorated, not only those who died in battles of land, sea, and air, but also the lives laid down by men and women in great war-service organizations such as

the Red Cross, and the sacrifices of war correspondents and entertainers, and others.

Those who met death in war effort in laboratory and shop, in shipyard and factory, or on merchant ships attacked on lonely seas.

Here are remembered the sacrifices of the pioneering men and women who gave their lives from coast to coast to transmit to succeeding generations the American heritage of freedom.

Built into the altar are stones from every State, each with a story of its own. There are stones sent by distinguished war leaders, stones sent from the far corners of the world, from battlegrounds and airfields where young Americans died.

WREATH FROM PRESIDENT

To this altar will come on Memorial Day—as on 4 successive Memorial Days in the past—a wreath from the President of the United States. Likewise, for the third successive year, the Governor of each of the 48 States and of Territories from the Virgin Island, to Hawaii and Guam, will add their tributes.

As the roll is called, a white rose will be placed on the altar as the personal tribute of each Governor to the war dead and of his State or Territory.

Memorials will come from the big national veterans' organizations: American Legion and Auxiliary, AMVETS, Veterans of Foreign Wars, Jewish War Veterans, Marine Corps League, and from the Grand Army Auxiliary, the Sons of Union Veterans, the Fleet Reserve Association, and other veterans groups.

There will be tributes from such other patriotic and fraternal groups as the Sons of the American Revolution, the Women's Overseas League, American National Red Cross, Knights of Columbus, Salvation Army, National YMCA, National Grange, 4–H Clubs of New England.

PARENTS OF PILOT

Memorials will be brought to the altar, also on behalf of the 5 million members of the General Federation of Women's Clubs and the 15 million members of the AFL–CIO.

Robert Burnette, president of the Rosebud Sioux Tribal Council of South Dakota, will add a new stone to the altar as spokesman for these "First Americans." The service, beginning at 3 p. m., ends with the traditional sounding of taps by a bugler.

The Cathedral of the Pines was founded by the parents of a young American World War II pilot who perished with his fellow crewmen in a B–17 Flying Fortress. He had hoped to build a home after the war near today's site of the open-air cathedral. Even before the war his family had envisaged the spot as a perfect site for an outdoor chapel.

The young lieutenant, Sanderson Sloane, had wanted to live where he could always see what he called "the most beautiful view God ever put together"—a sweep of forests and hills, valleys and lakes, spreading westward to the majesty of Mount Monadnock.

His parents frequently came to this bit of America which he loved, and when finally hope ended that their missing son would ever return, they were encouraged by clergymen in founding here an outdoor place of worship—the Cathedral of the Pines.

In 1946, when their project was well begun, it was "dedicated to the glory of God and in loving and grateful memory of Sanderson Sloane, by his parents, Douglas and Sibyl Sanderson Sloane, as a place where all people may come and worship, each in his own way."

CAME BY THE THOUSANDS

Their fellow Americans have done just that. They have come by thousands, people of all races and faiths, Christians and non-Christians. Each has worshiped God in his own manner—individually or in groups, or as members of organizations, from early spring until chill of autumn.

Gifts, too, have come to this outdoor place of worship, now perpetuated under the care of a continuing group of trustees. A simple stone pulpit has been added, a lectern, a chaplain's altar, a baptismal font—and even a carefully shielded organ so that during services organ tones may blend with the endless hushing of the wind in the pines.

Foreign Trade Is a Two-Way Street

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. COOLEY. Mr. Speaker, the recent observance of National Cotton Week found cotton men in the United States looking to the future, and any such assessment must include a good, hard look at the present and future export market for cotton. It is clear that we need to preserve and expand commercial markets for cotton abroad. In other words, those markets now enjoyed by virtue of the Government surplus disposal program must be broadened and supplanted by commercial export markets in the days ahead. The future is certain to bring with it an increasing rise in productivity. Therefore, we must not neglect the advancement of sound two-way trade as a vital facet of our continuing search for lasting world peace.

It is timely and salutary to note the recent publication of the Cotton Trade Journal's 1957 International Yearbook. This annual issue, like the ones that preceded it, contains a wealth of information about cotton and its worldwide significance. Publisher Francis G. Hickman devotes individual sections of the Yearbook to more than 30 countries and traces the importance of cotton in each of these many areas of the world.

As I am privileged to serve as chairman of the House Agriculture Committee, this publication is of special interest for me. One of the articles presents a well-rounded picture of Switzerland. This tiny country, with its population of approximately 5 million people—just about the same number that live in my home State of North Carolina—buys about $40 million worth of American farm products annually and, though destitute of almost very natural advantage, meets her dilemma by exporting to other nations the products turned out by her highly developed technical skills.

Data about Swiss imports of American farm products and their relationship to her exports of watches and other manufactured goods are clearly explained. This article by Swiss political scientist, economist, and journalist, Emile Déléaval, indicated that the Swiss have an unfavorable balance of trade with the United States of one-half billion dollars and that Switzerland buys about $150 million worth of American products each year, paying for them promptly in cash.

Referring to the adverse effects which have stemmed from the 50-percent increase in watch duties imposed by the United States in 1954, Mr. Déléaval warned that the Swiss connot afford to widen the gap of their unfavorable trade balance with this country. Watch exports, he explained, are of major importance to sustaining the Swiss economy, financing 20 percent of their imports—including, of course, imports from the United States.

The article emphasized the importance of retaining and enlarging our commercial export markets and not posing threats to them by actions such as the watch tariff increase which, by resorting to protectionist methods, only served to disrupt our international trade relationships and injure our reputation as a champion of liberty in every form.

I commend this issue of the International Yearbook to my colleagues, and under leave to extend my remarks, I place in the RECORD the text of this excellent article by Mr. Déléaval.

The article follows:

SWITZERLAND

(By Emile Déléaval, political scientist, economist, and journalist)

Each year tiny Switzerland buys thousands of bales of good American cotton. In fact, she purchases $40 million worth of American farm products annually, including tobacco, rice, and peanuts. But little Switzerland and powerful America have much more in common than their mutual trade, important as it is.

Politically, both peoples have the same love for freedom. Economically, they have the same devotion to work, the same skills and compelling desire to make their place through honest competition. Historically, both peoples have fought against tyranny; their struggles against oppression have helped shape our world today. And, as mentioned, they have been good trade partners for many years.

However, more than a common heritage is required today for nations to live peaceably with each other. If a more harmonious relationship is to be achieved between our countries, Switzerland's peculiar individuality and national character—so rarely understood—must be duly recognized.

From every standpoint tiny Switzerland is unique. Destitute of almost every natural advantage, it is difficult to see at first glance how she can exist at all.

Geographically, the country occupies the mountainous, semibarren heart of Europe. She has no access to the sea and is completely surrounded by large and powerful neighbors. But despite these handicaps Switzerland enjoys robust and burgeoning trade relations with every continent.

Topographically, Switzerland offers little to excite the envy of any other state. Her territory extends over an area of about 16,000 square miles, of which only about 4,500 square miles are productive. The Swiss have no coal, no metallic ore, no oil. In fact, they have no natural resources whatsoever, except hydroelectric power. Yet, Switzerland is numbered among the world's most important industrial nations.

Ethnically, Switzerland lacks a common denominator. Within her borders are concentrated many different cultures and religious groups. Ordinarily, national unity is based upon a common racial, language, or cultural background. But in Switzerland patriotic feeling stems from the diversity of the people. Seventy-two percent of the Swiss speak German, 21 percent French, 6 percent Italian, and 1 percent Romansch.

Fifty-seven percent of the people are Protestants, 41 percent Catholic, and 2 percent are Jews or members of other religious groups.

Politically, Switzerland had to devise new systems to meet its unique problem. Because none of its ethnic groups would tolerate dominance by any other, a decentralized government was essential. The federalist system which the Swiss adopted leaves the maximum of liberty to the citizen and to the canton in which he resides. It is the basis of Swiss democracy.

Economically, Switzerland is hard pressed. Her only raw materials are the skills and enterprising spirit of her people. Though intensely cultivated, the nation's scattered patches of arable land cannot begin to feed a population of 5 millions. Nevertheless, her people enjoy one of the world's highest living standards.

When Switzerland was created, the founders of the Helvetic Confederation could set against the multiple disadvantages of race and land only their love of liberty. Yet so strong was their thirst for independence that they decided to persevere, to establish a new sovereign state in the center of the Old World. Six and a half centuries later the facts show their audacious dream was not unrealistic. Switzerland is an oasis of peace, harmony, and well-being in a world torn by rivalries, wars, and poverty.

But this "Swiss miracle" was not produced by magic. Switzerland is a creation of its own will. Its inhabitants have overcome the severest difficulties to achieve and preserve their national unity and independence. Today Switzerland has no internal political difficulties, but, on the economic plane, Switzerland daily faces a challenge as grave as any in her past.

Switzerland's vital problem is how to house, feed, and clothe 5 million inhabitants in a country which must export to live and yet has almost no tangible assets to export. Switzerland meets this dilemma by exporting her skill to other nations.

This situation obviously imposes definite limitations. Forced to compete with nations having local sources of raw materials for their industries, the Swiss must concentrate on quality rather than mass production. Additionally, geographical conditions are not favorable to the construction of vast industrial complexes necessary for mass production.

The economy of Switzerland is derived from the same conditions that have shaped her political structure. In both cases, natural conditions seem to be in conflict with extensive freedom. The confederation must maintain close relationships with the outside world in order to insure a sufficient supply of raw materials and to sell its finished goods, repudiating interference and protectionism for reasons of survival, as well as from conviction. Today, Switzerland's tariff policy is one of the most liberal in the world. Tourists are always surprised at the variety of consumer goods available here; merchandise from the United States, Germany, Australia, Japan, South America, Iran, and other countries scattered all over the globe. Switzerland can hardly ask other countries to welcome her own products without showing some degree of reciprocity.

In Switzerland it is not the government, but the wishes of consumers that dictates the selection of foreign imports. Manufacturers from every country are on the lookout for buyers in Switzerland, competing with Swiss factories in the domestic market. If Swiss manufacturers can't compete, they must turn to other activities. For example, the Swiss had to give up making automobiles because they couldn't compete with the huge American, French, and German industries. Local conditions force them to adapt their potential to restricted industries; watchmaking, textiles, metallurgy, chemicals, chocolate—products which, by their nature are marketable only in the 40 percent of the world where people can afford to buy these products, whereas other nations can sell their more basic products all over the world.

TARIFF AFFECTS QUALITY

It is therefore especially disappointing for the Swiss to see a country rich as the United States interfere with the law of supply and demand by imposing a heavy tariff on watches. This tariff has not affected imports quantitatively, only qualitatively. The reason for this is easily explained. The 50 percent tariff increase could hardly help but affect retail prices. Today, for the same dollar-price consumers are receiving watches of comparatively inferior quality than before; the Swiss are selling more but lower quality watches in the United States. This has grave consequences for both parties. It makes the public pay to support domestic manufacturers, and, in the long run, will affect the high quality reputation of the Swiss watch. For Switzerland, the watch industry is a most important element in export trade. Americans, with their vast resources, perhaps find it difficult to realize the importance in this industry. We shall attempt to explain this briefly.

As we have stated, Switzerland has practically no natural resources. Her industries work with imported raw material. In this respect, the watch industry is ideal in that it offers a maximum of employment, utilizing a minimum of raw materials. Regardless of quality, the quantity of metal used in a watch remains the same; only the degree of craftsmanship changes. This means, of course, that thousands of workers depend for their livelihood on the sales of quality watches.

The Americans were surprised at the reaction that the tariff increase provoked in Switzerland, and a degree of surprise might be expected on the part of people not familiar with the Swiss economy. Swiss problems cannot be judged in terms of American experiences. The Americans possess economic power and mobility undreamed of by the Swiss. If one branch of the United States economy falters, a hundred others can fill the gap. In Switzerland conditions are quite different; there is no such freedom of choice. If one of our industries is hit, it is impossible to make up the loss.

The watch industry alone, accounting for 20 percent of our exports, finances one-fifth of our imports. Loss of this 20 percent would put us in a very precarious position. Our balance of trade with the United States is already unfavorable to the extent of one-half billion dollars, indicating that the Swiss buy that much more from the Americans than they sell them. The Swiss cannot afford to widen the gap between United States imports and exports without searching for other markets more anxious to buy our products. It is simply a matter of self preservation.

And, aside from the question of business, is it not somewhat disappointing to see the United States, champion of liberty in every form, resort to protectionist methods which place in jeopardy the friendly relationship that we have enjoyed since the end of the last century?

In the beginning we noted that the Swiss buy American cotton, tobacco, rice, peanuts, and other farm products. But that is not all—we buy almost everything America makes, mines or grows—chemicals, metals, appliances, automobiles, aircraft, petroleum, woolens and furs. In fact, Switzerland's payments for American products each year come to $150 million, which she pays promptly in cash—making her America's best cash customer on the European continent.

The point is that Switzerland's cash earnings—in short, her ability to buy American goods—is earned right in America through the sale of her own products, mostly watches and watch movements. Therefore, anything which seriously handicaps Switzerland's ability to sell and earn must affect her ability to buy.

Address by Former Governor of Pennsylvania, John S. Fine, at Loyalty Day Program Held at Nanticoke, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address given by former Governor of Pennsylvania, John S. Fine, at the Loyalty Day program held at Nanticoke, Pa., under the auspices of Post 290, Veterans of Foreign Wars:

Thank you, Mr. Chairman, for your very flattering introduction. To gain and hold the esteem of one's neighbors is one of life's richest possessions. It was near here that I first saw the light of day, and I am proud and happy that you have seen fit to ask me to talk here on this occasion in the city where I have spent the better part of my life.

Just for a moment, with your indulgence, I would like to comment on the chairman's references to the things I had a chance to do for Luzerne County while I was governor. First, let me say that I am eternally grateful that you good people and thousands of others like you in Luzerne County made it possible for me to get ahead in public life. It was your confidence and your support that set my steps toward the governor's chair. Once there, I was ever mindful of my indebtedness to you, and at every opportunity, where I could, consistent with sound public policy, I endeavored to make up for the past neglect of our area.

Permit me to say, my good friends and neighbors, that it is a source of immense satisfaction to me that we now have the magnificent new turnpike extension coursing from our region into Philadelphia, opening up, as it does, great new possibilities for business and industry. I liken the new turnpike to a massive shot of blood plasma into the body economic of northeastern Pennsylvania. And one aspect that pleases me so much is that I feel it will stimulate things so that conditions here will be materially improved and job opportunities will open up in increasing numbers for our young people. They are our greatest asset, our greatest hope. The future belongs to them, the safekeeping of America is in their hands.

Loyalty day, 1957, is a good time to think of youth, American youth, and the task we have of preserving American liberties untrammeled, American institutions strong and safe for the future.

Let us note well that the great freedoms which were our inheritance through the blood of patriots are not guaranteed to us in perpetuity. Each generation is the trustee of our liberties and institutions, and each succeeding generation has the task and solemn obligation to pass them on unimpaired, unvitiated to upcoming Americans. This is the highest duty of citizenship: preserving and protecting our free institutions which have made America the mightiest power on earth.

We might well pause today and take stock of our situation, to assess our stewardship, to survey the forces which would destroy

what has been built on this continent since the first patriots took up arms for freedom on a sloping New England green. Since those memorable days at Concord and Lexington, when the flames of freedom leaped high, American liberties and independence have been an inspiration of peoples all over the world.

But today we are confronted with a vicious menace, an insidious conspiracy; godless, atheistic communism, which seeks the enslavement of the whole world, a conspiracy that not only would destroy America and all it stands for but has already subdued three-fifths of the world.

We must understand the enemy. In too many places there has been a tendency to minimize the threat and force of communism. It is virulent, it is a spiritual plague; communism robs man of his dignity, it would make of man an animal; it regards man not as a child of God, endowed with certain inalienable rights, but as a thing whose whole being is to be sacrificed to the state. In a sense, communism is social cannibalism; it devours and destroys man, consumes his being in its voracious tyranny.

On this loyalty day, when so many nations are vast prison camps, when the Soviet Iron Curtain closes out the light and sunshine of freedom for millions, let us remember that the Kremlin is the one power that has elevated the denial of the existence of God to a fixed state policy. What, I ask you in the name of Heaven, can be expected from such a government?

Contrast this with the American dedication to the Almighty. Let us not forget that the whole spirit of the Declaration of Independence and the Constitution of the United States is one which gives basic recognition to the spirituality of man, as a creature of God. Throughout our history we have always dedicated ourselves to the Divine Creator. Two of the most vivid and moving moments in our national life were those of George Washington kneeling in prayer during the critical hours at Valley Forge, and of the great Lincoln invoking the guidance and blessings of the Almighty in the lonely watches of the night when the convulsive forces of the Civil War threatened to break the Nation apart.

So we see at once that two rival systems of thought are pitted against each other in the world today; the struggle is freedom versus Communist tyranny.

All of us were shocked to the depths by the terrible crucifixion that took place in Hungary; we grieve, I know, for the subjection of Poland to Soviet tyranny; the fate of Czechoslovakia, held in the Soviet vise, saddens all of us; so, too, are we immersed in gloom when we consider the captivity of the millions of souls in East Germany, Bulgaria, Rumania, Albania, North Korea, and China.

But it is not enough for us to grieve and wring our hands in despair. On the anvil of public discussion and through our democratic institutions we must forge positive policies that will bring aid and succor to the enslaved peoples of the world; we must by our acts and policies keep burning the flickering hope that is nourished in the breast of every human being held in Soviet slavery. We must realize anew that wherever the freedom of anyone in the world is denied, that is a threat to our own freedom.

And in acting and praying for the eventual liberation of all the peoples in captivity, let us in our charity be mindful that the people of Russia themselves were the first victims of Communist tyranny. The captive Russian people, properly, are one of the prime targets in the effort to expose the gigantic hoax of communism. I wonder how many of us realize that in all of the Russias, with its millions of people, only 3 percent of the inhabitants are members of the Communist Party. The Russian people know that communism is a stark failure. They know that communism is a fraud. The Russian people have been exploited to the fullest while the masters of the Kremlin endeavored to push along a frantic program of heavy industry to build up war weapons. The people have paid in inadequate housing, scanty food quotas, the denials of liberties. The best evidence of the shaky foundations of the Soviet regime is the defections that occurred in the Communist forces when the Hungarian patriots fought with their bare hands and indomitable spirits against Soviet tanks. One of the greatest stories of our times emerged from that heroic rebellion; the Soviet high command was so alarmed at the desertions in their ranks to the Hungarian patriots that the Kremlin quickly had to rush in Mongolian troops to stamp out the rebellion, and this they did with a savagery reminiscent of Genghis Khan. This forced withdrawal of the regular Soviet troops showed the Achilles heel of the Soviet regime—the disbelief of the Russian people and soldiery in the false tenets of communism.

I have made a point of this, and the fact that such a very small percentage of the Russian people are Communists, to warn you against a sophistry that has gained some currency in American thought; the members of known or registered Communists are so small in America that they can do no harm. This is the worst kind of ostrich thinking. In country after country we have seen how a handful of Communists, serving their masters in the Kremlin, have undermined democratic governments and brought about the downfall of nations. Make no mistake about it. Communists are dedicated to their case with a fanaticism; they submit to absolute discipline, they will die, and do, if need be, to advance their conspiracy. They will kill you, yes, kill you, if it serves their purpose.

America cannot be too vigilant to the menace of communism, not only its strong-arm methods, its kidnapings, but its subtler forms of attack; its propaganda, its various front organizations, its calculated and often effective efforts to destroy belief in American principles and institutions.

Remember this on Loyalty Day, 1957; the front is everywhere, the battle is unremitting, the Communist moles are everlastingly on the job. I had this brought forcibly to my attention when I was privileged to serve as your Governor. We set up a special subversive squad of the State police to deal with the problem. Our employees took the loyalty oath. We cooperated fully with the Federal authorities in their efforts to expose the Communist conspiracy and bring traitors to justice.

When you hear some say there aren't enough Communists in America to be worried about, just remember that because of the spy work of a half dozen people in the United States, Canada, and Britain, the Soviets were made a gift of secrets pertinent to the A-bomb and the hydrogen bomb, so that almost overnight, through treachery, the Communists were able to wipe out the substantial lead the free world enjoyed in nuclear weapons, and the great advantage we enjoyed was lost.

Having attempted to point up the problem posed today by the Communist conspiracy against the free world, I would like to emphasize the essential truth that throughout history freedom has always had a greater attraction for man than tyranny. Man in his very nature, yearns to be free and enjoys those God-given blessings that are his rightful inheritance. In the long run, unless we allow ourselves to be lulled too sleep or to be grossly deceived, we may count on free man emerging victorious from the struggle we find ourselves in. And because of this we may look with hope to the ultimate liberation of the enslaved peoples of Poland, Hungary, East Germany, Czechoslovakia, Bulgaria, Rumania, Albania, and the other nations which have had the misfortune to come under the Soviet heel.

It was freedom and free institutions that built up America. It was the advantages and the opportunities that abounded in the climate of a free America that enabled us as a people to grow from a small group of Colonies to our present great might. Today we are a nation of some 170 millions, our productive might is the greatest in the world, we have our freedom and liberties. As a result of our constitutional form of government we have religious, personal, and economic freedom.

These are the things we must cherish. These are the rights and institutions we must be loyal to—this is the atmosphere and climate we must protect and preserve and pass on so that succeeding generations of Americans may enjoy the same fruits of our system as has been our inheritance.

We are gathered today in a community and in a valley that has paid heavily in the blood of its young manhood in the armed services of our Nation so that America might remain free, and that freedom and peace might be achieved and preserved in the world. We cherish the memory of those of ours who fell in the name of freedom. No less than they, we have the duty of holding high the torch of liberty so that we may acquit ourselves honorably before the bar of history.

On this Loyalty Day, 1957, let us, in concert, dedicate ourselves anew to the noble principles that nurtured this Nation to greatness. Let us be loyal to our neighbors, our community, our Nation, and our God. In this way we shall keep alive the American dream and one day make freedom a reality for the millions of our fellow beings who languish in slavery behind the Iron Curtain.

Luther Patrick, Former Congressman, Dies at 66

SPEECH

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1957

Mr. HUDDLESTON. Mr. Speaker, the Members of the House have been previously advised that former Representative Luther Patrick, of Alabama's Ninth Congressional District, passed away during the night of Sunday, May 26, 1957. He was beloved by all who knew him, and his close friends numbered in the thousands. With the death of Mr. Patrick, Alabama has lost a great son and the Nation a fine citizen.

Under leave to extend my remarks heretofore granted, I insert in the CONGRESSIONAL RECORD a newspaper account of Mr. Patrick's death, which appeared in the Monday, May 27, issue of the Birmingham (Ala.) News:

LUTHER PATRICK, FORMER CONGRESSMAN, DIES AT 66

Former Congressman Luther Patrick—beloved poet, wit, writer, lawyer and radio entertainer—died last night at West End Baptist Hospital at the age of 66.

Death came after a long illness to the public figure who had been confined to a wheelchair in the closing years of his life. Although suffering with crippling arthritis, his courage never waned and he maintained a lively interest in Birmingham's civic affairs.

His frequent letters to newspaper editors made himself heard where his voice couldn't reach.

Funeral services will be held at 2 p. m. Tuesday at Johns-Ridout's Chapel, with the Reverend Paul Clem and the Reverend Frank

Ledford officiating. Burial will be in Elmwood Cemetery.

Patrick's life was the familiar American success story—from farm to fame, though his fame was limited largely to his own State and particularly to Birmingham, his adopted home.

He was a "Will Rogers type" radio entertainer and his folksy, down-to-earth comments and humor endeared him to thousands of listeners.

One of his many poems, "Sleepin' at the Foot of the Bed," was widely circulated and has been read or recited several times on national radio network shows.

He wrote three books: Hope Ye're Livin and Doin' Well, Friends, Neighbors, and Kinfolks, and Goosepocket. At the time of his death he was writing a book on folklore.

A veteran of four terms in Congress, he once said membership in the Democrat Party was a "southern requirement."

During his last term as Representative, he said he supported "education, industry, progress, good will, health, fair dealing, thrift, peace, knowledge, truth and virtue in general."

After his congressional service, he returned to Birmingham to live at 921 7th Street West.

Last year, he was a delegate to the National Democratic Convention.

Born on a farm in Morgan County, he first attended Gum Pond School and his teacher was Miss Effie Livingston. This also was the first school and the first teacher of Senator JOHN SPARKMAN.

Patrick worked his way through college. He first studied electrical engineering and then law at the University of Alabama, Louisiana State, and Purdue University.

He used his knowledge of engineering effectively as a member of the House Interstate and Foreign Commerce Committee.

World War I interrupted his legal career. When he returned from service, he worked in a steel mill before beginning full time practice of law.

In 1919, he opened his law office in Fairfield, moving to Birmingham in 1922.

Patrick was an assistant Alabama attorney general during the Graves administration, and also served as an assistant United States attorney for the northern district of Alabama.

At one time he served as consultant on the war production board. In 1949 he was an unsuccessful candidate for the post of associate city commissioner.

A pioneer radio commentator, he started in this work in 1925 with stations WAPI and WBRC.

He was a member of McCoy Methodist Church and often served as substitute Sunday school teacher. He also was a member of Alpha Masonic Lodge, Shriners, Knights of Pythias, Eagles, Elks, High Twelve Club, Men of Prayer Club, and The Club.

Surviving are his wife, Mrs. Pearl McPherson Patrick; a daughter, Mrs. W. James Brasher, Birmingham; five brothers, Irving and Ivan Patrick, Birmingham; Gilbert Patrick, Jasper, and Ferris and E. L. Patrick, Cullman.

Written on the Wind

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. FASCELL. Mr. Speaker, an extremely interesting though somewhat disconcerting newspaper report from Brazil was sent me recently by Mr. Hendrick J. Berns, a foreign correspondent of outstanding reputation for the Chicago Daily News and the Miami Herald. Because of the significance of the news article, particularly at this time when the Congress has the mutual-security program under consideration, I would like to call it to the attention of the Members.

Each and every American plays a part and shares the responsibility of selling our American way of life to the rest of the world. The moving-picture industry is no exception to this and, on the other hand, enjoys an invaluable and almost unequaled and unlimited opportunity in the conduct of its business to portray American modes and mores in a representative manner ideally suited for exhibition in foreign countries.

When one considers the energies, efforts, and funds expended by our Government to carry the story of America to people in all parts of the world, it seems tragic to me that our domestic industries and those individuals in charge of sending American-made products into these foreign countries for mass consumption, would not do so in a spirit of closer cooperation with our Government by making available for presentation overseas productions which are more truly representative of America's ideals and way of life. I do not think any one of us is willing to concede that the background of events in the story described in the attached newspaper report portray the average or typical American family of today. The article follows:

(By Hendrik J. Berns)

SANTOS, BRAZIL.—No matter how many millions of dollars the United States State Department spends annually to inform foreign countries properly of America—Hollywood continues to undo that job.

There is a picture playing here now that represents exactly what the doctor might order to tear down Americans and life in America.

Its title, "Written on the Wind," is as senseless as its story. But that would be little (or routine, for that matter) if it were not for the characters which the movie depicts.

With the exception of few, they are all overdrunk, oversexed, overly wild, overly rich. Surrounded by the castle atmosphere of Texas oil wealth, they move from private plane to fancy sports car and use both principally to reach the next bar.

Their hands have never been employed for anything but fist brawls or gun toting. Their minds are nonexistent.

The bottle is their only piece of conversation. And there is even a scene where cigarettes are extinguished in unemptied glasses of champagne.

Gas station attendants are picked up to perform the duties necessary to satisfy the lust of some female for the broad male torso. And jazz music, accompanying the weird nightgown contortions of a millionaire's daughter, is the background to her father's death.

The whole thing is nothing but the sum total of life's perversities anywhere and seen in America, with the proper knowledge of American life and many grains of salt, it would be bad enough.

But shown abroad, to people so eager to know America better and so frightfully ignorant of America yet—in spite of the State Department millions—the effect is tragic.

Such movies may well bring loads of foreign currency to the box office; yet only at the dire expense of wiping out all inter-American understanding.

No American individual and no American Government agency can possibly accomplish for America what such Hollywood concoctions do against it.

The Soil Bank Has Brought Problems to Florida

EXTENSION OF REMARKS
OF
HON. D. R. (BILLY) MATTHEWS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. MATTHEWS. Mr. Speaker, under leave to extend my remarks, I am pleased to enclose a very enlightening article which appeared in the Florida Times-Union of Jacksonville, in the Sunday, May 26, 1957, issue. This article explains the concern that many of us expressed over the results of the soil bank when we voted in the House a few days ago to suspend operations after this current year as far as the acreage-reserve part of the soil bank is concerned until we had time to explore this whole legislation again. I hope all of my colleagues will have a chance to read this article because it tells of conditions in some of the parts of my district and in areas close by in the State of Georgia. The complete article follows:

SOIL BANK SEEN $4 MILLION DRAIN IN 12 FLORIDA, GEORGIA COUNTIES

(By Chris Trizonis)

VALDOSTA, GA., May 25.—Businessmen, bankers and farm experts are beginning to be uneasy about the economy of the north Florida and south Georgia agricultural areas later this year as a result of the acreages which have been placed in the soil bank by farmers.

Boiling the situation down, they see a loss of $6 million which would be realized from the sale of corn, cotton and tobacco that has been placed into the soil bank against $1,760,000 in payments the participating farmers will receive in soil bank payments. This means there will be $4,240,000 less money circulating through the area where interviews and research on the soil bank effects were carried out.

This area includes Berrien, Brooks, Clinch, Cook, Echols, Lanier, Lowndes, Thomas and Tift Counties in Georgia and Hamilton, Madison and Suwannee Counties in Florida.

The squeeze resulting from less farming activity has already been felt by fertilizer dealers, implement dealers, seed and insecticide distributors and suppliers of gasoline and tires.

Fertilizer dealers and those who handle insecticides were hit hard by a 20-percent reduction in acreage on tobacco allotments. This was topped by an average throughout the area of 12 percent of the remaining acreage being placed into the soil bank. The highest percentage placed in the soil bank in a single county was 38 percent by Clinch County, Ga., farmers. The lowest was the 6-percent figure of Berrien, Colquitt and Cook Counties in Georgia.

COTTON AVERAGES 20 PERCENT

The average that went into the cotton program of the soil bank was 20 percent. This ranged from 54 percent in Clinch to 15 percent in Tift. The soil bank received 11,240 acres of cotton, 3,740 acres of tobacco and

12,129 acres of corn from 5 of the Georgia counties which voted acreage controls on the crops for the year.

The tightest economic squeeze is expected to occur during the months when cotton and tobacco are harvested. It is during this time that most of the day labor is employed. Day labor accounts for almost half of the money paid out by the farmer in the production of his crops. Because of this, businessmen who are dependent upon credit buying will feel the pinch soon. Most of those who have been employed as day laborers in the past will be without employment this year. The biggest factor in the lack of jobs will be the cutback on acreage but soil-bank acreage will play a large role.

County agents in these counties report that most of the single-family farms, farms from 100 to 175 acres in size, retained their acreages and are working them. The majority of the harvesting on these farms is done by the family with only a minimum of day labor help.

Most of the day labor pool was used on the large farms and county agents say the majority of the acreage placed into the soil bank came from these large farms. In many cases, all the acreage allotted for cotton and tobacco went into the soil bank.

SOIL BANK IS INVESTMENT

One county agent reported that a North Carolina man bought several farms in a north Florida county after the soil bank went into effect. All of the acreage on these farms went into the soil bank and tenant farms had to move off to seek employment in industrial areas. By way of explanation, the North Carolina man was quoted as saying the soil bank offered him a 12 percent return on his investment, a return much higher than he could get on bonds or stocks.

The United States Employment Service office at Valdosta, the largest industrial center in the north Florida and south Georgia farming, backs up the reports of county agents.

L. R. Guthrie of this office stated he has been able to attribute a heavy increase in the workload directly to the soil bank.

"For years the tenant farmer has been gradually leaving the farm. This has been due to mechanization. The farm owner has had to cut every corner possible in order to decrease the cost of production. Machines have enabled him to do this. As the number of farm machines increased, there has been less and less need for a large number of farmhands. The soil bank is just making the final departure of the tenant farmer take place faster," Guthrie said.

"In our office we anticipate a heavy run of applications for employment from the day laborers when the time comes for harvesting. So far, the expansion of industry in the city has been able to absorb the gradual flow from farm to urban areas. But now we will be faced by the day laborers situation on top of applications already on hand from small farm owners who have placed part of their acreage in the soil bank and want city work while they farm the remainder of their land on a part-time basis," Guthrie added.

PART-TIME FARMER INCREASING

He said the part-time farmer is on the increase. With cotton and tobacco in the soil bank, there are farmers who prefer to have a steady payyroll from industry while tending the rest of their land.

As for the effect of this on business, the summation provided by Comer Cherry, manager of the Credit Bureau of Valdosta, presents a gloomy outlook for merchants. He points out that the $40- to $60-a-week wage earner is the backbone of business in any community. Any move which affects these wage earners will have a detrimental effect on the economy.

With over $4 million less money to circulate in the 12 counties mentioned the loss is bound to be felt. Some sources claim that every $100 received from the sale of farm products turns over in a community 7 times before it loses its buying power by spreading out to pocketbooks outside the community. Based on this formula, these counties will suffer a loss of more than $28 million worth of buying power.

Edwin Shiver, president of the Georgia Cotton Ginners Association, predicts a loss of $35 million buying power in Georgia as a result of the cotton alone which has gone into the soil bank.

In a recent appearance before a congressional committee in Atlanta, Shiver used Bartow County as a typical example of the cotton situation in Georgia.

He said there will be a total loss of sales and services amounting to $33,210.78 in the county this year. Of this total, $53,938.80 would have gone for fertilizer and soda, $28,478.40 for insecticides, $33,141.61 for gasoline and oil, $2,568.86 for tires and tubes, $7,209.12 for sweeps and disk plows, $36,189.35 for ginning, $12,744.66 for transportation of cotton, seed, and fertilizer, $151,079.20 for labor to pick, chop, hoe, and operate equipment to produce the crop and $7,860.78 for machinery.

BROOKS HARD HIT

One of the heaviest hit counties as far as loss of population is concerned is Brooks County, Ga. Burney Humphreys, superintendent of the county schools, reported that the rural schools lost 504 students from September 1, 1956, to May 1, 1957, although he pointed out that the soil bank was not responsible for the entire loss.

He said indications are that the cut in tobacco allotments played the largest role in the loss and the placement of acreages in the soil bank was next on the list of reasons for moving away. He added that because Quitman had no industries, most of the population had left for Valdosta, Moultrie, Albany and a number of industrial and military centers in Florida.

Because of this heavy drop in enrollment Brooks County schools face a loss of 20 teachers in the next school year.

Mrs. Beth Williams Powers, associate editor of the Quitman Free Press, said a study of the soil bank and its effects on Brooks County showed disastrous effects on the economy of the county and the city.

Probably the least affected counties in the area will be Berrien, Colquitt and Cook in Georgia and Hamilton and Suwannee in Florida. In these counties, most of the farms are one-family operations of less than 200 acres. The majority of those who own these farms have utilized every acre of allotment permitted under the support programs. Most of the acreage which went into the soil bank in these counties was from the handful of large farms in each county. A small amount of acreage from the small farms went into the soil bank because the owners were unable to afford irrigation systems and feared another drought year.

PREVIOUS LOSSES CLOUD IMPACT

Madison County, Fla., Agent Rudy Hamrick said effects of the soil bank on the economy will not be felt strongly there because of 3 bad crop years in the past. Most of the farmers in that county have suffered severe losses during the 3 years and buying is limited because of tight credit and merchants whose books are already overloaded.

Since the soil bank has the earmarks of becoming a political football in Washington and throughout the Nation, many of those who are in position to evaluate the program also are Government employees. This prevents them from speaking too freely on the matter. Many of the comments ranged from bitter disgust with the program because it kills initiative and promotes laziness on the part of the less progressive farmer to absolute condemnation of the program as one that fails to accomplish its goal.

The soil bank was devised to cut back production in order that surplus tobacco and cotton raised in this area could be sold by the Commodities Credit Corp, which handles the commodities purchased under the support programs.

Those who feel the soil bank misses its goal point out that cotton and tobacco on hand in CCC stocks are inferior grades. They contend that tobacco on hand consists largely of undesirable 139 and 140 varieties grown in the Carolinas. This tobacco is slick and pale rather than reaching the quality of tobacco sought after by cigarette manufacturers.

COTTON SAID SHORT STAPLE

The cotton is allegedly short staple cotton which cannot be used on American machinery. The only possible place it could be used, these sources say, is in Europe where older machinery can handle shorter staple cotton. However, the European markets are uninterested in inferior grades of American cotton when top grades of cotton grown in Egypt, north Africa, and the Near East sell approximately 6 cents a pound less than the asking price for the short staple American cotton which is glutting warehouse floors.

"It would cause a lot of stink, I know," one Government employee said, "but the farmer and American business, which will suffer ultimately in the deal, would have been better off if only a fraction of the money had been used to haul the surplus to the middle of the Atlantic for dumping or for the purchase of gasoline to burn it."

Some contend that the businessman in this area who is now feeling a drop in sales has a worse situation to face yet when the dollars for harvesting what would have been produced, except for the soil bank, fail to come rolling in.

Address by the Honorable Peter A. Quinn at a Meeting of the Society of the Friendly Sons of St. Patrick in the City of New York, at the Hotel Sheraton Astor, New York City

---

EXTENSION OF REMARKS

OF

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1957

Mr. DELANEY. Mr. Speaker, I have just come across an address by one of our former colleagues, Hon. Peter A. Quinn, which he recently delivered at a stated meeting of that great society known as the Friendly Sons of St. Patrick in New York. Our former colleague is now the chief justice of the city court of the city of New York. When in the House, Judge Quinn was noted for his ready wit, his gracious manner and fluency of speech. He rose to the heights when he delivered the remarks which follow:

ADDRESS BY THE HONORABLE PETER A. QUINN AT A MEETING OF THE SOCIETY OF THE FRIENDLY SONS OF ST. PATRICK IN THE CITY OF NEW YORK, AT THE HOTEL SHERATON ASTOR, NEW YORK CITY

Mr. President, fellow Friendly Sons of St. Patrick, gentlemen of the glee club, and guests, you will notice the emphasis on that word "friendly." For of all your noble and notable talents, it is upon your friendliness I shall have greatest need to draw tonight.

The last of the High Kings of the whole of Ireland, Conn of The Hundred Battles—

and by the way, the present-day pronunciation and spelling of that name "Conn," is the corruption of clumsy Saxon tongues and illiterate Saxon pens, struggling with the Gaelic music in the ancient Milesian name of Cuinn.

Conn, or more properly, Quinn of the Hundred Battles from whom, of course, I am directly descended—and I have had a hundred battles myself upholding that claim, but fortunately I have the mark as proof: you know how certain hereditary physical characteristics identify the blood royal in descendants of some of the older European dynasties, such as the famous Hapsburg lip which indelibly marks the Hapsburg line; well, just so; those whose forbears in a direct line for generations wore the heavy metal, uncushioned crown of the Ard-Righs of Erin have a shining area of denuded scalp to mark the seat of that ancient crown; that mark which I wear in such pronounced degree is known as the "Tara bob"; now, of course, that doesn't mean that all bald-headed Irishmen are descended from the High Kings; only the Quinns with the Tara bob are so descended.

But Conn of the Hundred Battles, thinking of the succession one fine spring day, decided it was about time he married. He consulted with his chief minister of state. But this battle-scarred old veteran of all the wars, military, diplomatic, and matrimonial too, was immediately and violently opposed to the idea, arguing that if Conn married, his rare genius as a great civil and military leader would be undermined by the subtle influence of a woman.

Conn, a very reasonable man, decided to take evidence on the question. So he summoned all the married nobles of his court to the great hall at Tara and he put the question to them very fairly. He said, "If there are any of you who, searching your minds and your hearts in strictest honesty, are compelled to confess that your acts or decisions are influenced by the suggestions of your wives, let him take 5 paces to his left."

"Now, all of you who say to the contrary, take five paces to the right."

Slowly the company began to move, until every married nobleman had taken five paces to the left. That is, all but one.

In the center of the hall, a big, strapping fellow stood uncertainly. He looked lingeringly at the crowd on his left, hesitated and then took five giant strides to the right.

Conn of The Hundred Battles said, "Words fail me at this amazing spectacle. I leave it to you, noble sir, a born, lorn figure of freedom from the domination of woman, to tell this crowd on your left how it is that you stand your ground alone."

And the big fellow said, "Well, Sire, it's like this: Only this morning, as I left the house to come here to Tara, Catherine—my wife, that is—Catherine said to me, 'Now, mind you, Terence, at this season of the year there are all sorts of catching sicknesses abroad, so when you go up to Tara remember—stay out of crowds'."

I stand here a lone, lorn figure, looking lingeringly and lovingly at my rightful and customary place in the very midst of you. And as I think of the great wealth of learning, eloquence, wit, and good looks there is among you, in all honesty I am compelled to confess that I have less reason than even Terence for standing here apart from you and staying out of the crowd tonight.

There was an old friend of mine—and I think some of you have already made his acquaintance—an old friend, Michael Joseph Fidelis O'Flaherty, who was a member of the fire department of the city of New York. And one night while attending a fire he had the misfortune to fall out of second-story window. His partner, O'Sullivan, who had been working at his side, stuck his head out the window, and seeing the still form of O'Flaherty below, he called down "O'Flaherty, are you dead or alive?" And O'Flaherty answered, "It's killed dead I am."

And O'Sullivan said, "O'Flaherty, you're such a blasted liar, I don't know whether to believe you or not."

And O'Flaherty said, "Then it's certain sure I am dead, for if I were alive neither you nor any man living would dare call me a liar."

And it was as a result of what happened later when they got back to the firehouse and O'Flaherty none the worse for his fall, undertook forcefully to prove his point to O'Sullivan and refused to desist at the command of a superior officer—it was because of this that some time later he found himself before the trial commissioner on the charge of conduct unbecoming a member of the Fire Department of the City of New York.

O'Flaherty was supremely confident he would be exonerated, or at the worst, receive a light reprimand. But it seems that the trial commissioner had had a bad night. Or, maybe he had had too good a night. At any rate he was having a bad morning. He listened with obvious impatience and annoyance to the charge, cut O'Flaherty short in the middle of his defense, and without so much as batting an eyelash he found O'Flaherty guilty and fined him 30 days' pay.

O'Flaherty was struck speechless, for fully 2 seconds. Then he said, "Mr. Commissioner, I would like to ask a question. I would like to know, could I have a receipt for the fine assessed against me here today?"

The Commissioner said, "A receipt? Why, of course, not. I never heard of such a thing. And anyway, what would you want with a receipt?"

O'Flaherty said, "Well, Mr. Commissioner, you asked for it, and I'll tell you. It is my firm religious conviction that when I die I shall first appear before St. Peter and there in the great Book of Life he will have a full record of all the good and evil I have done here below. But just before he swings wide the pearly gates to usher me in, he will ask me to state for the record the good and evil done to me by others. And when I tell him of the mischief that befell me here today maybe he will think I am after making a mistake, accusing someone unjustly. And like as not he will say to me 'Come now, O'Flaherty, what proof have you of this?' And, Mr. Commissioner, what proof have I? Because, mind you, there'll be no time then to go searching all through hell to find you and get a receipt."

Now is the appropriate time for me to deliver my receipt, in full acknowledgment of the very great honor which is mine in being permitted in so distinguished a company to address this ancient and honorable society which in the 173 years of its existence has been regularly addressed by presidents, statesmen, prelates and priests, soldiers, scholars—and in the old days, Tammany chiefs.

But apart from the honor, addressing this society is a very serious undertaking, one which I have often heard has made stouter hearts than mine quail. But as my friend O'Flaherty was fond of saying "What's the sense of taking life too seriously when there's none of us who will ever get out of it alive?"

Nor is getting out of it dead the worst thing that can happen—as O'Flaherty demonstrated himself on his deathbed, when the parish priest broke the news to him that his last hour was at hand O'Flaherty insisted that he be helped out of bed to shave. His family, unable to dissuade him, began weeping wildly in the notion that the shock of such fearsome news had shaken O'Flaherty loose from his reason. O'Flaherty laughed at them.

He said, "Calm your fears. There's nothing wrong with my mind. I know very well what I'm doing. I am going to shave now simply because I won't have that clumsy blackguard of an undertaker nicking me."

Like a true Irishman, perfectly reasonable to the end. And with a laugh, even in the face of death.

Now there is a trait which is so characteristic of the Irish, that even the British jingoist, Kipling, accepts it as completely typical—when he says:

"There were lads from Calway, Louth, and Meath,
Who went to their death with a joke in in their teeth."

Indeed, it is so significantly characteristic, so peculiarly typical of the Irish, that I regard it as very strong proof of what the geneologists have long suspected—and that is, that the London-born martyr, St. Thomas More, was an Irishman by blood.

Great scholar, humanist, philosopher, statesman, theologian, lawyer, judge, chancellor, he lost his head when he ran afoul of the stubborn, selfish policy of His Majesty's government under Henry VIII. That in itself is enough to make him an Irishman.

Erasmus called him "the most angelic wit in England." Swift said he was "the man of the greatest virtue this kingdom ever produced." What else could he have been but an Irishman?

And yet Edward Hall, the English chronicler of the 16th century, who was a witness at the execution, in his official report, in which supposedly he was reflecting the opinion of the day, called St. Thomas More a jester, a mocker, a taunter of death, a wise foolish man, or a foolish wise man, he couldn't say which, but a man of no fit dignity and no serious mind. Largely because, I suppose, not unlike O'Flaherty, who out of respect for his person was determined to forestall the undertaker's ineptness as a barber, largely because St. Thomas More, as all the world well knows, with his head on the block and the ax about to fall, stayed the executioner, while he untucked the long beard he had grown in prison since his travesty of a trial for treason, untucked the beard from under his neck and his chest and laid it over the end of the block, saying, "This beard shall not be cut; at least it has done no treason."

Now, this extreme sense of humor, because it functions even in extremis, this Irish sense of humor, as it is called, this propensity to laugh and see the humor in even the most dire circumstances, while it has won for the Irish the universal reputation of an acute and unfailing sense of humor, in some quarters has drawn down on them the same criticism and misunderstanding and even sneers and contempt which Hall and his contemporaries heaped upon St. Thomas More. And sometimes, otherwise well disposed persons, baffled by this Irish sense of humor, impatient with it, sometimes they are inclined to put us down as pleasantly weak-minded or genial madmen.

But if you dissect laughter and examine the anatomy of a sense of humor, I daresay you will find not only that it is an integral and functional part of the God-given power of reason, but by corollary that those richest in a sense of humor are those necessarily richest in reason. Now, I know that comes very close to saying that the Irish, by the common trait commonly accounted to them of a surpassing sense of humor, must therefore be the people who naturally are most plentifully endowed with the divinely given gift of reason; by racial trait the most reasonable people in the world. Well, I won't go that far—out of deference to the non-Irish. But let's see:

The Angelic Doctor, also known as Aristotle baptized, probably the most profoundly reasonable man in the whole of strictly human history, Thomas of Aquin—a Quinn, mind you, and I am sorry we haven't time for a side excursion into the interesting question, if it's a Quinn he is, then what

part of Ireland did he come from; it would be profitless anyway, because I think at the time of his forebears Ireland was not in parts but all in one piece, as, please God, it soon will be again—but Thomas of Aquin, more commonly known as St. Thomas Aquinas, of whom Pope Leo XIII said, "Reason borne on the wings of Thomas scarcely can rise higher." St. Thomas Aquinas in exhaustive treatises and disquisitions and summas proved it up to the hilt that faith is the continuation of reason and that philosophy and revelation, therefore, harmonize.

Now, accepting St. Thomas' thesis—as any thinking person must, even on brief inquiry—and leaving aside for the moment the question of grace, or better still, leaving it to the theologians, isn't it obvious that those who will make the quickest and easiest transition from reason to faith, those who will lay their hands most naturally and readily and firmly on the eternal verities of revealed religion—isn't it obvious that they will be the people of the highest reason?

And what people in all the annals of history, hearing the Christian revelation for the first time, ever went for it like a ton of bricks the way the Irish did when they heard it fall fresh from the lips of a returned captive and former slave, our patron, the great and glorious St. Patrick?

And highly reasonable people, convinced of a great truth, are not content to accept it passively. Reason commands that they do something about it. And isn't that exactly the way the Irish behaved? They couldn't build churches and abbeys fast enough, in which to study and absorb the many-sided beauties of that fulfillment of reason found in the new truth, and they couldn't take ship fast enough to carry the blaze of its manifold glories including the Creator's endowment to all men of the unalienable freedom and peerless dignity of the individual—they couldn't take ship fast enough to carry the glad tidings to the neighboring islands and the whole continent of Europe, where men's minds, still sunk in the gloom of superstitution and the darkness of barbarism, were struggling aimlessly for the light.

And isn't it only a highly reasonable people who can become so engrossed, so enamored, so possessed with the compulsive grandeur of absolute truth, that no temptation, no fell design of great power or pelf can ever wrest it from them? And how many times in song and story have you heard of the centuries of murder and pillage and rapine, in which it was attempted to drown in a torrent of Irish blood the flame that Patrick lit? And the flame still burns. Come rack, come rope, come hell or Connaught, nothing could shake them loose from the way, the light, and the truth, because they had bound it to their souls with reason's finest hoops of steel.

And coming down to less important though more modern instances, who but a highly reasonable people after centuries of barehanded resistance and heartbreaking struggle against the sustained oppression of monstrous religious persecution, on gaining their freedom would choose as the first President of their Republic, no matter what other qualifications he might have had, one not of their faith but of the faith of their oppressors? And who but a highly reasonable people, in a world filled with the degraded politics of petty racial and religious hatreds, of which they themselves have too often been victims, in selecting the lord mayor of their chief city and capital, could look only to his qualifications and ignore as wholly irrelevant the accidental fact that he is not of the race or religion of 95 percent of the population?

Now, I suppose there are those who will say, "Well, if the Irish are such a highly reasonable people, as attested by their great sense of humor, how is it that so close to their laughter are always their tears?" Not, I assure you, as I have heard it put, in a very homely phrase, "because their bladders are too near their eyes"—but because humor and pathos are the extremes of a single psychological balance, which when poised on the fulcrum of fine reason, is always delicately atremble between—in minor concerns—between what is pleasant and what is unpleasant, what is agreeable and what is disagreeable, and in major concerns, between what is good and what is evil.

So that even taking Chesterton's familiar lines, as something more than a mere tour de force in rhymed paradox: The "Great Gaels of Ireland" were far from "mad" and if "all their wars were merry and all their songs were sad," it must have been because they were good wars fought in good causes; and it must have been that their songs had in them the remembrance of evil deeds and evil men.

And what Irishman today has anything less than tears for the poor starved, hunted, exiled brave people of Hungary, who under the Red terror of atheistic communism, with their bare hands, have had to fight and are fighting and dying all over again for their freedom and their religion. Yes, the Irish salute them, with nothing less than their tears. And they know how to fight and die, God help them, like Irishmen.

But can't you see the myriad ghosts who rise from the bloodstained pages of the centuries of Irish history, shaking with supernal merriment as they behold the three unwise men in the Kremlin? And can't you hear the whisper of their ghostly laughter echoing down the corridors of history as they call out to that unholy trio, "Oh, you blundering blackguards, don't you know that every time the nail-studded boot heel of the tyrant grinds down on the glowing embers of religion and freedom to crush them out, you only send a thousand new sparks flying in a thousand different directions to light a thousand new fires of faith and hope?

"Don't you know they piled us into transports and sent us into exile to die in the jungles and plantations of their New World? The same old idea you think you have patented anew under the name of slave-labor camps. Don't you know they starved and hunted us out of old Ireland into leaky emigrant ships, with little more than the few sad rags we had on our backs to cover our nakedness?"

And yet wherever we went or however little else we possessed, we carried with us Ireland's greatest treasure—the priceless spiritual deposit of truth with which God through Patrick had endowed us.

Fellow Friendly Sons of St. Patrick, wear well that Irish sense of humor with which the world has dubbed us. It is a treasured decoration; the bright badge of our belonging—our identification with a people to whom God gave the power on mighty wings of reason and of faith to rise above the storm wrack of life and soar to man's true destiny—beyond the farthest star.

Thank you.

Business, Congress, Education—Where Are We Going?

EXTENSION OF REMARKS

OF

HON. CHARLES E. POTTER

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, May 29, 1957

Mr. POTTER. Mr. President, in the rush of human events, it is sometimes forgotten that the investment in higher education is vital and productive. Faced with heavy burdens of taxation from all sources, education becomes a target. This holds true not only for the individual, but for every Member of Congress if his constituents are deluging him with demands for cuts in the budget.

In a talk which Dr. Harlan Hatcher, president of the University of Michigan, gave recently at the 11th annual Michigan congressional dinner at the Statler Hotel here, he discussed this kind of thinking in a most forthright and enlightened manner.

I ask unanimous consent that his remarks may be printed in the Appendix of the RECORD so all may have the benefit of Dr. Hatcher's informed thinking.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

BUSINESS, CONGRESS, EDUCATION—WHERE ARE WE GOING?

I address you in a period of continuing, high-level prosperity. Human and property losses during World War II were vast and almost incalculable. Peoples were displaced. Currencies were upset. On the analogy of World War I, we should have endured economic disaster and paralyzing inflation. We did not. No more dramatic contrast could be cited than that of Germany in the 1920's–1930's and West Germany since World War II. Her recovery has been remarkable. We ourselves have not fared too adversely—up to now.

Though the lengthened shadow of the great depression of the 1930's still falls ominously across our path and influences our thought and planning, it gives no authoritative sign of striking us another immediate blow.

The reasons for this encouraging state of affairs are no doubt many and complicated. We know more about the world we live in, and we are, on the whole, wiser about what we do know than we were in the 1920's. And we have learned how to learn. The two World Wars stimulated research. Research has given us new knowledge, new products, new processes. It has speeded up the cycle from idea, to product, to obsolescence. A heavy percentage of the businesses represented here are based on products that were unknown only a few years ago. Witness our present-day chemical, electronic, and aeronautical industries.

In 1910 on Belle Isle Bridge, Byron T. Carter tried to crank a stalled car for a woman. The engine kicked back and the flying crank broke Carter's jaw.[1] He died of ensuing complications. Cadillac's Henry Leland asked Charles F. Kettering to do something. Ket went to his makeshift laboratory in the old Deeds barn in Dayton, sorted out his hardware, and revolutionized the automobile, and emancipated women, by inventing the electric self-starter.

Forty-five years later he helped dedicate the multi-million-dollar General Motors Technical Center. The road from Deeds' Barn to the technical center is an outward and visible symbol of the dramatic march of science, and its resulting technology as applied to one industry. The inventive genius of the solitary mind is still vital, but to develop its ideas into useful products and involve them in our industry and culture require education, hundreds of related skills, and a thousand supporting processes, as well as considerable capital and business management. We are committed to this activity.

The mechanical aspect of our world is concrete and easy to isolate. Our mastery of the processes of research and understanding in economics and social procedures is

[1] T. A. Boyd: Professional Amateur, 1957.

less assured, but it is demonstrable and it is increasing. It is harder to dramatize what the economists are doing. They work in a complicated and illusive field. They have come a long way since the illiterate days of the early 1920's. As Kenneth Boulding, Michigan economist, quoting Schumpeter, says, "How nice economics was before anybody knew anything."

Our more exact knowledge and skill in this field are, at least in part, responsible for the relative stability of the economic order of the past dozen years. That is, they are responsible for a more accurate reading of the forces and the phenomena which, in turn, has helped us understand them and adapt them to our needs. We know enough to be confident that we do not have to suffer the capricious blows of economic disasters as in the past, any more than we have to suffer epidemics of smallpox or typhoid. We do have some maneuverability to order and control the direction and results of these forces under a concept of harmony with natural law.

This new concept of stability and orderly development is just as important to us as our nuclear weapons and our ultraspecialized industrial structure. In the longer perspective of history it may dwarf them into insignificance.

I have isolated only two samples of the forward thrust of our creative power. They are typical and illustrative, and must suffice for our purpose here.

America is exhibit A of modern industrial civilization. Our culture and the prosperity which supports it are based solidly upon business, industry, and scientific agriculture. These in turn are based upon, or more accurately, rooted deeply in, the nurturing soil of education for all our people, and a growing mastery over science, technology, and professional skills. No other nation has invested so heavily, as a matter of fundamental faith and national policy, in education.

Our forefathers bought into education for the Nation as a growth stock. They expected no immediate dividends for themselves. They did expect it for their children, and their children's children. Their investment has paid off handsomely. The stock has been split 10 for 1, the yield has risen, and the inventory is in reasonable balance.

The differential which accounts for our present greatness in a distraught and poverty-ridden world is the direct fruit of this policy. We have had no more raw resources than other peoples. We invested in education in its broadest and most specialized reaches. Other nations have not.

Our triumphant successes have been in science, technology, and agriculture. They speak for themselves. They have given us confidence and optimism along with some illusions.

We have not done so well in those subtler areas of necessary human knowledge that deal with man's emotions: A primitive force more dangerous and more devastating than nuclear fission.

We have given little thought to the force of different religions, their values and taboos; to nationalistic aspirations in the Near and Far East, nourished in part by some of the ideas on freedom we have left lying around since 1776; to the explosive fact of the rise in the world birthrate; to the skills of diplomacy that must take into account these overriding human factors.

These factors and these regions have had a minimum of attention in our American culture and our college curricula. Yet they are deeply affecting both our national and our private lives.

We are now reaching some crises of our own.

The first is psychological, and, therefore, somewhat frustrating. We are stunned to discover that, despite our high motives and the unprecedented deluge of American dollars, other peoples do not love us. They receive the gifts and stone our Embassies. We thought the banner of the American concept of freedom needed only to be raised and all good men would, with valor, repair thereto.

They do not, and have not, and we are surprised and hurt. They do not understand the decades of education and hard work that lie behind America's present position in the world. They would like to arrive there on some magic carpet without enduring the heavy burdens of the long journey.

We have been too ignorant and inexperienced to show great wisdom in our policies, or skill in carrying them out. And great wisdom is required to guide and restrain the impulsive generosity of the warm American heart.

We have, unnecessarily, found ourselves too alone in the world, waging a devastating, unstable, and too costly kind of peace. It now appears that we are also reaching a financial crisis that is a part of this total psychological state.

Under various successive pressures, we have been somewhat recklessly making all kinds of uncorrelated commitments on the Federal level. We have committed for veterans ($6 billion), for welfare ($14 billion plus), for foreign aid ($6–$8 billion, military and economic), for farmers ($5 billion), for interest ($5.5 billion), for armed services ($38 billion), for Atomic Energy Commission ($2.3 billion), for highways (X billions)—to name a few big items.

It took the shock of a cash peacetime budget of almost $72 billion, submitted by an economy-minded administration, plus another $11 billion in highway and social-security programs, to startle an installment buying nation into a realization of the magnitude of its Federal commitments, and the enormous bureaucratic structure which we have thrown together to handle them.

We have followed the same uncoordinated policy on the State level. The affairs of state in Michigan last year required approximately $1 billion. Well over 50 percent of this sum was restricted or dedicated in advance. The State was a collecting agency. The gasoline tax and the sales tax are already committed to State and local units, and are out of reach of the legislature. Only one-third, approximately, of the total tax collections in Michigan are at the disposal of the State legislature. A significant portion of that sum is for higher education. When a sudden wave of economy hits us, we do not reconsider the total picture; we strike wherever there is vulnerability.

Higher education is a ready victim.

It is odd, and ironic, that the most vital and productive part of our spending should be the most vulnerable and unstable, and so handicapped for effective operation and long-range planning.

The present outcry, however, is not surprising. It is the cold, logical outcome of failure to exercise priorities and choices in our spending program, both State and National. And the equally unwise response of outraged rebellion and reckless slashing is also a normal human reaction to frustration.

We are all fed up with Federal taxes, so we lash out at any vulnerable spot on the local scene. Father has had a rough day at the office; he comes home and spanks the children.

The most serious danger here is a further shift of responsibility from State to National Government. Local and State responsibility and rights seem now to have been doomed when the Federal Government discovered how to usurp the tax function through the collector of internal revenue. This process was first introduced as a trickle, it became a subsidence, and now is an avalanche.

The psychology of the shift is insidious, deadly, and, I fear, it may be both irresistible and incurable. Like the digger wasp Pepsis stinging the tarantula spider, it leaves the victim alive but paralyzed in its nest as food for its young. While the State of Michigan agonizes to find money to meet its minimum local needs, the Federal Government nonchalantly reaches in and removes some 5,000 million from the State through income tax alone—five times our own State's budget.

The resulting general protest of numbed unhappiness has no place to focus—only the great awesome sweep of the wilderness of a 72 billion budget and a responsibility lost somewhere among the Senators and Representatives of 48 States, among thousands of offices and bureaus, among other thousands of items, big and little, among subsidies to farmers and shippers, peasants and potentates, global aid and local pork barrels. "They" recommend, "they" tax and appropriate, "they" spend.

And "they" collect by quarterly installments, in advance, under heavy penalties, or through payroll deductions. The source, after periodic outcries, grows passive, accepts the new concept of "take-home pay," and surrenders to the vague, absentee power. He even deludes himself into believing that the Federal Government has great independent resources, which it can send to his rescue or relief, and he exults if he gets a few of his dollars back as "Federal aid" from Washington.

And here is precisely the point where business, Congress, and education meet at the summit.

We are moving straight and headlong into a crisis in higher education. Our population increased another 19 million in the last 7 years—19 million people who have never heard of your product—more than the entire United States when President Polk took office. We are now over 170 million. The census clock has been ticking off one birth every 8 seconds. On March 28 it had to be reset for a new child every 7½ seconds.

This is an overwhelming fact. You consider it in your future business plans. We live with the figures in planning for higher education.

I make certain assumptions. You must have known what you were doing when you decided to expand the size of your families, and that the resulting taxes you would increase might be your own. You did not suppose that 5 or 7 could live as cheaply as 2 or 3. You did not intend to bring them into this modern, shrunken, teeming, technological, unequal world without providing them with the knowledge and the skills required to cope with it successfully and even to advance it further.

You certainly did not intend, did you, or expect, that the standards would go down in proportion to the rise in population? What a folly that would be.

The contrary is possible.

I am pretty confident it will come to pass.

I have said that higher education is the one differential that America has to support her present greatness. It must continue, it must involve more of our able and willing youth, and it must reach higher levels and higher standards.

You fathers and mothers, the citizens of this Nation will require that this be accomplished. We have no alternative.

How is it to be done? We have a good basic pattern, but it is in danger of breaking down.

We are clearly drifting fast toward an answer, but not the best or sound answer, through the Federal Government.

The new enlarged generation of American youth are now beginning to converge on the high schools, and the college population will double in the next dozen years. We have plans, but we do not have places or teachers now in sight for them. We are making oxcart progress in a jet age.

Private colleges are important to American education. With more adequate support they can expand. But under optimum conditions they cannot enlarge enough to serve their traditional share of students. In our present society and economy, revolutionized by the graduated income tax, private sources of finance have been moved from individuals to corporate bodies. And corporate bodies, though their gifts increase, have not yet come to grips with the problem or its opportunities.

The State has had to move in. One of the wonders, and I would add the glories, of our time is the rise of public support for higher education. We have not changed our philosophy or direction to accomplish this; we have only extended the opportunities.

Now the State universities confront the mounting problem of support. There is an alarming tendency this year to stand still or cutback, to Balkanize the Republic by building walls between the States to shut out "nonresident" students. Because of the economic and psychological facts already cited, State legislatures are reluctant or unable to face up to the urgency of the problem and the necessity for taking one forward step each year. Present proposals made to the Michigan Legislature by the senate finance committee would even call an abrupt halt to all building, including planning for urgent facilities in engineering, physics, dentistry, and medicine. If this policy should prevail, it would make higher education a disaster area.

Basically, the Federal Government has so heavily preempted the sources of revenue that the State does not know how to meet its needs with what is left.

With private and corporate support unavailable, and with the State feeling poor and crowded out of a tax supply, the task of outfitting the colleges and the universities will inevitably shift to our great white magician father of more and more—the Federal Government.

The task will get done. The need and the shortage will mount over the next 5 years. By that time the youth will be ready for college, but the college will not be ready for him. There will be a stampede, a scramble for available places, there will be more shocked realization of our present neglect. There will be knocking on the door and no room at the inn.

At that point the Federal Government will be moving in under popular demand. The State barriers will have to give way and it will require Federal authority to achieve it. If we go on into the next decade without altering present tendencies, we may expect a system of Federal universities to be set up to meet the absolute needs for expensive higher education available to selected youth from all the States. The costs of the new Air Force Academy indicate some of the dangers we may encounter.

Scholarships will be needed, and the Federal Government will finance them. It is already beginning to do so. Laboratories and classrooms will have to be erected, and dormitories built; and Federal appropriations or aid or loans will provide them. And a vast new Parkinsonian bureaucracy will rise up to allocate and to administer.

Back in the 1860's, when the State colleges and many of the State universities were founded under national encouragement and support, the Federal Government had something to give. It owned public lands ceded to it by the several States when the Union was formed. What better use for this national land than to give some of it to the States to help them establish a new kind of college in a time of critical need?

They did, and it paid off.

In this day, the Federal Government has nothing to give except what it has first exacted from the pockets of those to whom it pretends to give back. And then, it gives back only a portion of what it takes, for its brokerage fee is high. Moreover, in the light of its present budget, it would have to increase taxes to get the money in the first place.

I view this further intrusion of the Federal Government with dismay. I think business, Congress, and education, should prevent it—not by blinding our eyes to the need, as we are now doing, but by positive and immediate action.

The best aid the Federal Government can now give to the States and the schools is to surrender back to them some of the sources of taxation to be used directly for the support of education. This, at least, would keep the schools in their rightful and traditional place in their local communities.

The State and local authorities should then abandon the present system of dedicated taxes for specific purposes, or place higher education in a more assured position along with other items in the budget. The present method effectively prohibits intelligent priorities and choice in the use of our disposable income.

Business and industry can support these reforms. They can give more concrete and effective recognition to the vital role of higher education in our society and of their dependence upon it. They can help establish a less capricious base of support for all higher education. They can give both moral and financial support by aiding universities in building new facilities, and in making new approaches to education.

There is no one way or single answer to solve our problem. We know enough to embark on various lines of attack. The Dearborn Center, of the University of Michigan, handsomely aided by Ford Motor Co. and the Ford Motor Co. fund, is a good example. The gift to the university provides the campus site and the capital for building. The State will finance the operation. It will link the educational process with business and industry through a cooperative plan, centering around science and the arts, business administration, engineering, and graduate training. It is a most heartening alternative to Federal sponsorship.

This plan puts the problem and its solution right where it belongs. It certainly makes no business sense whatever to have businessmen recommend $4.4 billion a year, indefinitely, for foreign aid; to plan so carefully great research centers and modern industrial plants to make goods for future populations; to face the already critical shortages in every profession and skill they, and America, require; and at the same time sit idly by on the present topsy-turvy tax wall and witness a possible downgrading of higher education at the moment of our most critical need.

The President's Committee on Education Beyond the High School is good as far as it goes. I would propose, however, that we need a more compact and action-minded group involving business, Congress, and education to make a pointblank ways-and-means attack on this problem.

It is easier and more fun to solve this one than to learn Russian. And, as General Motors' Dr. Hafstad is alleged to have said, "We will have to do one or the other."

Public Welfare Act of 1958

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1957

Mr. FORAND. Mr. Speaker, I have today introduced for appropriate reference the Public Welfare Act of 1958.

This bill proposes to bring up to date the public welfare provisions of the Social Security Act and place our public-welfare program of aid and service to the needy, handicapped, and helpless on a realistic basis in terms of present conditions. Since the Social Security Act was originally conceived and enacted in 1935, major changes and advances have taken place in its social insurance aspects and these have, in turn, greatly modified the nature of public welfare responsibilities. Unfortunately, the assistance and child welfare titles of the act have not been brought up to date as these changes have occurred and this, in turn, has made it difficult for the States to make the adaptations in their own public-welfare programs necessary to meet actual needs. This bill incorporates basic changes long advocated by the major welfare organizations and leaders throughout the country. These changes would give the States an optional alternative to the present system under which they could develop a single welfare program which would be at once more adequate to meet existing needs and more efficient in terms of costs, personnel and flexibility.

The rapid growth of our social insurance program with respect to coverage and benefits has greatly reduced the need of persons in the average situation for public assistance. As we continue to apply the insurance principle on an even wider basis by gradual improvements in our OASI program, the role of public welfare will tend to become even more specialized. This trend is exemplified in the fact that today the average age of recipients of old age assistance is 75 years and the figure rises every year. This means that it is chiefly the very old—many of whom retired too early to benefit from OASI coverage—and those with special medical needs who have to turn to public welfare for help. Some of these need only money and are entitled to receive it with a minimum of investigation to establish eligibility. But a great many others require highly individualized attention to secure the kind of care they need, frequently involving more than average financial aid to secure necessary medical and nursing care. To meet this kind of need public welfare agencies require flexible provisions and adequate staff. Similarly in the families with small children requiring aid, social problems increasingly compound financial needs. Illegitimacy, desertion, and other family problems among the recipients of public assistance make the present arbitrary division between the child welfare and public assistance aspects of the public welfare function increasingly illogical and archaic.

The States have been moving steadily toward this concept of a single public-welfare program which can provide a real floor of protection against unmet social and economic need for all people. This does not mean, however, that they are seeking a monopoly on social services. For public welfare by its very nature moves in only when family and voluntary resources are unavailable to the individual seeking help. The strong support for adequate public-welfare programs shown by voluntary groups like

the Family Service Association of America, the Council of Jewish Federations and Welfare Funds, and many other sectarian welfare agencies is good evidence that there is need in our society for both.

But State and local public welfare agencies have been handicapped in making the best use of their own resources and personnel by the rigid structure of Federal aid. This bill proposes to remedy this by providing the optional alternative of a single comprehensive public welfare plan with provisions which will make possible more adequate and flexible aid by relating Federal grants to the State's financial need, placing the ceiling on assistance payments on an average rather than individual grant basis, and eliminating the present arbitrary restrictions on eligibility. In return for this greater flexibility States are required to provide assistance for all persons who qualify within their own standards of need without arbitrary exclusions such as those based on residence. The bill also recognizes individualized service as an intrinsic element in all public welfare functions thus making it possible to bring about a closer coordination of all welfare programs in a single public welfare agency. The advantage of such a simplified approach to the person who needs help, to the Administrator and to the public constitute a major argument for giving early consideration to this proposal.

In the statement which follows a more detailed explanation of the provisions of this bill is given.

GENERAL

The bill provides a new title XVI for the Social Security Act under which a State could submit a comprehensive public welfare plan for assistance to needy persons and welfare services as defined in the bill. States that wished to do so could continue to operate programs of assistance under the existing provisions of title I, IV, X, and XIV but the new matching provisions described below are applicable only to title XVI and the usual provision is made to preclude assistance payments to any individual under more than one title of the act. For most States the scope, flexibility, and financial provisions of title XVI would probably prove an inducement to change, but the optional feature would ease the transitional process and make it possible for a State, which wished to retain certain programs—as, for example, aid to the blind—on the present basis, to do so.

COVERAGE FOR ASSISTANCE

This bill makes it possible for a State to receive Federal aid for assistance to any needy person and not exclusively for those over 65, blind, permanently and totally disabled, or those meeting the restrictive definition for aid to dependent children—as at present. Administration by categorical groups would, however, be optional with the States, provided the basis for establishing the categories was reasonable. Assistance could not, however, be paid to persons residing in public institutions other than medical institutions nor to patients in an institution for tuberculosis or mental disease.

HIGHER ASSISTANCE LEVELS

This bill would provide a more flexible, rational, and adequate financial base for assistance payments in all States by making the following changes:

First. Ceilings or the maximum payments subject to Federal aid would be increased to $75 a month for all adults and $37.50 for all children. Present maximums in old-age assistance, aid to the blind, and aid to the permanently and totally disabled are $60 a month; in aid to dependent children the present ceilings are $32 each for the first child and adult caretaker and $23 a month for each additional child.

Second. Matching on the average of all payments rather than in terms of each individual payment as at present would, however, make it possible to receive Federal matching for higher payments in cases of unusual need—provided these were offset by other payments below the maximum level.

Third. A new and simplified matching formula would replace the present complex and inequitable formula which neither recognizes the special needs of low-income States nor the great efforts made by some States to provide more adequately for their own needy. Under the proposed formula the total of all assistance payments—within the average ceilings as shown in first above—would receive a 62 percent Federal reimbursement in any State whose average per capita income was the same as that of the United States as a whole. For States above this average the percentage of Federal reimbursement would be proportionately decreased but would in no case fall below 50 percent. For States with a lower than average per capita income the percentage of Federal reimbursement would be proportionately increased but the maximum level of reimbursement would be 80 percent. Under this formula the needy in both the high and low income States would benefit: the former by the higher reimbursable ceilings and the latter by the higher rate of reimbursement.

Fourth. Welfare services provided by the public welfare agency would be subject to the same rate of reimbursement as assistance payments. Increasingly those persons turning to public welfare agencies for aid are those with special needs requiring knowledgeable service for their solution. Such service can often help speed the return of the individual to self-support, secure for him the care he needs from other sources, prevent serious or long-term future difficulties, and reduce the cost to the public of extended dependency. For example, many people needing medical care or rehabilitative service do not know what provisions are available or how to go about applying for them: Many people are lingering in general or mental hospitals simply because they have no other place to go—and no one to help them find such a place; many people living in areas where their former source of livelihood has ceased to exist need help in moving to areas of new opportunity; many children might be saved from juvenile delinquency or other forms of costly social maladjustment if their parents received helpful guidance at the crucial time or—in cases where substitute family care was necessary—the child welfare services of the public welfare agency could make prompt and adequate provision for their adoptive or foster-care placement. An advantage of this bill to the child welfare program is the fact that it permits child welfare workers to apply assistance funds to the placement of needy children requiring foster care. The grave injustice done to this neediest group of children under the present act, which denies assistance to children not living with a close relative, was pointed out by the welfare report of the Commission on Intergovernmental Relations.

Fifth. Simplified administration, with consequent benefits to those requiring public welfare aid as well as to those who do its work and pay its cost, is provided in this bill in several ways. Matching on the average of all payments, the optional elimination of categorical administration, and the provision of the same reimbursement formula for all types of aid would permit an enormous reduction in paperwork with subsequent reduction in the cost of overhead administration. The bill also requires that the program be administered by a single agency at each level of government thus eliminating costly duplication, overlapping, and confusion of responsibility. From the point of view of the individual or family requiring help the advantage of a single agency is obvious.

Sixth. Availability of benefits: The bill makes it a condition of the broadened base of Federal financial assistance provided by this new title that its benefits should be available to all qualified persons without residence or citizenship requirements. No public welfare program can be considered to be fulfilling its function as the ultimate guarantee against individual need if it arbitrarily excludes needy persons solely because of their length of residence. The very factors that make it essential for the Federal Government to share the broad public welfare responsibilities of the States make it equally essential that such aid be available to all.

Seventh. The Virgin Islands and Puerto Rico: This bill rights a long-standing injustice toward our fellow American citizens in the Virgin Islands and the Commonwealth of Puerto Rico by extending to these jurisdictions the same program provisions as apply in the States and territories.

Eighth. Confidential assistance records: This bill restores to all persons receiving assistance under this title the protection formerly required by all titles that the facts concerning their receipt of assistance be treated as confidential information.

Ninth. Personnel training: The bill recognizes the serious shortages in qualified public welfare personnel by providing special financial aid for training such personnel.

Selection of Outstanding Federal Administrator and Federal Employees of the Year for Michigan

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 29, 1957

Mr. POTTER. Mr. President, many awards are given in the United States, and in the feminine contingent we admire our Miss Cottons, Mrs. Americas, and queens of everything from cherry blossoms to potatoes. While all of these are important, sometimes an award is given which stands out among these honors.

Since the Federal Government is so important in our lives, the selection of the Outstanding Federal Administrator and the Federal Employees of the Year for Michigan takes on a special significance.

A. M. Menninger, district director of internal revenue for the Detroit district, has achieved the first honor; and Lewis H. Gilbert, central service assistant at the Veterans' Administration Hospital in Dearborn, Mich., the second.

I ask unanimous consent to have the nomination statement made by James F. Deane, assistant district director of the Internal Revenue Service, regarding Mr. Menninger, and the remarks made by Dr. Thomas P. Crane, manager of the Veterans' Administration hospital in Dearborn, Mich., concerning Mr. Gilbert, printed in the Appendix of the RECORD.

There being no objection, the statement and remarks were ordered to be printed in the RECORD, as follows:

NOMINATION STATEMENT BY DR. JAMES F. DEANE, ASSISTANT DISTRICT DIRECTOR OF THE INTERNAL REVENUE SERVICE

I am honored to be able to nominate Mr. Albert M. Menninger, district director of the Internal Revenue Service, as "Outstanding Federal Administrator of the Year." As will be set forth in succeeding paragraphs, his record of leadership and accomplishment over a period of many years is particularly worthy of special recognition.

In order to obtain a clear and well-rounded picture of Mr. Menninger, a brief biographical sketch is necessary. He was born in Tell City, Ind., and served in the Army Air Corps during World War I. On August 7, 1923, he entered on duty with the Bureau of Internal Revenue as a CAF–5 and was assigned to Washington, D. C. During the next 12 years, he was assigned to various cities in the United States and performed tax audits with particular emphasis on excise taxes. In 1935 he was assigned to Detroit and, except for 8 years in Chicago, has remained here.

Early in his career, he demonstrated a natural flair for excise taxes. This talent stood him in good stead when the number and complexity of excise taxes ballooned drastically in the thirties. He was soon acknowledged as the number one excise tax expert in the Nation. Although stationed in Detroit, he was required to travel throughout the country resolving the most complex excise tax matters. On December 1, 1942, he was appointed Agent Investigator in Charge (miscelleanous taxes) and made responsible for miscellaneous taxes in 15 States. Since that date he has served in high-level administrative positions. In addition to his administrative responsibilities, he continued to serve as an expert on excise tax problems and made frequent trips across the Nation when new excise problems arose. Mr. Menninger remained in this dual capacity until May 1952. At that time he was assigned to assist the regional commissioner in Chicago with the problems inherent in the establishment of the first Internal Revenue region in the Nation. This appointment was terminated when he took the oath as district director of the Detroit district on December 1, 1952.

The position of district director of the Detroit district ranks at or near the top among the 64 districts. This district ranks first in the total number of tax dollars collected, second in the total number of tax returns received, and third in the number of persons employed. As an indication of the size of our operations, I would like to point out that last year our tax collections were $7,156,469,000, and we received 4,300,000 tax returns. In the last 4 years, a total of $25 billion have been collected or an average of $6¼ billion a year. Also, this district is responsible for collection and enforcement of 77 taxing statutes.

By nature, Mr. Menninger is a warm, friendly individual who has a real liking for people. His willingness to listen and his sincere interest in the problems and welfare of employees enabled him to become known and respected by all employees within a few months. He makes frequent visits to the work areas and always takes time to stop and chat with line employees. His willingness to fight for employees, to keep them informed and to listen to their complaints have gone a long way toward relieving their fears and anxieties. As a consequence, morale has shown a steady improvement. All employees are given to know that, if they are right, they will be backed to the limit, and if they are wrong, they will be overruled. Also, under Mr. Menninger the department became engaged in a gigantic public education program to clarify the tax laws and the rights of taxpayers. Through radio, television and speaking engagements by himself and other employees, the public became informed on tax matters than ever before. He established cordial relations with all the local newspapers, and through their cooperation, countless favorable and informative news items have been issued. Any taxpayer complaint is courteously received, thoroughly investigated and promptly and equitable resolved.

Probably the key to Mr. Menninger's success as an administrator is his ability to lead rather than drive his subordinates. The use of fear to secure accomplishment is entirely foreign to his concept of proper administration. He has the complete respect and unswerving loyalty of all employees and I doubt that a single employee fears him or the position he holds in this district. Line and staff employees do not produce merely because he expects or demands it. Rather, they are motivated by a sincere desire to do their best for the boss. Individual differences of opinion are quickly cast aside if it appears that pursuit of them will lead to any conflict with the best interests of the director and the service. In effect, he serves as a rallying point around which staff personnel can gather to determine the course of action that is most beneficial to us and the service as a whole. The ability to secure complete loyalty and devotion to duty from subordinates and to motivate them primarily through personal popularity and dynamic leadership is a gift not enjoyed by many administrators. His knowledge and practice of the best techniques of human relations makes us extremely proud that he is our district director.

In addition to his outstanding efforts as district director, he has found time to fulfill his civic responsibilities. A listing of all his actvites n this respect would require considerable research and would make this document needlessly lengthy. Suffice it to point out that he has been coordinator of the savings bond drives in Michigan, cochairman of the Federal section of the torch drive, a charter member of the local chapter of the American Society of Public Administration, and one of the original sponsors and participants in the Federal executive development program conducted at and with Wayne University. He is also an active member of the Economic Club, the Federal Business Association and the Federal Safety Council. Together with his religious and charitable activities, he more than meets the criteria for an outstanding citizen of the community.

Despite the length of this nomination, I do not believe that I have done him full justice. There are so many facets to his personality, his methods and his leadership qualities that to present them all would be a herculean task. If you asked 50 people about his qualifications, you would get 50 favorable replies and most of them would stress different points. Therefore, I am compelled to repeat that in all respects, Mr. Albert M. Menninger fully warrants selection as the Federal Administrator of the year.

REMARKS BY DR. THOMAS P. CRANE, MANAGER OF THE VETERANS' ADMINISTRATION HOSPITAL, DEARBORN, MICH.

Mr. Lewis H. Gilbert, central service assistant, GS–3, is our nominee for the Federal employee of the year.

Mr. Gilbert's entire span of Federal service of more than 10 years has been at this hospital. During approximately the first 8 years of this period, Mr. Gilbert performed the duties of a hospital attendant (general) and those of a charge attendant (surgical), GS–2. His efficiency ratings through July 1952 were consistently very good or excellent. Since 1952 Mr. Gilbert has received four consecutive ratings of outstanding under the VA performance evaluation program. In September 1955, he was promoted to the position of central service assistant, GS–3.

In addition to the above, Mr. Gilbert has been given two cash awards for suggestions submitted under the Government's incentive awards program, in 1954 and 1955.

The following is extracted from the recommendation made by Mr. Gilbert's supervisor documenting his outstanding rating for the period from August 1955, through July 1956:

"He is always able to plan his workload to meet the emergencies that arise. Example: On July 11, he noted the excessive calls for G. U. drainage sets and without assignment proceeded to make up 17 sets to replace the depleted stock. This was not his assignment. He assumed the responsibility because the aid assigned the job was unable to organize his work to carry the additional load. On August 7, an aid became ill and was sent home. Her assignment was not anywhere near completed. He immediately adjusted his workload so he could take the additional responsibility of assisting Mrs. Young, the practical nurse, in completing the assignment. He had a heavy workload of his own, but managed to complete it and give the help needed to finish the work properly.

"He observes the workload and always gives help without assignment. On August 9, he observed a new aid in the department growing very nervous because of her workload, and without saying a word he stopped his own work and gave her a helping hand, calming her down by telling her, 'Every day is not like this,' and 'Everyone tries to help each other when the work piles up. Tomorrow you will probably be helping me.' He

boosted her morale and made her feel she was not doing too badly for a beginner.

On June 2 he was in charge of Central Service. There was an excessive run on oxygen and he became worried it would run out over the weekend. On his own he got in touch with the Supply Division and asked to have National Cylinder make our Monday delivery on Saturday, thus eliminating a serious situation without creating a lot of disturbance. This was an unforeseen increase in demand; the usage in 24 hours had equaled that of the preceding 6 days. He is very alert to increased demands and realizes the danger of running short of critical supplies such as oxygen.

He has exceptionally good relationships with personnel throughout the hospital. He has a very pleasant, even disposition, and creates warmth and friendliness wherever he goes. There are six men working the day shift in Central Service. He is always the one asked by the nurses on the wards to help solve their problems, to check equipment, etc. Example: On September 11, 1955, we were having difficulty with thermometer breakage on the TB wards because of the lack of adequate space for contaminated and soiled items, which were to be returned to Central Service. The wards were unable to obtain larger tables to place all these articles on, and most of the time the thermometer cups were crowded onto the tables in very hazardous positions. The nurses were concerned and asked him if he couldn't suggest something. He came up with the idea of attaching tumbler holders (old-fashioned bathroom cups) to the wall in the area where all the soiled items were left for Central Service pickup. These were purchased and installed at very little expense. This not only solved the nurses' problem, but cut down the costly replacement of thermometers in this service.

He always cooperates in carrying out Central Service duties. He keeps a watchful eye on others to insure that they follow instructions. On August 14 he asked me, "Has the procedure changed for handling contaminated syringe boats?" When I replied it had not, he explained he had observed three different people who were not following instructions when the nurse was absent. He had spoken to them, but they continued the practice so he came to me. He is fair but will not permit others to deliberately break procedures and feel they can get by. He is very interested in his work and does everything he can to see that everyone performs their duties as instructed.

He plans his work to complete his assignment and to have time for the extra things which have to be done, such as restocking shelves, putting away excess items, cleaning and checking equipment, checking supplies on hand, etc. Mr. Gilbert is a perfectionist and anything he does must be done well. Example: On May 2 he was cleaning cabinets and was very unhappy because they did not clean well. The next day he brought a package of Spic and Span from home and recleaned all the cabinets, stating, "That job looked half done, and I didn't want anybody looking at it and saying that Gilbert cleaned those cabinets."

Mr. Gilbert is a far above average aide. He takes a deep interest in his work and is constantly thinking in terms of improving the work of the department. He requires little direction or supervision. He is loyal, honest, and very conscientious. I consider him outstanding in all phases of his work.

In placing Mr. Gilbert's name before you as our nominee, we feel that he epitomizes all that is desirable in a career employee who has dedicated himself to serving others in a position which often escapes notice and offers little in the way of financial reward.

Shut-In's Day

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. CANFIELD. Mr. Speaker, within a few hours, many of us in this House and our friends in business and industry will be closing our desks, packing our bags, and heading for seashore, lake, and mountain resorts to enjoy the long Memorial Day weekend. We will bask in the sun, relax, and come back refreshed to face the tasks ahead with new perspective, new interest, and vigor. It is good to put aside the daily routine, to see new places and things, to look up into blue skies and hear bird songs, instead of the steady pound of typewriters and the drone of our own voices.

But there are those among us who have no hope of getting away this weekend or any other weekend. They are the shut-ins, doomed through no fault of their own to spend the days and years in wheelchairs and hospital beds. For them the fragance of spring, the white stillness of winter, the flamboyance of autumn and the lazy luxury of summer are nothing more than the pages of a calendar to be flipped over. Alone and too often forgotten, they sit by their windows and watch the seasons slip by, remembering perhaps the world outside, yearning always for some release from the bonds of pain and illness that hold them prisoners within the four walls of their bedchambers.

There is a growing movement afoot to bring some bit of sunshine, some glimmer of happiness into the lives of our shut-in friends. Since 1941, Mrs. William Francklyn Paris, of New Jersey, and Ernest Barker, of Canada, have been working through the Shut-in's Day Association to have the first Sunday of each June set aside as a day of remembrance and recognition of the shut-in. Shut-ins themselves, they understand the aching need of the shut-in for acceptance, for friendship and understanding. Thanks to their tireless efforts, carried on with Herculean vigor in spite of their own handicaps, and aided by a growing band of shut-in and non-shut-in supporters they are making steady progress. From a limited observance that first year the movement has spread out in ever-widening circles, in this country and abroad. In 1955, official proclamations marking the first Sunday of June as Shut-in's Day were issued by the mayors of 69 cities in 29 States. My good friend and beloved colleague, the late T. Millet Hand, introduced legislation in this House last year to give recognition to this day. Currently there are pending before the Committee on the Judiciary 2 bills to effect this end, 1 sponsored by my own New Jersey colleague, PETER J. RODINO, Jr., and the other by the gentleman from Pennsylvania, Mr. HOLLAND. It is my sincere hope that this session will see some action on this worthwhile legislation. But we need not sit back and wait for this bright tomorrow, we can, each one of us make this first Sunday of June 1957, Shut-in's Day in actuality. We can pay a visit to some shut-in, send him or her a cheery card, a note, or a bright bouquet of flowers We can let him know that he is not forgotten, that somebody cares, that somebody is interested in his views, willing to exchange news and experiences from the world outside for the priceless philosophy and examples of courage that so many shut-ins have to offer. We can spread the word and implement it and, while we are doing it, may we never forget that many of today's shut-ins were the bright young heroes of yesterday; the boys whose blood bought the black beaches of Iwo Jima, stained the sands of Anzio and the snows of Pusan, and paid for the freedom we now enjoy. We can say "thank you" to them this weekend by remembering them on Shut-in's Day, and by giving as many shut-ins as we can, some cause to say with all sincerity, "What is so rare as a day in June?"

Preliminary Public Hearings Between Defense Department and Special Subcommittee on Military Discharges, Armed Services Committee, Necessarily Postponed From June 3; Announcement Follows

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent, heretofore granted me so to do, I am pleased to produce for your information the following communication which has been sent to the 30 Members of the House who have heretofore filed companion bills on it relating to less than honorable discharges from the Military Establishment and from other interested persons.

Text of announcement follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., May 29, 1957.

MY DEAR COLLEAGUES IN THE HOUSE OF REPRESENTATIVES AND OTHERS INTERESTED: The previously announced target date, to wit: June 3, for the preliminary public hearings by the House Armed Services Special Subcommittee on Military Discharges (H. R. 1108) and companion bills, etc., will not begin June 3. The reason is that the House Armed Services Committee will not complete its public hearings and executive sessions on the military construction bill until about June 15 (estimated).

Promptly upon the completion of said hearings by the full Armed Services Committee, of which all members of the special subcommittee are members, these preliminary public hearings with the Defense Department as the only witnesses to be heard in said preliminary hearings, will be held.

Promptly thereafter it is planned to have public hearings in order that all Members of Congress who desire to do so, together with other interested and qualified persons, may appear and testify in public session.

You will receive notice of the date set for these preliminary hearings with the Defense Department as witnesses.

Sincerely yours,

CLYDE DOYLE,
Member of Congress; Chairman, Special Subcommittee on Military Discharges, Armed Services Committee.

(Subcommittee members: Hon. GEORGE HUDDLESTON, Jr., Alabama; Hon. A. PAUL KITCHIN, North Carolina; Hon. WILLIAM G. BRAY, Indiana; Hon. CHARLES S. GUBSER, California.)

Statement of Rev. James L. Vizzard on Mutual Security Program

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. FULTON. Mr. Speaker, it is a pleasure to call to the attention of the Congress and the American people the excellent statement of the Reverend James L. Vizzard, S. J., before the House Foreign Affairs Committee on the current mutual security program on May 28, 1957.

The statement follows:

My name is Father James L. Vizzard, S. J., with residence at Georgetown University. I appear before you today as vice president of the National Catholic Rural Life Conference and as treasurer and member of the executive council of the Catholic Association for International Peace.

I want to thank the committee for its courtesy in giving us the opportunity to express our observations and convictions on the mutual security program. I would also like to congratulate the committee for its wisdom and its deep insight into reality. By the very fact that these hearings are now being conducted the committee makes plain its judgment that in the grave and basic decisions we as a Nation must make, moral and spiritual considerations not only are pertinent but, when everything else is said and done, are overriding.

In consultation with Dr. C. J. Nuesse, who will appear here on June 5, it was determined that our testimony might conveniently be divided into two distinct parts. It will be my function and privilege to present the teachings of the church, i. e., the ideas and principles which influence the practical judgments which informed Catholics make on issues such as we are facing today. His testimony will present the concrete evidence of Catholic convictions in the form principally of statements and policy resolutions of Catholic organizations and spokesmen. He will also offer specific recommendations on the mutual security program which have come from the same sources.

My comments on the military aspects of the mutual security program will be brief. To be sure, they also have their moral implications, but their justification, as has recently been clearly explained, lies chiefly in our own urgent defense needs. What previously has been presented under the guise of foreign aid is now seen to be largely American aid, and should be so billed. We have here, to put it directly, a very cheap way to buy ourselves essential military security. No doubt in this phase of our defense program, as very likely in others, some money can be saved by careful planning and administration. But we might well ask ourselves if we can afford to haggle or to try to make political advantage over a relatively few dollars when our lives may be at stake.

Neither will I spend any time on the more technical budgetary, fiscal, or administrative details of economic development and technical assistance. As I understand the chief purpose of these hearings, it is to reestablish, to emphasize, even to dramatize, the moral and religious bases of our programs. It is the motivation and the spirit rather than the details which are under consideration today.

As everyone here is quite aware, a great variety of reasons have been given to explain and justify the mutual security program: Our expanding economy demands overseas markets and sources of raw material. We need to win friends and thus bolster our national security. We need strong allies to check further Communist expansion. If we don't help, the Communists will. As a last resort, appeal has been made to our fears. Our flesh has been made to creep with vivid warnings of the horrors all of us may suffer and few of us may survive if we fail to support this program adequately.

No one would reasonably question the validity and even urgency of each of these motives, for they reflect different aspects of our national interest. But it has been the discouraging experience of many of us that where we have suggested that moral motivation might be more urgent, and even more practical, patronizing realists have tried to embarrass us into silence. They clearly imply or even bluntly state that charity and justice have no real pertinence to the issues, that these virtues represent only the sentimental idealism of international do-gooders. Moral interest, they claim, has nothing to do with national interest, and they'd be happy if we wouldn't complicate the matter.

This attitude is a strange one in a Nation founded by men who so clearly spelled out the moral basis of our political society. The Founding Fathers understood that our national interest is a much broader concept and reality than is embraced by military security, political stability, and economic advantage. For, unless our Nation has interests and responsibilities rooted in moral principles, just how do we differ from the arbitrary legality of totalitarian states? Unless our national interest is based upon moral interest, our society and our objectives can claim no superiority over those of the Communist nations. Unless our foreign economic policy recognizes opportunities and obligations which far transcend narrowly conceived selfish and temporary interests then do we not deserve to be weighed and judged by the world, and by God, in the same balance as Russia?

What's more, even in the terms of narrowly conceived national interest, motives of justice and charity have validity and value. It is my conviction, and I believe the results of these hearings will bear me out, that the mutual-security program will win much more sincere and practical approval from our citizens if it is explained and undertaken in terms of moral and religious conviction. In very concrete political terms, I believe that taxpayers and voters will respond more quickly and more heartily to this kind of appeal than to any other.

Moreover, again in terms of actual achievements of our goals, programs undertaken for and guided by these motives are far more likely to achieve, as byproducts, the stated aims of our foreign policy. It is the universal experience of mankind that gratitude and friendship cannot be bought. Neither individuals nor nations can be bribed into secure alliances. But disinterested service, genuine love, rarely fails to call forth a similar response. If we want friends and dependable allies, we will win them only if we can make it plain that we are interested in them for their own sake, and for God's.

On the conviction, therefore, that whether national interests be conceived either narrowly or broadly, moral and religious considerations are pertinent, I would like to explore these sources.

Start from the fact that while we and those in the world's relatively few other favored countries have been likely in our prayer to pass unthinkingly over the petition, "give us this day our daily bread," in large parts of the world hundreds of millions have known no prayer more urgent. Hunger, poverty, disease, and death have been their daily bread.

To this situation contrast the fact that we have an enormously productive economy, that as a people we possess a disproportionate share of this world's wealth, that we enjoy a standard of living almost intolerably superior to that of a great portion of the world's people.

What, then, are our moral obligations?

I'm sure that we would not subscribe to the proposition that God created the resources of this world for the exclusive benefit of those who might have had the power to seize them, or the luck to stumble upon them, or the good fortune to be born into them. I am sure we would agree that it would be supreme egoism for us to assume that God has granted us such material riches for our own use alone. We are not members of some kind of exclusive club, the sole residents of a high-walled garden of paradise, somehow specially chosen of God to enjoy the best of His creation while the great bulk

of mankind struggle outside for a meager and precarious subsistence.

One of Christ's parables comes to mind: Dives and Lazarus. We have no reason to expect that the fate of a nation which might scorn the obligations which go with wealth will be any different than that of the man whose very name implies wealth, selfishly and exclusively enjoyed. In today's world no one could mistake what nation is cast in the role of Dives.

It is also a fact, and it should be a disturbing one, that in the only portrayal of the final judgment which we have from Christ's own lips, the decision of the judge is based on the very simple and direct criterion: Did you feed the hungry, clothe the naked, heal the sick? We have no reason to believe that nations will be judged on any other basis.

A simple sense of decency and justice must convince us that we possess God's bounty not only that we might enjoy it ourselves but also that we might share it. In God's sight, we are His stewards. He has given us the opportunity and responsibility and privilege to use His blessings so that all might benefit. Justice suggests, demands, that wealth be administered to the welfare of all; and, if Christian teaching means anything, this is true of nations as well as of individuals.

But there are higher motives still than fear of judgment or the obligations of justice. The law of love, the law of charity, which has been taught by all great religions, was summed up in the simple but dramatic admonition of Christ, "Thou shalt love thy neighbor as thyself." And we were not left in doubt as to who is our neighbor. The lesson of the parable of the Good Samaritan is that every man is our neighbor, even the stranger by the side of the road in a faraway land. The works of charity do not demand a passport. The obligations of charity do not end at our own shores. Our neighbor is any man who needs our help wherever he may be found and reached; and when he is found love dictates that we approach him, as it were, with an apology for having come so late to help him.

Someone who may have heard these last words of mine may agree with their religious idealism but insist, perhaps sadly, that charity is the responsibility of individuals and not of states. Such a belief is common, but it ignores the fact that states come into being to fulfill for us collectively what we cannot do individually. As individuals we are bound to charity toward all. But in a world so vast and complex, in our private capacities we cannot reach all who need and have a claim on our charity. The state, therefore, acts as our agent. When the state helps, it is ourselves helping.

One is also rebuffed by some opponents of foreign aid who with an uncompromising air of finality remarks, "Well, these give-aways have to stop. After all charity begins at home." For them that ends the argument. It is difficult to understand why, for the statement claims no more than that charity begins at home. It doesn't end there. It is not completed and perfected until it reaches out to the farthest ends of the earth, and embraces in its warmth and love all who are in need.

A number of other objections can be heard almost every day and can be read in almost any paper: We have not won friends, the countries we have helped most are still "uncommitted"; our generosity is not appreciated. Somehow these objections seem almost petulant and they have already been dealt with. Why should we expect friendship and gratitude, when in the past our aid has been explained and justified exclusively on the basis of our terms, our aims, our self-interest?

Others make the outraged charge that our foreign operations are shot through with inefficiency, boondoggling, and graft. There have been, I am sure, cases in which this has been true, and wherever it has been found it must be eradicated and every effort must be made to prevent its recurrence. But no honest critic can make a universal indictment. The people we have sent out and the operations we have conducted have been no better or worse than we find in our own country. On the whole, a remarkable degree of integrity and success has characterized our activities up to now.

Perhaps the loudest and most persistent objection we hear these days is that our economy can't stand the strain, that we need tax cuts more than foreign handouts. Frankly, I don't think we have to pay much attention to such nonsense. Our economy has stood, and, if called upon, could again stand the the much greater strain and waste of war. We have not even begun to make the kind of sacrifices, personal and national, which we can sustain, and willingly sustain if we are convinced of their necessity. Moreover, the part of the Mutual Security funds which have been expended on technical assistance and economic development have been very small indeed, and even if eliminated entirely could hardly lead to a perceptible tax cut. And if it were eliminated, or even significantly cut, I think we'd have a harder time living with our consciences and with the consequences of our folly than we have now living with our budget and the necessary taxes.

In the Mutual Security program, we have the opportunity of providing the world with one thing it desperately needs: A shining example of pure, undefiled and disinterested service. Our aid is and should be recognized as an important factor in stemming the advances of communism, but this program has an importance independent of the Communist threat. We should do the same things and even more even if communism were to disappear tomorrow. As stewards of God's abundance we must make available to others what we ourselves enjoy. In doing so, we are not called upon to sacrifice our own prosperity. In the long run such sharing will return a hundredfold.

If we dedicate ourselves to a program for shared abundance, we may never again be called upon to dedicate our lives and our wealth to a program of shared disaster. We believe that here the United States has the opportunity and the privilege to give moral leadership to the world as it has provided political and military leadership.

Ann Arbor, Mich.

EXTENSION OF REMARKS
OF

HON. GEORGE MEADER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1957

Mr. MEADER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article from the June issue of Fleet Flashes, published by Lykes Bros. Steamship Co., Inc., of New Orleans, La.

The article follows:

ANN ARBOR, MICH.

This is Ann Arbor.

Those who know Ann Arbor think of it as more than a home, more than a city. To the resident, Ann Arbor is a way of life. It it a quality of living generated by the provincial atmosphere of a college town along with the advantages of a large metropolitan area.

Beautiful Ann Arbor, with its famous university, its self-sufficient industry, its section after section of attractive shaded residential areas offers much to its residents. To the newcomer or the tourist, it offers an enchantment, a fascination which we can't forget.

It was in 1823 that a group of pioneers passed through a fur trading post known as Detroit, and pushed on along the banks of the Huron River in search of a location for a new frontier community.

Among the settlers was a Virginian named John Allen, and a fellow pioneer known as Elisha Rumsey. Both were married—and the wives of both were named Ann.

Some 40 miles west of Detroit, in the rolling slopes which bounded the Huron River, the pioneers established their settlement.

The wives of the two men—Ann Allen and Mary Ann Rumsey—eventually enlarged and beautified a wild grape arbor on the bank of a creek named for Allen. Here, they spent long afternoons together—knitting, mending, and probably gossiping a bit.

This meeting place they called Ann's Arbor—and it wasn't long before the entire settlement had adopted the name as its own. The name was shortened to Ann Arbor when the town was formally recorded in Detroit the following year.

The settlement began to grow. Today Ann Arbor is a university town on the immediate edge of one of the greatest industrial centers in the world. Its industries have developed sharply since the turn of the century.

And yet Ann Arbor has not lost its provincial flavor—for with its growth, its steady progress in all areas of industrial and commercial expansion, Ann Arbor remains primarily a city of homes—an informal, self-sufficient residential community large enough to offer its citizens the ultimates in modern living, small enough to retain its intrinsic friendliness, warmth, and informal atmosphere.

Known as the Mother of State Universities, the University of Michigan was founded in Detroit in 1817, and moved to Ann Arbor in 1837. Today one of the five largest universities in the Nation, Michigan is distinguished for the excellence of both its faculty and its physical facilities.

In Ann Arbor is located one of the Nation's foremost medical centers.

Since the university school of medicine was established over a century ago, the consistent growth of both the school and the public medical facilities has been outstanding.

Present medical facilities cover an area of approximately 4 acres. Included among hospital facilities in Ann Arbor are the university main hospital with a capacity of some seven hundred patients, and a number of specialized hospitals.

These include a complete isolation hospital; the Simpson Memorial Institute for medical research in blood diseases; the Neuropsychiatric Institute; the Veterans' Readjustment Center and a unique and beautiful maternity hospital.

A large seven-story out-patient clinic building houses over 100 physicians' offices and 196 examining rooms. Its function is to provide diagnosis and consultation for patients who do not require hospitalization.

Outstanding musical and dramatic offerings have become traditional in Ann Arbor. An annual winter concert series brings internationally famous symphony orchestras and Metropolitan Opera stars to the stage of Hill Auditorium. Top Hollywood and Broadway casts presents the Nation's best and most popular productions during the spring drama season.

Spectator and participant alike will find well-provided recreation in Ann Arbor. Opportunities for almost every sport—from golf to tennis, to water activities—are at all sides.

Nearby lakes and recreation areas provide excellent boating, swimming, and fishing.

There is no substitute for the thrill or color of football season in Ann Arbor. Stanch support of the famed Michigan varsity is evident everywhere—a support that extends beyond the gridiron, across the Nation wherever alumni are found.

Sports enthusiasts in Ann Arbor—and that includes practically everyone—crowd the benches for such other Big Ten athletic competitions as basketball, baseball, swimming, track, golf, hockey, and wrestling.

It would be difficult to overemphasize the attractiveness of Ann Arbor as a residential community. Residents take a uniform and justified pride in the appearance of their homes.

Tree-lined streets, gentle hills, numerous parks and wooded areas add much to the residential flavor of the community. Near the campus area, large fraternity and sorority buildings greatly enhance the city's impressive residential character.

New residential developments—in all price ranges—are constantly being expanded.

Probably as educationally minded as any city in America, Ann Arbor has long been known for the high quality of its schools and the educational programs that it consistently carries out.

Almost without exception, its public schools are modern. They are well lighted, well heated, equipped with libraries, gymnasiums, auditoriums, home economic and science rooms, and kindergartens.

And yet Ann Arbor is not merely satisfied with fine buildings. It is the work that goes on inside these buildings—transforming the student into the responsible citizen—that forms the vital function of the school system.

Comparing extremely favorable with the most modern retail shopping centers in the Nation, Ann Arbor retailers enjoy a gross business in excess of $80 million a year.

Because of competition with neighboring centers as well as Detroit, shoppers in Ann Arbor enjoy the newest and most modern facilities.

While Ann Arbor enjoys the benefits of purchasing power provided by industrial and university payrolls, as well as the constant influx of student population, the city also has specific agricultural assets.

The county seat of one of Michigan's most prosperous agricultural areas, Ann Arbor is the logical headquarters for agricultural interests.

The city itself is a choice consumer market for high-quality produce. It maintains a farmers' market which draws producers from many neighboring counties.

All this—consumer market, transportation facilities, location, physical assets, labor pool, and residential advantages—combine to make Ann Arbor a choice location for business, for industry, as well as an ideal place to live, to raise and educate a family, and to reap the benefits of the "Ann Arbor way of life."

More than 50 firms, ranging from 2 to 2,200 employees, comprise the industrial family in Ann Arbor. At present, more than 6,000 employees in industry receive wages in excess of $24,500,000 annually.

Recent trends toward the establishment of industrial research and development operations are being further developed by the chamber of commerce. Such operations help maintain the city's highly skilled labor pool, and take advantage of the many technical facilities made available by the University of Michigan.

The American Merchant Marine

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES

Wednesday, May 29, 1957

Mr. POTTER. Mr. President, I am pleased to have placed in the Appendix of the RECORD a prize-winning essay written by William Bradley Dunn, of Detroit, Mich., who was awarded a national prize in 1957 in the Harold Harding memorial essay contest. The subject of the essay is, "The American Merchant Marine."

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

THE AMERICAN MERCHANT MARINE—ITS IMPORTANCE TO THE AMERICAN FARMER-MINER-MANUFACTURER IN WORLD TRADE

(By William Bradley Dunn)

Down through the years, the American merchant marine has played an extremely important part in the development of our native land. The merchant marine has always had two purposes: (1) to further and increase foreign trade and, (2) to assist in national defense. The United States first established a realistic policy toward the merchant marine when Congress passed the Merchant Marine Act of 1936. Then in 1939 a program of shipbuilding was launched to replace obsolete ships. During the war, an emergency reconversion plan for building and shipping was established. The rate of building was tremendous, and when the war ended, the United States was left with a considerable number of ships on hand. This supply gave the United States the largest merchant marine in the world; however, it was unbalanced. We had a great supply of ships that could carry troops, but too few could be used for cargo transportation. So in 1948, the Maritime Commission launched another program which gave us the vital ships that we needed. These needs have been increased tremendously today. Hugh Gallagher, past president of the Propeller Club and vice president of Matson Navigation Lines, says this:

"Basically, on the sea, we need fast cargo ships, tankers, and troop ships. They must be fast enough to go in alone, and large enough to be capable of doing the job required of them.[1]

Merely constructing ships was not sufficient, so the merchant marine opened academies which provided extensive education for seamen. Through these extra facilities, the capacity of the merchant marine for service to our country was increased.

Outside of our national defense, the merchant marine's most important duty is to export our products to countries abroad. In this job, there are three main categories: farm products, mined products, and manufactured goods.

After the war, the merchant marine was busier than ever. Their job was to transport millions of tons of food products to the devastated nations of Europe and Asia. In a speech, Walter Ploeser said:

"The welfare of the farmer and American shipping are both essential to the prosperity of every man, woman, and child in the country."[2]

In 1952, the farmer exported one-half of the rice crop, two-fifths of the wheat crop, and one-quarter of the tobacco and cotton crop. This volume of exports indicates how dependent the farmer is on the sales of his products to other countries for his income. He must also expand foreign trade if he is to diminish the heavy stockpiles. Three products—tobacco, cotton, and wheat—make up two-thirds of the farmer's export dollar. Since the farmer and the merchant marine have only scratched the surface of possible trade with foreign countries, they are working toward an expansion of foreign trade. To safeguard the farmer, the Merchant Marine Act of 1936 insured that our oceangoing ships would carry the farmer's products. If the merchant marine would not ship the farmer's goods, then this country would be in a dire state, for the merchant marine is the only feasible way of shipping our farm products overseas.

The miner is also considerably aided in world trade by the merchant marine. In the first place, the ore miners around the Great Lakes would be nearly helpless without the inland merchant marine. Through many years, trade travel on the lakes has increased steadily. The merchant marine has transported over four billion tons of raw materials through the Great Lakes. Three billion of this total has been iron ore.

The coal which runs our many factories around the Great Lakes is carried by merchant marine vessels. To meet the demands, the ships are being built larger and better. On even a greater scale, our oceangoing tankers do a task for the oilman. Eleven new deep-sea tankers have been built in the past 9 years. These new tankers and supertankers are designed not only for utility, but also for speed of delivery. J. D. Pogers, president of the Esso Shipping Co., has this to say:

"Progress has been the keynote of the tanker industry ever since the first true tanker came into being in 1886—progress not only in size and speed of the vessel, but in employee-welfare safety and efficient operation. As the oil industry meets new goals in oil production and refining, this progressive spirit will insure the availability of the tanker tonnage that will be needed to move an ever-increasing volume of petroleum and its products over our ocean trade routes."[3]

The foreign trade of the United States miners will increase only as the strength and capacity of the merchant marine increases.

Along with the farmer and the miner, the manufacturer also is indebted to the merchant marine. He depends upon its services both in the import and in the export fields. During the time of war, it is vital to the manufacturer in shipping valuable relief supplies abroad; and the people abroad are dependent upon it for their much needed materials. Although a great deal of our trade across the sea and on our lakes is in raw materials, a substantial quantity is made up of shipments of manufactured goods. Ships on the Great Lakes transport ready-made automobiles, for example. Transoceanic trade between the United States and other countries is part of America's foreign policy. Our Nation depends heavily upon the manufacturer and the merchant marine for the continuation of this essential service.

The farmer, the miner, the manufacturer—these three make up the backbone of American prosperity. Without the American merchant marine, however, they would not be able to conduct their businesses profitably. As the farmer, miner, and manufacturer look toward the future, they can count on the American merchant marine being on the job, doing bigger and better work, and playing a larger role in our Nation's prosperity. Not only do the farmer, miner, and manufacturer benefit from the American merchant marine, but the entire American people are confident that the merchant marine will continue to play its important role in the Nation's welfare.

A March on Washington

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks in the RECORD. I include the following editorial from the May 20, 1957, edition of the Vicksburg (Miss.) Evening Post:

A MARCH ON WASHINGTON

A march was made on Washington Friday, the third anniversary of the Supreme Court's decision to outlaw segregation in the public schools of the Nation. It was called by various names, but it was most generally described as a prayer pilgrimage for freedom. It was designed to appeal to President Eisenhower and to the Congress to join the judicial branch of our Government in giving strong, aggressive leadership in the civil rights field.

The civil-rights issues have become so prominent in the minds of politicians and pressure groups, that all other considerations seem to fade into insignificance. Witness the remarks of Representative ADAM CLAYTON POWELL, who bluntly told his audience "I don't give a tinker's damn about foreign policy, about the farm problem, about the money situation, about anything except civil rights." Yet, the main issue does not come to the surface. And it will remain obscure, just so long as vote scrambling and fanaticism hold sway. The real issue is the deprivation suffered by the States of the sacred rights written into the Constitution. Much is said about the 14th amendment—the 10th is scarcely mentioned. Yet year after year, and decision after decision, the 10th amendment has been emasculated until we now have little vestige of substance left in the powers and rights of the various States.

Cunningly and with great finesse, the forces which would destroy constitutional government in this country, have raised issues to obscure their real purpose. Behind the emotionalism of these issues, those forces continue to work to deprive us of rights which have been the bulwark of our glorious history. Loyal Americans who pierce the screen and see the real issue at stake are branded as disloyal, as traitors, as reactionaries, as enemies of America. JIM EASTLAND, one of the great stalwarts of the fight for constitutional government, is the current whipping boy. He dared to raise his voice in protest and to point the finger at the subversives and to show them in their true light. Joe McCarthy got the full treatment and he died a broken man, whom even his enemies had to grudgingly admit was intensely loyal to his country.

The march on Washington was a pilgrimage, entered into by hundreds in a sincere belief they were in a pilgrimage for freedom. Yet history will reveal that it was an observance of the anniversary of a day when our glorious Constitution was undermined and made to totter—when nine men, not elected by the people, wrote a new law into statute books and thus denied the people of the 48 States those rights for which our forefathers died, and, at the same time, usurped the functions of the legislative branch.

The time has come for a prayerful pilgrimage of clear-eyed Americans to insist that the damage which has been done be removed and no further efforts be made to strike down the foundation of America—our Constitution.

One Reason Why

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the May 16, 1957, edition of the Wall Street Journal:

ONE REASON WHY

President Eisenhower made two points in his defense of the budget speech that seem particularly significant so far as his $2 billion Federal school-aid program is concerned.

One point was his statement that no great budget deductions are possible unless the people stop demanding more and more services from the Government. We know of no great clamor from the general public about the need for $2 billion from Washington for their schools. The States, cities, villages, towns, and school districts across the Nation are going about the business of providing their own needs and meeting their own responsibilities. In the 9 months that ended March 31 last, the people taxed themselves to provide $1.5 billion to build their schools. Our guess is that Mr. Eisenhower is misled by the noise of a small, dedicated minority that claims—without any proof at all—that if public education is not to fall apart the Federal Government must go into the school-building business, temporarily

And that brings us to the other point Mr. Eisenhower made. The budget is so big, he said, because the Federal Government is already doing a lot of things that "are established by law, and the bulk of the expenditures under those programs) are established by law."

All of them, though, like foreign aid, began as "temporary" programs just as the President says Federal school aid will be only temporary. All of them now, however, are locked in by law and custom. Veterans, farmers, and foreign governments have come to expect the handouts and the public has come to accept the handouts.

"All these," Mr. Eisenhower noted, "are programs long ago enacted by the Congress." Since the same argument will be made by others later, it strikes us that Mr. Eisenhower is not on the soundest ground when he says that the school aid program will be a get-in-and-get-out temporary one.

The history of Federal aid—as the Republican leader in the Senate noted a short time ago—argues persuasively against the chance that an aid program once started can be easily ended. In fact, Mr. Eisenhower himself said that, in the cases of farmers and veterans, the programs and expenditures "have tended to grow rather than shrink over recent years."

To argue that Federal handout history will not repeat itself in the matter of school aid is to blink the clear record. And to argue that the public should support another vast spending program which the public neither demands nor requires will hardly reduce the growing budgets.

Mr. Eisenhower, we think, was quite correct when he said the other night: "I deeply believe, as I am sure you do, that education is clearly a responsibility of State and local governments—and should remain so."

We do believe the President believes that deeply. It makes us wonder all the more why Mr. Eisenhower chooses to support those who would not let it remain so.

Present Inequities in Social Security

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. ASHLEY. Mr. Speaker, through the years the Congress has, wisely I believe, recognized that people receiving social security should be allowed to supplement their benefits with a modest amount of earnings. The amount of outside earnings allowed has been increased from $14.99 per month to $50 per month in 1950, to $75 per month in 1952, and finally, in 1954, to $1,200 a year. The 1954 amendments also changed the law so that persons aged 72 and over have no restrictions on earnings whatsoever. I have been concerned, however, with some inequities which have arisen through what I am convinced must have been an oversight in the drafting of this legislation. In shifting from a monthly income test to an annual test, inequities have arisen. These problems occur in the year of retirement and the year in which the individual reaches age 72.

The $1,200 per year exemption is based on average monthly earnings of $100 a month. But to relieve problems which arise with uneven earnings, the act states that an individual cannot lose a benefit for any month in which he earns $80 or less even though he exceeds the $1,200 limit.

Let us see how the system works in a specific fact situation—first in the year of retirement and then in the year of age 72.

For instance, let us take the example of a 65-year-old teacher who finishes his school year in June and must retire. He applies for benefits on July 1. During the first 6 months of the year he had earned $2,200. When he applied for social security he already had, therefore, exceeded the amount of earnings he is allowed for the year. He is told at the social security office that the law will still allow him to earn $80 monthly, but if he exceeds this amount his benefit for that month will be canceled.

If, however, he could have retired in January, instead of July, he would have

been allowed to earn $100 a month for the entire year in addition to his retirement benefit. Thus the teacher, solely because he retires at midyear, loses $20 a month in earning power during his first 6 months of retirement. This is an arbitrary discrimination without basis in reason. It puts a premium on the date of retirement which seems wholly unrealistic. Moreover, it imposes a retirement test on income earned before retirement actually takes place.

Now let us see what can happen to the same teacher in the other situation—depending in this case entirely upon the accident of when his 72d birthday occurs. He has been earning $100 per month in the last few years and has also received a maximum social security benefit of $108.50 a month. Now that he has reached his 72d birthday he assumes that there is no longer any restriction on the amount of money he can earn and still receive benefits. He, thereupon, gets another job which pays him $150 a month—or $50 more than he was earning. At the end of the year he finds out, however, that he must pay back four monthly benefits—totaling $434 because he exceeded the $1,200 a year. In other words, because of earnings after age 72, he must return benefits he received before he became 72. He also discovers, to his dismay, that the extra $50 per month—totaling $300 for the 6 months on the new job—is more than canceled by the amount he owes to social security. He must repay them $134 over the extra $300 he earned to cover his $434 debt. This repayment in many cases, constitutes an extreme hardship.

The two bills I am introducing today will cure these inequities by very simple changes in the law. The first bill makes a special provision that will allow an individual to earn $100 a month in every month of the year in which he retires. The second bill removes completely the income limitation for the entire taxable year in which he becomes age 72. The two bills place him in the same position as that of other individuals who are fortunate enough to have their retirement dates and their birthdays in January, and thus, merely by happenstance, are attuned to the vagaries of existing law.

Certainly it is unrealistic to assume that most people can retire, or have their birthday, in January and thus avoid the complicated and sometimes confiscatory workings of the present provisions. We know that, for most people, the time of retirement is not a matter of choice. Frequently it is compulsory. Often, as in the case of school teachers, it is governed by provisions of law. In other cases, it is at the caprice of the employer. Clearly, the month in which a man was born should not influence the amount of social-security benfits to which he is entitled.

The cost to the social-security fund of the changes I propose would by very insignificant, and are fully warranted by the equities they effectuate. I urge the Congress to take prompt action on these bills so that the unfortunate characteristics of the present system can be changed.

America's Crusade for Freemen's Rights

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. THORNBERRY. Mr. Speaker, each year the Veterans of Foreign Wars sponsor a national essay contest as part of their Americanism program. The contest is conducted on a local level by VFW auxiliaries and the winning essay is submitted to the State essay competition. From this level the winning essay is then submitted to compete in the national essay contest.

This year the topic for the essay is "America's Crusade for Freemen's Rights." The winner of the contest on the local level in Smithville, Tex., was Miss Clara Brosch, whose essay will be entered in the Texas State competition. Owing to the nature of the topic, I believe that all Members of Congress would be interested to read what the youth of our country write about this important subject and I therefore submit Miss Brosch's essay for inclusion in the CONGRESSIONAL RECORD, as follows:

AMERICA'S CRUSADE FOR FREEMEN'S RIGHTS

It can truly be said that America exemplifies a constant crusade for the rights of the freeman. Life in the United States is based upon the freeman's rights. Not only do Americans strive for freedom within their own country, but there is a constant effort to free others. It is in the preamble to the Constitution that we find these words, "to secure the blessings of liberty to ourselves and our posterity, we do ordain and establish this Constitution for the United States of America."

From the time that the Mayflower landed at Plymouth Rock, the most outstanding belief has been that of freedom, for that is the very reason the first settlers ventured into a strange new land. These were truly brave people. Their desire for religious, political, and economical freedom was so strong that they felt this journey was their only chance to secure them.

The most current example of the constant strife to free others is the Hungarian relief program which the United States has established. But this is not unusual, for the United States has come to the aid of practically every country which has suffered difficulty. Only a few years ago the United States went to war in Korea to help the South Koreans resist communism.

The most imminent threat to freedom today is communism. Communism is seeking to destroy the freedom of the entire world by conquering. Communism is rapidly spreading throughout the world. Education seems to be our best weapon. Of course, there is always the thought of war, but wars are never really won. People and things are destroyed in war, and nothing is really gained.

Freedom is perhaps the greatest characteristic of the United States of America and its people. Freedom exists in every action of the Americans. The Constitution, although it is a document of rights and freedoms within itself, was not enough for the people. Amendments were, and still are, being made and discussed constantly. The purpose of the first 10 amendments, called the Bill of Rights, is the protection of the rights of the people and of the States against encroachment by the Federal Government. This Bill of Rights guarantees some of our fundamental freedoms. They are known as civil liberties, because they insure our domestic rights.

Often we are prone to take our inalienable rights for granted. A course in American history very well teaches us to appreciate the freedoms that we do have by explaining the hardships of our ancestors and how many of them lost their lives fighting for freedom.

President Franklin Delano Roosevelt, in 1941, described the four freedoms, which he expressed as (1) freedom of speech and expression, (2) freedom of worship, (3) freedom from want, and, (4) freedom from fear.

President Roosevelt was trying to get the country back on its feet. He thought that these were the most important freedoms for the Americans. It would be well for us to think about these freedoms. Where did we get them? Does everyone have them? Of course not, very few people have as many, or any, freedoms.

The biggest problem within the United States itself, perhaps, is segregation. It is hard for us in the South to agree with, and to abide by the Supreme Court ruling. We have grown up believing that the Negroes and the whites are different races, and that they should be separated. If we search deep into our hearts, however, most of us have no real objection to being integrated with the Negroes. We must admit that the colored people were not meant to be inferior to us. All men were created equal. A conflict within the United States could easily destroy us and our freedoms: it would be much easier for the Communists to conquer us if we are divided. "A house divided cannot stand." When the problem of slavery was in its worst stages, Abraham Lincoln stated, "Our paramount object in this struggle is to save the Union, and is not to save or destroy slavery." We should take an example from a brilliant man. Although segregation in the South is a big problem, we must find some solution in which we can remain united and save the Union.

With the fine leaders we have in our Government today, we should be able to remain the world power, but if not, the most important thing is that we maintain our freedom.

Purebred Dairy Cattle Month

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 29, 1957

Mr. POTTER. Mr. President, in my State of Michigan, the month of May has been proclaimed as Purebred Dairy Cattle Month in recognition of the great progress that has been made in the dairy industry through the combined efforts of various organizations interested in the farmer and all of our citizens.

It is fitting that such recognition be given the purebred dairy-cattle industry and I would like to ask unanimous consent to have inserted in the Appendix of the RECORD, the words of this proclamation, which are most appropriate.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

Much of the credit for the vast progress that has been made in breeding and developing the dairy-cattle industry of this land should be given the purebred dairy-cat-

tle association, the service work done by the State and National Departments of Agriculture, the extension staff of our colleges of agriculture, and the master breeders of the Nation. The able and energetic men who are concerned with bettering our dairy breeds never cease to strive for better animals that will provide greater production.

All dairymen profit from the program of the purebred cattle associations, thus producing more and better dairy cattle and products more economically. The cow is the production unit that is the key to an industry giving employment to one-seventh of our population and furnishing about one-fourth of our food supply. Dairy products provide nature's most nearly perfect food, which is the basis for building young, strong bodies for a greater America.

Statement of Theo. N. Tsangaris

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. MADDEN. Mr. Speaker, the following are excerpts from a statement made by Theo. N. Tsangaris, of Gary, Ind., before the House Foreign Affairs Subcommittee hearings at Gary on May 20, 1957:

Mr. Chairman, opening my remarks, I would like to express my sincere thanks to your committee and your chairman, Hon. A. S. J. CARNAHAN, for the opportunity extended to me to appear before you and present my remarks.

As I understand, through your visit to our city, Gary, Ind., with the largest steelworks in the world, you are seeking to obtain local views on various aspects of the United States foreign policy, giving particular consideration to the mutual-security program. This being the case, I would try to use a few minutes of your valuable time to speak about the case of a country, small in size but very important in the society of nations because of its strategic location, her continuous struggle for the preservation of the ideal of liberty and freedom and its strong belief that honesty should be the basic rule of real friendship. I mean, Hellas, or better known, Greece.

Greece is the birthplace of democracy. It has a history that stretches back almost 4,000 years to a time when the people who inhabited the island of Crete had developed a notable civilization known as the Minoan period.

Greece joined the United States and the other Allies in fighting Germany and the other Central Powers in World War I and again fought with the Allies against the German-Italian-Japanese Axis in World War II, and her resistance to the Nazi invasion won the admiration of the world and upset the timetable of Hitler's plans against the Allies, giving them the valuable time to build up their strength.

Greece won another victory in 1949, this time against the forces of international communism which launched an all-out attack against Greece in an attempt to drag the country behind the Iron Curtain.

The war, occupation, Communist aggression, and the earthquake of the Ionion Islands in 1953, in Volos and Thessalia in 1955, Achaias in 1956 and only recently in Dodecanese Islands, brought about a total destruction in Greek ports, railways, bridges, and rolling stock, not mentioning the destruction in agriculture, Greek merchant marine and industry. Thanks to the valuable and great American moral and financial assistance, the deplorable conditions and suffering were alleviated.

The refugee program of 1953 accepted the earthquaked victims to immigate to the United States of America. The problem of Greece in some respect was temporarily solved. A great number of these homeless poverty-stricken victims, found refuge in this land of opportunity and justice for all.

In the last 4 years the Greek Government with generous American help has built roads, linking Athens to all the major tourist areas, agricultural and industrial centers, great postwar hydroelectrical plants, permitting people to enjoy the benefits of electric power and water availability. Greece, devoted to peace, gladly opens its doors to all those who wish to gain a better knowledge of both the country and its people.

A good beginning has been made—but very far from the status of conditions which will help the Greek Government and the people of Greece to be able, on their own efforts and initiative, to formulate plans and policies for a definite and brighter future.

International conditions force the Greek Government to spend 65 percent of the national budget for military preparations. Probably this is the highest percentage among all NATO nations. This undoubtedly causes the deplorable low standard of living of the great majority of the Greek people. The Government doesn't have the means to develop any kind of sizable industry, which would help unemployment. This is really the core of the most serious problems that the Greek people are facing. It was really very disheartening to me, during my visit to Greece last fall, to see boys, who just graduated from high schools or even from institutions of higher education, to be strolling along the streets of Athens seeking employment, knowing ahead of time that their chances to find any kind of a job are practically null.

People in Greece, young or old, like to work. They want to work, because they know that that is the best way to make an honest living. Can we create that opportunity for them? Encourage outside investments in Greece. Help the Greek Government, with proper supervision from the United States of America to develop productive industries, so people can find jobs. Don't send surpluses to Greece. The benefit of the people from such measures is very limited.

Every year at least 50,000 people are added to those who are seeking employment, while nothing is done to absorb any of those. The best way to fight communism in Greece is to give her people the opportunity to work.

The Greek Government is very much aware that the fundamental weakness which has acted as a restricting force in connection with further development is the lack of adequate capital. To remedy this situation, the Government encourages foreign investments and to that effect it has promulgated a constitutional law which provides guaranties for capital and profits.

Before closing my remarks, I would like to impress upon this committee the fact that a measure which will help some way is to help the emigration of Greeks to the United States in some good numbers. Unemployment will be helped, working capital will be sent back to the relatives in Greece by the emigrants, and very definitely, a terrific good will will be established between the United States and Greece. After all, the number of people allowed under the quota system from Greece to come to the United States is really a joke.

Greece enjoys a long and treasured friendship with the United States, with whom she shares common beliefs in democracy and liberty. The Greek people very definitely understand and appreciate extensively the great help given to them by this great democracy. It is their strong belief of the friendship between the United States and their country that has given them the courage to continue their fight for survival. They have been sincere and honest friends to us. They deserve our consideration.

May God, who knows everything, influence your thinking and guide your actions for the good of this country of ours and all the people who believe in Him.

Respectfully submitted,

THEO. N. TSANGARIS.

Visit of a Great Statesman

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. KEATING. Mr. Speaker, Konrad Adenauer has been called the greatest German statesman in modern history. The record shows this is not an exaggeration.

Dr. Adenauer has been the leader and guiding light in rebuilding Germany to its present position as the mightiest industrial power of Western Europe. He has helped lay the foundations of a stable democratic society in a land wracked by totalitarian dictatorship and war. His support for the concept of a united Europe has been a moving factor in the formation of the European Coal and Steel Community. And today, Germany is taking her rightful place in erecting the military defenses of a united Western Europe.

Mr. Speaker, it is indeed a pleasure for the American people to again welcome this distinguished visitor to our land. With each successive visit, Chancellor Adenauer has been more widely recognized by our people as a man of courage, wisdom, and determination, whose vigor of mind and body belie his years.

We know him as both a great German and great European; indeed, as a champion of the free world itself.

Born in 1876 in the city of Cologne, where his father was registrar of the court of appeals, Konrad Adenauer prepared himself for the legal profession. A highly educated man, he studied law and economics at the University at Freiburg, Munich, and Bonn. He began to practice law in his native city, but soon entered public service as a deputy mayor of Cologne. In 1917, during the First World War, he was chosen to be lord high mayor. He occupied this office continuously from then until 1933 when he was ousted by the Nazis. He was mayor again for a brief period at the end of the Second World War. While in office, Adenauer rapidly became known as the greatest mayor in Germany. He founded Cologne's University, rebuilt its river port, provided superb housing for the workers, surrounded it with a green belt and started the famous Cologne fair. During this same period, Konrad Adenauer served in the Prussian state council and became its president. Twice he

was offered the post of chancellor of Germany in the days before Hitler. Both times he refused, preferring to remain mayor of Cologne.

When the Nazis came to power, Adenauer would have nothing to do with them. In 1933 he refused to display the Swastika from the venerable town hall of Cologne. For this, he was promptly fired from all his high posts and forced to flee from the city where he had been the leading citizen. He was imprisoned for a brief period by the German gestapo in 1934 and then retired to private life until the end of the war. Throughout the Hitlerian reign of terror he remained a staunch foe of this barbarian movement that ripped asunder the high values for which western civilization had stood through the ages.

When the war ended, Dr. Adenauer was almost 70 years old, an age when most men think of retiring. But for him it marked only the end of one public career and the beginning of a second.

Adenauer's second career has made him world famous. It began after the Second World War when he traveled throughout Germany carrying a blanket and a few slices of bread in his brief case, in an attempt to organize the Christian Democratic Party. This party was a cooperative movement of Roman Catholics and Protestants, seeking to apply Christian ethics in politics without, however, encouraging the participation of the churches themselves in political activities. A party based on cooperation of these denominations was itself a great help in attempting to build a sense of unity and stability in war-torn Germany.

Dr. Adenauer soon became president of the Christian Democrats in the British Zone of occupied Germany, and prominent in the North Rhine-Westphalia Provincial Diet. Then in 1948, when a Parliamentary Council was formed to draft a new basic law for West Germany, it was Dr. Adenauer who was elected its president. This position of leadership was continued when, in 1949, the Bundestag voted him the first Chancellor of the new Federal Republic of Germany.

This was a far different Germany from that which had existed before World War II and before the days of Hitler, when he had first been offered the job of Chancellor. His native city of Cologne was reduced from a population of 600,000 to a mass of holes and cellars inhabited by a scant 40,000 hungry men, women, and children. Many other parts of the country were also devastated. Germany had lost her eastern provinces to Poland and was herself divided into four military occupation zones.

The United States, British, and French zones soon cooperated in the rehabilitation of Germany, but the authorities in the Soviet zone moved further and further away from their wartime allies. The Soviets concentrated on making sure that Germany would never again be a threat to their security.

Russia thus insisted on heavy reparations from Germany including the dismantling and export to Russia of a large number of industrial plants. She further made it obvious that it had become a fixed part of her defense plans to continue occupation of the Soviet zone in Germany. It was promptly cut off from contact with the western parts of Germany and a Russian satellite government installed there. Eighteen million Germans in the east were thus cut off from all hope of any immediate reunion with their fellow countrymen. Many more continued to exist in prison camps within the Soviet Union.

To top it off, of course, the spirit of the German people had been trampled upon by Hitler for 8 years and they had been led into a war upon the world. A whole generation of youth had grown up in Germany without any experience of the normal decencies of western society, to say nothing of democracy itself. Hitler had been especially strong in his denunciation of democracy. How could this Germany be turned into a reasonably happy, prosperous, united democracy—with a soul? This was the task that faced the German people under the leadership of Konrad Adenauer.

Events move so swiftly today and our lives are so caught up in their rapid pace that it is difficult to realize this was Germany less than 10 years ago. The changes that have been wrought in the land beyond the Rhine have been called a miracle, so prodigious is their magnitude. It would be an injustice to the vitality of the human spirit of all the German people to claim that what has been accomplished is the result of the actions and words of but one man, Konrad Adenauer. But it would be an equal injustice to the facts of history to deny that Dr. Adenauer has been the dynamic leader of the forces in West German life, who has guided them and given the German people exactly the type of inspiration they required in this hour. A hard-working people, blessed with natural resources and aid from the western allies—all these have moved together to bring about that which we call the German miracle. But it is not too much to say that without the Chancellor, the parts of this miracle might not have been put together.

The first thing that strikes one about postwar Germany is the amazing growth of its industrial might. In 1956 the gross national product of the Federal Republic reached a peak equivalent to $45 billion. Since 1950 the income of all employed persons has risen about 60 percent. But these advances have not been easy. Indeed, they are the direct result of hard work and self-denial. During these years of reconstruction, a steady 22 percent of the gross national product has been poured into the rebuilding of factories, homes, and capital goods that has made possible the continuing economic expansion.

Now there is talk of automation being applied to the German economy. Nearly everyone in Germany who wants a job has one. And there is a mounting scarcity of labor that has led both the unions and the employers to favor the devices of automation. Both sides are hopeful that it may permit Chancellor Adenauer's booming economy to move toward a 40-hour workweek, as well as to produce more goods at a lower cost to the public.

Chancellor Adenauer has been a strong advocate of free enterprise. Just this month we have seen the development of new plans to increase the ownership of industry by private persons. State-owned industrial plants, beginning with the famous Volkswagen automobile plant, are to be sold to individual investors through low-priced bonds. It is reported that the shares will be priced as low as $11.90 and that no one will be permitted to gain control of the company by monopolizing the purchases. Profit sharing by workers in all privately owned companies will be encouraged by investment plans operated by insurance companies and savings banks. In addition to all this, the Government is planning to make additional financial help available to people who want to buy their own homes.

At the same time that economic recovery has taken place, the communists and the neo-nazis have been decisively beaten. In the 1949 elections, the communists received 5.7 percent of the popular vote. By the time the next elections rolled around in 1953, the German people slashed even this small figure to a mere 2.2 percent.

There is clearly no love of communism in the Federal Republic. Why should there be any love for this system that has enslaved 18 million in East Germany, refused to send home the many prisoners of war that remain in Russia, and refused to permit the reunification of the German nation? Why indeed should communism be popular in Dr. Adenauer's Germany when the people there can see with their own eyes the poverty that exists in East Germany compared to their own well-being?

Communism promises a workers' paradise as an alternative to slavery under capitalism. Germany today is conclusive proof of the utter nonsense underlying this claim. In the Federal Republic, under 20th century capitalism, the people are enjoying the benefits of a fully operating, efficient economy. In East Germany, the people look with longing eyes at the prosperity of the West while they themselves live under an inefficient economic system that operates more in the interests of the Soviet Union than the German people.

Naziism has also died in Germany under the impact of Dr. Adenauer's government. In 1949, the neo-Nazis received only 1.8 percent of the popular vote and in the next election 4 years later, they tumbled to a shaky 1.4 percent. In that election Dr. Adenauer refused to seek the neo-Nazis' support. Instead, he saved his most biting condemnation of nazism and all its works for his speeches in the heart of the right-wing country.

Many feared it would be impossible to establish anything resembling a democracy upon the ruins of Hitler's Germany. But the facts of the last 12 years have shown how wrong they were. Chancellor Adenauer's government has become one of the most stable democracies in Western Europe, while communism and nazism have been vanquished.

West Germany today is well on the road toward building a humane democratic society, with protection for individual rights. But this Germany is incomplete. It is divided by the famous Iron Curtain which for many years separated the two parts of the nation. It is this division of Germany that has constituted the most important problem in German foreign policy since the end of the Second World War. Chancellor Adenauer has directed himself toward its solution with insight and tenacity.

His policy has been consistently based on the premise that a weak Germany will remain a divided Germany. It is only from a position of strength that the Federal Republic can face Soviet Russia across the conference table with any hope of gaining reunification based on free elections throughout both East and West Germany.

The events of the past year have made this problem even more difficult. It appears now that Russia is turning East Germany into a fortress from which she will send forth troops to maintain control throughout the whole satellite empire in Eastern Europe. It was from East Germany that the Soviet troops departed to quell the revolt of the Hungarian people. It is East Germany that is apparently now slated to receive Soviet atomic installations. A united Germany would eliminate the opportunity for the Soviet Union to control their satellites from the western side. It would thus further weaken her ability to keep the satellite empire intact.

In February of this year, Soviet Russia declared that reunification has become "ever more remote" as a result of the Federal Republic's participation in NATO, and her rearmament. In April the Soviets made their warning even stronger when the Soviet note said that any atomic armaments in the Federal Republic would "gravely endanger the reunification of Germany." Chancellor Adenauer has answered the Russian charges contained in these vindictive notes by stating clearly and unequivocally that his Government's policy of continued membership in NATO is entirely defensive in nature. It thus offers no threat to the Soviet Union. Moreover, he has pointed out that Germany has pledged not to arm herself with atomic weapons.

But what do these Soviet policy statements imply for the future of German policy? Is it true that a policy of weakness and isolation would guarantee German reunification on the basis of free elections? A policy of weakness would mean German abandonment of NATO and the withdrawal of NATO forces from Germany.

What if Russia should agree to recall all her forces to Poland, or even to the Soviet home border? Dr. Adenauer has pointed to the inevitable result of such a troop withdrawal. The Soviets would be only a stone's throw from Germany, while the United States would pull its troops back 3,000 to 6,000 miles. In the Chancellor's own words:

> On the one hand we would have the powerful Soviet bloc, and on the other hand a totally isolated Germany without any connection with the United States, and a number of other relatively weak European nations.

Thus a weakened, isolated Germany would be more a prey to Soviet power. Soviet Russia would have no reason whatsoever to agree to German reunification on the request of a weakened and isolated Federal Republic. Russia would gain absolutely nothing by agreeing to do this since she would have already achieved her main goal in central Europe, which is to guarantee a permanently crippled and ineffective Germany.

At the same time Russia would gain nothing by agreeing to reunification, it would lose a great deal by such a move. If current reports are correct in estimating that Russia is now using East Germany as a military base from which to keep her European satellites in line, then Russia will not willingly agree to surrender this vital base.

It seems to me, Mr. Speaker, that Chancellor Adenauer is quite correct in insisting that the only hope for German reunification lies in the alliance of a strong German Federal Republic with the free world. While reunification has not been achieved in these last years, and will not be easy to achieve in the immediate future, there is greater basis for hope in a policy of strong alliance than in one of weak isolation.

This policy of strength must be coupled with a door constantly open for negotiations with the Soviet Union that may reduce international tensions and thus lay the groundwork for an eventual settlement that recognizes the realities of Europe. These realities are, on the one hand, that the West is united and has absolutely no aggressive intentions toward the Soviet Union. On the other hand, Russia cannot expect to extend her control in Europe without risking war. Until a final settlement is achieved, NATO serves as both a deterrent to Soviet aggression and a shield that will enable the allies to defend themselves in the event war should prove necessary.

But beyond the problem of German unification and the matters of European defense, there is the growing experiment in European unity, which has excited the imaginations of us all. Konrad Adenauer has been a prime mover in these great experiments such as the Coal and Steel Community, the European Payments Union, and now the Common Market and European Atomic Energy Community. They are further reflections of Dr. Adenauer's conviction that the fate of Germany is now inextricably linked with the fate of Europe as a whole. The cornerstone of economic and political survival is cooperation between France, Germany, and Great Britain. His support for these movements, since he became Chancellor, has helped heal the old wounds that separated these powers for so many years.

The expansion of international politics to the current global struggle between the Soviet bloc and the free world has made it evident that cooperation must replace discord in Western Europe if the individual nation states are to live in security and prosperity. Modern industrial developments have further impelled the European states toward cooperation to reduce wasteful competition and organize for more efficient production and distribution. The Federal Republic, under the strong inspiration of its Chancellor, has taken a leading role in this movement so that today Germany is a respected and responsible member of the Western European community of free nations.

All of these many developments put together constitute the German miracle and the German part in the European miracle. Chancellor Konrad Adenauer has perhaps been more responsible for these events than any other single person. It is for these many reasons that we join with others in hailing our honored visitor as the greatest statesman of modern Germany.

Prize-Winning Essays on the Importance of the American Merchant Marine to the Farmer, the Miner, and the Manufacturer in World Trade

---

EXTENSION OF REMARKS

OF

HON. RALPH. W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, May 29, 1957

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two prize-winning essays in the national competition on the subject, "The American Merchant Marine—Its Importance to the Farmer, Miner, Manufacturer in World Trade." One of the essays is by Louise Rembert Lamar, of Galveston, Tex. She is 18 years old. The other essay is by Joe York Thomas, of La Porte, Tex. He is 16 years old.

These essays are national prize winners in the 1957 Harold Harding memorial essay contest, sponsored by the Propeller Club of the United States.

There being no objection, the essays were ordered to be printed in the RECORD, as follows:

THE AMERICAN MERCHANT MARINE—ITS IMPORTANCE TO THE FARMER, MINER, MANUFACTURER IN WORLD TRADE

(By Louise Rembert Lamar, Galveston, Tex.)

The United States merchant marine is a major industry. It employs 225,000 people; it sends $2.8 billion into our Nation's economy each year for goods and services. Altogether foreign trade activity creates jobs for 4.5 million American farmers and workers who earn $13 billion annually. These may seem like cold statistics, but they prove how very vital our merchant fleet is to our entire country. Those who feel that the economy would not suffer if ships of other nations carried our precious cargoes are right, up to a point. If and when a world war occurs, the shipping of other countries would become utterly unreliable for us, whereas both importing and exporting would soar to peaks of importance. Our merchant marine is as vital to our Nation's safety as is our Army, Navy, and Air Force.

For the farmer more than for any other group exporting is extremely important now. The millions of tons of surplus foodstuffs bought by the Government and stored at a cost of $3 million a day have been a drug

on the market since the last war. Stores of wheat, rice, corn, cheese, butter, and dried milk are growing each year, as the Government spends tax money from the farmers themselves as well as from other citizens to buy surplus products which eventually must be given away or even destroyed. For 6 years the merchant marine has been carrying parts of this surplus to India, Japan, Europe, and the Near East. Every year, every month, more rice, wheat, corn, rye, barley, and flour are shipped abroad. Slowly but surely our enormous stockpiles are dwindling. When they are gone the farmer will once again have a sure footing in the national economy. In the meantime other crops are streaming out of the country to world markets. American tobacco has a large European market as do meats, animal oils, citrus fruits, and many of our packinghouse products.

Although we import great quantities of mined products, there are two fields of American mining which depend greatly upon foreign exports. Sulfur, a product essential for medicines, gunpowder, and bleaching agents, is mined exclusively in the United States and is supplied to the world by our fleet. In 1955, 40 million tons of American coal were exported, and it is estimated that the demand will jump to 100 million tons by 1960. In addition to direct exports, coal is necessary for production of the steel that is exported in scrap metal or finished products. Shipbuilding and repairing take 9 percent of our steel mills' total output. If more steel were produced, shipyards would gladly use it, for they now have hardly enough steel to rebottom present ships, much less to build all the new ships that are planned.

In addition to its importance to farmer and miner, the American merchant marine is vital to American industry. The manufacturer in America today can no longer depend upon raw materials from our own country. Industrial methods are so complex that the necessary supplies must come from every section of the globe. It is the job of the American merchant vessels to transport the wide variety of these supplies that are so vitally essential to production. Our rubber is shipped from the Far East to be widely used in all industry; 90 percent of the diamonds used in dies for fine-wire drawing, gem polishing, drills, lathes, and engraving come from Kimberley, South Africa. The tungsten for light-bulb filaments must be brought from Spain. From Malaya and Bolivia, we get tin ore which, processed into tin, is used for containers for food in peacetime and is vital for our defense in wartime. Even the production of metals whose ores are available in the United States is dependent upon alloys which must be imported. From Malaya antimony, vital because of its expansion during cooling, is used in aluminum and for type. Manganese and chrome are important to strengthen steel. Uranium from the Belgian Congo, mercury from Mexico and Spain, aluminum and bauxite from Canada, vanadium, molybdenum, zinc, and a host of other metals and ores vital to the life of industry are brought in a steady, dependable stream to industry's doorstep by the American merchant marine.

Hemp and jute for rope, kyanite for wood preservation, raw silk—more materials than can be listed—flow from every corner of the world into the United States through the channels of our merchant fleet. As for our exports, there is hardly a spot on earth where American products ranging from tractors to toothpaste are not recognized as superior. American machinery or American cosmetics—you can find them anywhere—thanks to our merchant marine.

America is in a period of great prosperity. The Census Bureau has estimated that American merchants exported a record $18,900,000,000 of goods in 1956. Our merchant marine is vital to the continuance of this prosperity because it transports the growing output of our farms and factories to foreign markets and brings in foreign raw materials critically needed for our industries. Congress has recognized this importance by authorizing the construction of an atomic-powered merchant vessel which will be completed in 1960. Our Nation's economy and the American merchant marine will continue to grow together through interdependence.

THE AMERICAN MERCHANT MARINE—ITS IMPORTANCE TO THE FARMER, MINER, MANUFACTURER IN WORLD TRADE

(By Joe York Thomas, La Porte, Tex.)

Since America's infancy the American merchant marine has been the lifeline of her people—the lifeline flowing with commodities of American industry at home and abroad. Its service has been indispensable to the miners, farmers, and manufacturers, and because of the dependence of other industries on these three, it can be truly said that the merchant marine controls the lifeline of the American people.

Although this land is regarded as a land of abundance—a land flowing with "milk and honey"—there are some commodities, raw materials as well as manufactured items, which must be imported; likewise, or her abundance America must export to peoples abroad both raw materials and manufactured items which in these days of plenty have tended to pass from the class of luxury to necessity. In this interchange of goods the American merchant marine is loyal in its service both at home and abroad.

One grant industry which has grown even greater because of service rendered by the merchant marine is mining. Each year thousands of tons of iron ore are transported along the Great Lakes from the mines to the steel mills of the Nation. If it were not for the large-scale transportation of this raw material made possible by the merchant marine, mining operations could never have reached the proportions they have, because overland transportation could not have met the needs of the industry. The steel mills, a natural outgrowth of a plentiful supply of raw materials delivered from foreign as well as domestic mines, have given employment to thousands of laborers. Indirectly it is the services of the American merchant marine which make it possible for miners and steel-mill workers to earn a livelihood.

Another industry not generally thought of as mining but technically classed as such is the oil industry. Still another is sulfur. The vertical holes drilled to the oil or sulfur beds are mines; and much of the equipment used in drilling, including steel casings and drilling tools, is delivered by vessels of the merchant marine. This is really only a beginning, for from these mines pour the black gold of the oilfields and the black, boiling liquid, later yellow brick sulfur, which in turn are delivered to ports all over the world by our own merchant marine. Again indirectly it is the seamen of the merchant marine who put money in the pockets of millions of workers and gasoline in the tanks of millions of cars.

Who privileged to walk along any great ship channel has not thrilled at the sight of an American tanker riding low with her cargo of oil, headed for the open sea, or, in retrospect, shuddered at the sight of a cargo of scrap iron destined for Japan? Both, products of mines and mills, are part of the Nation's trade and as such are transported by the American merchant marine.

The little farmer on his dryland farm in central Texas, happy and content with his wealth of rich black soil which produces all he needs for his family plus a surplus for educating his children, would probably raise an eyebrow if it were suggested to him that his life was touched by the merchant marine. Yet, it is in two ways. His being able to supply his own needs releases just that amount of produce—even though it be raised on a much larger farm in some remote part of the United States—for transport to some foreign country by the merchant marine. Also, if he were made aware, he could look about his farm and in his home and recognize, against a backdrop of mighty ships plowing the deep furrows of the sea, his own farm machinery that turns his sod and harvests his crops, his household appliances that cook and preserve his food, and his breakfast cup that steams with inviting goodness of coffee grown high in the mountains of South America sweetened with sugar from the West Indies as commodities which would probably remain as raw materials in places far removed from the little dryland farm of central Texas if it were not for the merchant marine. The cotton farmers, however, are more likely to recognize the link between their farms and the millions of yards of material which help to clothe parts of the world's population as being the service rendered by the merchant marine. The same can be said of the cattle and poultry growers of America.

Another facet of American industry deeply indebted to the service of the merchant marine is manufacturing. Whether or not the factory owners halt to pay tribute, there is little doubt that they are aware of what the service means to them. Before there can be a factory, suitable locations with respect to climate, laborers, tax conditions, and sources of power for running the machinery must be found. Frequently these locations are far removed from the source or sources of raw materials. It is then that the American merchant marine comes to the rescue. Ships of the merchant marine shuttle back and forth across the seas, up and down canals, around lakes, and up and down rivers transporting raw materials to the factories. Then when the factories have transformed the raw materials into commodities in demand at home and abroad, the ships fill their holds with these finished products and deliver them to seaports nearest the points of consumption.

The farmer, the miner, the manufacturer—these are but a few of the people of America served by the American merchant marine, a lifeline in a complex economic system characterized on every hand by interdependence. What better can be said of any organization in a democracy than that it serves its people well?

The Unfair Trial of Jesus of Nazareth

EXTENSION OF REMARKS
OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1957

Mr. DORN of South Carolina. Mr. Speaker, I commend to the House the following excellent address by the Honorable GEORGE S. LONG, of Louisiana. Dr. LONG did considerable research on this speech and has delivered it upon a number of occasions. It is characteristic of Congressman LONG and the principles and ideals which he upholds.

THE UNFAIR TRIAL OF JESUS OF NAZARETH

(By Hon. GEORGE S. LONG, of Louisiana)

In the beginning may I say that I am attempting to tell the story of the trial of Jesus Christ from a layman's point of view, just as though I had walked into a courtroom when the trial began, not knowing anything about the case, and sat through it, and after having heard all the evidence and arguments, made up my own mind.

My conclusions and thoughts on this earth-shaking event are based on a great deal of research and study. I have read The Robe, by Lloyd C. Douglas, The Trial of Jesus from the Standpoint of a Lawyer, by Walter M. Chandler, I have personally heard the lecture of the Honorable Prince Freling, former attorney general of the State of Oklahoma on the same subject, and have studied the account of the trial in the Bible many times. I have been aided by this and by the writings of Dr. Gerald L. K. Smith. I will make no attempt to show that I am a lawyer or that I have studied the case from the standpoint of law, but will merely express a layman's viewpoint of the trial after having heard it. I wish now to give you my own thoughts and the conclusions I have reached.

I believe this was the greatest miscarriage of justice that has ever been recorded in the history of mankind. No man, as far as I know, has ever been tried by a court with all of the rules of law disregarded as they were in the trial of Jesus.

One particular point that I want to emphasize is that in that day it was the custom to try one for a capital crime in the daytime. No one was tried at night. They had no electric lights at that time—they had only torches and candles, and it was thought that by having capital crimes tried in the daytime, the witnesses could be clearly seen and a just trial would be more likely to be had. That was for capital crimes. Yet, this custom was not followed in the trial of Jesus. They tried Him at night.

Another law of that day was that if all the judges in the trial unanimously voted to convict the accused, it was presumed that they were biased and prejudiced and the accused was deemed not guilty and would be acquitted. It was said that several of the judges who tried Jesus voted "guilty" because they felt that all having voted Him guilty, He would then be freed according to the law of that day. But the officials disregarded their own law and ordered Him crucified.

They knew that Jesus had never done anything except good, but in spite of this He was crucified.

Let's consider Jesus when He first appeared, speaking as a man or as a prophet, when His mother found Him after He had been away and asked where He had been. He answered, "wist ye not that I must be about My Father's business," but from this moment for 16 years history is silent.

Suddenly He appears on the banks of the Jordan, and is baptized of John and begins His short but glorious ministry, which ended in a judicial fiasco at Jerusalem. His ministry portrayed the character of the man.

The Jews, after they returned from captivity, looked forward to the coming of a King. Their daily prayers were of His coming. When they retired at night, they thought He might appear before the morning, and take His place on the throne of David. They were looking for a King to appear with great pomp and with a large army who would rule the land.

Jesus boldly proclaimed that "I am the King, the Son of God, and the kingdom of God is within Me."

If this belief prevailed, it meant the destruction of the ruling class, and the priests themselves, who were the representatives of the ruling classes, set out to destroy Him. Their first effort was to entangle Him in His talk, in order to assure evidence against Him from His own lips, and for this purpose, they employed detectives. This is the first record in history we have of detectives. It is a sad fact that during the last days of our Master's life, His footsteps were dogged by detectives. In seeking to secure evidence against Him, one detective asked Him, "If several men successively married the same woman, whose wife would she be in your kingdom?"

The next detective asked Him a harder and more difficult question and one it was thought impossible to answer, and one whether answered in the negative or in the affirmative was thought would convict Him.

This man asked Him, "Is it lawful to pay tribute to Caesar?" It was thought if He answered "Yes" it would ruin Him in the eyes of the Jews, and if He answered "No," it would make Him guilty of treason to Rome. He made the remarkable answer: "Render unto Caesar the things that are Caesar's, and unto God, the things that are God's." In other words, He meant simply, in plain words—obey the laws of your state and pay your taxes. Be a good citizen—but on the spiritual side, when you come to receive God, there shall be no person or thing that you should bow down to—then give unto Caesar the things that are his and unto God the things that are God's.

That answer was the basis of the foundation of this Republic. The separation of the church and the state. It sustained Roger Williams, who pleaded for religious liberty in the depths of a Rhode Island forest. The answer simply meant that a man owed a duty to God and one to his country, and our great Republic was founded on the fact that no church, however strong, shall ever control the Government of the United States of America.

These efforts having failed, more desperate proceedings were resorted to. Jesus had been preaching in Nazareth and had had many conversions. The Feast of the Passover was approaching and His enemies knew He would be in Jerusalem, and they set out to destroy Him. It is a significant fact that the great Sanhedrin Court had three secret meetings for this purpose. The first was held in September; the second in February, prior to His death, and at this meeting it was said, "It is better that one man should die rather than a nation should perish."

Just a few days after this, one act occurred which hastened His destruction. This was the sublime miracle He performed when He raised Lazarus from the dead. Immediately following this, the Sanhedrin met and decided to put Him to death.

As I said, the Feast of the Passover was approaching and they knew Jesus would be present. He arrived, and they were surprised at the ovation which He received. The first day He was there He spent not as has been said, in hiding, but in the wilderness in constant prayer.

On the 6th day of April He ate the Last Supper at the home of Mark. It must have been an impressive scene. John, whom Jesus loved, was there. Peter, who was to deny Him, was there. Judas Iscariot, who was to betray Him, was there. Jesus gave an example of humility to all when He bathed His disciples' feet.

About midnight, after the singing of psalms, they left the home of Mark, and entered the Garden of Gethsemane, so called because a wine press was located there. The disciples slept—the Man of Sorrows prayed. Suddenly a noise was heard. Soldiers were approaching. We knew it was night because they carried lanterns, staves and torches. The remarkable and inexplicable thing is that they were Roman soldiers.

When they approached, they asked, "Where is Jesus of Nazareth?" Some confusion seemed to have resulted in determining which was He, and Judas kissed the Master's cheek to indicate the man who was wanted. The impetuous Peter drew his sword and cut off the ear of Malchus, a Roman soldier. This was an act of treason against the Roman Government, yet no arrest was made for this—only one of the gospels mentioned the fact that Jesus stopped and healed the ear of Malchus, and this was Luke. He would probably have been more apt to record it, because he was a physician.

Jesus is now under arrest and the first question that arises is—was the arrest legal? No warrant was issued, and the law, as it existed then, required that no arrest be made during the week of the Feast of the Passover. Here again we see the disregard for their own laws in their eagerness to crucify the Savior of mankind.

As the officers started off with Him, they did not go to any magistrate first. They went to the home of Annas, the smartest, the meanest, the craftiest Jew that ever lived. He had been chief priest of the temple and had conferred the honor on his son, and at this time his son-in-law, Caiphus, held the position. It is a remarkable thing that Annas and all of his household were up, and the time must have been between 1 and 2 o'clock in the morning.

It might be said here that they chose night because their deeds were evil. They were out to kill—to manufacture evidence or to do anything in any manner to hasten the death of Jesus. One asked Him concerning His preaching—whether or not He had said He could destroy the temple made with hands and build another made without hands. Jesus remained silent and one of the servants slapped Him in the face and He simply said, "If I have spoken evil, bear witness of evil—if not, why smitest thou Me?" This was not a plea for sympathy, but for justice from their hands, which they knew nothing about, cared nothing about—justice meant nothing to those people who had set out to destroy and crucify Jesus of Nazareth.

The procession starts again and wends its way to the great halls of Sanhedrin. The Sanhedrin was the great court of the Jews. Its members were the highest type of men without a blemish of character. They came up on graduations from lower Sanhedrin, like advancing a judge from a justice of the peace through the county and district courts and on to the Supreme Court. No man could be a judge who had indulged in usury. He had to be a man of unblemished character. There were 70 of these judges and the chief priest presided, making 71. The court was established under the direct authority of God, as found in Deuteronomy. The court had unlimited jurisdiction. It tried every conceivable kind of offense in that day and the remarkable thing was that there were no lawyers in that time. Yet, I am unable to explain the case of St. Paul, for an orator was employed to speak against him.

The court had peculiar rules, one of which should be mentioned. If witnesses testified differently in any given case, no verdict

would be had. The judges simply said somebody was lying and they did not know who it was, that it was impossible to see the human heart and the human brain and they did not assume the responsibility of determining the facts and the case was therefore thrown out of court. What a remarkable tribute to a country that could secure a conviction of any criminal on such a rule of law as this. If this rule were in force today, no district judge could grant a divorce or convict a bootlegger. This was the court then, which Jesus was taken to. The court was in session, with all members present, and the chief priest presiding. When Jesus was led before the court, they began to question Him and when He refused to answer, the chief priest rent His garment. This was not an error of law, but merely an act of bad taste.

Two witnesses were ushered before the court and they testified, "we heard Him say that He could destroy the temple made with hands and build another temple within 3 days made without hands." No denial was made of the statement and indeed no denial was necessary.

This is it at last. The chief priest put the question to a vote and they unanimously voted He was guilty of blasphemy and worthy of death, but to accomplish this, they had to violate the law they themselves had made. The trial was held at night, and I have pointed out under the law, a capital case could not be tried at night. The great law writers pointed out that the examination in such a case is like that of a surgical case, where light is needed, and therefore, it was the law that no capital case could be tried at night, but this law was disregarded in the trial of Jesus. They tried Him at night, against the law, convicted Him and sentenced Him to death.

Another fatal error in the trial was this—the balloting was irregular. The law was that the roll should be called—that the youngest judge should vote first, and so on up to the eldest and the high priest—the reason being that this would show that no one was influenced by his elders. This was wholly disregarded in the case of Jesus. They voted all together that He should suffer death.

Another absolutely fatal error was this; according to the laws of that time, a unanimous verdict operated to acquit the defendant. The old Jew said that in such a case bias and prejudice entered in, and they would not permit a citizen to lose his life under circumstances such as these.

The vote in the case of Jesus, was unanimous. Now, there were judges who knew Him and knew His innocence. His great character, His great courage, and they voted "guilty." Nicodemus was a judge, and voted "guilty." The greatest lawgiver of his day and one at whose feet the Apostle Paul sat, was a judge, and voted "guilty." Surely they did not do so ignorantly, and we must assume that, knowing there was a sufficient number to convict, they voted guilty in an effort to render a unanimous and hence a void verdict, hoping the court would sustain the law.

Jesus, however, is not convicted of blasphemy, but here another obstacle appeared; Rome, in her idea of sovereignty, retained always the power of life and death, and while the Sanhedrin Court could render the verdict, they could not carry it into execution without the approval of Rome, and for this purpose they repaired to the Temple of the Caesars.

It must have been a beautiful morning in April when they started to the judgment seat of Pilate. Their way took them through a beautiful park where fountains were glittering in the sunlight and hundreds of doves were preening their feathers at the water's edge.

The Roman Governor at this time was known by the name of Pontius Pilate. This was, perhaps, not his name. He had been a soldier in the army of Rome and had been decorated for bravery and given the police for distinguished services in battle, and probably took the name Pilate from this occurrence.

Pilate had many of the elements of greatness, but the less said of his family, the better.

Pilate was on the judgment seat when the party arrived and immediately asked them, "what charge do you bring against this man?" They hesitated, but finally forced to prepare a charge, they named three; first "He stirs up all Jewry, from Galilee to this place." Pilate knew this charge was too vague and dismissed it at once. The charged, second, "He refuses to pay his taxes." Pilate knew this to be untrue. Third, "He makes himself the king of the Jews." Pilate was inclined to dismiss all of the charges, and took Jesus inside of the royal residence to question Him privately. He asked Him about His mission, and Jesus answered, "That I should bear witness to the truth, for this purpose I was born, and for this I came into the world."

Pilate disdainfully asked, "What is truth?" and again repaired to the judgment seat and pronounced his judgment.

He tried to avoid the issue and sent Him to Herod. He must have known of the ill feeling between Herod and Jesus, for just a few days before Jesus spoke before the great multitude and said, "Go tell that fox that I perform these miracles, and today and tomorrow, and the third day I shall be perfected." The hearing before Herod amounted to nothing except to effect a reconciliation between Herod and Pilate, who had been on bitter terms.

Jesus was now bedecked with raiment, and again led to the judgment seat of Pilate. Pilate began to temporize and to avoid the issues. He said, "I will scourge him and release him." Cowardly subterfuge of a cowardly man. If he held to his first judgment, he would have come to us as the greatest judge that ever lived. He tried again to avoid the issue; "I will release either Jesus or Barabbas, whom do you choose?" Of course, the choice was Barabbas, for the friends of Jesus were not there.

They uttered in Pilate's ears the fateful words, "If you let this man go, you are no friend of Caesar's." This sealed Jesus' doom, and consigned to destruction the Master Spirit of the age.

It is unnecessary to dwell at any length on the execution, as every schoolchild knows it by heart.

They took Him to the hill called Golgatha. My own opinion is that the cross was lifted first and Jesus nailed upon it. A cup of wine was handed Him. He seemed not to know at first what it was, but He touched his lips to it and realized that it was aromatic wine which the Jewish women always prepared for those who were to undergo execution, that their senses might be dulled when they passed through the valley of the shadow. Jesus thrust it away, preferring to cross through the shadow unintoxicated, without the aid of any narcotic or anything else. He was ready to meet his Father—was there to pay the price for the sins of the world, and die—which He did.

His physical body must have been of the finest texture. He was placed on the cross about 10:30 o'clock in the morning and at the close of the day, the thieves placed with Him were not dead and they had to break their legs to hasten death, but about 3 o'clock in the afternoon Jesus uttered an awful cry. His head fell upon his breast, and He ceased to breathe.

A great many things enter into the life of Jesus which probably may have been overlooked. One thing is Mary, the mother of Jesus. I am thinking at this particular time when the dark hour came and when Jesus hung on the cross between two thieves and had been crucified for the sins of the world—she stood close to the cross.

Of course, this merely portrays and causes to stand out the true mother love, and to show how much greater was the love of Jesus for all mankind, who gave his life for our sins. I sometimes wonder in my studies if Mary was not conscious of the fact that her son Jesus was at that moment making history that would stand throughout time.

We all know that Jesus loved His mother and was giving us the lesson of humility. One of the outstanding things that will be noted in the life of Jesus was that He was not a scholarly man, but God chose to bring His message to the people in a manner that all could understand. Therefore, our Saviour would not be considered at this time as a highly educated, or scholarly, gentleman. I am sure the jeers and hisses that were hurled at Jesus in His dying hour were also cast at His mother.

Jesus was crucified for one reason and one reason only—because He was good and evil men feared Him. He went about preaching the laws of mankind, teaching us that we are our brother's keeper, and if we have plenty in store that we should be willing to divide with our neighbors and friends without price. That this earth was created by God Almighty and all the good things put upon the earth for the use of human beings, and that we are God's creatures, and that if we follow in His footsteps and love Him, He will devise ways and means where there will be no hungry men, women, or children. Starvation will never stalk the land so long as we, His children, adhere to the teachings of Jesus Christ, and when the time has come that all men believe alike and are willing to put the teachings of Jesus into practice, there will be no war, we will comfort the sick and dying and this will be a great and glorious world to live in. We will have no need for courthouses or jails for everyone will do right because it is right and because they love their God and their Maker.

In conclusion, I would like to quote the words of a great historian: "Rest now in Thy glory, Noble Founder, Thy work is completed, Thy divinity established. Fear no more to see the edifice of Thy efforts crumble through no fault of Thine. Henceforth above all frailty Thou shalt witness from the depths of Thy divine peace, the enduring work that shall follow Thy deeds. At the cost of a few hours suffering, which has not even touched Thy great soul, Thou hast achieved immortality the most complete. For hundreds of years the world will breathe life from Thee. Above Thee as an ensign, will be fought our hottest battles. Take possession of Thy kingdom, Thou who has conquered death. Whither, by the royal road Thou has pointed out, long generations of adorers shall follow Thee.

"As for us, ever more children doomed to impotence, who labor without reaping, and who will never witness the fruits of that which we have sown, let us bow before Thee, Divine Man. Thou could do that which we cannot do—create, affirm, act."

Out of this background of what seemed to be defeat came the greatest victory mankind has ever witnessed; namely, complete defeat translated into complete victory.

Will greater originality be born again or will the world be content to follow the bold explorer of ancient days? We do not know, but whatever unlooked-for events may come, Jesus will never be surpassed. His worship will unceasingly renew His youth. His story will invoke the noblest tears. His suffering will subdue the noblest hearts; all nations and all ages will yet proclaim that among the sons of men no one has been born who is greater than He. There will never be another who is perfect on this earth until Jesus comes again.

Appendix

Fair Employment Practices Ordinance in San Francisco

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. SHELLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by my very good friend, Supervisor J. Eugene McAteer, giving his well-thought-out reasons for voting in favor of the fair employment practices ordinance before the Board of Supervisors of the City and County of San Francisco. As one who has spent all of my life supporting measures to guarantee equal opportunity for all races and creeds, without regard to color or religious denomination, I am very proud to insert this excellent statement in the RECORD. We here in the Congress have again come to the stage where the words of men and of political parties must be measured finally by their actions and their records.

The statement follows:

STATEMENT BY SUPERVISOR J. EUGENE MCATEER ON PENDING FAIR EMPLOYMENT ORDINANCE, MEETING OF BOARD OF SUPERVISORS, CITY AND COUNTY OF SAN FRANCISCO, MAY 20, 1957

For many years I have considered the principles of fair employment practices legislation. I have pondered the fundamentals of it from a moral position and from a practical viewpoint. In the past, I have concluded my position to be one of the school which believes that "morality may not be legislated." On this point I have maintained, until recently, that the fundamentals of fair employment practices must come from within the people involved and may not be forced on these people by laws and regulations from without.

During the past several weeks, I have read and reread the legislation before us today. I have reexamined my own previous beliefs and convictions in the field of State regulation. Through all of this recent study, I have been unable to adequately and conscientiously reject a statement made to me recently by a friend of mine of many years, Mr. Harry Kingman, recently retired as the secretary of the Young Men's Christian Association at the University of California, who has devoted over 30 years toward combating community prejudices and discriminatory acts. At present, at his own expense, he is in Washington, D. C., endeavoring to convince Federal legislators that one of the necessary ingredients toward curbing juvenile delinquency and race prejudice, on a national level, is the enactment of a fair employment practices bill.

Mr. Kingman's recent statement to me, when discussing this proposed ordinance, was, "Virtually every statute and judicial decree—local, State, or Federal—to some extent is a regulation of morality. In fact, if moral standards of individuals were not susceptible to community definition and regulation, we would probably not have emerged from primitive barbarism." To me, this statement will withstand the onslaught of whatever weapons the opponents of this particular legislation choose to use.

It must be clear to everyone in our democracy that our laws are founded on consensus. Sanctions and restraints are applied by the community. By legislative action, executive orders and judicial decrees, the race prejudices of Americans have been denied public sanction during the past 20 years. We have seen the elimination of white primaries, the removal of racial restrictions in many professional associations and in public housing, the creation of fair employment practice commissions in a number of States and municipalities, the integration of our Armed Forces, and the racial integration of many segregated schools.

At practically every stage in this current American social transition, strong opposition pleaded that "morality could not be legislated." However, in my opinion, the results indicate a high degree of compliance and only a few isolated instances of firm resistance. Further, the success of moral legislation of the nature of fair employment practices need only be measured and evaluated against the usual standards of law enforcement—not against the hypothetical standards of 100. We all know that our laws against rape and homicide, which have universal and overwhelming support, are occasionally violated. Therefore, obviously the proponents of this legislation cannot, and do not, expect to attain 100 percent compliance.

After wrestling with my conscience, I have concluded that I am no longer able to support my former academic position that "morality may not be legislated." Investigation and personal knowledge convince me that the continuation of the "voluntary plan" of fair employment practices is wishful thinking and hopeful evasion on the part of the opponents of this legislation. Truthfully, I wish that this were not the case. I wish that San Francisco, my native city, could proclaim to the world that our city's morals and community version of the Constitution preamble's reference to "liberty and justice for all" were such that we had voluntarily accomplished fair, equitable, and nonprejudiced employment for all of our citizens in our community. However, such is not the case, in my opinion.

Along with some of my colleagues, I had hoped that the State legislative body would enact a statewide fair employment practices bill. However, this has not happened. It may be that other sections of the State are waiting for a "proving ground" to be created within the State. They may be waiting to see how such legislation succeeds or fails within a certain city in California. If this is true, it now appears to me that this is a golden opportunity for San Francisco to take the lead and to clearly demonstrate that our city is the "city that knows how—to award all her citizens full citizenship."

There is one aspect of this legislation that has been briefly mentioned by Dr. Ertola in our discussion. Each of us is aware of it. This is an ordinance. It may be repealed by this body. If chaos, turbulence and economic unrest result from it, the board of supervisors will know it soon enough. In such case, the legislation may be repealed by six members of this board. Therefore, those of you who are opposed to creating of this Commission on Equal Employment Opportunity may justifiably view this as an experiment. It is not being accomplished by charter amendment which, as we all know, would require a majority vote of the electorate to place it into operation—and the same procedure to repeal it.

Our Declaration of Independence of 1776 indicates that "We hold these truths to be self-evident * * * that among our unalienable rights are life, liberty, and the pursuit of happiness." It is about the latter right that I would like to briefly comment. Happiness infers a state of well-being, peace, and comfort. It infers a freedom from frustration and insecurity. When individuals, families, and communities are enjoying happiness, there is less juvenile delinquency and immorality. How is it possible for a member of the Filipino, Chinese, Negro, or Indian groups of our city to attain complete happiness, when he knows that, at present, there are very few positions available for him, regardless of his education, ability, and desire to progress up the ladder of business and industry? He knows that the denial of the opportunity to prove his ability is a denial built upon a flimsy, non-American, nondemocratic principle of dislike of skin pigmentation. It is understandable why there is so much unrest and frustration in these groups.

We must recognize that the major exterior difference among us is the God-imposed one of skin color. Those of you who have seen a Negro infantryman with his chest torn open by shrapnel will remember that his blood was red and that his ribs and liver were the same color as yours. Those of you who have seen a Filipino scout with his hand blown off at the wrist will recall that his blood and tendons were of the same color as that of the Ute Indian, alongside him in the foxhole, who was hit in the shoulder by a sniper. If you have seen the deck of an LST filled with battlefield amputees, you will agree, I am sure, that the blood that each of them shed for his country was of equal quality and dignity. I am positive that it was, in the eyes of the Lord.

In wartime we afford all of our eligible citizens an equal opportunity to get killed, regardless of race, creed, or religion. I know of no instance where a soldier, sailor, or marine was denied an equal chance to get shot at by the enemy, because of skin pigmentation. It seems that we should now provide our peacetime citizens an equal chance to get a shot at employment without reference to his skin pigmentation. Accordingly, I shall vote for the fair employment practice legislation before us today.

Trinity River Project—Another Job Private Enterprise Can and Is Willing To Do

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. SCUDDER. Mr. Speaker, the Congress has an opportunity to save the tax-

payers $55.5 million, and, at the same time, create a $145 million tax-revenue source.

It can be done by approving H. R. 6997, the bill to authorize joint development of the power facilities of the Trinity River project in northern California. In addition, the Federal Government will realize a substantially greater profit from sale of falling water if a private utility company is allowed to construct, operate, and maintain the hydroelectric power phases of the project.

The Pacific Gas & Electric Co. can integrate the energy from this project to serve more people, and spread the benefits for the general public welfare. They have submitted a sound business proposal to the Federal Government which, after careful review, has been recommended for approval by the Secretary of the Interior.

When private enterprise is capable of handling the requirements consistent with the development of our natural resources, it should be encouraged to do so. The Trinity River partnership plan has wide support among the people of California, particularly in the northern part of the State where the project is located. For example, the Eureka, Calif., Chamber of Commerce has reiterated its position in support of the joint development proposal. Their reasons are set forth in a letter to me, dated May 21, 1957, which I desire to include with my own remarks, as follows:

EUREKA CHAMBER OF COMMERCE,
Eureka, Calif., May 21, 1957.

Congressman HUBERT B. SCUDDER,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN SCUDDER: At a regularly scheduled meeting of the Industrial Committee of the Eureka Chamber of Commerce, held Friday, April 26, the committee again reiterated its position pertaining to the power development of the Trinity River Project.

The industrial committee went on record favoring the following:

That the Pacific Gas & Electric Co. be allowed to install power facilities in connection with the Trinity River project.

That the Pacific Gas & Electric Co. pay for this installation with its own funds.

Our industrial committee feels that private enterprise should develop our own natural resources wherever and whenever possible. Whenever the project is too large to be handled by private enterprise capital and the result would benefit our country at large we then feel that Government support is necessary. In the case of the Trinity River project, the Pacific Gas & Electric Co. is financially capable of developing power facilities at its own expense and we feel that they should be encouraged to do so.

The Pacific Gas & Electric Co. pays $1,010,000 per year in taxes to Humboldt County. These taxes represent a large percentage of our Humboldt County budget that is used for the good of all our people in the school system, roads, parks, and administrative costs.

Our committee feels that private enterprise, such as the Pacific Gas & Electric Co., should be encouraged in developing our natural resources. In this case, the company is anxious to assume its responsibility by expending some $56 million to install power facilities at the Trinity River project site. According to the Pacific Gas & Electric report, there would be $165 million net gain in project revenue, plus $145 million that would be paid in Federal, State, and local taxes.

We ask your support in favoring the installation of power facilities at the Trinity River site by the Pacific Gas & Electric Co.

Sincerely,

FRANK MCGARAGHAN,
President, Eureka Chamber of Commerce.
R. F. DENBO,
Manager, Eureka Chamber of Commerce and the Humboldt County Board of Trade.

Senator Joseph R. McCarthy

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 30, 1957

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

RESOLUTION RELATING TO THE LIFE AND PUBLIC SERVICE OF SENATOR JOSEPH R. MCCARTHY, A WISCONSIN REPUBLICAN

The members of the eighth GOP congressional district were grieved to learn of the untimely passing of Senator Joseph R. McCarthy at Bethesda Naval Hospital in Maryland on May 2, 1957. Few people sensed the seriousness of our Senator's last illness.

Senator McCarthy was born November 14, 1908, at Grand Chute, Wis. He received his early education in the Underhill Elementary School of his home community, the name of which school was recently changed to McCarthy School in honor of the Senator. While an elementary school student he conducted a poultry business on the farm of his father, Timothy. This farm the Senator recently purchased. In 1929 he enrolled in the Manawa High School where he completed the prescribed 4-year course in a single year, graduating in 1930. In addition to his high-school work, he owned and managed a country grocery store. In 1930 after his graduation he started a similar store in Shiocton.

In the fall of 1930 he enrolled in the engineering school at Marquette University, but 2 years later he transferred to the law department, and in 1935 completed the prescribed 6-year course in 5 years. While attending Marquette he was completely self-sufficient, paying his own way by working as a boxing coach and operating a filling station at night. Six hours after his graduation from Marquette he had opened a law office in Waupaca.

In 1936 he became associated with the law office of Michael Eberlein, a prominent Shawano attorney, which association lasted about 3 years.

In 1939 the Senator entered the race for circuit judge of the 10th circuit and won a 3-cornered race. In 1945 he was reelected to the bench without opposition.

Meanwhile, early in 1942, he received a commission in the Marine Corps and served in the Pacific theater until December 1944 when he returned to the political arena. During his tour of duty he was granted leave of absence to run against the incumbent Senator ALEXANDER WILEY in the Republican primary of 1944, but he was defeated.

Following his military career he began his campaign for the Senate seat of Robert M. La Follette whom he defeated in the primary of 1946. The Senator's campaign was considered one of the best organized campaigns seen in this State. He was reelected in 1952. His self confidence in challenging the younger La Follette, one of the Nation's best known legislators, was an early indication of McCarthy's aggressive conduct in a turbulent career in the years to come.

The Senator's career mounted after 1950 when he came to grips with the issue of communism. History will record him as one of the most aggressive and courageous fighters against communism among the members of the United States Senate and the man who did more to awaken the public to the dangers and immediacy of communism in our Government. Because of his continuous and courageous fight against the threat of communism, he became the most controversial United States Senator of the century. During the peak of his career his name was before the public daily and the people followed every move he made avidly. A man of firm convictions, he had strong friends and equally firm opponents. Many who disagreed with his methods admired his devotion to the cause he espoused, and his courage of conviction. As a result of his activity he was awarded many citations from civic and patriotic organizations.

Although Senator McCarthy himself never aspired to the presidency of the United States, he played an important part in every presidential election since his arrival on the Federal scene. Because of his hard-hitting campaign techniques and desire to take issues in grip and expose the communistic menace, he more than any other Republican in America was credited with the election of our present President, Dwight D. Eisenhower, that brought about the end of 20 years of rule under the Democrat Party.

In view of the high office to which the people of Wisconsin twice elected Senator Joseph R. McCarthy and the devotion to his country for which he did in fact lay down his life; be it

Resolved by the eighth district Republican caucus membership, That they express their deep sorrow at the untimely passing of the Senator and express to his wife and other survivors their most heartfelt condolences for their loss; and be it further

Resolved, That this resolution be made a part of the minutes of the eighth district caucus assembled at Green Bay, Wis., on May 18, 1957, and that copies be sent to the Secretary of the United States Senate, to Senator Alexander P. Wiley, Congressman John W. Byrnes, and to his widow, Jean, at her address.

Father of Roadside Tables Finally Ready To Use 'Em

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 30, 1957

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I would like to insert the attached article from the Detroit News of May 26, 1957, regarding the retirement of Allan M. Williams as engineer-manager of the Ionia County Road Commission. Mr. Williams is considered to be one of the leaders in his field and is known throughout Michigan for originating the idea of placing roadside tables along the public highways. It is believed that not only were Ionia County's tables the first in Michigan but very probably the first in the Nation. Mr. Williams has a fine record of service

in his profession as well as in civic activity. It is a pleasure for me to call this account of his retirement to the attention of the House and wish him many happy years of activity in whatever fields he may decide upon:

FATHER OF ROADSIDE TABLES FINALLY READY TO USE 'EM

IONIA, May 25.—The man who put the table into roadside picnics—and thereby started a Michigan tradition—is retiring from one of his jobs next Saturday.

He is Allan M. Williams, 65, who has spent 38 years making roads smoother, parks prettier, and picnics more enjoyable, especially in Ionia County.

As engineering-manager of the county road commission, the job he is now leaving, the man with ideas originated the roadside table in 1929 when he put up one on U. S. 16. It was a scenic grove at the junction of Morrison Lake Road, south of Saranac.

A FAVORITE SPOT

There's a plaque on the spot today, marking an innovation in Michigan hospitality that was to sweep the State and gain fame and familiarity around the country.

It's a favorite spot with Williams.

In the early days he drove past the intersection many times, often seeing some family parked by the roadside with their lunch spread out on the grassy knoll, or a tree trunk.

"Why not?" he finally asked himself, "give them a table to sit at so they can really enjoy their picnic and the view?"

Williams fashioned a table out of ordinary planks, unlike the 4,200 of the rustic variety that identify Michigan trunklines today.

GAINED WIDE FAME

It drew so many compliments and letters—at Ionia and at the State highway department in Lansing—that Williams got permission to put tables at convenient spots throughout the county.

Finally, the State asked Williams to build 1,000 of them for use in other parts of Michigan. For 5 or 6 years, Williams' office was in the picnic table business, until the task took to much of his time.

Williams has been Ionia County's only road engineer, taking the job when it was created in 1919 after serving as resident engineer in west Michigan for the State highway department.

One of his "bosses" was a road commissioner, named Fred W. Green, who later became governor. Another was Fred A. Chapman, who became secretary-manager of the Michigan State Fair in Detroit.

IMPROVED ROADS

When he took over, county roads were gravel affairs. The county even had 24 horse-drawn graders. There was only 1 mile of concrete highway in the county—linking Ionia with the nearby Ionia State Reformatory.

That was a three-way project, a township supplying the cement, the State putting in the gravel and the reformatory furnishing the labor.

Today the county has 6 major trunklines—U. S.-16 and M-21 bisecting the county from east to west; and M-66 from north to south, plus M-50, M-44 and M-91.

DEVELOPED PARK

Among Williams' accomplishments was the obtaining of the first extra right-of-way grant in the State—beyond the then legal width of 66 feet—to make a wide curve on M-91, north of Lowell, at Pinckney Corners. He worked on it with Otto Hess, Kent County engineer, who becomes the dean of county engineers upon Williams' retirement.

Williams also pushed the development of Bertha Brock County Park from a 23-acre tract into a 200-acre domain of natural woods, streams, and meadows, 2 lodges and a caretaker's home.

West of Ionia on M-21, it is booked solid all summer long and is popular for winter sports as well.

After next Saturday, Williams will devote his time to the Ionia Free Fair, of which he is president.

But he plans also to put some of those roadside picnic tables to personal use.

What Farmers Can Do

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 30, 1957

Mr. McINTIRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from a recent issue of the Farm Journal, a popular farm publication.

Mr. Speaker, during the last several years there has been a persistent pursuit of a solution for our farm problem. Perhaps the time has come for us to pause a moment, observe where we have been, examine where we now are, and determine where we are going.

Every problem has a solution, and a solution comes into being only when all parties associated with the problem exhibit a willingness to cooperate and work toward the problem's end.

The prime principle in this consideration is the farmer, and because the farmer is immediately affected by political and economic impulses generated by government, the second principle becomes the Federal Government. To the extent that these parties effect a desirable solution, in that degree does a third principle become a benefactor—the consumer.

A blending together of the cooperative efforts of the farmer and the Federal Government might well contribute to the desired solution, with congressional committees interested in agricultural functions calling into conference farmer representatives from the various areas of agricultural production throughout the United States.

Such a program would provide an opportunity to air and identify all farm problems, to examine all suggested solutions, and to formulate concepts for delaing with the problem or problems.

Such an approach would perform as a concrete base for the advancement of a farm policy that is comprehensive in nature and effective in application—proving a benefit not only to the farmer but to all other segments of our economy as well.

The above-mentioned editorial follows:

WHAT FARMERS CAN DO

The day is coming, fast, when farmers will have to depend on themselves more and on Government less.

The signs are clear to see. Farmers wield less power with every election. City Congressmen are voting the consumer's viewpoint more emphatically. Their vote on the soil bank this month was merely the most recent and most striking instance. And many farmers are growing skeptical as they watch one program after another come and go. Many would agree with Secretary Benson that the evidence of the last 24 years is inescapable: farmers will not accept, legislators will not vote, administrators cannot impose the kind of controls necessary to get the job done.

Is there reason, then, to despair? Certainly not. Farm Journal believes there is a great deal farmers can do. Some things they can do for themselves. Some they have a right to ask Government to do.

Doing things yourself is surest and best. And farmers are doing much. As commodity groups they are improving their product, then getting out and selling it. Several groups have voted a checkoff to finance selling campaigns. They are spending their own money, and vigorously.

Many an individual farmer has found someway to sell an individual product at a special price. Some are processing their product and collecting a middleman's profit.

Perhaps half of the Nation's farmers—and many farm women—are working off the farm part time. It's strenuous but they are getting into good financial health.

But farmers have a right to call on their Government for some help, too. Farm Journal believes that for now farmers need support prices to help them through a transition period. Such help is in the national interest. Farmers run greater risks, beyond their control, than any major group. To raise enough food they will occasionally raise a surplus, and the whole Nation can well charge the cost to food insurance. But support prices should be at a level that lets farmers make a maximum of their own decisions, and that won't inevitably build surpluses. We may have to get such levels gradually.

Farm Journal would like to see the soil bank retained, altered to make it more effective, then given enough money to work. That won't be cheap, but it would be cheaper than what we've been doing. Handling surpluses hasn't been exactly inexpensive.

We could make it more attractive to take out whole farms rather than spoil the efficiency of others—we haven't fully explored the great possibilities of the conservation reserve.

We could demand research to find new uses for farm products, and new crops we aren't raising at all. And we could find the money right within the present USDA budget.

Farmers can legitimately demand that Government keep credit available, strengthen its program for low-income areas, help establish area vocational schools, help industry move to rural areas to furnish employment, continue marketing agreements—just to make a partial list.

The future for farming is good. But we are justified in vigorously asking Government to help in such ways as can actually work. And we can be prepared to do still more for ourselves.

H. R. 7238: A Bill To Amend the Public Assistance Provisions of the Social Security Act

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 30, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the Appendix

of the RECORD, I include the following letter:

MASSACHUSETTS SELECTMEN'S ASSOCIATION,
Boston, Mass., May 28, 1957.

Re H. R. 7238

Hon. THOMAS J. LANE,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE LANE: To amend the public assistance provisions of the Social Security Act so as to provide for a more effective distribution of Federal funds for medical and other remedial care.

At is regular meeting held on May 25, the executive board of this association voted unanimously to direct me to let you know that they are in favor of the passage of the above entitled bill.

They feel that if it becomes law it will greatly simplify the administration of medical care in public assistance, and assure Massachusetts of its fair share in Federal contributions for such care.

Respectfully yours,

HAZEL G. OLIVER,
Executive Secretary.

The Marine Corps

EXTENSION OF REMARKS
OF
HON. J. T. RUTHERFORD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 30, 1957

Mr. RUTHERFORD. Mr. Speaker, some 5 or 6 years ago an issue was presented to the Congress. After extensive testimony, discussion, debate, and deliberate consideration, the Congress arrived at its conclusion. This decision once again demonstrated the genius of our system of Government for sifting and sorting and finally arriving at the correct decision.

This incident to which I refer is the action of Congress on the Marine Corps bill, as it is commonly termed. At the time the 82d Congress considered this bill in 1951 it was apparent that the efficiency of the Marine Corps was being seriously impaired and its role as the Nation's traditional force-in-readiness was endangered. This caused great concern, as you can remember, not only for this outstanding military organization, but, more fundamentally, for the safety and security of our country.

As a result of Congress' searching inquiry into this vital defense matter, the role of the Marine Corps as our ever-ready striking force was confirmed by law, the Marine Corps was to be represented on the Joint Chiefs of Staff, and the size of this readiness force was firmly established by law as not less than 3 full combat-ready divisions, with supporting elements, and 3 air wings.

The occasion for my comment at this time is to express approbation for the manner in which the Marine Corps has carried their responsibility under the law. Rather than adopt an impotent, inert position the Marine Corps has continued its history of strength and dynamic productiveness in the field of military accomplishment.

Starting 10 years ago with the development of a new approach tuned to the requirement of contemporary war and equipment, the Marine Corps has effectively developed its doctrine of vertical envelopment, using helicopters to increase mobility, versatility, and security.

Today our country can be pleased with and proud of our Congress, who provided a strong Marine Corps to assure the safety of our country. I am pleased to learn that the Marine Corps has lived up to its responsibilities. In this period of crucial and critical conditions throughout the world we are at peace, and this is due, no doubt, to the fact that our Nation has a strong Marine Corps posed to support our national policy and protect our interest wherever and whenever it be required.

With one marine division in the Far East, finely trained and equipped for instant use, the enemies of our country cannot mistake the resoluteness and firmness with which the United States views the necessity of peace. This force is proof positive to those who would hamstring our country that we are ready to and capable of effectively striking down any aggressive force unleased in that area.

Dramatic evidence of the effectiveness of the Marine Corps force in readiness was recently demonstrated in the explosive Middle East. At the very moment when war eruption appeared certain, the United States Navy moved its Sixth Fleet into the area, with a Marine Corps landing force. We all witnessed the electric effect this had upon the aggressive forces then on the move. War or warlike action was averted, and the interests of the free world were protected and advanced.

The Marine Corps has lived up to its obligation and requirement of law by maintaining 3 combat-ready divisions and 3 air wings as our Nation's first force of protection from danger and war. The will of Congress has been followed, and I am of the opinion that the efficient and effective way in which it has been accomplished is worthy of comment.

The Formosa Outbreak—Causes and Lessons To Be Learned

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 30, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Minneapolis Tribune of May 27, 1957, which is by all odds the best analysis I have seen of the basic factors underlying the recent explosion on Formosa.

Much of the resentment that has been building up was visible and could have been prevented, but that is water over the dam. The problem is what to do now—to correct, or at least to reduce the tensions.

Americans cannot be asked to live on Asian standards; and Asians cannot in the near future attain American standards. So a certain amount of envy is inevitable. But we must for the sake of our own security interests, and we can, make adjustments to prevent the envy from proceeding to irritation, then resentment, then alienation. One of the prices of successful world leadership is to discover and make such adjustments.

A first step is to be more selective and to pay more attention to the views and feelings of those in Asia who want to be both our allies and our friends. We must screen more carefully all American personel sent abroad, both civilian and military—and including wives. We would not send them over unless they were competent in their particular specialties. But what they do and how they live off duty is just as important to their usefulness to our country, as how proficient they are in transmitting the technical skills they are sent over to communicate. It is self-defeating needlessly to antagonize or alienate those whom we are helping to become stronger, because their independence and well-being are vital to our own.

The editorial follows:

ONE PRICE OF LEADERSHIP

The anti-American rioting on Formosa illustrates some of the difficulties the United States faces as the leader of the free world.

Without American support, Formosa would fall rather quickly to the Chinese Communists. American military and economic aid has given Formosa a higher living standard than most other nations in southeast Asia, and much better than on the mainland, now governed by the Chinese Communists.

Yet in spite of this American help, the large-scale rioting that broke out shows there is a strong anti-American feeling on Formosa. Why should this be?

We don't pretend to know all the answers, but many factors are involved in the growth of anti-American feeling throughout many areas of the world.

In the first place, the United States helps many nations, but we still are envied. Our wealth and our high standard of living put us in the category of the rich relative who is envied more than he is loved.

In the second place, the Asians want respect, understanding and, above all, treatment as equals. Any incident that hints—accurately or not—that there is one code of justice for the Asian and another for the white man rankles with the Asian. On Formosa, an army sergeant was acquitted by an American court-martial for killing a Chinese "Peeping Tom." This may well have appeared to the Chinese as another example of special justice for the white man.

In the third place, Americans who go abroad for our Government and for private industries often live in segregated colonies. They take with them the American culture and as much of the American standards of living as they can afford. This automatically sets them off from the local people.

On Formosa, most of the Chinese and Formosans walk or ride bicycles. Most Americans, of course, own automobiles. Americans usually have their own clubs and swimming pools, and live apart from, not as a part of, the local people, in the minds of Asians, these actions show that Americans do not regard the Chinese as equals.

In the fourth place, the Communists have been conducting an unremitting propaganda war against the United States bases around the world. Prime Minister Nehru of India, a

neutralist, also is critical of our system of military alliances. And Formosa, after all, is an American base.

There may well have been other reasons, too, for the anti-American feeling, such as the frustrations of the Formosans who want independence more than they want American aid or rule by Chiang; the refusal, for very good reasons, of the American Government to support Chiang's desire to return to the mainland of China; the problems raised by the retirement of many overage men in Chiang's huge army, and perhaps others.

But similar anti-American feelings have been displayed recently in Japan, on Okinawa, in South Korea, in the Philippines, and in many other Asian countries. Even Europeans have been more critical of this country in recent months.

Yet even if we improve our relationships with the overseas people, as we should, we cannot expect to buy friendship with the dollars we invest in military and economic aid. Our purpose in stationing our Armed Forces in various parts of the globe and providing funds for economic development abroad is to strengthen the free nations and to help protect them from international communism. The hostility we incur is part of the price we pay for world leadership.

Another Broken Pledge to the Indians?

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 30, 1957

Mr. OSTERTAG. Mr. Speaker, there is now pending before the House Public Works Committee a so-called flood-control project, which, if approved, will haunt the conscience of this Nation for generations to come. I refer to the proposed dam across the Allegheny River at Kinzua, Pa.

If approved, it will inundate some 9,000 acres of an Indian reservation in western New York which was granted to the Seneca Nation under solemn treaty by the first President of our country, George Washington. It will destroy the Indians' habitations and farmlands, leaving them nothing but hilly and precipitous mountain land on which to eke out a living.

This dam is being promulgated as a flood-control project, but a study of the hearings makes it abundantly clear that flood control could be provided by a much smaller structure or by other alternatives, with far less cost to the taxpayers of the United States and far less violence to the moral conscience of this Nation. As presently envisioned, it will, in fact, cost in excess of $100 million, and it will be built, not solely for flood control, as its sponsors claim, but for power purposes.

Mr. Speaker, the people of western New York are aghast at this bland and cavalier disregard of morality and fundamental decency in this project. I have received hundreds of letters from residents of the area, expressing their sense of shock and concern that the great Government of the United States could so lightly ignore the plain but solemn pledge to the Indians which it wrote into a treaty 163 years ago, and which the Indians themselves have scrupulously observed.

If this project is carried out, as presently planned, and over the intense and unanimous opposition of the Senecas, it will indeed be a black day for America. If we cannot keep faith with the first Americans in our own country, who will trust the solemnly pledged word of the United States Government?

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD, an article from the Democrat Chronicle, of Rochester, N. Y., with respect to this issue, and a group of letters from today's mail on the subject. These letters are of particular interest, because they come from a group of fourth-graders, who find themselves unable to understand how the great Government of the United States could so lightly ignore a treaty made by the Father of his Country. I confess I cannot understand it either.

The article and letters follow:

PLEDGE TO CORNPLANTER—CONTROVERSY OVER PLANS FOR NEW KINUZA DAM CENTERS ON A 1794 PROMISE TO INDIAN CHIEF

(By Floyd King)

In 1790, George Washington addressed himself as follows to the great Seneca Chief Cornplanter:

"The merits of Corn Plant (Cornplanter) and his friendship for the United States are well known to me and shall not be forgotten."

Four years later in solemn council at Canandaigua, President Washington's emissary ceded certain tribal lands to the Iroquois family and gave this pledge:

"The United States will never claim the same nor disturb them or either of the Six Nations nor their Indian friends * * * in the free use and enjoyment thereof."

One hundred and sixty years later, Col. H. E. Sprague, of the United States Army engineers, said:

"The property right of the Seneca Nation * * * is subject to the inherent right of the Government to appropriate property for public use."

These apparently contradictory statements are important right now because around them swirls the heated controversy over the right of the Government to build a flood-control dam that would wipe out the Cornplanter Indian Reservation. This Indian homeland and burial place of the immortal Seneca is astride the Allegheny River in Pennsylvania just below the New York border.

The controversy has sentimental overtones for Rochester because of the shadowy figure of Cornplanter, still dominant in the picture although he has been dead these 100 years. The remarkable Seneca leader was born at the old Indian village of Conewaugus just south of Rochester on the Genesee River.

All of the Indian trails in this area probably felt his moccasined feet; he was the subject of numerous writings by the late Dr. Arthur C. Parker, former director of the Rochester Museum; and when the Commonwealth of Pennsylvania granted him a tract of land where he is now buried, it was called Jenniseo in memory of his boyhood home along the Genesee.

Generally, man has little time for sentiment when he is making the inexorable changes that he calls progress. Nevertheless, plans for this modern-day dam are so interwoven with the legends of Cornplanter that to build for the future without consideration for the past would be historically unthinkable.

It was Cornplanter's fate to be a leader of his people during the tortured years when the tide of migration was sweeping over Indian lands. The literary legacy that he left to history is made up largely of letters to Washington and the Governor of Pennsylvania protesting with pathos and dignity the steady encroachment on Indian territory and the constant breaking of treaties.

The situation of the Six Nations was not a happy one. In addition to holding land coveted by the white man, they had fought on the side of the British during the Revolution. In one of the most eloquent letters in history, Cornplanter wrote to Washington explaining why the Senecas had fought with England against the Americans.

He reminded Washington that in the beginning the colonists told the Indians that they were "the children of one great father (the King of England) who regarded the red people as his children" and invited the Indians to accept his protection and to obey him. Cornplanter continued:

"What the Seneca Nation promise, they faithfully perform. When you refused to obey the King, he commanded us to assist his beloved men in making you sober. In obeying him we did no more than yourselves had led us to promise. We were deceived; but your people, teaching us to confide in that King, had helped to deceive us, and we now appeal to your heart. Is all the blame ours?"

This paragraph contains the germ of the misunderstanding that has plagued Indian and white man since they began dealing with each other. To the Indian, a promise is a promise and a treaty a treaty. They now hold a deed to land and a solemn promise that "the United States will never claim the same nor disturb them in the free use and enjoyment thereof."

The United States proposes to scrap the treaty and break the promise. It plans to build a 181-foot dam across the Allegheny at Kinzua, Pa. It would flood out all of the 700-acre Cornplanter Reservation and a considerable part (over 9,000 acres) of the Allegany Reservation in New York State.

In protesting the building of the dam that would wipe out the homeland of the Seneca Nation, Indian spokesmen pointed out that this homeland "is essential to the maintenance of our vital community life. Here is our Long House, center for community and religious life. This community life has great significance not only for those now living on the reservation but also for hundreds of their relatives who have their homes elsewhere but return to the homeland at regular intervals for the social and spiritual strength they derive from the community."

The Indians not only have protested the treaty breaking on moral grounds but the Seneca Nation retained two of the country's most noted flood control engineers who studied the project and offered the opinion that the proposed dam is "not even a good second choice."

Dr. Arthur E. Morgan, former chairman of the Tennessee Valley Authority, and Barton E. Jones, who built Norris Dam and 75 other major flood control projects, proposed instead a 41-mile diversion channel that would drain flood waters into Lake Erie.

"There is every indication," Dr. Morgan declared, "that permanent and complete control of the floodwater orginating in the upper Allegheny River should be accomplished by diversion."

The Indians also proposed a series of small headwater dams. On this plan they have the support of the Soil Conservation Service of the United States Department of Agriculture which maintains that upstream control is the efficient and economic way to prevent floods.

The total program proposed by the Indians would cost between forty and sixty million dollars. The plan was dismissed without

comment by the Army engineers who are going ahead with plans for the downstream dam at an estimated cost of 125 millions.

The big dam is part of the Rivers and Harbors bill now before Congress. A Senate subcommittee considering an appropriation for the dam was told at a hearing last week that there are many protests against the treaty being violated. However, the indications were that the money would be made available.

Col. H. E. Smyser, of the Army engineers' explained to the committee that the Government does not want title to the Indian land but would be satisfied with a lease. Indian spokesmen professed to see no difference between a title grab or a lease inasmuch as both took their land away and flooded out their homes.

However, opposition has been mounting. Only last week the Erie County Amvets Council voted to oppose construction of the dam. And Representative HAROLD C. OSTERTAG, who was made a member of the Tonawandas when he visited their reservation in western New York some time ago, has served notice he will not approve the project as long as the Senecas object.

"My mail," said OSTERTAG, "reflects the widespread concern of people of good will and good conscience everywhere over this project. The taking of the Senecas' land for flood-control purposes poses both legal and moral questions of considerable magnitude."

It is on these moral grounds that we return to Cornplanter ever the spokesman for his people against the injustices of the white man. His birth, life and death were marked by these injustices, which now threaten his grave.

Cornplanter was the son of John Abeel, an Indian trader and renegade son of one of Albany's most distinguished mayors. John was recorded as an "alleged lunatic" for the following reasons:

"He early developed a taste for hunting and finally became a fur trader among the Indians of the Six Nations with whom he was on terms of intimate friendship, so much so that he became enamoured with an Indian princess, named Aliquipiso, of the Turtle Clan of Seneca Tribe, and married her. Their son, born about 1742, became the famous Corn Plant."

This was a forest ceremony performed after the Indian fashion. John soon abandoned his Indian wife and child, married the daughter of a prominent German family and settled down to a life of respectability. The lunatic label apparently then was dropped.

Years later in one of his eloquent letters to the Governor of Pennsylvania, Cornplanter told how he learned of his parentage and his subsequent meeting with his father. He wrote:

"When I was a child I played with butterflies, the grasshoppers, and the frogs, as I grew up I began to pay some attention and play with the Indian boys in the neighborhood and they took notice of my skin being a different color from theirs and spoke about it; I inquired of my mother the cause and she told me that my father was a resident of Albany.

"I then knew where my father lived and went to see him and found he was a white man and spoke the English language—he gave me victuals when I was at his house, but when I started to return home, he gave me no provisions to eat on the way—he gave me neither kettle nor gun, neither did he tell me that the United States was about to rebel against the Government of England."

Cornplanter has been named after his father, John Abeel. This name became corrupted to O'Bail. The common reason given was that the white man either could not pronounce Abeel or misunderstood it. Dr. Parker suggested there may have been an effort on the part of those interested to cover up the facts by permitting a misspelling of the name which passed into history as O'Bail.

Thus it was that Cornplanter, after a lifetime of futile dealing with the white man, always marked by integrity and dignity on his part, came to his deathbed under a name not his own and saddened by the knowledge that he had lost much of the land of his ancestors to the white people. He asked that his grave not be marked.

But Pennsylvania could not ignore the great Indian leader and 30 years after his death it erected a monument at his grave. Inscribed to John O'Bail, known as Cornplanter, the eulogy reads:

"Chief of the Seneca Tribe, and a principal chief of the Six Nations from the period of the Revolutionary War to the time of his death. Distinguished for talent, courage, eloquence, sobriety, and love for tribe and race, to whose welfare he devoted his time, his energy, and his means during a long and eventful life."

If the Kinzua Dam is built, the waters will rise many feet over this monument and leave the grave unmarked, as Cornplanter asked.

AUDUBON SCHOOL No. 33,
Rochester, N. Y., May 21, 1957.

Hon. HAROLD C. OSTERTAG,
House of Representatives,
Washington, D. C.

DEAR MR. OSTERTAG: As a result of our intense study of the Seneca Indians in fourth grade, our class searches avidly for any information about New York State Indians. Thus the enclosed article about Cornplanter's Indian Reservation came to our active attention during morning news discussion.

The children were so concerned about the plight of these Indians that this letterwriting was the direct outgrowth, and in a very realistic way they have expressed their views. Their sincerity of purpose is evident.

Respectfully yours,
(MRS.) ETHEL S. ANDERSON,
Teacher, Grade 4.

ROCHESTER, N. Y., *May 20, 1957.*

Hon. HAROLD C. OSTERTAG,
House of Representatives,
Washington, D. C.

DEAR MR. OSTERTAG: I would like to discuss the problem of the Seneca Indians. I think this is an important topic.

The dam Congress plans to build will flood the Senecas' 700-acre reservation and a big part of Allegany Reservation, in New York, which is theirs, too. If it is flooded, it will break the pledge Washington made in 1794. Two famous flood-control engineers suggest that, if you had smaller dams at the source of the river, it would be much better all around. There is another way, too. They can make a 41-mile diversion channel that would drain floodwaters into Lake Erie. I think that either of these ways would be better than the 181-foot dam planned at Kinzua, Pa.

They have the support of the Soil Conservation Service of the United States Department of Agriculture, which says that upstream control is the efficient and economic way to prevent floods.

I hope you will take my letter into consideration and do what is best for the Indians.

Respectfully yours,
KATHLEEN ANN ROGERS.

ROCHESTER, N. Y., *May 20, 1957.*

Hon. HAROLD C. OSTERTAG,
House of Representatives,
Washington, D. C.

DEAR MR. OSTERTAG: I have studied the Seneca Indians and I believe they should not be driven off their land. If the Government stops the Allegheny River with a dam at Kinzua, Pa., it will flood the Indians off their land. Two engineers know two ways of doing it without flooding them out. One way is to make some small dams near the source of the river. Another is to redirect the course of the river.

Remember the promise that George Washington made to Cornplanter. He said that Cornplanter could keep the land that was given to him. Where would the Indians go if they were driven off their land? Where would you go if you were a Seneca Indian? Please save Cornplanter's Reservation for the Senecas, who have always kept their promises to us.

Respectfully yours,
JANET ANN MACKAY.

ROCHESTER, N. Y.

Hon. HAROLD C. OSTERTAG
House of Representatives,
Washington, D. C.

DEAR MR. OSTERTAG: I think you should let the Indians keep their reservation. Instead of building the 180-foot dam at Kinzua, Pa., the Government could put in some small dams. If the Allegheny River destroys the reservation because of the new dam, we will be breaking the promise that George Washington made in 1794.

Respectfully yours,
THOMAS DELEYSER.

ROCHESTER, N. Y., *May 20, 1957.*

Hon. HAROLD C. OSTERTAG,
House of Representatives,
Washington, D. C.

DEAR MR. OSTERTAG: I am concerned about the 181-foot dam that may be built on Cornplanter's Indian Reservation. I don't think it should be built, because of George Washington's promise to Cornplanter that was made in 1794. I think it is a good idea to redirect the Allegheny River into Lake Erie, or make some small dams near the source of the river.

Respectfully your,
VIRGINIA WRIGHT.

ROCHESTER, N. Y., *May 20, 1957.*

Hon. HAROLD C. OSTERTAG,
House of Representatives,
Washington, D. C.

DEAR MR. OSTERTAG: We have studied about the Senecas and we think you should not put the 180-foot dam on their reservation, because it would flood the land and drive the Indians away. Cornplanter got the land from George Washington and he promised it would always be theirs. Please find another way to solve the Allegheny flood problem.

Respectfully yours,
MARIA POLITO.

ROCHESTER, N. Y., *May 20, 1957.*

Hon. HAROLD C. OSTERTAG,
House of Representatives,
Washington, D. C.

DEAR MR. OSTERTAG: Our teacher read us about the big dam you are planning to build which will destroy the middle of the Indian reservation. I think you should build some small dams near the source of the river, or find another solution to the problem, so the Cornplanter Reservation will be safe.

Respectfully yours,
DONALD D. CARLSON.

ROCHESTER, N. Y., *May 20, 1957.*

Hon. HAROLD C. OSTERTAG,
House of Representatives,
Washington, D. C.

DEAR MR. OSTERTAG: Our class read an article in the Democrat and Chronicle about Congress building a dam at Kinzua, Pa. We would like to choose one of the other ways mentioned to accomplish what has to be done.

The reason we are against the dam is because of our good neighbors, the Indians. The dam will flood their reservation and they

will be driven from their homeland. We studied about the Indians in our fourth-grade classroom this year.

We know that our Government promised Cornplanter that it would never take away land that had been given to the Seneca Nation. Now they say they want it back.

I try never to make a promise that I can't keep. Don't you think the United States Government can keep its promise to Cornplanter? We have taken away almost all the land the Indians once had; please let them keep their homeland now. After all, where would we be if they took our homeland away from us? I hope you will give this matter your attention because it is very important to us.

Respectfully,

NANCY MARIE MARAILLE.

ROCHESTER, N. Y., *May 20, 1957.*

Hon. HAROLD C. OSTERTAG,
House of Representatives,
Washington, D. C.

DEAR MR. OSTERTAG: I do not approve of Congress taking the Indians' land away from them. George Washington made a promise to Cornplanter in 1794 that this land would always be Seneca territory. I don't think that promise should be broken.

Some engineers found out that they could build smaller dams up the river farther. Things would be better all around if the smaller dams were built. There is also another way. A canal could be built to drain floodwaters into Lake Erie. I hope you take my letter into consideration and do the right thing for the Indians.

Respectfully yours,

BARBARA AHRENS.

International Atomic Energy Agency

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Friday, May 31, 1957

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address entitled "Approval of Atomic Agency Essential to United States Leadership," delivered by the distinguished junior Senator from New Jersey [Mr. CASE] to the New Jersey Young Republicans in Atlantic City, and published in the New York Herald Tribune of Sunday, May 25, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

APPROVAL OF ATOMIC AGENCY ESSENTIAL TO UNITED STATES LEADERSHIP

(By Senator CLIFFORD P. CASE)

The following are excerpts from a speech by Senator CASE delivered recently to the New Jersey Young Republicans in Atlantic City:

"Nearly three and a half years ago President Eisenhower appeared before the United Nations and pledged this Nation to find the way by which nuclear forces could be dedicated to the benefit, not destruction, of man.

"His words sparked new hope throughout the world. Thus was launched an effort that is more than a key feature of the President's foreign policy. In a very real sense, it is key to our future and that of every man.

"For many years following the war the United States labored to bring about a system of international control of atomic energy. Those efforts were unavailing, primarily because of Soviet refusal to agree to effective control measures such as inspection.

"It was against this background that the President made his historic address in December, 1953. He suggested a new effort that would concentrate on the peaceful uses of the atom. From his suggestion, over long months of negotiation, has developed the International Atomic Energy Agency. Last October the draft statute of the Agency was adopted unanimously by an 81-nation conference. Recently, the Senate Foreign Relations Committee opened hearings looking toward ratification by the Senate. Prompt ratification by the United States is, I believe, of the utmost importance.

"At this point in history the United States no longer has a monopoly of the nuclear energy field. A number of nations including, of course, the U. S. S. R., are engaged in nuclear development. Many others, especially the under-developed nations are eagerly seeking an opportunity to avail themselves of the marvelous benefits the atom can bring.

"The question is whether the United States will join with other nations in an effort to insure that the development of peaceful uses of the atom will go forward in ways which will best serve our interests and the peace of the world.

"We are faced with an opportunity that is unlikely to come again. For the first time there has been achieved well-nigh universal agreement on a plan of development and control in the atomic energy field and fortunately this comes at a time when relatively few nations are yet engaged in weapons development. We have an opportunity for leadership. If we forego that opportunity, we run the risk that others—of whose basic hostility to our way of life there can be no doubt—will exploit our failure to take the lead.

"What of the risks, it is asked, that are involved in membership in this new Agency? To that I can only say I have been unable to discover any substantial risk that can be avoided by refusing to join the Agency.

"The draft statute specifically forbids the use for military purposes of fissionable material supplied through the International Atomic Energy Agency. To insure the effectiveness of this prohibition, a comprehensive system of safeguards is provided. These safeguards are the equal, indeed the same I am informed, of any the United States now prescribes in its bilateral atomic agreements with other nations.

"Among the most important of the safeguards is the right of inspection, of free access by Agency personnel to all places, persons and data having to do with a project. This means, of course, that like any other country that seeks Agency assistance, any applicant among the Soviet satellite countries will have to submit the projects for approval and agree to continuous inspection and accountability procedures. This would at least open a window on an area now cut off from our view, though not from a major source of nuclear materials and technology.

"Qualified technical experts state that diversion of fissionable materials of the quality specified to military purposes would be most difficult, if not impossible, to achieve clandestinely. At the same time the strict accountability features in conjunction with other technical factors and the requirement that excess material be stored in Agency storehouses make it most unlikely that diversion could be accomplished secretly.

"We can refuse to join the IAEA but this does not mean we can stop the drive of other nations to secure for themselves the benefits of atomic energy. Or we can ratify the Charter and take the lead in establishing what the President has called 'an international body in which all may safely pool their knowledge and skill for the advancement of all.'

"To me the choice seems clear. We, no less than other nations, want and need 'this new instrument of peaceful progress.'"

Democrat Charge That Eisenhower Policies Enrich the Rich and Impoverish the Poor Is Gross Untruth

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 30, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks I include a factual article that sets the record straight on the results of the Eisenhower administration fiscal policies that have strengthened the economy and benefited all. The article is by the distinguished economist, Dr. Arthur Upgren and appeared in the Minneapolis Star of May 21, 1957.

The article follows:

FISCAL CRISIS? IT "JUST AIN'T SO"—FACTS BELIE DEMOCRATIC ADVISORY COUNCIL'S CHARGES

(By Arthur Upgren)

The advisory council of the Democratic national committee recently asserted that our fiscal policies, those of the Eisenhower administration, are approaching a crisis; that the net effect of all the administration's economic and financial policies is that the rich are getting richer and the poor are getting poorer.

First, let's take a look at the fiscal policies. The authoritative, official Economic Indicators shows that there was a deficit in the Treasury's cash consolidated budget of $6.1 billion in 1953, most of the deficit resulting from the Truman budget for the fiscal year which ended June 30, 1953.

The same publication shows that this $6 billion plus deficit was converted into a surplus of $5.5 billion by 1956.

This is, indeed, a strange way to create a fiscal crisis, as the Democratic committee claims the Eisenhower administration has done.

In addition, between 1953 and 1956 there was a cut in defense expenditures and there was a cut in taxes. President Eisenhower recently estimated that this cut, to date, has given taxpayers $25 billion in relief from the high taxes prevailing in 1953 and the years immediately preceding.

How could a deficit of $6.1 billion be converted into a surplus of $5.5 billion at the same time that there was a tax cut of $7.4 billion? Part of the answer is that there was a $10 billion cut in defense outlays.

The rest of the answer is that our total national income rose from $298 billion in 1954 to $342 billion in 1956. That's a rise of $44 billion, and the Treasury's tax collectors got a lot of it.

Yet personal disposable incomes—what you've got left after taxes—rose by $30 billion, a nice 10-percent gain in 2 years, 1955 and 1956.

In the years from June 30, 1955, to the fiscal year ending June 30, 1957, net budget receipts of the Federal Government have risen by more than $10 billion while net budget expenditures have risen by less than $5 billion. This, too, is not the way you go into a fiscal crisis.

What has happened has been that we have had marked economic growth and expansion, sparked by wise economic and fiscal

policies. That's just about the complete opposite of having produced a fiscal crisis.

Now as to the Democratic committee's charge that the rich are getting richer and the poor getting poorer, Dr. Arthur F. Burns, until last fall Chairman of the President Economic Advisory Council, has shown that it is the other way around. The rich have been getting relatively poorer and the poor have been getting absolutely richer.

In an annual report to the National Bureau of Economic Research of which he was chairman (a post he has reassumed), Burns some years ago pointed out that since 1929 we had moved more than half of the way toward absolute equality of incomes.

Progressive income taxation, interest rate control, and rent control have aided in cutting back the incomes of the richest groups.

Again Economic Indicators reveals that disposable income—what is left after tax deductions—rose from $538 per capita in 1939 to $1,737 per capita in the first quarter of 1957. Leaving out price inflation the gain was more than 70 percent in 18 years.

Since 1939 the gain in average weekly earnings of our 17 million factory workers has been from $23.86 weekly pay to $82 in March 1957. The rise has been from $68 a week in 1952 to $82 at the present time.

That is a gain of over 20 percent in the first Eisenhower administration.

A Tribute to Our Jewish War Veterans

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Friday, May 31, 1957

Mr. MARTIN of Iowa. Mr. President, on May 24, 1957, it was my privilege to attend the annual memorial services honoring Jewish War Veterans of the United States, held at Adas Israel Synagogue, Washington, D. C., and to take part in these memorial services. I ask unanimous consent that my address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A TRIBUTE TO OUR JEWISH WAR VETERANS

(Address by Senator THOS. E. MARTIN, Republican, of Iowa, at the annual memorial services honoring Jewish War Veterans of the United States, Adas Israel Synagogue, Washington, D. C., May 24, 1957)

It is a great honor to take part in these memorial services honoring the Jewish war dead. The ideals of your organization and the way in which you have carried these ideals into practice are eminently worthy of emulation.

Recently, I took the time to read part of the constitution of the Jewish War Veterans. I was particularly impressed by article II of this constitution. I would like to quote a portion of it:

"To maintain true allegiance to the United States of America; to encourage honor and purity in public affairs; to combat whatever tends to impair the efficiency and permanency of free institutions; to encourage the doctrine of universal liberty, equal rights, and full justice to all men.

* * * * *

"To instill love of country and flag in our youth and to foster such activities as will tend to perpetuate the objects and ideals of our organization."

The history of our country's struggle to secure and maintain the principles cited above is an inspiring story of purpose and devotion. The part played in these struggles by people of the Jewish faith is equally inspiring. From the first days of the Revolutionary War, American Jews have taken their place alongside men of all faiths and all beliefs in the common cause of freedom.

Early in our history the rumblings of freedom were heard in the Colonies. One of the first visible signs of the oncoming struggle was the Non-Importations Resolutions of 1765—the first real step toward independence—when a group of colonists indicated desire for freedom by refusing to trade with the English. It is highly significant that among the signers of these resolutions were nine Jews whose principal livelihood depended on such trade. Six Jews signed the more stringent agreement of 1770. But they took this action without fear because of their faith in the ideals of liberty and freedom.

When the fight for independence turned into actual war, the Jews of the Colonies carried their share of the burdens. Deeply etched on the rolls of the Revolutionary heroes are such names as Lt. Col. David Salisbury Franks who served with great distinction; Lt. Col. Isaac Franks, an aide-de-camp to General Washington; Mordecai Sheftall, who put his entire salary at the disposal of the Army physicians for the purchase of much-needed medicines, and was badly wounded at the siege of Savannah; Manual Mordecai who also served on Washington's staff and who gave a fortune of $100,000 for the cause of independence; and Hayn Solomon who was arrested by the British as an American spy and who later extended financial help to James Madison, Edmond Randolph, Thomas Jefferson, Arthur Lee, General Steuben, and Robert Morris and still later became the financial link between the United States and Europe. The Jews truly contributed their share of sacrifice and valor to the infant United States.

That the Hebrew played a conspicuous part in the drama of the revolution, despite the relatively small size of his community, there can be little doubt. His aid was both military and financial. The record reads creditably on both counts.

When the tragic War Between the States broke out, Jews were found on both sides fighting for the causes in which they believed. Simon Wolf, who made an exhaustive study of that war, estimates that 8,400 Jews served with the northern army, and it was reported that John Seddon, Confederate Secretary of War, one time said there were between 10,000 and 12,000 Jews serving in the Confederate Army.

Although it is impossible to estimate accurately the total number of Jews who served in the War Between the States, some of the names and deeds of fighting Jews will live forever—names like Leopold Karpeles, who turned a retreat into a victory at the Battle of the Wilderness by rallying the northern soldiers; Benjamin Levy, the 16-year-old drummer boy who won the Congressional Medal of Honor for his bravery at the Battle of Charles City Crossroads; Leopold Blumenberg, about whom Lincoln once said, "He has suffered for us and served us well, had the rope around his neck for being our friend, raised troops, fought and been wounded"; and Edward Soloman, who served with great courage and valor at Gettysburg.

On and on this list of Jews who fought so gallantly could go. In each war there were Jews, great numbers of Jews, who compiled records that rank with America's bravest.

More than 1 million Jews have served in our Armed Forces in our country's wars. The list of Jewish heroes could go on for hours and we still wouldn't list them all. While we cannot possibly list all the Jewish heroes of World War I and World War II and Korea, we can pay special tribute to Chaplain Alexander D. Goode who, together with 3 other chaplains, 2 of the Protestant faith and one of the Catholic faith, gave their lives in the sinking of the *Dorchester* in the North Atlantic early in World War II. The story of Chaplain Goode and his fellow ministers of religion, Chaplains Clark V. Poling and George L. Fox, Protestant ministers, and Chaplain John P. Washington, a Catholic priest, is an epic of human dignity and sacrifice. As a lifeboat drew away from the stricken *Dorchester*, a young sailor who knew the four chaplains had given their life preservers to four enlisted men, saw them locked arm in arm and deep in prayer. And then suddenly the men and the ship were gone—gone beneath the icy waves.

In the First World War there were 3 Medal of Honor winners, 1 of whom is your genial and able national executive director, Ben Kaufman, 147 winners of Distinugished Service Crosses and Medals, and 982 other decorations, citations, and awards that were given to American Jews. In World War II, 2 more Jews won the Nation's highest award for bravery, the Congressional Medal of Honor, 64 men who won the Distinguished Service Cross, 27 who won the Navy Cross, and 34 who received the Distinguished Service Medal. In addition to this inspiring list there were actually thousands of additional awards and citations given to men of Jewish faith who served with distinction in the Second World War.

I have not been able to secure a breakdown of the decorations won by Jewish servicemen in the Korean conflict, but I am confident when the full story is written the pattern of service and patriotism forged by Americans of the Jewish faith in all our wars will be reproduced.

Perhaps the best description of the place of the Jew in the military history of the United States was made by Congressman Julius Kahn, of California, when he drew the first draft number for the First World War. I would like to repeat to you what he said:

"Many of the boys who go to the front will be wounded. Many of them will be killed. But Jews at all periods of the world's history have been ready to make the supreme sacrifice whenever the land that gives them shelter demands it. I know that I voice the sentiment of the overwhelming majority of the Jews of the United States when I say we will do our share toward keeping Old Glory floating proudly in the skies so that it may continue to shelter under its fold the downtrodden and the oppressed of every land."

The Jews of our country have always upheld the high appraisal of Congressman Kahn. Your record of sacrifice for the country you love has been far and beyond the call of duty. I consider it an honor to meet with you today.

Address by William Treadwell at Eighth Annual Conference, Institute of Public Relations, at Brighton, England

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, May 31, 1957

Mr. WILEY. Mr. President, I have been pleased to comment previously on the splendid work of the People-to-People Foundation.

This foundation, which fulfills the great mandate expressed by President

Eisenhower at the special White House Conference in Washington on September 11–12, 1956, can be and is a most notable contribution to the cause of peace, freedom, and prosperity throughout the world, through better understanding.

I have in my hands the text of the booklet published by the United States Information Agency entitled "People-to-People—A Program of International Friendship," as published by the United States Information Agency. I commend this booklet to the reading of all interested Americans and organizations.

I send to the desk the text of a significant address made by Mr. William Treadwell, manager, public relations department, Leo Burnett Co., Inc., who was an official representative to the eighth annual conference of the Institute of Public Relations at the Grand Hotel in Brighton, England, on Sunday, May 19, 1957.

The comments of Mr. Treadwell, a noted expert in the field of public relations, make, I believe, for most interesting and stimulating reading.

I ask unanimous consent that the text of the address be printed in the Appendix of the RECORD, to be preceded by a list of the committee chairmen and cochairmen of the people-to-people program.

There being no objection, the list and address were ordered to be printed in the RECORD, as follows:

PEOPLE-TO-PEOPLE PROGRAM—COMMITTEE CHAIRMEN AND COCHAIRMEN

ADDRESSES

Advertising organizations: Theodore S. Repplier, president, the Advertising Council, Inc., 1200 18th Street NW., Washington, D. C.

Armed services: Carter L. Burgess, Assistant Secretary of Defense, the Pentagon, Washington, D. C.

Banking: Fred F. Florence, president, Republic National Bank of Dallas, Dallas, Tex.

Books: George P. Brett, Jr., president, the Macmillan Co., 60 Fifth Avenue, New York, N. Y.

Business Council for International Understanding: Sigurd S. Larmon, president, Young & Rubicam, Inc., 285 Madison Avenue, New York, N. Y.; Meade Brunet, vice president, Radio Corporation of America, 30 Rockefeller Plaza, New York, N. Y.

Business organizations: Harry A. Bullis, chairman of the board, General Mills, Inc., 400 Second Avenue, South, Minneapolis, Minn.

Cartoonists: Al Capp, River House, 145 Pinckney Street, Boston, Mass.

Civic: Dr. George N. Shuster, president, Hunter College, 695 Park Avenue, New York, N. Y.

Education: Dr. Albert Jacobs, president, Trinity College, Hartford, Conn.; Dr. Corma Mowrey, director, professional services, West Virginia Education Association, 1558 Quarrier Street, Charleston, W. Va.

Farm groups: Allan B. Kline, 4209 Grove Avenue, Western Springs, Ill.

Fine arts groups: Dr. David E. Finley, chairman, United States Commission of Fine Arts, United States Department of the Interior, Washington, D. C.

Foreign affairs: Dr. Brooks Emeny, 221 Elm Road, Princeton, N. J.

Foreign Service alumni: David McKendree Key, 2543 Waterside Drive NW., Washington, D. C.

4–H clubs: T. A. Erickson, 1403 Chelmsford, St. Paul, Minn.; Norman C. Mindrum, the National 4–H Club Foundation, 8561 Fenton Street, Silver Spring, Md.; Guy Lee Noble, National Committee on Boys and Girls Club Work, 59 East Van Buren Street, Chicago, Ill.

Fraternal organizations: Gen. William J. Donovan, Donovan, Leisure, Newton & Irvine, 2 Wall Street, New York, N. Y.

Handicapped: Maj. Gen. Melvin J. Maas, USMC (retired), Chairman, President's Committee on Employment of the Physically Handicapped, United States Department of Labor, Washington, D. C.

Hobbies: H. L. Lindquist, president, National Federation of Stamp Clubs, 153 Waverly Place, New York, N. Y.

Hotel industry: Robert K. Christenberry, president, Ambassador Hotel, Park Avenue and 51st Street, New York, N. Y.

Insurance: Frederic W. Ecker, president, Metropolitan Life Insurance Co., 1 Madison Avenue, New York, N. Y.

Labor: George Meany, president, the American Federation of Labor and Congress of Industrial Organizations, 815 16th Street NW., Washington, D. C.

Letter writing: Miss Anna Lord Strauss, 27 East 69th Street, New York, N. Y.

Magazines: Paul C. Smith, president, Crowell-Collier Publishing Co., 640 Fifth Avenue, New York, N. Y.

Medicine and the health professions: Dr. Louis H. Bauer, secretary general, World Medical Association, 10 Columbus Circle, New York, N. Y.

Motion pictures: Y. Frank Freeman, chairman, Association of Motion Picture Producers, Inc., 8480 Beverly Boulevard, Hollywood, Calif.

Music: Eugene Ormandy, music conductor, the Philadelphia Orchestra, Academy of Music, Broad and Locust Streets, Philadelphia, Pa.

Nationalities groups: John Slezak, 711 West State Street, Sycamore, Ill.; Judge Juvenal Marchisio, nationalities committee, 65 East 55th Street, New York, N. Y.

Professional societies: Chief Justice Robert G. Simmons, Nebraska Supreme Court, Lincoln, Nebr.

Public relations: Edward L. Lipscomb, director of public relations, National Cotton Council, Post Office Box 9905, Memphis, Tenn.

Radio and television: Dr. Frank Stanton, president, Columbia Broadcasting System, Inc., 485 Madison Avenue, New York, N. Y.; Harold E. Fellows, president and chairman of board, National Association of Radio & Television Broadcasters, 1771 N Street NW., Washington, D. C.

Religious Groups: Dr. Eugene Carson Blake, president, National Council of Churches of Christ in the U. S. A., 510 Witherspoon Building, Philadelphia, Pa.; Rt. Rev. Msgr. Howard J. Carroll, general secretary, National Catholic Welfare Conference, 1312 Massachusetts Avenue NW., Washington, D. C.; Dr. Abraham J. Feldman, president, Synagogue Council of America, 110 West 42d Street, New York, N. Y.

Science and engineering groups: Dr. Joseph W. Barker, chairman of the board, Research Corp., 405 Lexington Avenue, New York, N. Y.

Service organizations: Charles E. Wilson, 570 Lexington Avenue, New York, N. Y.

Speakers: Cyrus S. Ching, 1625 I Street NW., Washington, D. C.; A. Maceo Walker, Sr., Post Office Box 241, Memphis, Tenn.

Sports: Edward P. F. Eagan, 48 Wall Street, New York, N. Y.

Talent group for the entertainment industry: George L. Murphy, 205 South Beverly Drive, Beverly Hills, Calif.

Transportation agencies: John W. Hanes, chairman, finance committee, Olin Mathieson Chemical Corp., 460 Park Avenue, New York, N. Y.

Travelers: Ralph T. Reed, president, American Express Co., 65 Broadway, New York, N. Y.

Veterans: Capt. Edward V. Rickenbacker, chairman of the board, Eastern Air Lines, 10 Rockefeller Plaza, New York, N. Y.; Lewis K. Gough, 15 N. Euclid Avenue, Pasadena, Calif.

Women's groups: Mrs. William Barclay Parsons, Jr., president, National Council of Women of the United States, 345 East 46th Street, New York, N. Y.

Writers: William Faulkner, Oxford, Miss.; Harvey Breit, New York Times Book Review, Times Square, New York, N. Y.

Youth: Dr. Arthur A. Schuck, chief Scout executive, Boy Scouts of America, New Brunswick, N. J.

PRESIDENT EISENHOWER'S PEOPLE-TO-PEOPLE PROGRAM

(By Bill Treadwell, eighth annual conference, Institute of Public Relations, Grand Hotel, Brighton, England, May 19, 1957)

As a member and official representative to this conference of President Eisenhower's people-to-people program, I greatly appreciate your invitation to briefly tell you something about this most interesting and extensive program.

My remarks are merely some personal conclusions about what President Eisenhower termed "the central fact in today's life—the existence of different philosophies in contest for the loyalty and support of the world's people."

The institute conference this year has again been very stimulating and informative. Your country, like ours, has assumed that other nations have properly understood your foreign policies, your internal problems, and your people and it is so important that we in our profession, as your program chairman has aptly put it, "spotlight weaknesses" in the public-relations program of a country and suggest remedies.

In the United States we have started working on just such a program for our own people and our Government. It is known as President Eisenhower's people-to-people program. The whole concept of this program can be reduced to the following three essential points:

First. Every dollar we in the United States spend for defense—every atom bomb we can build, every plane, every ship, every gun—is wholly negative. These are purely and simply a means of buying time, for they are designed only to prevent physical aggression against us. We will not employ them for attack. We use them to hold off potential enemies while peaceful ideas take hold, and peoples come to friendship and understanding which will make them unnecessary.

Second. In today's basic world battle of ideas and ideologies, what governments do and say is important, but the sum total of what individuals do and say is decisive. Government actions and government statements are often suspect, but the actions and statements of individual citizens are universally accepted as a true measure of the attitude and atmosphere of the country from which they come.

Third. Our Government alone, therefore, cannot conceivably do the job of achieving friendship and understanding for America on the part of the citizens of other nations throughout the world. It is a job which can be done only with the active cooperation and assistance of individual Americans working through their own contacts with individuals in other lands. It is the purpose of this program to enlist such assistance.

One day during the United Nations General Assembly when the Egyptian crisis was at its height, a little old lady sat in the gallery listening to a simultaneous translation. She had the headphones glued to her ears. As you know, the listener to U. N. sessions is able to throw a switch and pick up 1 of 5 languages which he understands best—English, Russian, French, Spanish, and Chinese.

When the meeting was over, a man sitting directly behind her, who had been watching her with great interest leaned over and said, "I beg your pardon; did you enjoy that debate?" She turned around, and she said, "Oh, yes; very much."

"Well, what was it that you enjoyed the most?"

She turned her twittering blue eyes on him and said, with obvious awe in her voice, "I think it's perfectly wonderful how all those 81 delegates can understand and speak Chinese so well."

Sometimes one gets the impression that people and nations around the world understand each other in about the same degree as this dear little old lady who had been listening in Chinese.

Person-to-person relationships, such as are made possible by our cultural and educational exchange programs, help us to learn more about one another. Such relationships thus promote understanding and good will among people of different races, creeds, and nationalities, and contribute to the establishment of peace with justice in the world.

People are what count. A sympathetic understanding of the aspirations, the hopes and fears, the traditions and prides of other peoples and nations is essential to the promotion of mutual prosperity and peace. Such understanding is a compulsory requirement on each of us if, as a people, we are to discharge our inescapable national responsibility to lead the world in the growth of freedom and human dignity.

It is most fortunate that we have in President Eisenhower a great American leader who is well aware of the fact that Americans are misunderstood and because of his keen understanding of the battle that is raging in men's minds has organized this people-to-people program.

He has selected men and women from private industry to distribute information about America on a worldwide basis. This points to the fact that the great strength of America and any nation today lies not in its Government information organizations and programs, but in its private groups and individuals in these groups. Ladies and gentlemen, * * * this, then, is America's unused weapon.

Its unifying force is clearly the realization that the day of American isolation is gone and that we have entered a new one of interdependence and responsibility. We are all determined to make more and more friends for the United States.

When President Eisenhower initiated this program last fall, he said in his opening remarks:

"Every bomb and implement of war we manufacture, in the long run has no purpose other than negative: to give us time to prevent the other fellow from starting a war, since we know we won't.

"The billions we pour into that ought to be supported by a great American effort, a positive constructive effort that leads directly toward what we all want—a true and lasting peace."

I was in Nevada where the hydrogen bomb was tested. It has five times the destructive power of the sum total of all the bombs dropped on Germany during World War II. This development proves obviously that today's bombs cannot accomplish anything but racial suicide.

We can also conclude from this that the ideological struggle will probably be settled in the years to come by those people who can convince the world that justice and hope are on their side.

We, as citizens of the United States, also realize that our country is being subjected to the greatest campaign of vilification, slander, and distortion in the history of the world. This shrewd and never-ending campaign always shows Americans as immoral, unjust, and cheap. Every method is used to discredit us. Our crime rate, juvenile delinquency, racial conflicts, slums, and even our divorce rates are greatly misrepresented.

Never has one nation been so persistently smeared. Your great country and the other democracies are also on the receiving end of this smear treatment from time to time.

Perhaps you would like to know a little about the people-to-people committees and the program itself.

We have more than 40 different committees made up of representatives from advertising, publishing, business, education, fraternal organizations, motion-picture industry, religious groups, the Armed Forces, and women's organizations.

We have even formed a People-to-People Foundation with Charles E. Wilson, former president of General Electric, as its president, to properly and privately finance the activities carried on by these committees.

The working arrangements of the public relations committee falls into two broad areas. The first consists of supplying public relations counsel and service to the other 40 committees which have been chosen to conduct various phases of this program.

The second broad area consists of four programs dealing directly with public relations practitioners and the public relations field in our country. It is this group that is responsible for contacts with public relations groups outside the United States.

We have a subcommittee working with American-owned companies operating in foreign areas.

Another subcommittee has the job of planning and developing special public relations materials within the United States to make better ambassadors of citizens who will travel outside our borders.

When your president, Alan Campbell-Johnson, visited the States several months ago, he mentioned that your membership is very much interested in studying our public relations case histories, printed matter, speeches, annual reports, and public relations textbooks. In fact, all public relations literature published by our corporations, associations, industries, and Government.

Through the public relations committee of the people-to-people program, we have shipped to your institute some 5,000 different public relations items for your library. Duplicate materials can be sent to other libraries in England. These materials were contributed by more than 200 different representatives of the public relations profession in the United States.

This program of international friendship and understanding is not a one-way street. Our people want to and should know more about you and your country.

We look forward to further exchanges of public relations personnel and materials from your people to our people.

This, then, is President Eisenhower's people-to-people program.

Ike Created New United States Policy

EXTENSION OF REMARKS

OF

HON. BOURKE B. HICKENLOOPER

OF IOWA

IN THE SENATE OF THE UNITED STATES

Friday, May 31, 1957

Mr. HICKENLOOPER. Mr. President, on April 14, 1957, in the Sunday Gazette of Cedar Rapids, Iowa, there appeared a very interesting article entitled "Ike Created New United States Policy," written by Dr. Haridas T. Muzumdar.

Dr. Muzumdar was born in India. He received his higher education in this country and has been a United States citizen for a number of years. He has a deep interest in matters affecting India, especially its relations with the United States.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IKE CREATED NEW UNITED STATES POLICY

(By Dr. Haridas T. Muzumdar)

(EDITOR'S NOTE.—Dr. Muzumdar, friend and biographer of the late Mahatma Gandhi, is professor of sociology at Cornell College and a keen student of political affairs.)

The Eisenhower doctrine, now officially accepted by Congress and the American people, marks the birth of an independent American foreign policy.

It is not so much the Eisenhower doctrine as defined by Congress that is significant; the real significance lies in the background of the conditions that led to the emancipation of this country's foreign policy from the apron strings of Britain and France.

Whether the British, the French, and the Israelis were well advised in launching their attack on Egypt in the midst of the American presidential campaign is a moot point. They had reasons to believe that American policy under the Eisenhower administration was opposed to imperialistic and colonial ventures by her friends as well as by her foes. Hence, they decided not to take the United States into their confidence before launching their attack on Egypt.

They further reasoned that President Eisenhower, involved as he was in the tail end of the presidential campaign, would remain noncommittal in regard to their military adventure and would be forced to accept a fait accompli.

But they underestimated their man. Their calculations miscarried and their actions boomeranged.

SINGLE STANDARD

In the history of American diplomacy no statement on American foreign policy is likely to have a more far-reaching effect than President Eisenhower's dispassionate enunciation of the objectives of American foreign policy during the heat of our domestic political campaign.

In his radio and television address to the Nation from Washington on October 31, 1956, the President reiterated his conviction that:

"The United Nations represents the soundest hope for peace in the world. For this very reason I believe that the processes of the United Nations need further to be developed and strengthened. I speak particularly of increasing its ability to secure justice under international law."

Then President Eisenhower made a statement which will from now on be the cornerstone of American foreign policy: The single standard in international diplomacy, not the double standard—one for our friends, another for the rest of the world. Here are Eisenhower's magnificent words:

"There can be no peace without law. And there can be no law if we invoke one code of international conduct for those who oppose us and another for our friends."

The value of the Eisenhower declaration consists in the freedom of action it allows the American Government in the formulation of our foreign policy in terms of standards of international morality rather than in terms of helping out our friends and allies in their nefarious ventures.

Without any tinge of political partisanship I must point out that this doctrine, as

well as practice, of a Republican President is in sharp contrast to the doctrines and practices of preceding Democratic Presidents.

WILSON WENT ASTRAY

For instance, no high Government official in this country or elsewhere was more adept at the use of words in enunciating noble principles than President Woodrow Wilson. Indeed, not a few of his speeches and state papers embody some of the noblest aspirations of the American people—and of mankind. However, his stand on "too proud to fight" and his 14 points lost their moral significance because of partisanship for America's friends and allies.

Wilson had two standards—one for America's friends whose empires were to be immune from the encroachment of the right of self-determination for all subject peoples, and another for the defeated Central Powers whose empires were to be broken up in the name of the right of self-determination. Indeed, at the end of the war to make the world safe for democracy and to extend the right of self-determination to all peoples, the British Empire waxed fattest in all its history with the addition of mandated territories.

This double standard of international morality lost America many friends in Asia and Africa in the interwar period.

F. D. R. FOLLOWED

President Franklin D. Roosevelt, like Wilson, had magical facility with words. Some of Roosevelt's speeches and state papers contain the abiding aspirations of America—and of mankind. But alas. Roosevelt, too, like Wilson, had American foreign policy tied to the chariot of the Anglo-French empires.

For instance, the third article of the Atlantic Charter specifically laid down that they, the signatories (Roosevelt and Churchill), respect the rights of all peoples to choose the form of government under which they will live; and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them.

If language means anything, this article endorses the doctrine of self-determination for all nations. But within less than a month after the signing of the Atlantic Charter, Churchill announced in the British Parliament that the principles embodied in the Atlantic Charter did not and would not apply to the British Empire, and stated:

"We had in mind primarily restoration of the sovereignty, self-government and national life of the states and nations of Europe now under the Nazi yoke, and the principles which would govern any alterations in the territorial boundaries of (European) countries which may have to be made."

President Roosevelt saw fit not to challenge Prime Minister Churchill's interpretation, thereby strengthening the belief of Asians and Africans that American foreign policy, like that of England and France, was compounded of a double standard of international morality—a standard of equality applicable to the European peoples, and a standard of inequality and inferiority to be applied to the peoples of Asia and Africa.

ROOT OF DISTRUST

Now, let me at once say that these actions of our wartime Democratic Presidents do not, in my judgment, make them traitors to America. They imply a wrong orientation on their part.

If you believe, subconsciously or consciously at the Europeans are a breed superior to Asians and Africans, you cannot help arriving at the position that Wilson and Roosevelt took. The tragedy consisted not in absence of desire on their part to serve the best interests of America and the world; rather did the tragedy consist in their wrong ethical orientation, leading to politically mischievous conclusions.

This is the root cause for distrust of America rife in Asia and Africa during the last generation. We are today reaping the whirlwind of distrust sown by the wind of wrong orientation.

It is against this background and this sort of interpretation by Asians and Africans that President Eisenhower made his historic pronouncement of the single standard of international ethics in America's dealings with friends and foes, with Afro-Asians and Europeans.

No wonder Prime Minister Nehru declared that President Eisenhower's stand raised America's moral prestige immeasurably throughout the world.

Once the logic of the Eisenhower doctrine is accepted as the point of departure for American foreign policy, the administration's demand for congressional legislation on the Middle East can be viewed as one of the detailed steps in implementation. The warning to the Soviet Union against subversion in the Middle East is entirely in order; it is merely an extension of the same sort of protection our Government stands ready to give European nations outside the Iron Curtain.

Let us not, then, confuse the Eisenhower doctrine merely with warning to the Soviet Union against subversion in the Middle East or with military and economic aid to the Middle Eastern countries at the President's discretion. Let us rather realize that the Eisenhower doctrine embodies a historic departure from previous American foreign policy:

1. That henceforth American foreign policy shall be based not on expediency to suit the convenience of our friends the British and the French.

2. That henceforth American foreign policy shall be broadbased upon the concept of equality of Asians and Africans with the Europeans.

Foreign Market for Southern Cotton

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, May 31, 1957

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Foreign Market Big Boon to Southern Cotton Farmer," published in the Birmingham News of May 28, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EXPORTS INCREASING—FOREIGN MARKET BIG BOON TO SOUTHERN COTTON FARMER

AUBURN, ALA., May 28.—Large foreign markets have created a boom in American cotton sales.

And with each shipload of cotton sent across the seas, the southern farmer's marketing situation becomes a little more favorable.

API Extension Marketing Specialist A. W. Jones says this foreign cotton sales boom began last summer with vast increases in cotton exports. Thus, this factor alone is the biggest marketing development affecting southern farmers this year.

According to the specialist cotton from Government surplus stocks sold for export during the current cotton marketing year totaled 7,585,600 bales through April 30. Exporters are rapidly revising their estimates of total exports for this season upward. In fact some forecasters see foreign sales of cotton hitting the 8-million-bale mark.

To make the situation even brighter, Jones said, cotton is now being sold for export after August 15—in the 1957–58 marketing year. Through April 30, sales for shipment overseas next year add up to 2,520,300 bales.

"These heavy cotton sales can be traced directly to the Government's competitive pricing program," declared the specialist. "Under this program United States cotton can move onto world markets at a price competitive with foreign-grown cotton.

"On April 30, the price of middling, inch cotton sold for export this year averaged 27.61 cents per pound," said Jones. The monthly prices paid for export cotton during the year give us a much better idea than we have had in the past of an average price range farmers could expect on the world market, and just how sharp market competition would be with other cotton growing countries.

A long-range view of world markets holds good possibilities of a continued high level of foreign sales at prices that should be favorable for a vastly stepped-up cotton production program.

Jones said cotton exports aren't the only farm exports that are on the increase. Total agricultural exports from July through March increased 44 percent in value over the year before, totaling $3.6 billion compared to $2.5 billion last year.

"So far this year cotton is out ahead of all other commodities in the percentage increase over last year's exports," he said. "Value of cotton exports this year totaled $855 million as compared to $217 million from July 1955, through March 1956."

The specialist also reported that only the big combination of grains and feeds shows a greater export value this year than cotton. The long list of other products recording fair-size increases in exports include vegetable oils, oilseeds, fruits, vegetables, dairy products, meats and poultry products. Tobacco alone is showing a decline in exports from last year. But private relief donations are running 19 percent under last year.

"Certain exports are going more and more to particular countries," explained Jones. "Cotton and wheat are the two things remaining on the shipping lists to a long series of farflung markets. Some other commodities—particularly dairy, poultry and meat products, fruits and vegetables—go to a more selective list of countries."

For example, Jones noted that during February 83 percent of the condensed milk exports went to Vietnam, Laos, and Cambodia. Venezuela received 84 percent of our dried whole milk and 74 percent of shell eggs. Italy and Mexico took 72 percent of our nonfat dry milk solids export. And Spain received more than 90 percent of our exported beef, hams and shoulders. About all of our peanut exports went to Mexico and Switzerland.

Millard Military School in Curry County, Oreg.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, May 31, 1957

Mr. NEUBERGER. Mr. President, Col. and Mrs. Homer B. Millard have wone justifiable fame in training young men for entrance to the United States

Naval, Air Force, and Military Academies.

Since 1954 Colonel Millard has operated his preparatory school in the southwestern Oregon coastal community of Langlois, in Curry County, and has students from many States. From 1925 to 1946 Colonel Millard conducted his school in Washington, D. C., and had among his students sons of our leading generals, such as Dwight D. Eisenhower, George S. Patton, Henry H. (Hap) Arnold, Alfred Gruenther, and many more. Colonel Millard earned a reputation for successful training of young men, and during the 20 years of operation of his Washington school roughly 10 percent of the West Point graduates prepped at his school.

Mr. President, I base my appointments to the various military academies solely on merit, from scores obtained in the United States civil service designation examination. Young men who have been trained by Colonel Millard stand near the top in these examinations. Both Colonel Millard and his wife have a fine military background, Mrs. Millard having served as a lieutenant commander in the Waves during World War II.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article by Ralph P. Stuller, editor of the Coquille Valley Sentinel, which appeared in the Northwest Rotogravure magazine of the Sunday Oregonian on May 12, 1957, describing the Millard School. The title of the article is "It's a Tough School but the Students Like It."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IT'S A TOUGH SCHOOL BUT THE STUDENTS LIKE IT—AMBITIOUS TEEN-AGERS PREPARE THEMSELVES FOR UNITED STATES MILITARY ACADEMIES IN SECLUDED CLASSROOMS IN CURRY COUNTY HILLS

(By Ralph P. Stuller, editor, Coquille Valley Sentinel)

If you called the Millard School the Northwest's most unusual school, you could be right. Certainly when a visitor is told of this Curry County school, he raises a questioning eyebrow. Sure, it prepares lively young men for Annapolis, West Point, and the Air Force Academy, but who ever heard of rugged youngsters giving up TV, rock-and-roll on the radio, soft chairs, magazines, and hotrods? More than that, who goes to school 6 days, sometimes 7 days a week, with night work thrown in for good measure?

They do it all at the Millard School, which nestles high above the Curry County coastline on a 1,200-foot hill, where an attractive early American ranchhouse serves as home and school for a group of eager young military-minded eagles.

Students from all over the Western Hemisphere are coming to this school run by Col. and Mrs. Homer B. Millard on spartan but loving rules designed to make come true the words of Confucius.

"In all things, success depends upon previous preparation, and without such preparation there is sure to be failure."

This is a school that makes a Saturday night movie in nearby Port Orford or Bandon—with a chaperone, too—a privilege for high grades, and not the right of a teen-ager.

This is a school that gives no grades, but failure means you go home.

In today's world when many schools seemingly have lost sight of the old-fashioned purpose of education—to make a youth the master of his skills so he can master his fate—the Millard School holds a fascination for both thoughtful parents and thinking boys.

And whether the story being told lies in the founder of this colorful preparatory place for the Nation's military academies, whether it is in the peaceful and lush hillsides of Curry County, or in the eager students who sign up for 6 tough monastic months of training, it is hard to say.

Col. Homer B. Millard founded the Oregon school some 290 miles south of Portland off Highway 101 and the hamlet of Langlois, in 1954. Previously he had operated his famed Millard School in Washington, D. C., from 1925 to 1946—with time away during active war service in World War II.

In Washington Generals of the Army Dwight D. Eisenhower and Henry H. Arnold, Gens. George S. Patton, James Doolittle, Lucius Clay, Alfred Gruenther, and presidents of South American countries, admirals in the United States Navy, and many more sent him their sons. Of 21,000 men who entered West Point during those years, Colonel Millard prepped over 2,000, or roughly 10 percent.

So it was that when Colonel Millard closed his school in 1946 and decided to come back to his native State of Oregon, he had a reputation for success.

He hoped to set up a school in Oregon that eventually will have a top enrollment of 30 students. Today he averages 10. The 6-month term begins in September and finishes the 1st of March. A June course completes just before the July appointment exams for West Point, Annapolis, and the Air Force school.

As for military background, Colonel Millard served from Oregon in the Mexican dispute and World War I, attended West Point—and in World War II was on the staff of the 9th Bomber Command in north Africa, aided in designing the Colorado Air Force Academy, and later served as executive officer to the secretary general of Nuremberg, Germany. He had good cause to know what it takes.

His charming wife also knows both the military and the English she teaches. A former faculty member on the University of Hawaii staff, she helped set up the Armed Forces Institute in Madison, Wis., was a lieutenant commander in the WAVES, and at one time served as senior WAVE officer in San Francisco.

The Millard School sits on a 300-acre ranch 4 miles east of Langlois. Cattle and sheep range the pastures, and students get outside exercise by aiding with the work.

This winter there were 10 boys at the Millard School, all of whom took their West Point examinations at the Presidio.

The boys are housed in rooms upstairs in the modern ranchhouse, and their rooms are rigidly inspected each day, and they make their own beds and clean their rooms daily.

When a student enters he is given aptitude tests and other standard exams to check his weak and strong points. There's no guesswork in his training. Colonel Millard knows what he must know; he makes sure he knows it at the end of the courses. The student who finishes Millard is a master of algebra, plane geometry, and English.

A ship's clock calls the bells for time.

All studying and letter writing is done in the classroom. No books are taken from the classroom.

At Millard, keen-eyed youngsters are up and ready for the day at 7 a. m. They breakfast. Then to class. Here they study, drill, repeat, explain, and ask questions. A basic rule is that a student must ask questions on anything he does not know or understand. Penalty is for not asking.

Evening study period is from 7:15 to 9:45 p. m. There is no talking allowed during study hour.

Telephone calls are allowed only on an incoming basis and from 7 to 8 a. m.; noon until 1 p. m., and 6:30 to 7:15 p. m. No student is called to the phone at any other time.

The kitchen is off limits for all students except those on wood and dining table details.

At Millard School a visitor finds himself addressed as sir. And the 24-hour control, 7 days a week, seems to work miracles in making boys into forward-looking, upright young men.

It's both a family and a school. Millard, Colonel and Mrs. Millard are part of the group with each individual having a goal in sight, his military academy entrance. The top students help the poorer ones. It all makes for good learning.

The textbooks used are many and solid, old-fashioned ones. They're the ones where drill and repetition come into the learning situation. Colonel and Mrs. Milard's goal is that the students they have, master their subjects.

Periodic tests including the famed Ivy League college boards are given to check progress. Physcal activities include hiking, working, and rifle-range shooting.

The student at Millard comes lightly packed. Informal clothes are worn during the day. A suit and shirt and tie, however, is required for the evening dinner. He also brings blankets, comforter, bath towels, washcloths, pair of four-buckle shoes, work shoes, a good dictionary, and the The Complete Works of William Shakespeare. The latter is the only recreational reading he has.

Because there is little chance to spend money he is allowed only $3 per week. Thanksgiving is not a holiday. He goes to school. At Christmas those students who have made good progress get a short Christmas leave, otherwise they stay at the school and study.

No student is permitted to leave the school ranch.

A visitor to the classroom generally is amazed. The class marches in, stands at attention, and the platoon leader salutes Colonel Millard and says: "The geometry class is prepared for instruction, sir."

And that they are.

One student makes a mistake.

After questioning from the colonel, the student suddenly says, "Sir, I was wrong, this is the correct way to prove this problem, sir." Mistakes are always corrected at once. No student leaves the classroom until he knows what he is doing.

In English the emphasis is on vocabulary, and it would delight a university professor's heart. Millard School believes the communicative device invented by the man who wanted to talk is important.

I met the 10 boys who finished the school this March and found them keen, alert, and happy.

They had come through and found it fun to sharpen up thinking abilities. With Shakespeare as a substitute for fiction and the radio, they also developed a vast reservoir of certain sage wisdom that matured them.

The March graduates of The Millard School came from a variety of places—one was the son of the mayor of Colon, Panama; others came from Virginia, Arizona, Oklahoma, California, and four came from Oregon. All had appointments for West Point.

When the boys left for their final competitive examinations at the Presidio they had gained from 10 to 20 pounds. The food, much of it home-grown runs from fried country chicken to wild blackberry pie.

The Millard School is the only school of its kind west of the Appalachians. It's really quite a place, this Oregon school that points young men to our three proud military academies.

And, as Colonel Millard points out, too, the job is worth doing. After all, an education at West Pont, Annapolis, or the Air Force Academy is worth $10,000. Really quite a scholarship to win.

Department of Defense Appropriation Bill, 1958

SPEECH
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 7665) making appropriations for the Department of Defense for the fiscal year ending June 30, 1958, and for other purposes.

Mr. SIKES. Mr. Chairman, one of the great chapters in medical research today is being done by the Medical Research and Development Branch of the United States Army.

Defense efforts are primarily directed toward developing and maintaining constantly improved means for destruction of an enemy aggressor, in order to protect the Nation from attack. However, certain elements of the defense program provide constructive advances of remarkable value to the continuing welfare of our people and of all mankind. The Army Medical Service Research and Development program is a clear example of such beneficial, constructive activity.

Historically, Army doctors have been leading pioneers in the improvement of American medicine, ever since Army Surgeon John Jones wrote the first American textbook on surgery in 1776. Maj. Walter Reed, famous to everyone, made possible the practical control of the scourge yellow fever, and thereby enabled construction of the Panama Canal. Similar historical Army victories in medicine are too numerous to detail. More important, Army medical research continues to make valuable contributions to the health and welfare of our people. Although directed to solving the problem of preserving fighting strength in combat, results achieved are immediately applicable to civilian disease and injury.

New and improved treatment of severe burns, proven at the United States Army Surgical Research Unit, have been widely adopted by the civilian medical profession.

Research on blood-vessel surgery, emphasized during the Korean conflict, carried out in part at frontline hospitals, and since pursued at both Army laboratories and Army contract supported universities, has helped to save innumerable lives and limbs. The torn arms and legs of automobile-accident victims, as well as the weakened arteries of the older aged group, are now more effectively repaired.

In the event of either natural disaster or enemy attack, large quantities of whole blood are always needed. Heretofore the storage life of this precious commodity has been far too short. The problem of storage life was particularly acute when American forces fought at the end of thousands of miles of supply line. Army medical research has now discovered means for greatly extending the useful storage life of human blood so that soon it is expected that stockpiling for national emergency will be made easier—an advance which could be lifesaving to any one of us.

Thanks to another facet of Army medical research, stock handlers, slaughterhouse workers, and others who work with livestock will work in greater safety from Q fever.

In another area, rapid progress is being made by the Army Medical Service in developing a fat emulsion suitable for intravenous use. Such an emulsion provides needed food to those badly injured or ill individuals who cannot take food by mouth.

All of these examples aer only random samples of immediate benefits accruing to our Nation from constructive efforts of the Army Medical Service's research and development program.

Uniform Admission to the Federal Bar, H. R. 818

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. MULTER. Mr. Speaker, on January 3, 1957, I introduced H. R. 818 to make uniform the rules for admission to the Federal bar.

THE PURPOSE OF THE BILL

The purpose of this bill is to promote consistency and certainty, and to eliminate the present inequities and anomalies, in admissions to practice before the lower Federal courts.

The bill would amend title 28 of the United States Code by adding a new section 1657, so as to provide that membership in good standing at the bar of the United States Supreme Court shall be the sole requirement for admission to practice before the Federal courts of appeals and district courts, including the district court for the district of Alaska but not that of the District of Columbia. This provision would not apply to any person who is barred from practice before the district courts and courts of appeals by reason of holding public office.

THE PROBLEM

At present, the extreme diversity of admission rules in the Federal courts gives rise to many inequities and anomalies. Attention was recently called to this problem by an article in the American Bar Association Journal, volume 42, page 721, 1956. An article by Hugh Williamson, discussing the various admission rules of the Federal district courts was placed in the CONGRESSIONAL RECORD by me on July 21, 1953.

For admission to the bar of the United States Supreme Court, it is only necessary to be of good moral character and admitted, for 3 years past, to practice in the highest court of a State. Seven of the 11 circuit courts of appeals—the 3d, 4th, 6th, 7th, 8th, and 9th and the Court of Appeals for the District of Columbia—admit attorneys on this same basis. But these 7 circuits include only 29 States. In all the other States, there are special, additional requirements. One example will clarify the problem. For admission in the first circuit—Maine, Massachusetts, New Hampshire, Puerto Rico, and Rhode Island—the attorney must have been previously admitted to practice in some other United States appellate court. If all United States appellate courts adopted this rule, there would be no further admissions.

An even stranger spectacle of diversity and confusion is presented by the Federal district courts. Thirty of them will admit anyone who has been licensed to practice in the highest court of any State. But 22 others require a previous license to practice in the State in which the district court is located. It is this requirement that causes the most trouble, since admission to the State bar—not the bar of the attorney's own State, to which he has already been admitted, but of the State where the Federal court sits—involves a period of residence which is often as long as a year. Other delays occur in studying for the State bar examination, waiting to be examined, waiting for the results of the examination, and waiting to be licensed. Meanwhile, an important pending case may be brought to a standstill, or lost to another attorney. In addition to delay, substantial expense may be incurred, especially by attorneys who practice in a number of Federal jurisdictions.

Like the circuit courts of appeals, particular Federal district courts have special rules of admission. Eight will admit anyone who has been previously licensed to practice by a district court in any other State. Two require examinations.

Even attorneys of the United States Government in the performance of their official duties are often not recognized in the lower Federal courts, except pro hac vice, and, even then, in association with local attorneys. Only 6 of the 85 Federal district courts make special provisions for attorneys of the United States Government.

Other anomalies arise from geography. In the Southern District of New York, a New Jersey lawyer is admitted freely, but a New York lawyer cannot be admitted in the Federal district court for New Jersey until he has been licensed in practice at the New Jersey bar. Similar situations exist in many parts of the country—for example, between New Jersey and Philadelphia, the two Kansas Citys, and so forth.

The closed shop kept by many of the State bars is in sharp contrast to the liberality of the Federal courts in admitting attorneys licensed by the States. This exercise of local monopoly simply aggravates the problem already discussed, arising from the requirement in many Federal district courts of a pre-

vious license to practice in the State where the court sits.

A recent State decision will illustrate this problem, but first a little background information may be helpful. Any members of the Federal bar in either district of California is freely admitted to the Federal district court in Arizona. But a member of the Federal bar in Arizona cannot be admitted to either Federal district court in California until he has become a member of the California State bar.

In *Application of Wasserman* (240 F. (2d) 213 (C. C. A. 9, 1956)), an attorney had applied for admission to practice in the United States District Court for the Southern District of California. He was a resident of California and a member of the State bar of Arizona though not of California. The district court denied the motion for his admission, on the ground that he was not a member of the California State bar.

In affirming this decision as not appealable, the circuit court of appeals delivered some interesting dicta:

(a) The Federal district court is an independent court and can make its own rules.

(b) On the other hand, "each—Federal district court—is considered a court of the particular State in which it sits and by which it is bounded"—page 214.

(c) It is a criminal offense to practice law in California without having been admitted to the State bar.

(d) On the other hand, California cannot regulate practice in the Federal courts.

As to the two arguments (a) and (b), it may be observed that a truly independent court would exercise its independence by determining, in its proper discretion, the admission of attorneys to its own bar. The second pair of arguments, (c) and (d), cancel each other out, so that the circuit court seems to have answered this argument itself.

Furthermore, it is hard to believe that any Federal court would permit a convict, who lost his right to practice law by reason of his conviction, to continue to practice in that court.

The circuit court then advanced its third argument, which merits serious discussion. It pointed out the danger that an attorney admitted in some other State which inadequately tested his qualifications, or who was subsequently guilty of unprofessional conduct, might be permitted to practice law in California through admission to the Federal district court. This danger, said the circuit court" far outweighs, in our opinion, any theoretical desire that there may be a uniform rule for admission in the district courts of the United States"—page 216.

What about the equal danger that the qualifications of attorneys may be inadequately tested by the very State in which the Federal court sits?

What about the danger that an attorney admitted by the State in which the Federal court sits may later be guilty of unprofessional conduct?

The circuit court, in Application of Wasserman, has pointed out dangers but has not presented any adequate solution. Whatever rules of admission may be adopted, they would be deficient if they did not provide for revocation of the privilege upon the happening of anything that would have disqualified the practitioner as an applicant. As to substantive qualifications, the present situation is far from satisfactory; it has already been noted that only 2 of the 85 Federal district courts require examinations.

The real choice is between diversity and unity. Either the Federal courts in each State must take separate precautions against the dangers mentioned by the circuit court in Application of Wasserman, supra, or there must be a uniform system of admission to the Federal bar. If a uniform system of admission is adopted, by which attorneys admitted in the United States Supreme Court are freely admitted in the lower Federal courts, the moral qualifications of the applicants will be assured initially, as they are now. It may be necessary to supplement this system by periodic or ad hoc reinvestigations. Professional qualifications could also be assured by examinations on Federal law and procedure. But surely this matter can safely be left to the discretion of the United States Supreme Court at the time it makes the applicable rules and when it revises them from time to time as experience dictates.

THE ADVANTAGES OF THE BILL

The advantages of H. R. 818 may now be summarized:

(a) The bill would promote simplicity, consistency and certainty in admissions to practice before the lower Federal courts. By so doing, it would facilitate and economize the administration of the Federal courts, and would eliminate the present inequities and anomalies (previously discussed). In turn, the elimination of these inequities and anomalies would save much time, effort and expense of American lawyers whose practice has grown enormously in mobility and geographic extent owing to the continued expansion of economic activity and the economic role of Government.

(b) Under this bill, the admission of attorneys in the Federal courts would rest in the sole discretion of the Federal judiciary.

(c) The bill would give substance to the principle that the practice of law is a conditional privilege under the Federal Constitution. See *Ex Parte Garland* (71 U. S. (4 Wall.) 333, 378 (1866)). In that case, an act of Congress prohibiting the admission to the bar of United States district and circuit courts of any person who had not taken an oath that he had not aided in the secession was held contrary to the fifth amendment.

(d) Finally, Congress has power to regulate the admission of attorneys in the lower Federal courts under the Constitution, article III, section 1, which expressly authorizes Congress to ordain and establish such courts.

I urge the early enactment of my bill.

Department of Defense Appropriation Bill, 1958

SPEECH
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 7665) making appropriations for the Department of Defense for the fiscal year ending June 30, 1958, and for other purposes.

Mr. SIKES. Mr. Chairman, I wish to have inserted in the CONGRESSIONAL RECORD the article by Donald Baldwin entitled "Tour of Korean Front Finds United States Force Weak," which appeared in the Washington Post and Times Herald on May 27, 1957. Mr. Baldwin's story follows:

TOUR OF KOREAN FRONT FINDS UNITED STATES FORCE WEAK

(By Donald Baldwin)

SEOUL, May 26.—United States forces in Korea today are woefully weak. Their unmanned battle positions are overgrown with weeds—an invitation to Communist attack.

In contrast, the North Koreans and Red Chinese across the demilitarized zone have built up an army in 4 years of armistice far more powerful than at any time during the Korean war.

The Communists have new jet planes, new tanks, new artillery, and in the opinion of South Korean intelligence officers they may also have atomic weapons. All the weapons in South Korea are either obsolete or obsolescent.

TEN-DAY INSPECTION MADE

A 10-day inspection by an Associated Press team found alert, seemingly well-trained South Korean soldiers manning 150 miles of the front from well-entrenched positions, although they were equipped with old, World War II weapons.

But a 5-mile-wide sector, athwart the classic invasion route north of Seoul, is entrusted to an American division only 60 to 80 percent of normal strength. The South Koreans—criticized during the war for failing to stand and fight alongside Americans—call the American sector the weakest link in the battle line. United States field commanders openly express concern.

This is how the opposing sides stack up today:

In the south, there are about 700,000 South Korean troops, about 80,000 Americans including 2 infantry divisions and logistics and command units, and fewer than 5,000 other United Nations troops, including a British regiment in the process of being withdrawn.

This compares with an 800,000-man U. N. army at the end of the Korean fighting in 1953—but the weapons are old now and have not been replaced because of a ban in the armistice agreement against introduction of new-type equipment.

RED STRENGTH GREATER

In the north, according to intelligence reports, the North Koreans have a reorganized and reequipped 400,000-man army and the Chinese Communists have a 350,000-man garrison. There are also at least a million Red Chinese troops across the Yalu River in Manchuria. The Communist forces in Korea during the war were estimated at more than a million.

The Communists have ignored the ban on new weapons. They have shipped in 1,672 artillery pieces, 340 new tanks, in addition to the 480 they already had, 500 jet and 300 propeller-driven planes.

There are recurrent—but unconfirmed—reports that their new artillery includes atomic cannon with a range of 15 to 20 miles, which is manned by Soviet technicians.

The Red jets include about 250 Mig-17's—later model interceptors than the Manchuria-based Mig's which were bested by United States Saberjets during the Korean fighting.

The U. N. forces still have about 150 Sabres, half flown by American pilots and half by South Koreans. Other United States fighter-bombers and light bombers have been withdrawn because of their age. Even the Sabres have been superseded elsewhere by newer fighters.

United States strategy appears to be based on the assumption that the Communists will not attack so long as there are any American forces in South Korea, even though understrength. South Korean generals, however, feel sure the Communists will invade the country again as soon as they feel able.

YANKS EXPENDABLE?

On the Allied side is the knowledge that a fast jet bomber could deliver an atomic bomb from its Okinawa base to a Korean target in under 2 hours, and the general assumption here is that no holds will be barred if fighting breaks out again.

In that event, some officers here say, American troops on the scene might of necessity be expendable if evacuation proved impossible. Asked what would happen if there was another Communist attack, a high officer in United States headquarters, said:

"We'd be in a terrible position."

On paper, both United States divisions are fully manned for action, with Americans firing every gun. But a visit to the two units showed both were far below strength.

All but one of the frontline regiments are miles from the frontline. It would take them from 1 to 3 hours to reach their battle positions, now weathered and overgrown with weeds in the almost 4 years of suspended combat.

The regiment that is close to its positions is located north of the Imjin River above Seoul, and in event of attack would probably have to pull back quickly behind the natural barrier or risk annihilation.

All across the American-held sector, however, continuous and active training programs are under way and morale appears to be good.

Still, a lieutenant colonel commanding a United States tank battalion said:

"If my outfit had to go into combat today I'd be forced to leave 15 or 20 tanks behind because I haven't the crews to man them."

Reports Indicate Tito Is Reshipping Machine Tools to Red China

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, Mr. John J. Casserly, of INS, writing from Belgrade, Yugoslavia, states that during a guided tour of a seaport town, he slipped away from tour officials and saw dock workers inking out the letters "U. S. A." on wooden crates and restamping them for transshipment to Hong Kong.

Under leave to extend my remarks, I am including the article by Mr. Casserly which appeared in the Milwaukee Sentinel on May 15:

REPORTS TITO RESHIPS UNITED STATES TOOLS TO MAO

(By John J. Casserly)

BELGRADE, May 14.—American-made machine tools apparently are being shipped from Yugoslavia to Red China—possibly violating United States-Yugoslav agreements.

During a guided tour of the port of Rijeka on the Adriatic coast, this correspondent slipped away from tour officials and saw dock workers inking out the letters "U. S. A." on wooden crates and restamping them for transshipment to Hong Kong.

Between cracks and openings in the boxes, precision hand and similar small tools could be spotted. A dock worker who spoke some English said the boxes were bound for Red China. He said the tools had just arrived from New York in a ship flying the Nigerian flag.

The dock worker also reported Rijeka was increasingly busy with such shipments since it was popular as a free port and customs inspectors were easy.

Inside the nearby shipbuilding plant, a director denied that Yugoslavia was carrying on any trade with Red China from Rijeka. He said, however, that the port was receiving much air-sea radar equipment from the Radio Corporation of America as well as ship radio instruments and similar gear.

Address by Gov. Marvin Griffin, of Georgia, Before the Citizens' Council at Greenville, Miss.

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. DAVIS of Georgia. Mr. Speaker, Gov. Marvin Griffin, of Georgia, recently spoke to a meeting of citizens' council members at Greenville, Miss.

I have read his magnificent address delivered on that occasion.

Governor Griffin is an eloquent speaker. He is a believer in local self-government and a staunch defender of States rights. In this present era of turmoil and confusion, when radicals in both the judicial and executive departments of our Government are undertaking, through usurpation of authority and other fraudulent means, to change our Federal Constitution by judicial decrees and Executive orders, Governor Griffin has resolutely and firmly stood his ground as chief executive of the State of Georgia against these efforts. He continues to do so.

His eloquent and informative address deserves the consideration of thoughtful Americans everywhere. Under unanimous consent previously granted, I insert the address herewith:

Chairman Waits, Attorney General Patterson, distinguished guests, and fellow southerners, it is a great pleasure, indeed, for me to appear here tonight before this courageous group of Mississippi patriots who are fighting side by side with the people of our State of Georgia in the dedicated battle to preserve the rights of the States in this Nation as set forth in our immortal Constitution.

The people of Georgia have a kindly feeling for the people of Mississippi because this territory which has risen to such high repute was once a part of the State of Georgia when we were one of the original 13 States.

We have also a close bond in the fact that we have the same traditions, the same ideals of government, the same economic and geographic conditions and have been united in other great movements in past years which have linked us firmly together.

And I am deeply grateful for the invitation extended to me to visit the good people of Mississippi by Mr. Martin Heard, of Leland, and our common friend, State Senator Peyton Hawes, of Elberton, Ga., who is with us tonight.

Almost 100 years ago the people of the great State of Mississippi joined with the people of Georgia and the people of other Southern States and fought shoulder to shoulder in one of the most sanguinary wars in history for the causes and principles they thought were right.

And today their valiant descendants are ready, I believe, to battle, side by side for those same sacred rights which are today threatened with destruction through ruthless decisions of the Supreme Court of the United States which have, I believe, deliberately ignored the Constitution of this mighty Nation.

The court's decision in the school segregation case and later in the intrastate transportation case have brought the people of the South face to face with a monstrous situation which threatens to bring internecine strife never before seen in our country and indeed menaces the very existence of this Nation in the immediate future.

These segregation decisions of the United States Supreme Court have, indeed, ignored the cherished and revered Constitution of our country.

The segregation decisions ignore State constitutions, State laws, and inheritance reserved to the people.

The segregation decisions ignore 123 long-established precedents set by the Nation's appellate courts in previous opinions handed down by the most learned judges in the history of our land.

Instead, the Court based its ruling on the opinions of certain individuals which it termed "modern authorities" in the fields of psychology, sociology, and anthropology.

The qualifications of the authors cited in the decision are dubious, to say the least. An investigation by your great statesman, Senator EASTLAND, recently exposed several of them as having long and notorious records of association with Communists or Communist-front organizations.

Two of the authors, the Senator revealed, have records listing 28 citations of Red-front activity.

While another author, Dr. Gunnar Myrdal, a Swedish professor, whose work, An American Dilemma, primarily relied on by the Court, was quoted by the Senator as stating in this book that the United States Constitution is "impractical and unsuited to modern conditions" and its adoption was "nearly a plot against the common people."

This man Myrdal, Senator EASTLAND pointed out, was brought to the United States in 1937 from the University of Stockholm by the Carnegie Foundation to compile this study in spite of the fact "he was a Socialist who had served the Communist cause, and admitted he had no knowledge of the race relations in the United States."

Another so-called modern authority upheld by the decision was actually a paid employee of the National Association for the Advancement of Colored People which brought the cases before the Court.

It is a treasonable miscarriage of justice for any court to accept a party litigant's associate as an authority on anything, let alone as an authority on psychology, and to put such opinions above the United States Constitution itself.

The Supreme Court, for obvious reasons, did not give counsel for any of the Southern States an opportunity to shatter once and for all the baseless claims of these fuzzy-minded theorists who could have been discredited easily with recognized opinions of reputable persons in these fields.

Senator EASTLAND concluded properly: "The Court took the writings and teachings of pro-Communist agitators and people who are part and parcel of the Communist conspiracy to destroy our country and substituted them for the law of the land."

The people of the South, who refuse to accept this decision, are acting according to the clear provisions of the United States Constitution in their resistance to their blood-won rights as American citizens. By doing so, they are the ones who are following the law of the land.

In our State of Georgia the Constitution and the laws prevent the expenditure of State tax funds for the operation of mixed schools.

Our general assembly will never appropriate money for mixed schools.

Let me say to you definitely and unequivocally—Georgia will have separate public schools or no public schools as long as I am Governor of that State.

There is no choice under our laws.

There is no choice as a matter of practical application but to adhere to our long-established social traditions.

The issue now is the same as it was 100 years ago.

The question is whether we are going to surrender our free nation under God and the priceless heritage it affords.

That is the question we alone can answer.

How much usurpation of our rights are we going to allow?

When are we going to say, "Hold, enough"?

That time has come now, my friends.

Submission to tyranny invites more tyranny.

The school segregation decision by the Supreme Court is not an expression of law and order but is an effort to bring about by naked force alone and amalgamation of race and destruction of our very form of government itself.

No pretense was made by the Supreme Court to justify its ruling as a matter of law. It is anarchy by the Court.

The South was making great progress, unimpeded; but now the good relations between the races of this region have been set back over a hundred years.

It cannot be said that the people of the South have defied the Court when it is the Court itself which acts unconstitutionally. The States and their people refuse to recognize a ruling which is clearly an unlawful usurpation of authority by the Federal judiciary.

It is the Court which flouts the law of the land, not the States nor their people.

All attempts to mix the races, whether they be in the classrooms, on the playgrounds, in public conveyances or in any other area of close personal contact on terms of equality, imperil the institution of the South.

I am unalterably opposed to any breakdown in such barriers and do not feel that I can, in good conscience, condone one breech and be opposed to another.

The decision of the Court does not rest upon established precedent, previous rulings, the law or any construction of the Constitution. It ignores all of these in favor of vague theories on sociology and psychology.

These are not exact sciences.

Their application to public education brings every phase of that subject under Federal jurisdiction. The laws respecting marriage and divorce likewise are subject to revision and review under this theory, upon allegations of unconstitutionality, by this new ruling of the Court.

Of course, there is no provision in the Federal Constitution dealing with education or schools. Not one word or syllable.

The States have the inherent right to operate and maintain their public schools, utilizing such educational methods therein as are conducive both to the welfare of those to be educated and the people generally.

Rights of the States in this respect have not been delegated to the Central Government, but on the contrary have been reserved unto the States by the 10th amendment of the Federal Constitution.

Being possessed in this lawful right the States are clothed with power to repel every unlawful interference therewith.

If the South surrenders the operation of her schools to the Federal Government, such action would sound the death knell of constitutional government as it is known in this country.

That is the issue which overshadows all other questions.

The heavy percentage of colored population in the South makes it mandatory for us to practice segregation in this region.

It is in poor taste and bad judgment for States which do not have our problems to seek to tell us how we can best solve it.

I say to these States—be careful, for you may be next.

Both races must preserve their integrity.

Throughout the course of history, it has been proved over and over again that in those countries where the population loses its heritage and identity, they also lose their capacity for world leadership and retrogress into second-rate powers.

Let us say with our fathers that no government, no governmental department, no court or other tribunal, has the right to dispose of the fundamental liberties of man.

We believe that these liberties are derived from Almighty God. That when the great Creator of the universe breathed upon the dust and made an immortal soul. He gave man certain rights and freedoms beyond the power of government or any court to deny.

It is unnecessary to catalog these immunities, but among them are the rights possessed by every man to have a home and rear a family, to choose his own associates, to rear his children according to his belief, to stand erect in the dignity of his personality, and to maintain the pride of his inheritance.

Upon the great issues of the day the people of the South always have played their valiant part. Let no one be mistaken about this and upon this issue the South and her peoply firmly will stand.

In this perilous situation that confronts the Southern States we find that we have several ways by which we can prevent this disaster by means just as legal as is the Supreme Court of the United States itself.

In Georgia our answer to the school segregation decision was the adoption of the following amendment to the education article of the constitution of the State:

"Notwithstanding any other provision of this constitution, the general assembly may by law provide for grants of State, county, or municipal funds to citizens of the State for educational purposes, in discharge of all obligation of the State to provide adequate education for its citizens."

The regular 1956 session of the general assembly implemented this constitutional amendment by providing a legislative program to go into effect in each school district, if, as, and when the public schools in such district are brought under the coercive power of the Federal courts.

Under this program, if, as and when the Federal Government prohibits operation of the public schools in a particular school district in accordance with the present homogeneous method of separate education, all authority to continue public schools in that district is abolished.

This is known as the private school plan.

The result of such action of the Federal Government will be to terminate public schools in that district.

If, as, and when such action occurs, this legislation provides for an adequate system of grants from State and local funds to the parents of all children, on an equal basis, for the education of their children.

Under this legislation Georgia complies with the decisions of the Federal Supreme Court inasmuch as the State and local governments go out of the public-school business.

Under this legislation the education of the children of Georgia will be committed to the people themselves.

Through a system of private schools organized and founded by the school patrons in the local communities an educational structure serviceable and satisfactory to Georgians will continue as long as the people desire.

The social structure of the State is, therefore, secure by reason of the action of the people of the State in amending their constitution and the action of the General Assembly of Georgia in its implementing acts.

As a result of these laws, the integrity of the two races in Georgia will be maintained.

After this legislative program, the general assembly enacted into law a resolution of interposition in relation to the decisions of the United States Supreme Court against the public schools.

I shall demonstrate the correctness of our position by examining with you the nature and structure of the Government provided by the Constitution of the United States, and the fundamental principles of relationship between the States and the Federal Government with particular reference to its judicial department.

Here are some fundamental truths:

1. In this country sovereignty resides in the people of the respective States.

2. When the Constitution of the United States was formed and the Federal Government established, the people of the respective States delegated a portion of governmental authority to the Federal Government.

3. All of the power not so delegated to the Federal Government is retained by the people of the respective States.

4. The three departments of the Federal Government—the executive, legislative and judicial—are agencies for the people of the respective States, created for the purpose only of carrying out the authority granted to each department.

5. The Supreme Court of the United States is one of the units of the judicial department of the Federal Government, and can have no authority beyond that delegated by the Constitution of the United States to the judicial department.

6. When any of the three departments of the Federal Government undertakes to exercise authority over matters concerning which it has not been granted power, such an undertaking is illegal and unconstitutional, because it is beyond the authority granted. No exception is made for the Supreme Court of the United States, and if it undertakes to exercise power over a subject concerning which no authority has been granted, its acts are illegal, unconstitutional, and without any lawful force.

7. The Supreme Court of the United States has no jurisdiction to entertain a suit against any State of the Union except in the case of suits between States respecting boundary disputes and the like; and suits between the States and the United States in cases of that character.

8. Since the Federal Supreme Court has no other authority to render any judgment against a State, its declaration that the

States are prohibited from operating their own public schools according to the segregated system is wholly without authority of the Constitution.

9. The judicial power of the United States does not in the nature of things extend to interfering with the States in respect to their public-school systems.

10. By these baseless decisions the Court undertakes to establish that its pronouncements are the supreme law of the land. The court thus disobeys the Constitution, for it is there provided in that document that the Constitution, the laws of the United States made in pursuance thereof, and treaties made under the authority of the United States, shall be the supreme law of the land.

The Court assumes further unlawfully the power to judge all the laws of the States according to facts created by the Court, and to veto such laws if in the judgment of the Court they do not meet with its approval.

11. The Supreme Court has no power to judge the extent of its own authority. Its jurisdiction is that which is authorized by the Constitution. When it goes beyond the Constitution, it oversteps its powers. It cannot, by a mere claim of additional authority, confer the same upon itself.

12. The authority which the Supreme Court may exercise must be found within the limits of the judicial power delegated by the States. If the Court attempts to intrude into an unauthorized field, a State possesses the right to take note of the unlawful conduct of the Court and formally to declare the true nature and character thereof, and to denounce the same as null and void.

It is the duty of the State in flagrant cases to so interpose its powers between its people and the effort of the Court to assert an unlawful dominion over them.

This right of interposition, though not expressly referred to in the Constitution, arises out of the nature and character of that instrument and the government established by it, and exists of necessity.

The Constitution is in writing so that the powers granted to the Federal Government may be stated.

No other reason exists for a written Constitution.

A government of unlimited power needs no written constitution.

To prevent the Federal Government from thereafter claiming to posses powers not delegated to it the first Congress submitted to the States for ratification the Bill of Rights, the Tenth Amendment of which is in the following words:

"The powers not delegated to the United States by the Constitution nor prohibited by it to the States, are reserved to the States respectively, or to the people."

John Adams described this amendment as containing a complete Bill of Rights.

The outer limits of the powers of the Judicial Department are set forth in the third article of the Constitution.

The Supreme Court is a part of that Department.

This article does not attempt to elevate the judicial department over and above any State of the Union or over and above the legislative and executive departments of the Federal Government.

When the Supreme Court of the United States acts beyond the powers delegated to it, it oversteps its authority.

Such acts cannot bind the States from whose people all its powers are derived.

Interposition is based upon the premise that the powers of the Federal Government resulted from a compact to which the States were parties.

The States have the right to interpose their sovereignty in a case of deliberate, palpable, and dangerous exercise of powers not granted by the compact.

This would be done either by the legislature or the people themselves in convention.

If the question be decided in the affirmative, the legislature or convention will then determine in what manner they ought to be declared null and void, within the limits of the State.

This solemn declaration, based on her rights as a member of the Union, would be obligatory, not only on her own citizens, but on the Federal Government itself, thereby placing the violated rights of the State under the shield of the Constitution. This action is subject to the overruling authority of a higher power—the amending power—the acts of which none can object.

If on appeal the decision be favorable to the Federal Government (ratification by three-fourths of the States), the disputed power will be converted into an expressly granted power.

But on the other hand, if the decision be adverse (13 States refuse to ratify) such rejection would uphold the State action that the act of Congress or the Supreme Court is null and void. Here is the true method whereby the people themselves, through the amending power, correct dangerous usurpations of authority.

Will the States stand meekly by and allow themselves to be illegally stripped of all their rights?

Must they conform to a deliberate, palpable, and dangerous usurpation of their Constitution by nine political appointees?

Free courageous people in all the States will use all legal and honorable means toward defending their Constitution. One of these means is the placing of these violated rights of the State under the shield of the Constitution by the act of interposition. To use the words of William Pitt, they will be "invoking the genius of the Constitution."

Now, my friends, the Supreme Court, emboldened by its arrant usurpation of power in the school segregation case, has now come forward with a new decision which outlaws segregation on intrastate transportation lines.

This is, indeed, an arrogant and unauthorized step taken by the Court in the face of the doctrines laid down in the last decade by the Interstate Commerce Commission which has jurisdiction over common carriers.

The Interstate Commerce Commmission assuredly has never been known in any manner as a friend of segregation on common carriers. It ruled several years ago against segregation in interstate transportation but in its own ruling made no reference to segregation in intrastate transportation.

Now comes the Supreme Court with a contemptuous 10-word decision and rules that there shall be no segregation in intrastate traffic, that is within the limits of each State, itself.

This new decision adds to the complexities of the segregation situation in all its phases.

Let me assure you that we shall fight this new attack with all the zeal we have shown in our resistance to the Supreme Court's decision in the school cases.

One of the important measures passed at the recent session of the Georgia Legislature was a joint resolution requesting the Georgia representatives in the United States House of Representatives to bring impeachment proceedings against Chief Justice Earl Warren of the United States Supreme Court and Justices Black, Douglas, Reed, Frankfurter and Clark, associate members. These proceedings were recommended on the basis of charges set forth in the resolution principally for usurpation of power and total disregard for the provisions of the Constitution of the United States.

Let me assure you of my hearty approval of this resolution.

No greater danger to the rights and liberties of the people exists than illegal decisions made by a Supreme Court which are contrary to all principles of law and precedents as well as to the principles set forth in the Constitution.

Thomas Jefferson, one of the founders of this Government, set forth these dangers in a statement he made in 1820 as follows:

"The judiciary of the United States is the subtle corps of sappers and miners constantly working underground to undermine the foundations of our confederated fabric. They are construing our Constitution from a coordination of a general and special government to a general and supreme one alone. This will lay all things at their feet. I will say that against this every man should raise his voice, and more, should uplift his arm.

"Having found, from experience, that impeachment is an impracticable thing, a mere scarecrow, they skulk responsibility to public opinion. An opinion is huddled up in conclave, perhaps by a majority of one, delivered as if unanimous, and with the silent acquiescence of lazy or timid associates, by a crafty chief judge, who sophisticates the law in his mind, by the turn of his own reasoning."

Thomas Jefferson knew whereof he spoke.

Up to the present time, we have resisted by legal means the imposition of the nefarious ruling of the Supreme Court in our State.

There has been no mixing of the races in the schools of Georgia.

We are opposed unequivocally to any breakdown in segregation, whether it be in school classrooms, on the playgrounds in parks, in public transportation facilities, or in any other areas of close personal contact on terms of equality.

Let us all join hands in the South and with united efforts resist these tyrannous decisions of the United States Supreme Court in the same spirit that our forefathers fought for their cause in the dark days of 1861–65.

Almost 3 years have passed since the United States Supreme Court, in its decision of May 17, 1954, sought to usurp from State and local governments the administration of school affairs.

The effect of this unconstitutional, unlawful decree has not been felt in Georgia as yet.

That fact is no mere accident.

The determined and cooperative efforts of dedicated people, a steadfast general assembly, and an administration committed unequivocally toward preservation of our cherished institutions—all of these working in concert, have stemmed the tide.

Never before in our history has it been so necessary for our people to work in complete unity to present a solid front to the threats that assail us from many sides.

No matter what any court may rule, the Constitution of the United States and the crystalized public sentiment of an overwhelming majority of the people remain the law of the land.

We are going to protect both our white and colored citizens in Georgia from mob violence, abuse, and unbridled intimidation from whatever source it may come.

We are going to do this by maintaining Georgia's sacred heritages and traditions.

My friends, I bring you good news from all parts of the South.

Three years ago our citizens were stunned at the drastic usurpation of power by the United States Supreme Court.

The blow came so unexpectedly that the people were bewildered and in a state of shock at such an arrant act of unauthorized power by the highest court in the land.

But all over the Southland the people began to rally for the fight against tyranny.

Public sentiment crystallized so sharply that a strong resistance movement was launched.

Today it is growing at an amazing rate in all States seeking to preserve the rights granted them under the Constitution of this Nation.

In Georgia, as I have said, we have thrown up all the ramparts possible to protect us from attacks from all sides.

Here in Mississippi your courageous legislature has enacted the doctrine of interposition into law. You have passed other measures which will enable you to utilize the private school plan or the pupil assignment method.

Florida and some of the other States also have adopted interposition laws.

South Carolina has passed an array of laws as strong as any in the South and the sentiment in that State is almost 100 percent in support of them.

North Carolina, Alabama, and Virginia have taken strong action and these States have developed strong leaders to conduct the battle.

The great State of Texas is coming into the front ranks of the fight.

Its house of representatives has already adopted 8 bills designed to preserve segregation in the schools. Five of these bills have been recommended favorably by a Senate committee and three others are awaiting hearings.

In Louisiana the legislature meets later this month and Gov. Earl Long has pledged to maintain segregation.

Earlier this year the Arkansas Legislature passed laws that no student should be required to attend an integrated school. It passed a law requiring that organizations advocating integration—such as the National Association for the Advancement of Colored People—report contributions, expenditures, and other information.

The Arkansas Legislature also established a commission "to protect that State and sister States from encroachments by the Federal Government."

Even in Tennessee, where the first skirmishes over the Supreme Court's decision arose, the legislature has adopted segregation bills keyed on the pupil assignment plan.

In all these States the resistance is growing stronger every day. They are falling in line to win this battle through legal means and through court action.

They are unanimously opposing violent measures of any kind.

The liberties of men never have lasted long under governments of total power.

As the immortal Tom Watson said:

"Democratic institutions exist by reason of their virtue. If they ever perish it will be when you have forgotten the past, become indifferent to the present, and utterly reckless as to the future."

Freedom is a fragile flower and must be tended by the people with alert vigilance which can be given only to governments close to home and responsive to the local will.

Upon the great issues of the day the South always has played a valiant part.

Let no one be mistaken about this.

Upon this issue the South and her people firmly will stand.

We rejoice that the Commonwealth of Mississippi and all the other States of the South are now standing undaunted and unafraid. They are uniting with us in this mighty battle for preservation of government and freedom from judicial tyranny.

Under the great banner of liberty and the rights of man we move into battle formation, and under an Almighty God, we will win an imperishable victory for our children and the generations yet to come.

Secretary Benson Picks Up Farm Support

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, the Wisconsin Agriculturist and Farmer is published in Racine, Wis., and has gained an enviable reputation for conducting opinion polls among the farm people it serves. Included in my remarks is an article prepared by this outstanding farm paper which indicates that Ezra Benson has gained ground among the farmers in this country.

The article follows at this point:

BENSON PICKS UP FARM SUPPORT

(By W. C. Voskuil)

Secretary of Agriculture Benson still isn't very popular with Wisconsin farmers. However, he is better liked now than a year ago.

That about sums up the most recent Wisconsin Agriculturist poll on Benson and the farm problem.

The following question was again asked of hundreds of Wisconsin farmers during on-the-farm interviews.

"On the whole, do you think Ezra Benson is doing a good, fair, or poor job as Secretary of Agriculture?"

	Percent
Good	8
Fair	38
Poor	38
Undecided	16

You can see why we say that the Secretary is not especially popular in Wisconsin. Only 8 percent of the farmers will say that he is doing a good job.

Thirty-eight percent will grant that Benson is doing a fair job. They are kind of on the fence—not voicing either approval or disapproval.

THIRTY-EIGHT PERCENT SAY BENSON IS DOING A POOR JOB

Another 38 percent have a more decided opinion. They argue that the Secretary is doing a poor job, and they are definitely unhappy with it.

The rest, 16 percent, took the easy way out. They don't know how to rate Mr. Benson in his job. We find that many of these undecided folks were women who were less interested in the question than their husbands.

We said that, in spite of the above figures, Mr. Benson is now better liked than he was a year ago. Take a look at the following table, and you will see why we say this:

How farm opinion on Benson changed

[In percent]

	1953	1954	1955	1956	1957
Doing good job	30	14	12	4	8
Doing fair job	42	38	34	26	38
Doing poor job	13	37	45	55	38
Undecided	15	11	9	15	16

It can be seen that Wisconsin Agriculturist Poll has kept close touch with farm opinion on Secretary Benson. The question above has been asked once each year for the past 5 years.

Low point in Benson's popularity came in 1956. At that time only 4 percent would say he was doing a good job while 55 percent declared that he was doing a poor job.

Notice that the "good" and "fair" percentages have gone up during the past year while those who say the Secretary is doing a poor job have dropped in number. It isn't much of a change in farm opinion but it is in Mr. Benson's favor.

Why this slight shift in sentiment? Milk prices probably have a lot to do with it. A year of two ago milk was low compared to other farm products. Since then, milk prices have stiffened and dairymen are somewhat more optimistic.

REPUBLICANS MORE SYMPATHETIC THAN DEMOCRATS

Politics seem to affect a person's thinking on the Benson question. As might be expected, Republicans are more sympathetic to the Secretary of Agriculture than are Democrats.

Thirteen percent of the Republicans say that he is doing a good job, 46 percent rate him fair and only 25 percent say he is doing a poor job.

By contrast, only 2 percent of the Democrats say the Secretary is doing a good job. Twenty-eight percent concede that he is doing a fair job, but a big 62 percent rate him as doing a poor job.

There were only minor differences in Benson's popularity with men and women. Many more of the ladies were in the undecided column. Otherwise they seemed to feel about as the men did.

Age seemed to make a difference in people's views on Benson. It may be a surprise to know that the younger group thinks more highly of him than the middle-aged and older farmers.

This bears out the same thing which was found in earlier polls on the same question. For some reason the group below 34 years of age is more friendly to the Secretary than are older farmers.

What reasons do farmers give for liking or disliking the work of the present Secretary of Agriculture? Just about everything one could think of.

"Another 4 years of him would about squeeze me out of business," declared a Barron County dairyman.

THINKS BENSON IS TRYING TO LOWER FARM INCOME

"He is always trying to cut farm prices instead of getting more for us," grumbled another.

"This is the first year I didn't have money enough to pay taxes and it gets worse all the time," said an unhappy Pierce County man.

A Waukesha County dairyman was more charitable. "We would have gone through the price wringer no matter who was in Benson's chair," he contended.

One thing may be significant. Criticisms were not quite as bitter and personal as a year ago. The Secretary could perhaps take some comfort from that.

Roger Kyes Says Foreign Aid Fails As United States Solution

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1957

Mr. SMITH of Wisconsin. Under leave to extend my remarks, I am including an article which appeared in the Washington Star under date of May 4 in which Roger M. Kyes, former Deputy Secretary of Defense, declared that the United States foreign aid programs have not succeeded in solving our international problems or winning universal friendship. The article follows:

KYES HOLDS FOREIGN AID FAILS AS UNITED STATES SOLUTION

Roger M. Kyes, former Deputy Secretary of Defense, declared here last night that the United States foreign-aid programs "have not succeeded in solving our international problems or winning universal friendship."

Their failure, he suggested, might be credited to attempts by this country to buy respect and loyalty.

Mr. Kyes, a key defense figure in the first 3 years of the Eisenhower administration, prefaced several references to the foreign aid programs by assuring some 500 listeners at an evening session of the Associated Harvard Clubs at the Mayflower Hotel that he had "no wish even to comment" upon them, "let alone criticize."

He, nevertheless, proceeded to do just that.

PROBLEMS UNSOLVED

"I am sure," the industrialist said, "that a good deal of careful thought has gone into planning and executing them, but by themselves our foreign aid programs have not succeeded in solving our international problems or winning universal friendship."

Among those present at the meeting, one of several to be held through tomorrow, were a number of Senators and Representatives.

"If economic aid often has not worked," Mr. Kyes said, "it is for one simple fundamental reason—loyalty cannot be bought; respect cannot be purchased; conformity with our point of view is not traded for dollars.

"On the other hand, pride can be offended by money. If we act as a rich spendthrift who cares not what he pays so long as he gets what he wants we must expect to be regarded accordingly."

UNDERSTANDING SUGGESTED

The crux of the problem, Mr. Kyes declared, is "perhaps understanding."

"We must learn to look at others from where they sit, not from where we sit. We must try to look at Frenchmen, Germans, Italians—and particularly the people of the underdeveloped countries—through their eyes, not our own."

Mr. Kyes was 1 of 2 featured speakers. The other was Senator KENNEDY, Democrat, of Massachusetts. They were introduced by Senator SALTONSTALL, Republican, of Massachusetts.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

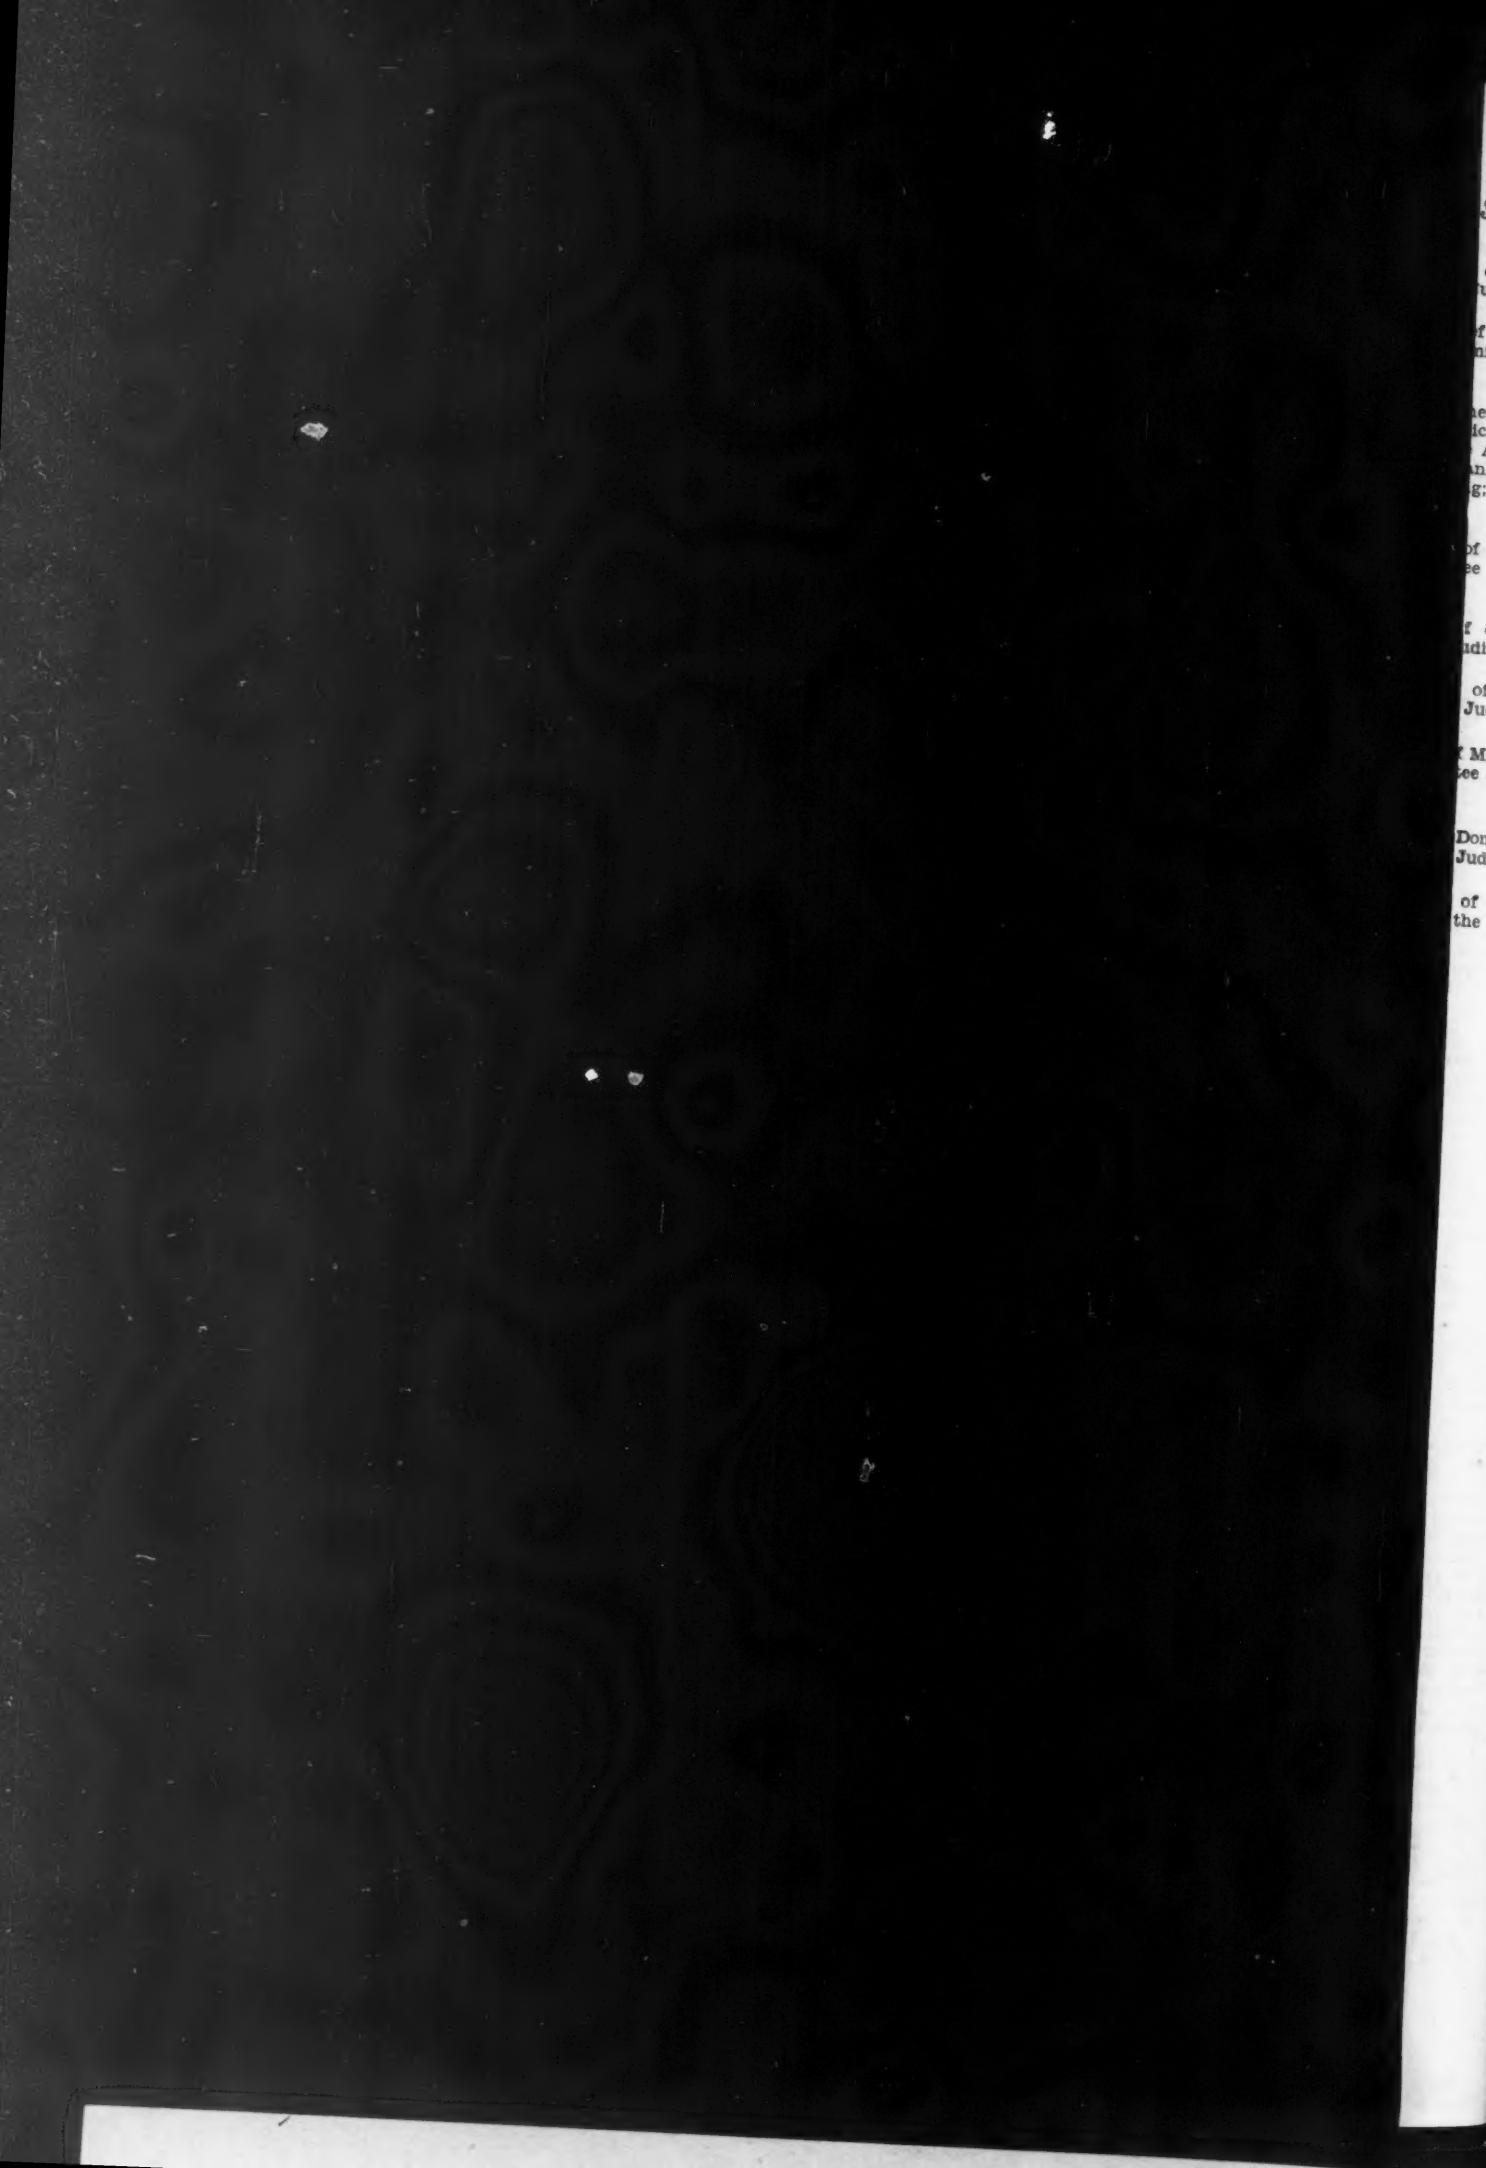
8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.



Appendix

Commencement Addresses by Hon. Mike Mansfield, of Montana

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, June 3, 1957

Mr. MANSFIELD. Mr. President, during the past week I delivered four commencement addresses in Montana and Iowa. I ask unanimous consent that the addresses made by me on those occasions be printed separately in the Appendix of the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

THE NATION'S FUTURE IN THE WORLD

(Address by Senator MIKE MANSFIELD, of Montana, commencement exercises, Central Catholic High School, Billings, Mont., May 26, 1957)

Ladies and gentlemen of the graduating class of 1957, distinguished members of the faculty, parents, relatives, and friends, I am deeply honored to be asked to participate with you in this graduation.

To me, graduation means more than an end or a beginning. It means both at the same time. It means, in other words, a continuity which links one phase of life to another.

In this sense, a graduation is an expression of the law of life, which is change in the unchanging. That may sound mysterious and profound. In fact, it is neither.

Look around you, think for a moment, and you will see the meaning of this law of life. You will see that in the past few weeks spring has come to replace winter and the earth has grown green again. You will see that boys and girls are moving into manhood and womanhood. Those of you who are old enough to remember—that would include only the gentlemen present—those of you who are old enough will note that even Billings has grown into something different, into a larger community with a new look, in the space of a few short years.

If you look around you, then, if you think about it for a moment, you will be aware of change in all things—constant, endless change.

There is a sadness in some of this change. We are reluctant to see the passing of a time with which we are familiar, a time which has brought many happy associations. We are not certain of what will come in its place and it is hard to trust what we do not know.

Yet, change must come; that is clear. It seems to me that we can find strength to face the challenge of change, if we bear this in mind: the law of life is not only change; it is, as I noted, change in the unchanging.

Just as the spring has come this year, it will come again and again. Just as the earth has grown green this year, it will grow green each year in all the years to come. That is the constant. That is the unchanging in the changing.

So it is with the things that have lasting meaning in each of our lives. There, too, we will find things that are enduring in the midst of the changing. What, for example, made your days as students in this high school worthwhile? Your studies? No doubt. But studies change. Some will continue to interest you and some will not. Your extracurricular activities? Undoubtedly. Perhaps some of you may think that they were even more worthwhile than your studies. But extracurricular activities also change and some will continue to interest you and some will not.

I think that beneath these things, beneath the day to day routine of the past few years there was something deeper that made high school worthwhile for you. There was something less tangible perhaps than studies or extracurricular activities, but, in the long run, more important. There was something which gave lasting meaning to these years in your lives.

Was it, perhaps, the understanding that you had from friendly members of the faculty? Was it the affection which you shared with one another? Was it the courage with which you faced the problems of learning and living? Was it the faith you felt that life was good and God was good?

I know that these are things that a person is not aware of every minute of the day. That does not make them any less important. They are there, in all of us, and they are fundamental. They are constants, the enduring. They will be there with you throughout your life.

What we see, then, changes. What we do, changes. But what we are and what we feel underlies everything we see and do. That is the unchanging in the changing. If you do into the future with the understanding and tolerance, with the honesty, with the courage and with the faith, which gave deeper meaning to your life here during the past few years then you can go into it without fear. These feelings will guide you in dealing with whatever may arise in that future.

What applies to each of us individually also applies to our country. I talk to you today, about our country because its future and yours are closely interwoven. Just as your responsibility for your own future will grow increasingly heavier in the next few years, so too will your share of responsibility for the Nation's future.

Countries, ours no less than others, are governed by the same law of life that governs each of us: change in the unchanging. It could hardly be otherwise, for nations are the creations of human beings. This Nation is constantly changing. What we call the United States at this moment is not an abstraction. It is the product of the lives of all the individuals who have composed the Nation since the beginning. It is the sum of the great lives and the unknown lives, the lives of the countless millions who have made their contribution in conquering a wilderness, in agriculture, in labor, in defense, in science and industry, in religion, in education, in ideas, and hopes, in the raising of each new generation to maturity. All of these lives have left their impression on the shape of the Nation and that is your national heritage. But just as the Nation is different today than it was 50 years ago, 50 years from now it will be still something different.

The United States, in short, grows and changes as the individuals within it grow and change. It must change if it is to endure. As it is with the individuals so it is with the Nation. In growing and changing there are certain constants which make our national existence worthwhile, which enables us to meet new challenges successfully.

When we think of our Nation's future in the world it will be helpful to think of it in those terms, as though it were a growing individual. And I want you to think of the Nation's future, today, for as I mentioned, it is interwoven with your own. Each of you will have much to do with shaping the future of the United States and that future, in turn, will exercise a great influence on yours.

Time does not stand still and neither does our country. I would like for you to reconstruct from your studies of history a picture of the United States a century ago. You will recall that our State of Montana, most States west of the Mississippi were settled then by a handful of people—many of them were your grandparents and great grandparents—many of them immigrants. They lived in isolated communities with little contact between one community and the next. They hunted and fished. They did some simple farming. They raised stock. They dug minerals from the mountains. They had few machines to help them. They had few of the conveniences that we take for granted today. There was no electricity, no telephone, no theaters, no radio or TV. They had few schools in which to educate their children.

Until the railroads came, there was little regular contact with the more settled areas of the eastern part of the country. Not many people knew or cared what was happening west of the Mississippi if they were east of it. And if they were west of the river they know little of what was happening in the East. As for the rest of the world, few people in the United States knew anything about it or gave much thought to it.

Now, that has changed. The people who came to Montana, to the West, their children and their children's children built a new way of life here. Population has grown. The powers of rivers has been harnessed through dams like Hungry Horse, Kerr, Tiber, Canyon Ferry, and more will be harnessed in our service through new dams like Libby in northwestern Montana and, in this section, Yellowtail, if we are ever able to convince the President that we need it, as you and I know that we need it. New industries have developed and more will develop. Schools have multiplied and we have learned many new ways of thinking and doing.

Most significant in the changes of the past century within our State is that we are no longer a scattering of communities, isolated and unconnected. We are linked together as never before by a complex system of airways, rails, and roads. We can pick up a telephone here in Billings and call any point in the State. Soon, I hope, TV will link every part of the State and the State with the rest of the Nation, as radio already does.

What is all this leading up to? The point I am trying to make is that, over the past century, the citizens of this State have been drawn by the processes of change into closer and closer integration. What is happening within the State is also happening within the Nation. All of the States are now tied together more closely than ever before.

What happens in other States and in Washington is now known to us immediately and affects us very directly. In turn, what we do affects the rest of the Nation profoundly and is known elsewhere promptly. In other words, a great interdependency and unity has developed throughout the United States. This means that, more and more, the Nation grows and prospers as a whole or it does not grow and prosper at all.

And what is happening in the United States is happening throughout the world. Other countries are no longer remote from us. We know promptly what is happening beyond our borders and others know promptly what is happening here. Our products are sold in vast quantities on every other continent. We draw on those continents for many of the essential products of our daily life.

A few decades ago we would not have even learned of a political upheaval in the Middle East until days or perhaps weeks after it had occurred. Today, almost simultaneous with its occurrence, the President finds it necessary to dispatch a fleet of naval vessels to the scene because he believes it may invoive our vital national interests.

In other words, a process similar to the integration which has gone on within our State and within the Nation has also taken place in the world. We are no longer immune from the impact of events thousands of miles away. These events may act to hurt the Nation or to help the Nation. One thing is certain, however, sooner or later, they are bound to affect us.

No single person brought about this situation. It is the result of the never-ending process of change which goes on wherever there is life. We may not like the situation. We may feel uncertain as to where we are headed, just as I noted earlier you men and women may sense a sadness and uncertainty in graduating. Nevertheless, out of consideration for the Nation's future, we have got to face these changes in the world. We have got to try to understand what they mean to us. We have got to try to deal with them in a way which safeguards the Nation and its future.

What are the changes which have taken place in the world during these past few decades? Again, if you will recall your studies of history, you will have a picture of what the world was like a few decades ago so that we may contrast it with what it is like now. You will recall that Europe, particularly Great Britain, a half century ago was the citadel of international power. It shaped events practically everywhere else in the world. The United States and Japan were the principal exceptions. These two countries were growing rapidly in independent strength. Elsewhere, however, the countries of Europe controlled a seemingly inert and motionless world. The Europeans directed international commerce and industry and the political life of many peoples. China, India, and most of Asia were in a state of political sleep. Latin America, Africa, and Australia-New Zealand were great but little known continents. They poured natural wealth into the channels of international commerce but otherwise had little effect on events in the world.

The Europeans themselves were divided into rival national states. So long as they keep their rivalries from erupting in war among themselves, however, the rest of the world did not challenge their combined power. Their rule over other peoples produced at least a semblance of peace and calm over the face of the earth.

Under the surface of this calm, however, change—that constant law of life—was at work everywhere. It was hidden and it was often suppressed but it was not to be denied. In two great wars and the swift cavalcade of international events in their aftermath, the force of these long pent-up changes burst upon us.

We find ourselves, today, in another world, far different from that of a half-century ago. Europe is no longer the great citadel of power that once it was. Instead, the nations of that Continent have had to struggle for years merely to restore the devastation of World War II and to preserve their independent survival. And they would have been unable to do either had it not been for the help which this country extended to them. A dozen years after World War II, the European nations have still to regain their former importance and they are not likely to regain it unless they draw closer in unity among themselves. They are suspended between two poles. The one pole is the expanded totalitarian power of the Soviet Union. The other is the power of freedom of the United States. They are attracted towards us but many of their citizens look towards Russia or fear the power of Russia.

This new world in which we find ourselves today is also a world in which the slumbering nations of the past have awakened. India, China, nations in the rest of Asia, in the Middle East and Africa—these nations are coming out of a long night of political sleep. Some have awakened in a friendly, cheerful mood. Some have awakened growling and scowling. And some have just plain got up on the wrong side of the bed. Whatever the case, however, all of these nations are a part of this changed world in which we find ourselves and they have to be reckoned with.

So, too are the developing nations of Latin America and elsewhere—Canada, for example. Each in their growing strength and in their expanding achievements are new factors in the world in which we must work out our future.

This world of today is also a world of instant communications. And it is a world in which space is losing its meaning. In aviation, distances are no longer calculated in miles but in hours of flying time; with the coming of the jet age they will soon be calculated in minutes and seconds.

It is a world in which nations depend intimately upon one another for the food, the minerals, the countless products which are essential to their existence. It is a world in which no one part is far from or can be separated from the rest.

It is, in short, a greatly different world from that of a century or a half century ago. It is a world of new dangers. You graduates know from your science studies the grim possibilities which it contains. You know the implications of the threat of atomic war.

Even the testing of nuclear weapons let alone war with these weapons, raises complex questions. When a single hydrogen bomb is set off in a test in the Pacific, for example, it is necessary to close off over 400,000 square miles of the ocean to all ships to guard against accidental death or injury. And we do not yet know with any degree of certainty what the long-range effect of the so-called radioactive fallout from nuclear explosions will be on human life and future generations. We do know, however, that like X-rays, the effect of this fallout is cumulative and that it can be highly dangerous to mankind in concentrated amounts. Moreover, no nation is immune from it, even though the nation may be hundreds or thousands of miles from the scene of the explosions.

Three countries are already testing these nuclear weapons—the United States, Soviet Russia, and Great Britain. Others will in all probability have them in the not too distant future. The level of radioactive fallout in the atmosphere will increase as testing increases.

That is the kind of new danger which confronts us in the present world. If testing of weapons alone is such a serious matter, it is not too difficult to imagine the danger posed by such weapons in the hands of an aggressor nation capable of delivering them in jet planes and guided missiles.

If the world today contains new dangers for the Nation as it most certainly does, it also contains new hope. You graduates know from your studies that there are two sides to the coin of scientific progress. You know it is rich in the promise of a better tomorrow. You know that this world of today and tomorrow contains infinite possibilities of material progress for all mankind. Even more important, you know that the new international contacts which it compels can enrich our spirits and bring this planet closer to that brotherhood of man which God has enjoined upon us.

Let me turn now for a few minutes before closing to the implications of this world of today and tomorrow for the Nation's future and for your individual futures. I think it is clear that we cannot safeguard the Nation's place in this world if we start by imagining that we are living under conditions that existed a half century ago.

We can no longer dismiss other nations as too remote to be of concern to us when we know that, in fact, they are no longer remote. We cannot assume that events thousands of miles away have no meaning for us when we know that three times in the lives of some of us, those events have plunged the Nation into war. We cannot proceed on the old assumption that Europe still dominates the world and will keep a kind of peace in it when we know in fact that power has gravitated from Europe toward the Soviet Union and toward the United States. We cannot ignore the fact that many new nations have come into independence in recent years and that they will be a force for good or evil in what happens from now on. We cannot, in short, turn back the clock.

To do so would be to try to preserve the Nation in a world and time that no longer exists, a world and time when the principal dangers we faced were frontier conflicts, fought with bow and arrow and musket, when people in this State and the West lived largely by hunting and fishing and simple agriculture. If this Nation today were to plan and act on what existed yesterday, the real world would soon leave us behind. Even more likely, it would submerge us in its swift and ever-changing currents.

That is why this Nation must be ever alert to the continuing changes in the world. Our relations with other nations must reflect this awareness. The foreign policies which were adequate 50 years ago to protect the Nation and its future had ceased to be satisfactory 25 years ago. Those of today will undoubtedly have to be adjusted tomorrow.

In other words, change is to be expected and it must be faced. If you recall, however, I stressed that the important thing was change in the unchanging. There are constants which have marked the life of this Nation from the beginning. These can provide us with the strength to move into an uncertain future with the conviction that we can make it a worthwhile future no matter what it may contain. These constants include a belief in human freedom, in human equality and in human dignity.

They include a respect for the past coupled with a willingness to explore new paths of understanding and achievement. They include a willingness to defend our own rights coupled with full respect for the rights of others. They include a faith in ourselves and in God's infinite wisdom.

The task for the Nation, and that means all of us, then, is to seek always to enlarge our understanding of the world around us. The task for the Nation is to adjust our relations with other nations in the light of its realities. The task for all of us is to see to it that in making these adjustments we do so without losing the unchanging, the enduring in our national life. I call upon you young men and women of the graduating class of 1957 to join with us in that task.

GRADUATES IN 20TH CENTURY WORLD

(Address by Senator MIKE MANSFIELD, of Montana, commencement exercises, Butte Public High School, Butte, Mont., May 28, 1957)

Ladies and gentlemen of the class of 1957, distinguished members of the faculty, parents, relatives, and friends, to each of us this graduation means something different. For you who are parents of graduates, the occasion is a landmark in the growth and progress of those closest to you. For you who taught the graduates, it is a moment of gratification which can be fully appreciated only by those who have dedicated themselves to the heavy responsibility of educating the youth of the land. For the invited guests like myself, it is both an honor and a pleasure to be permitted to participate.

And for you who are graduates, this commencement marks a significant point in your lives. It is a symbol of change, of the ending of an era and the beginning of another. Your thoughts at this time, I am sure, must be mixed. There must be in them both a reluctance to leave the old and the familiar and yet an anticipation of the new and the unknown. With each of you, I am sure, these thoughts take on a highly personal form. You are concerned with your particular experiences at this school over the past few years and your particular regrets at their closing. You are also concerned with your individual futures and what each may contain.

It is natural at decisive moments in life that you consider most carefully what affects you most closely. Let me suggest, however, that you have plenty of company when you ask yourself the question "What lies ahead for me?" If you stop to think of it, you will realize that not only are you asking that question, but graduates in Anaconda, in Lewiston, in Missoula, in Miles City, in Plentywood, all over the State and the Nation, are asking the same question. You will realize, too, that thousands of graduates in London, Paris, in Tokyo, in Calcutta, in the new African Republic of Ghana, in Moscow, graduates throughout the world are asking the same question: "What lies ahead for me?"

Each graduate wants to work out in his own way the answer that is right for himself. In that sense, each answer will be a personal answer, but it will also have much in common with the others. And one of the things, perhaps the most important thing, that the answers will have in common is that they will be dependent to a large extent on the kind of country or environment in which each graduating group lives and on the kind of world in which we all live.

Let me try to illustrate this point. Suppose for a moment, that this graduation in Butte were taking place not today but a hundred years ago. To you, gentlemen of the class of 1857, the answer to the question, "What lies ahead for me?" would still be a personal one but it would also be a simpler one than it is today in at least one respect. The number of choices open to you would be limited. For most of you, graduation would be followed by homesteading somewhere in the West. Or you might find a job in a store of some kind or open one yourself. Or, if you were restless, you might set out to prospect for gold in California. Five or six of you might head eastward to one of the Nation's few colleges. If you came back at all, it would be as a minister, a doctor or perhaps a lawyer or teacher.

As for the ladies of the class of 1857, it is unlikely that there would be any of you, for in those days people had very serious doubts about the wisdom of educating girls. But if there were, the choices of a future would be even narrower than the men's. One or two of you might have become teachers and you would, of course, be in demand as wives. But with a high school diploma, you might be regarded as having too much education even for that honorable profession.

What I am trying to get across to you is the fact that your futures—all of your futures—will be sharply influenced by the kind of world and the part of the world in which you find yourself. Let me, then, try to give you a picture of the different situations which confront high school graduates in different parts of the world, not in 1857 but in 1957.

Beginning in the United States, what is the setting in which you and your fellow graduates throughout the country must shape your future? It is, first of all, the setting of a growing country with a rapidly expanding population. It is a setting which finds us at a new peak of technological progress and on the threshold of even greater progress. Advances in agriculture, science and industry are transforming our economic way of life at an incredible speed. We are learning new ways, easier ways of growing and making the things that are necessary for daily living. We are only at the beginning of the age of nuclear energy, of the new power of the atom. Developments in transportation and communication have unified the country as never before. The science of medicine is steadily increasing the life expectancy of all of us. Developments in other sciences are expanding our knowledge of the planet on which we live and, indeed of the universe of which the earth is a part.

This setting opens wide horizons for careers for all of you, horizons that are by no means limited to those whose talents run to science, agriculture, and to industry. The fact is that the changes in technology in these fields will find their counterparts in education, in the arts, in the law and in all other aspects of human endeavor in this country.

All of you, whatever your interests, can look forward to a future of promise. It is not, however, a future without problems. And perhaps the greatest problem which the Nation will face in the next 25 years is to see to it that our technological progress does not run away with us, overwhelm us and, in the end, destroy those things in our way of life which make it most worthwhile.

We must not, in our fascination with the dazzling achievements of science, overlook the fact that technological progress is not an end in itself. It must enrich the lives and open new possibilities for the spiritual development of all our citizens or it will have served no useful purposes.

We must see to it, therefore, that this progress does not get out of hand. We must see to it that it creates opportunities for employment rather than destroys them. We must see to it that its benefits reach all our citizens, in better living conditions, in greater security, in better educational, health and recreational facilities. And we must see to it that the burdens of progress, for there are burdens as well as boons in progress, are borne equitably by all.

Most important, we must see to it that progress takes place in a pattern which preserves the fundamental values of American life. Those values are a high and equal respect for the dignity, the freedom, and the worth of every individual citizen.

You graduates will also work out your futures in a Nation whose position with respect to the rest of the world has undergone great changes in the past few decades. Once isolated by the oceans from other countries, we are now linked with them by the airways and modern communications. Once a small Nation with little influence or interest beyond our borders, we are now an enormous Nation with worldwide influence and worldwide interests.

The great power of the United States places us in a position of great responsibility. It is first of all a responsibility to ourselves and to future generations. If we no longer have the immunity of distance and remoteness from developments in the rest of the world—and technological progress has ended that immunity—then we must take steps to safeguard the Nation in its new contacts. What we do or fail to do in our relations with others has a great influence throughout the world. Our actions are an important factor in determining whether the world will keep a measure of peace or whether it will be plunged into a great war from whose destructiveness no nation will escape. What we do or fail to do in our relations with others also has a great influence on the continued progress of all mankind and ourselves as a part of it.

These are new problems to which a short time ago people in this country gave little thought. Now we have no choice but to give a great deal of thought to them. We will have to use our great power with wisdom, with restraint, and with economy to safeguard peace or we shall be compelled to use it recklessly in the terrible waste of war. As your Senator, I have tried as others have tried to give these international problems the attention they must have if your Government is going to handle them successfully. I have done so because they involve the safety and well-being of the people of this State, of all the people of the United States; in fact, of civilization itself. They are the major problems confronting us today and they will become even more important tomorrow.

That, then, is the kind of situation in which you graduates will work out your futures. What of graduates in Western Europe—in London, Paris, or Rome? In Germany and in Scandinavia? The young people in Western Europe will find themselves in a situation which has many similarities with yours. They, too, have grown up in an atmosphere of freedom and scientific progress.

They will not have as great an opportunity as you will have. The European countries are older and more crowded lands. Many of the graduates will migrate, as did our forebears, to seek a new life in Canada, in Latin America, in Australia or Africa. Some will come to this country. They will add their labor, their spirit, and their thought to the continuing stream of American life.

For those who remain in Europe, life will not be easy. Their countries lie directly in the shadow of the massive totalitarian power of Soviet Russia. They know that if they are to live in freedom they must be prepared to defend themselves. Yet they know the price of past wars, and they live in dread of a new one. These graduates in Europe today almost without exception have felt the effects of war themselves. They have seen the marching armies of World War II. They have heard the bursting bombs.

They know, too, that their countries are small countries, as the world measures countries these days and that individually, they have little influence on the course of international developments. They know, finally, that for centuries their countries have been torn by rivalries and conflict which in the end have weakened them all.

Yet, for all its weaknesses, Europe is not without promise for its graduates of 1957. You know from your readings of history that that continent has many sources of strength. It is the birthplace of most of the great ideas of freedom which have spurred people throughout the world to action for human betterment—ideas which today, we take for granted in this country. Europe has also had its geniuses of science and industry. Indeed, the development of atomic energy in this country during World

War II was at least as much of the work of Einstein, and other European-born scientists as it was of our own. Europe has produced its great men of art and literature, and music. Finally, Europe has made its contribution in the struggle for freedom. Countless thousands of its soldiers fought and died for liberty in our revolution, in the two great wars of this century and in Korea.

A Europe which can produce men of genius, works of civilization such as it has, is not without hope for the future. A Europe which can rise up in the cause of freedom as it has done many times is not a dead continent. A Europe which can recover from the terrible ravages of World War II as it has done with assistance from the United States, is not without inner strength.

If Europe is to continue to survive and to grow in freedom, however, it has two great challenges which it must meet. It must bring Germany, a united Germany, into a peaceful place in a unified and peaceful Western Europe. And Western Europe must stand fast together against the threats, the taunts and the harassments of totalitarian Russia. These two questions dominate the situation in which the graduates of the class of 1957 in Western Europe will work out their futures.

What of the graduates on the other side of the globe, in Japan? Their situation is a difficult one. Japan is a small country, no larger than our State of Montana. It has less natural wealth and only limited land fit for farming. Yet, within that country live 90 million people. You might try to imagine what it would be like in Montana if, instead of 650,000 citizens, we had 90 million. For one thing, you might expect that the population of Butte would be not 40 thousand, but several million. We would have, to say the least, a housing problem to end all housing problems.

Yet Japan must feed, clothe, house, educate, and otherwise take care of its 90 million people. How is it done? For one thing, by a lower standard of living.. There is less to go around in the way of food, clothing, shelter and conveniences and the Japanese have adjusted themselves to doing with less. The Japanese also produce high yields of rice and other crops from their limited lands by intensive cultivation and extensive irrigation. They fish the waters of the Pacific from the Arctic to the Antarctic. Most important, they depend on trade with other countries based on their highly developed industry.

For Japan, the problem is literally one of having to fish and trade abroad on a large scale if they are to survive in peace and independence. In order to do both, the Japanese are turning increasingly to relations with Russia and Communist China. Before we condemn them for this, however, we had better ask ourselves, "What alternative do they have?"

The situation, then, that is faced by the Japanese graduates of 1957 is that: They live in a poor country which brought great destruction upon itself and others by the militarism of its leaders in World War II. By their own efforts and with assistance from the United States, the Japanese have restored their country and now have a fairly prosperous existence, perhaps more prosperous than they have ever known, but in no way comparable with what we take for granted in this country. They have a responsible, elected government, and they have independence.

Even under the best of circumstances, however, it will be difficult for the Japanese to maintain this situation. The Japanese islands are close to both of the centers of totalitarian communism—Russia and China. Economic circumstances compel the Japanese to deal with both. The Japanese will have to walk a narrow line if they are to trade goods with these Communist lands without ending up in their camps. Whether the new generation of Japanese will be able to walk such a line, whether they will be able to work out their futures in freedom, will depend to a great extent on how well the ideas of freedom, implanted by the United States after the war, take root. It will also depend on the understanding with which other free nations, including ourselves, treat Japan's very real needs for cooperation in economic matters.

Let me turn now to the class of 1957 in India, let us say in Calcutta or New Delhi. What is true for the students in these cities is also to a great extent true for graduates in the Middle Eastern countries—Egypt, Syria, and Pakistan, for example. It is true for graduates in Burma, Ceylon, Indonesia and the countries of Indochina.

In connection with the work of the Senate, I have had occasion to visit newly independent countries many times. I have done so because what happens in them, the way they go, is of the greatest significance to us. Their vast population, numbering in the neighborhood of 750 million, is almost a third of the world's total. These people can be a decisive factor in determining whether there will be peace or war, and I can think of no question which is more important to the people of this State, to the people of the United States. As these countries develop, moreover, our trade and other relations with them can become increasingly beneficial to both sides.

This huge world of newly independent nations which stretches from Africa through the petroleum-rich Middle East to the shores of Australia is already of great significance to us. It will have become even more important by the time you graduates have reached the age of your parents. I venture to predict that many of you will be at work in these distant places. You will be carrying skills which you have learned here in the United States to help others to a better way of life. You will be carrying on business affairs since commerce, more and more, no longer stops at our national boundaries.

What kind of situation, then, is it that the graduates in the newly independent nations find themselves? They find themselves in countries which for the most part have known for centuries only poverty almost beyond imagining for the many beside great wealth for the few. They exist in countries like one I visited several years ago—Nepal—in which there is sometimes only one doctor for hundreds of thousands of people, where less than half the children born survive their first year. They live in countries where the number of people who can read and write is often less than 10 percent of the population. They live in countries where a foot-powered sewing machine would be an example of advanced mechanization. They live in countries where many people have seen airplanes overhead, but never a railroad or an automobile.

Until recently, these countries were colonies of European nations. The Europeans brought many improvements and they also developed the natural resources of the lands largely for the benefit of Europe. The ideas of liberty and Christianity also entered these lands from Europe. Over the years these ideas built in the hearts of native leaders a burning desire for national independence and improvement in the conditions under which their people lived.

The desire for independence has now been fulfilled in virtually all of the countries of Asia, and it is being fulfilled very rapidly in Africa. The graduates of 1957 in these two continents have lived through this change from colonialism to national freedom. As children they heard their present leaders deliver impassioned pleas for independence. They have now grown up to see those pleas answered.

Independence, however, has not solved the problems of poverty, ignorance, and disease from which their countries have long suffered. It will fall to these graduates to tackle these problems if the promise of independence is to be fulfilled for all of the people of the newly independent nations. It will fall to them to use the power of independence boldly yet responsibly to bring their countries fully into the modern world. It will fall to them to rise above the bitter hatreds which the struggles of their fathers for freedom engendered. Other nations, like our own, can help to some degree but the initiative must come from them if their independence is not to be an empty word.

The graduates of 1957 in the newly independent countries have a difficult but inspiring future ahead of them. It is one of hard work, heavy responsibility, and many challenges. If they make of it what they can, however, they will have contributed immeasurably to the growth of their countries, the welfare of millions of people and to the strength of freedom throughout the world. I hope you graduates will keep an interest in their work and do what you can in the future to help them.

Before concluding, I should like to turn to one other class of 1957, the graduates of Moscow or Leningrad or any other city in Soviet Russia. Because of the great tension which has existed between this country and Russia, it is easy to overlook the fact that many of the same problems of life confront the people of Russia as we ourselves know. Their graduates, I am sure, also ask the question, "What's ahead for me?" And the setting in which they live as is the case anywhere else, to a great extent, controls their answer.

The graduate in Russia lives in a country which in a technical sense is not unrecognizable to us. The Russians in the last 20 years have laid great stress on industry. They have their extensive mining operations. They have their tractor factories, their railroads, their automobile plants, their mechanized farms. Most important, they have developed atomic and nuclear weapons, and the jet aviation and the guided missiles with which these instruments of destruction are linked in modern warfare.

The quality of Russian production is in general inferior to the material things we know and so is the quantity. The standard of living of the average person is far lower than it is in this country.

Except for these differences, however, what we might call the look of Russia to its graduates is not too dissimilar to the look of the United States to you graduates as you both contemplate the question, "What's ahead for me?"

Yet we sense and we sense correctly that there are enormous differences in the situations which confront the Russian graduate and the graduate in the United States. I believe if you think of it for a moment you will discover that of these differences, two are outstanding. They are the principal differences between freedom and totalitarianism. The first is the degree of freedom of choice you will exercise over your future, as compared with the Russians. In this country, it is you who will eventually choose what work you will do, where you will live and what you will make of your life. For the Russian graduate, that choice will be largely determined by the state. The task of choosing what we are to do with our lives is sometimes a difficult one. It is a price of freedom which the Russian graduates will not have to pay. But it is also a priceless heritage of freedom which they will never know.

The second great difference is that while you maye criticize your Government and prefer Republicans to Democrats or Democrats

to Republicans, I believe you have a measure of confidence that life in the future in this country will continue on a fairly level keel. You know that you will not be plunged into the nightmare of war by some sudden act of a mad ruler. You know, in short, that you live in a country with a responsible, an accountable government. It is a government which the people of this country have made and can unmake by orderly processes.

The Russian graduate has no such assurance. He must work out his future under an autocratic government. Today, it is run by the combination of Khrushchev and Bulganin but sudden upheavals in the night and tomorrow's ruler may be another power-mad Stalin. Even in the case of the present Soviet leaders—this week they may smile at the world, and next week frown at it. This week they may talk peace. Next week the order may go out for war. A graduate in Soviet Russia, as he develops his career, may make a great contribution to science and be honored for it in 1 year, but the next he may be sent into exile because the party in control has changed its mind.

Since such is the state of affairs in Russia, I believe you can see that the Russian graduate deserves our sympathy as much as his totalitarian government deserves our condemnation.

Unfortunately, the effect of the situation in Russia is not confined within the borders of that country. The totalitarian influence of that country is worldwide. Not only has it suppressed the independence of neighboring nations, but it has kept the entire world in constant fear of aggression and war.

That brings me to the final thought I wish to leave with you tonight. As you graduates, not only here in Butte High School, but throughout the world, work out your futures in accordance with your personal desires and the setting in which you find yourselves, there is one problem which all of you must face. That is the problem of maintaining peace in the 20th century world. That is a problem for which no single country can find the solution. There are no simple answers to this problem, yet all of us must do what we can to contribute to a solution. We cannot pass it off as futile and sit down to wait for our fate. If we can conquer this problem, a world—a universe—of undreamed of possibilities will open before us. Your creative contributions together with all those who have gone before will provide the key. If we fail, then all mankind in this nuclear age stands on the brink of unspeakable disaster. We cannot fail. We must not fail.

A Foreign Policy for Peace

(Address by Senator Mike Mansfield, of Montana, commencement exercises, College of Great Falls, Great Falls, Mont., May 29, 1957)

When Monsignor Donovan asked me to deliver the commencement address here at the College of Great Falls, I felt both honored and flattered. When the Monsignor also asked me to receive the honorary doctorate degree, I was overwhelmed. It was with a deep sense of gratitude and humility that I accepted.

I wish there were some way, some special honor, some higher degree—some superior mortar board, so to speak—that I might in return bestow upon the Monsignor, not because he needs it more than I but because he deserves it more.

This year, as you may know, is his silver anniversary in the priesthood. Twenty-five years of devotion to religion and years of service in the education of the youth of all faiths are ample testimony to his superior worth.

I regret, Monsignor, that I cannot give you a higher degree or a better mortar-board. I can however, express on behalf of all here, the deepest admiration and affection for you for your great contribution to this community. I can also express the hope that your next 25 years will be spent among us so that your magnificent work may go on.

This year is also the silver jubilee of the College of Great Falls. The 25 years of its existence have been years of astonishing growth, for the school, for the city, for the State and the Nation. The progress of the College of Great Falls is all the more remarkable since the school was founded at a time when the Nation was in the lowest depths of the great depression. For you graduates the great depression may be just a title in history. For your parents, however, it is far more than that. They will remember it as a time when colleges, like banks and businesses were busy only at closing their doors. It took courage and faith to establish a school in that climate. The vindication of the courage and faith of the founders of the College of Great Falls is to be seen in this graduating class of 1957.

Since all numbers seem to lead to 25 today, I should also note that a quarter of a century ago with the coming to power of Adolf Hitler in Germany, preparations began in earnest for World War II. We did not know it then but less than a decade later the entire world was to be engulfed in a struggle which brought civilization very close to the edge of doom.

The world has now recovered from the material damage of that war. The physical scars have healed even though the personal losses are still felt by those who suffered them. War has become an unpleasant subject for discussion. Many would prefer not to talk about it, just as people preferred not to talk about it in 1932.

Yet the shadow of war still hangs above the earth. The shadow today, moreover, is darker than that which preceded World War II. It is a darker shadow than any in the history of mankind. It is the shadow of a war which threatens not only the Soviet Union and this country but all countries. It is the shadow of a war which threatens not solely civilization but the human race itself; not merely this generation but all generations to come.

I shall not dwell at length, today, on the terrors of this war of the future. You have read of them. You have heard of them. Sufficient to say that each year its potential destructiveness grows larger as atomic weapons are brought to an ever higher state of perfection. We have already reached the point where it is necessary to clear an area three times the size of the State of Montana in order to test a hydrogen bomb. Think of it for a moment. Over 400,000 square miles of the Pacific Ocean must be emptied of unprotected shipping before a single explosion can be set off safely. Even then, there must also be a prayer that the winds hold and that there has not been a miscalculation. If we have already reached this state merely in testing nuclear explosives, it is not difficult to imagine what would happen if such explosives were released in actual warfare.

The United States, Soviet Russia, and Britain already have these weapons. It will not be long before other nations add them to their arsenals.

And we are only at the beginning. Guided missiles are commencing to replace piloted planes for delivering nuclear explosives in warfare. These missiles now travel several hundred miles with uncanny accuracy. Both Russia and the United States are already experimenting with new models that will speed to targets 1,500 miles away in a matter of minutes. It is only a question of a few years until these devices will have been developed to the point where they will carry nuclear explosives between the continents and reach speeds of 15,000 miles or more per hour in their flight.

This is not science fiction but scientific fact. These are the realities of the world in which we live in this second half of the 20th century.

It is no wonder that the conscience of humanity has begun to speak out. We have heard it in the words of His Holiness, Pope Pius XII. We have heard it from the depths of Africa in the words of that great missionary, Albert Schweitzer. We have heard it from other religious leaders throughout the world.

The words of each may differ but the message in every case is the same. The warning is clear: Mankind is walking blindly on the brink of an overwhelming catastrophe. There is little margin for error. There is little margin of time.

I said that I would not dwell at length today on the dangers inherent in war and I shall not. What is essential is that we recognize these dangers as very real. What is essential is that we do not close our minds to them as being beyond our comprehension. What is essential is that we seek to understand the problems that these weapons pose for the Nation and do what we can to deal with them.

That brings me to the question I wish to discuss with you in detail today. What is the alternative to accepting the inevitability of a nuclear war? The alternative, it seems to me, the only alternative is to work actively for peace.

There is no more important problem facing our State or the Nation. It is a problem which has a special significance for you young men and women who are graduating in the year 1957. You will be face to face with this problem through your maturing years. You will work out your dreams, your careers, your lives, under its overpowering influence.

As your Senator, I have given a great deal of thought and time to this question. If he is to serve the citizens of his State, a Senator must be concerned with a Hungry Horse or a Tiber Dam. He must be concerned with the price of wheat or cattle. He must be concerned with the cost of government as it is expressed in the budget and taxes. He must be concerned with the improvement of transportation and communications and the countless other problems of the citizens of the State.

As he considers these domestic matters, however, he is in much the same situation that you young people find yourselves in thinking of your futures. He must consider them in the light of the immense problems of war and peace which face the Nation.

The cost of past wars and preparations for defense in the event of another runs to over 80 percent of the $71.8 billion budget presented to Congress by the administration a few months ago. You have heard much, I am sure, of the so-called battle of the budget. Actually, it is more a skirmish than a battle. Congress has done what it can to reduce spending, to increase efficiency. The major costs of government, however, have to do as I noted, with defense costs, with what might be called war costs. So long as serious threats exist to the security of the Nation these are the most difficult costs to reduce.

The questions of war and peace, therefore, are not remote from the interests of the people of this State, or any State. They are at the core of our interests. And because they are, as a Senator, I have been deeply concerned with them. I have traveled widely in the world these past few years in an effort to grasp their implications as fully as possible. I have tried to understand what roads lead to peace, what roads to war.

The way the nation acts for peace is primarily through foreign policy, just as we work to defend ourselves in war through defense policies. A foreign policy is not a mystical formula no one can understand except the President and the Secretary of State, and of which ordinary citizens need stand in awe. In this Nation, it is your foreign policy

and the more you know about it, the better policy it is likely to be. You will gain if this country has an effective foreign policy. You will suffer incalculably if it is an inadequate policy.

Foreign policy is the course of action we follow as a Nation in the world. It is what we do or fail to do in our relations with others to safeguard our national interests. Fifty years ago or even 25, these interests did not appear to be of great consequence. Yet 3 times in the lives of many here today, they were sufficient to plunge the Nation into the deep sorrow and the tremendous losses of great military conflicts.

In the light of these experiences can we believe any longer that the Nation's international interests are of little consequence? In the light of these experiences, is it reasonable to assume that if a major conflict breaks out in the world we can avoid it? If we were unable to do so when other nations were more remote from us, when the oceans provided a defense of insulation, are we likely to do so now? Are we likely to do so when technological advances continue to bring nations into ever-closer contact with one another? Are we likely to do so when not only the oceans but even the polar regions have ceased to be a barrier to this contact?

It seems to me that there is only one way in which we can hope to safeguard our overriding national interest in avoiding an involvement in war. That is by reducing the liklihood of an outbreak of war. It is by building a positive foreign policy for peace.

A policy of peace is one which first of all, recognizes and is based solidly on the realities that exist in the world. It is one which is adjusted not to conditions as we would like them to be but to conditions as they are. Most important, it is a policy which isolates the principal dangers of war in the world and acts, insofar as it is within our capacity to act, to curb or remove those dangers.

Before I deal with the dangers to peace and the actions that are necessary to cope with them, let me say this about the nature of foreign policy. No matter how effective it may be, peace depends on what others do as well as on what we do. The most that we can expect is that those responsible for our foreign policy assess accurately the situation that exists in the world, that they face this situation honestly and then set a courageous course of action for dealing wih it. They can do no more. We can ask for no more.

I have spoken, as you may know, many times in recent years on matters of foreign policy, in the Senate, at home in Montana, and elsewhere. As a result, some have come to regard me as a critic of the administration's foreign policy. I can assure you, however, that my purpose has not been criticism for the sake of criticism. My purpose has been to impress upon those responsible the commonsense principles of policy I have just mentioned: Assess the international situation accurately; face it honestly; deal with it courageously.

In these terms, a foreign policy for peace requires that first of all we isolate the dangers to peace in the present international situation. When we consider these dangers, most of us think automatically of Soviet Russia. There are sound reasons for this chain of thought although I should like to emphasize that the problem of maintaining peace involves much more than the actions of any single country or any single ideology. The problem has been with the world long before "communism" was even a word in the language and it may well be with us even after communism is remembered only in history.

At this moment, nevertheless, a major threat to peace does arise from the Soviet Union. That is because Russia is a militant totalitarianism and a powerful totalitarianism. It is the second industrial power of the world and possesses enormous military strength. Moscow is the summit of a world-wide system of power which extends over most of Eastern Europe and deep into the heart of Asia. The Russians have allies in the Middle East and support wherever Communist Parties operate in the world.

Soviet Russia is cut from the same cloth that has characterized all tyrannies. The threat it poses to peace lies basically in the unpredictability of the rulers of the Communist system. They are ruthless men and if they are like Stalin, they are men obsessed with a fear and hatred of freedom. They are men who cannot rest content while people or nations who do not agree with them continue to exist in independence.

The danger to peace arises from that fact that these men—these men without fixed responsibility to their peoples—control vast forces of destruction. They can unleash these forces in a moment of fear, in a moment of miscalculation, in a moment of whim.

Strangely enough the hope that peace shall not give way suddenly in these circumstances lies in the fact that these Soviet rulers are not only ruthless men, they are also intelligent men. They are fully aware of the dangers to themselves as well as to others in modern warfare. They know something of the power of nuclear weapons since they themselves have them and they are fully aware that these weapons are held by the United States and other free nations. They know that if they launch a military aggression it will be met by retaliation. Since such is the case, if they act as intelligent men, they will not invite their own destruction by precipitating a war.

That is not much of a hope for peace. It is a delicate fulcrum on which to balance the fate of civilization. For the moment, however, there is no other. That is one of the realities of the situation which confronts the Nation, and we have no choice but to live with it.

There is still another hope, however, a hope for a more durable peace. To realize it, will require endless patience and the deepest wisdom and restraint on our part. This other hope, this long-range hope lies in the fact that the Soviet totalitarianism is no more impervious to change than any other system and changes within the Communist realm could lead in the direction of greater stability, greater responsibility, and a more secure peace.

Pressures for change already exist throughout the vast stretch of the Soviet system, from Eastern Europe to the Pacific. There are people living within the Communist countries who resent oppression and who resist it. We have seen their influence in developments in Yugoslavia, in Hungary, and in Poland. In time, that influence is likely to reveal itself elsewhere in the Soviet system, even within Soviet Russia itself.

What, then, does the situation within the Soviet system add up to in terms of a foreign policy for peace? What attitudes and actions on our part does it suggest? It suggests, first of all, that we cannot underestimate the continued danger of aggression from the Soviet system. It also suggests, however, that if we can do anything to lessen the threat which a potential war with the scientific weapons of today represents to all mankind, we ought to be prepared to do it. We should be prepared to negotiate at any time and at any place and on any matter which relates to the control of this warfare of the future. These negotiations must be pursued not with blind optimism but with all the soberness we can command, with full awareness that there is no room for false steps or empty promises.

I am confident that we can trust the President of the United States to negotiate in that fashion. It amazes me when people say that the President, our representatives, or other Americans cannot talk with the Russians without being contaminated or without getting the worst of the bargain. If we ever reach the point where we fear negotiations on any matter because we believe we are less capable, less competent or more subject to contamination than others, or because we regard ourselves less able to distinguish between what is good or bad for this Nation then we shall indeed have reached a sorry state.

To afford immediate protection against war, then, we need a combination of military strength and a willingness to negotiate to reduce the risks of war. For the long-range hope of peace we need to be constantly alert to developments inside the Soviet system. We need to be flexible in our policies for dealing with these developments. Whenever changes within that system promise to lead to greater freedom and to peace we ought to do what it is prudent to do to encourage these changes. One thing we ought not to do is to stimulate uprisings in any country by incendiary words or promises of liberation and then provide only tears and sympathy to the martyrs to liberty when these uprisings are crushed by brutal power.

Freedom will come to the countries now suppressed by Soviet Russia and even to the people within Soviet Russia. It will come, however, primarily on the initiative of the peoples of these lands. Our words and actions in this connection can be harmful as well as helpful unless they are governed by great wisdom, understanding, and restraint.

If I may turn now from the problems posed for foreign policy by the Soviet system, I should like to consider with you another threat to peace. The threat which arises from within the circle of the free nations themselves. Twice in this century the world has been plunged into wholesale conflicts. The origins of World War I and World War II had little to do with Soviet totalitarianism. They were wars which began primarily in Western Europe. They were wars which resulted from the disunity and rivalries of the very nations which are closest to us in culture, in traditions, and in outlook. They were wars, in short, which struck at the heart of the free civilizations of the Western World.

World War I dealt a severe blow to the ideals and achievements of Europe. World War II almost brought an end to liberty in Western Europe. It took an enormous effort on the part of the people of that region, great human and financial sacrifices on the part of the people of the United States, to restore that region, to give it one more chance to live again in freedom.

I believe it is the last chance. The countries of Western Europe now have little choice. Either they move toward greater unity or they will once again split apart into the rivalries which characterized them before World War II. They will lay themselves open to a new suicidal conflict and to a long night of totalitarian domination.

In recent years, I have had occasion to talk at length with many of the political leaders of Western Europe. Most of them recognize that the hope for the continued freedom of their countries lies in unity. They have done much to overcome the fears and suspicions of centuries, such as those which have characterized German-French relations, and they have moved their countries a long way toward integration. Much remains to be done, however, if the unity of Western Europe is to become a living reality. There is a need to rejoin the two halves of a divided Germany in peace and there is a need for a continued advance in binding together all of Western Europe in common efforts for defense and for economic and scientific progress.

During the past decade this country has done a great deal to contribute to the stability of Western Europe and to encourage

its integration. Public funds, funds to which all of us contribute in taxes, were used to bring about economic recovery in the European countries under the Marshall plan. They have been used through the North Atlantic Treaty Organization to promote a common defense against totalitarian aggression.

We have made this contribution because it has been in our national interest to make it. We have made it because, as I suggested earlier, the advances of techniology and science have linked our peace with the preservation of peace elsewhere. We have made it because there is no real defense against a major nuclear war except the defense of a strongly maintained peace.

I should like to turn now to a third major danger of war. It is a danger which arises from the vast political transition which is taking place in Asia and Africa. On those continents, one-third of mankind is on the move. These peoples have moved or are moving from colonial systems into a status of independent national life. They are impelled by the same urge to freedom and to better conditions of life that has inspired many others since the American Revolution in the 18th century.

This country can ony sympathize with the motives which underlie this urge to change in the Afro-Asian world. To do otherwise would be to deny our noblest political beliefs and traditions.

When that has been said, however, we must also recognize that the vastness and the rapidity of the transition, creates major problems for the maintenance of peace. As we have seen in the recent Suez and Middle Eastern cirsis, this transition can involve bloodshed and it can bring the nations of the world close to major war. It can, as we have seen in the case of China, create aggression. Unless the transition to political indedence is coupled with economic progress and the growth of responsible governments it can lead to disillusionment with freedom and to the rise of new totalitarianisms.

A foreign policy for peace must be acutely aware of these possibilities in the colonial transition. It must act to encourage the strengthening of the forces of freedom in the newly independent countries and their peaceful economic progress. It must not, however, produce an unending dependence on this country or an irresponsibility or an arrogance in the leadership of these new nations.

The point 4 program of technical cooperation has done much to help the peoples of the newly independent nations in an appropriate fashion. It has assisted them in acquiring the skills necessary to promote public health, education and other basic and essential services of modern life. I have seen this people-to-people undertaking in operation in many countries. The men and women who are engaged in point 4 work, the teachers, the public health specialists, the county agents, are performing an outstanding service to humanity and, in the process, are doing a great deal to promote an understanding and an appreciation of the finest qualities of our national life. However, I have also seen other types of foreign aid, often excessive and ill-advised military and economic aid that has been wasteful and harmful. It was for that reason that last year I suggested a full investigation of foreign aid by the Senate. That investigation has now been completed and I believe we have the facts which will enable us to separate the necessary from the superfluous, the wheat from the chaff, in foreign aid in the future.

If I may summarize, then, a foreign policy for peace has to deal with three principal dangers of war: the threat of aggression from the Soviet totalitarian system, the tendency toward disunity in Western Europe and the difficulties of the transition to freedom in Asia and Africa.

There are ways, as I have tried to indicate, in which we may cope with these dangers. We can stand firm with others against the threat of aggression from Soviet sources while we bend every effort to reduce by negotiation the perils which modern warfare and weapons pose for all humanity. We can do what we are able to do, to encourage the greater unity of the free nations of Europe and the Western world. We can help to guide the progress of the newly-independent nations into channels of freedom, responsibility and economic progress.

We have no choice but to face the fact that all of these efforts require money. Let us, however, bear this in mind. It costs about $200 million a year to run the Department of State, the agency charged with primary responsibility for peace. It costs over $40 billion a year to run the Department of Defense, the agency charged with primary responsibility for defending the Nation in war. Further, most of the foreign aid we now provide supplements these expenditures for defense. If there is to be a major reduction in the price of government, in taxes, therefore it will be brought about only by an effective foreign policy that reduces the danger of war and the cost of defense against war.

Let me make this one final point clear. Money is not a guarantor of the success of a foreign policy for peace. Peace cannot be bought. Money is not a substitute for an intelligent understanding of the international problems we face. It is not a substitute for wise leadership in dealing with these problems. Least of all is it a substitute for an essential human compassion and for an essential human courage. Least of all, is it a substitute for the faith and the determination that what must be done can be done to keep a decent peace in the world so that this Nation may live and prosper in peace.

Your Heritage of Freedom

(Address by Senator Mike Mansfield, of Montana, commencement exercises, Clarke College, Dubuque, Iowa, June 1, 1957)

It is customary on occasions such as this for the speaker to begin his remarks with some comments, lighthearted and otherwise. He might truthfully refer, for example, to the fact that his wife had been on this campus as a young student several years ago. He might point out that they were, perhaps, the happiest years of her life and that the Christian education she received here has been the mainstay of our lives. Or he might comment on his own days in college.

Usually by the time such comments have been exhausted, the commencement address is far enough along so that the more restless graduates—or their parents—are looking for the nearest exit. Thereafter, those portions of the address which the speaker is likely to think are the most important may not receive much attention.

I propose to reverse that procedure today and plunge immediately into my subject. I may make some assertions without proof of their validity. But bear with me for 20 minutes and I will try to tie these remarks into a bundle you may carry with you for the next few years. There may even be some time left to tell you what a fine-looking group of graduates you are.

There are two periods in the life of man (and I use the word "man" in its generic sense) when he is likely to contemplate his place in history.

First, he is expected to think of his potential contribution to history when he graduates from college.

Secondly, he is likely to think of his contribution to history when he begins to think of death.

Most of the rest of the time, however, man is so occupied with living—he is so close to the stirring event of life itself—that he is usually not able to assess his impact on history.

I was once a schoolteacher. During those years, I discovered that the time to teach a student something was when he was paying attention. I believe you are attentive today because this is one of the moments in your personal life history when you are ready to learn and to plan.

There is one simple thought that I want to leave with you. It is this:

Every man and women has an opportunity to leave his or her mark on the history of the human race.

If we could somehow visualize the history of mankind as a total, it might look something like a pyramid—perhaps a pyamid of people, or of ideas, piled one on the other.

The essential of any pyramid which can be built to its apex is that it rests on a sound foundation.

The foundation for this pyramid of life is that it rests on man's belief in God. It is by that belief that man knows his contributions will not be lost for any divine reason. He knows the foundation will not fail. If man's contribution is to be lost, it will be because of man's failure, not God's failure.

A second essential of a pyramid is that each stone rests firmly on another. Lives and ideas must be fitted together so that each succeeding level of construction rests firmly on the foundation beneath it.

Your place in this pyramid is yet to be determined. Determine it well for I assure you that one day you will be called upon to tell what you have contributed to mankind. When you are ready to pass from this life, you must ask yourself: What have I contributed?

You have heard the story of the rich and favored king who asked a wise Athenian whether he considered the king lucky. The answer was quick: How can I tell? You aren't dead yet."

And this, I suppose, a characteristic of the contributions we make. Their total impact may not be known until we have passed on.

I have been told that one point impressed on men when they are learning to fly is that they owe their lives to the men who went before them. The pilot who first flew into a cloud and crashed because he could not maintain his equilibrium must not have felt that he was making a contribution to life. But lives sacrificed in all lines of endeavor have contributed to man's knowledge and growth and have helped to build the pyramid toward its apex.

All that man is able to do today he owes to what others have done before him. What man will be able to do tomorrow, he will owe to those of us who live today.

But what can you do? You are but one of billions of people on this earth.

One thing is clear. You can do worse than nothing. You can live a life that destroys rather than builds. You have the potential of becoming a burden on your community. You can force others to take care of you in the county jail or elsewhere. You can be a source of destructive acts in your community and not contribute to the growth of mankind. In short, you can act in such a way as to sap the resources of your community and require others to devote extra energy to your protection, rather than to be able to devote themselves to the growth of man.

But at the opposite end of the scale from doing nothing or worse than nothing, it is also clear to me that you have the potential—as an individual—of contributing to the advance of mankind.

One of our great contemporary authors has written: "Nothing was ever created by two men. There are no good collaborations, whether in music, in art, in poetry, in mathematics, in philosophy. Once the miracle of creation has taken place, the group can build and extend it, but the group never in-

vents anything. The preciousness lies in the lonely mind of man."

The preciousness of our religion and our Government lies in their ability to preserve and to promote the capability of every individual to make his unique contribution to the progress of mankind.

None of us can know the contribution he may make toward man's progress. Some may develop new ideas; others will improve our physical surroundings; some will influence the lives of their companions; others will pass their heritage on to children capable of greater contributions than their parents. We each have the capacity to leave the world a better place than it was before we arrived in it.

Man as an individual has laboriously struggled upward. He understands things today he did not understand last year or the year before. He moves ahead step by step. He can continue this progress when his spirit and mind can operate in freedom. His growth will be stunted if his freedom is impaired.

It is for this reason that it is so important that we as individuals and as a sovereign entity shape our destiny toward protecting and promoting the freedom of this Nation.

You young women gathered here today to take an important step in life are the offspring of a free people. You are here to carry on the heritage that has been built. You are each fitting yourselves to make your unique contributions to the progress of mankind.

I have now completed what are the more serious portions of my remarks. The time has come to stop talking philosophy and to talk practicalities. You have jobs ahead of you. You have a community and a world in which you must live.

What is this world you face? Is it likely to be a peaceful world?

Last year I delivered an address to the graduating students of Montana State University. I told them that for the first time in my experience I could state my belief that a world war in their lifetime might be avoided. I said that I believed this was possible because of things done by men and women from many nations.

I reminded them of the discovery of atomic power—a discovery which was a threat, and still is—but which may also be a benefit in disguise because any nation which might start a war may now reasonably expect to bring about its own destruction. Nations of the world have realized in the past 2 years that another war might destroy all life. We live at peace as the result of what Sir Winston Churchill has described as the mutual terror resulting from the threat of atomic destruction.

Two years ago, at the summit conference, the United States and the Soviet Union crystallized an unspoken and unwritten understanding. The understanding was that neither country on pain of self-destruction could start a major war or permit a situation between other powers to deteriorate to the point where a major war might threaten.

Today if we get into a world war, it is not likely to be because the great powers want war, but because they will have slipped into war inadvertently.

Recall, for a moment, the most serious situation of last fall, the situations in the Middle East. Israeli troops had moved on Suez. France and Great Britain brought force to bear in the same area. The situation was fraught with danger that a small war might become a big war.

I cannot go into the details of those historic months. But I call your attention to the fact that the world stood virtually united in demanding that the use of force cease. The United States and the Soviet Union, with no understanding between them, found themselves on the same side. Together, unwillingly together, they worked through the United Nations to snuff out the fire of military action in the tinder box of the Middle East.

I do not attribute the stopping of hostilities in the Middle Eastern crisis to any great diplomatic finesse on the part of the United States, the Soviet Union, or any other nation. I attribute it to the overriding, but unspoken, threat posed by the existence of weapons of mutual terror. These weapons might inadvertently have been unleashed had the use of force in the Middle East continued unrestrained.

It has been 2 years since the President met at Geneva with the chiefs of state of France, the United Kingdom, and the Soviet Union. It may well be that the time is approaching for another such meeting.

Much has happened in these 2 years which might shape the thinking of such a meeting. Britain has a new Prime Minister. President Eisenhower has been reelected by the greatest majority of any President. The leaders in the Soviet Union have faced the crisis of rebellion in the satellite nations. The Middle East crisis has warned us all that war lurks around the corner for nations not ever mindful of the terrible consequences that might flow from relatively isolated military action.

It seems to me that the people of the earth have the right to expect that the chiefs of state of these great powers should gather at least once every 2 years to discuss the issue of war or peace.

I believe that another summit conference will soon be due, and I suggest a new technique for such a conference. Past conferences of this kind have been followed by disillusionment and disappointment, I believe partly because they tried to do too much.

Would it not be advisable then in devising an agenda for such a conference to limit it to one important problem? Could the nations not agree, for example, to consider only one question on which agreement might be expected?

One of the difficulties in past conferences of this type has been that the agenda has been as wide open as the problems that face the great powers. Such an agenda tends to concentrate discussions on all the problem areas on which we disagree.

Why could not the chiefs of state take up just one problem—a big one I must admit—but one upon which there is some chance of agreement?

I have felt for some time now that real progress might be made toward agreement for the suspension of testing of hydrogen bombs of great size.

This should not be a suspension of tests on our part only. I propose instead that we endeavor to reach agreement with the Soviet Union and the United Kingdom on suspending tests of bombs over a certain strength level.

An agreement of this kind would be self-enforcing. We know from reading the daily press that our detection devices as well as those of many other countries can infallibly detect hydrogen test explosions when they exceed a certain size. It follows therefore that if any party to an agreement not to test the biggest bombs were to violate that agreement, the violation would instantly be known to the entire world.

I grant that such an agreement would not be without its dangers. But I believe that the time has come when the dangers of further uncontrolled big tests outweigh the dangers of agreement to suspend such tests. Surely this is an important enough issue for the heads of state to explore together ways of agreeing to limit or stop altogether the testing of hydrogen bombs so large that their fallout of radioactive material poses a threat to mankind.

It is a strange thing that the United States which has been the leading nation in the development of military uses of the atom has somehow failed to occupy a leadership position in the development of the peaceful uses of the atom. It is a strange thing that this Nation has somehow failed to convince much of the world that we are in the forefront in seeking to control the devastating effects of the atom and to put it to peaceful uses.
